General Comment

conducting toxic screening for military and veterans in a timely manner like after deployments and prior to EAS is essential for protecting service members. it is important to be able to try and identify potential sources for exposure to elements like depleted uranium and attempts to mitigate exposure to troops rotating thought the area. understanding that the work comes with inherent risk of exposure and not everything can be cordoned off in every country but listing examples on the questionnaire would be beneficial. proximity to burn pits, fuel farms, clearing vehicles hit with DU, searching old bombed out fortifications and areas that the troop would not be think at the time about contamination but are sources and should be checked for symptoms
