Subject: RE: [EXTERNAL] Electric Power Survey Form Changes Proposed for 2023

Hi Ben,

Thank you for your message. Please note that this was a mass mailer that went out to all of our respondents for every survey. If you do not currently report for solar PV plants then these specific changes do not apply to you. You can look at the proposed changes by going to the link included in the e-mail and previewing the form changes for the survey under which you respond.

Best,

Sara

Subject: RE: [EXTERNAL] Electric Power Survey Form Changes Proposed for 2023

Dear sir/madam,
Our facility does not contain photovoltaic cells and modules.
We are not sure why and how the additional reporting will be required for the Marathon Petroleum Salt Lake City refinery.
Please explain.
Thanks,
Ben Lai

Subject: [EXTERNAL] Electric Power Survey Form Changes Proposed for 2023

The U.S. Energy Information Administration (EIA) is proposing changes to its electric power

surveys for 2023 for Form EIA-860, EIA-860M, EIA-861, EIA-861M, EIA-861S, EIA-923, EIA-923M, EIA-930, EIA-63B.

The electricity surveys collect data from entities involved in the production, transmission, delivery, and sale of electricity and in maintaining the reliability of the power system. The data collected are the primary source of information on the nation's electric power industry. Form EIA-63B renewable survey collects information on the manufacture, shipment, import, and export of photovoltaic cells and modules, and this form is the primary national source of information on these topics. The electric power surveys are:

Form EIA-63B *Photovoltaic Module Shipments Report*
Form EIA-860 *Annual Electric Generator Report*
Form EIA-860M *Monthly Update to the Annual Electric Generator Report*
Form EIA-861 *Annual Electric Power Industry Report*
Form EIA-861S *Annual Electric Power Industry Report* (Short Form)
Form EIA-861M *Monthly Electric Power Industry Report*
Form EIA-923 *Power Plant Operations Report*
Form EIA-930 *Balancing Authority Operations Report*
Form EIA-930A *Annual Balancing Authority Generator Inventory Report (proposed)*

Information relating to this clearance can be found at https://www.eia.gov/survey/changes/electricity/2023/.

The proposed changes were announced to the public via an FRN published on May 23, 2022. The FRN asks the public to submit comments to EIA, and specifies a due date of July 22, 2022. EIA will review and address comment filed. When EIA submits the final package of documents to OMB, it will contain a list of the comments and EIA's responses. At that time, EIA will publish another FRN to give the public 30 days to comment on the proposed changes and will specify that the comments should now go directly to OMB. OMB will perform their review and may ask EIA for further documentation or clarification. If approved, EIA expects these changes to be effective beginning in January 2023.

Send comments to Electricity2023@eia.gov and, to ensure receipt by the due date, email is recommended. You can also submit comments via postal mail to U.S. Department of Energy, U.S. Energy Information Administration, Mail Stop EI-23, 1000 Independence Avenue, SW, Washington, DC 20585, Attention: Sara Hoff. Requests for additional information should be directed to her at the email address listed above.
