Subject: RE: Form Changes

Hi David,

Thank you for your comment.

It is perfectly acceptable to enter a zero if there was little to no fuel consumption / electricity generation for a specific generator (i.e. backup generator at a hospital).

Best,

Sara

Subject: [EXTERNAL] Form Changes

The changes look good.

I support a couple of local hospitals with their forms for their cogeneration facilities. I'd like to suggest additional changes.

Under current circumstances the hospitals don't run very many hours – I would be interested if there was a threshold for operating hours or kWh generated that the client could respond with a "did not significantly generate" without filling out the forms for what has been such a minor amount of power generation.

Then EIA would know that there was a cogeneration site at a hospital that was available to run but wasn't used significantly during the year. Depending what the questions are about resiliency these could be asked to still report the kW capacity, etc. which remain the same year to year so it can autofill.

David
