Wes Wegert	1/3/2023 19:48	Greetings IRS, I'd like to toss my suggestion into the hat as far as the tax credit is concerned for electric vehicle purchases in 2023-24. I read your list of acceptable vehicles and saw Aptera was not on the list. They're a US manufacturer, making solar electric vehicles and are beginning deliveries in the coming months. I fully intend on purchasing, but to be able to get a 20 mpg jeep with the tax credit but not my 600 mile range solar car seems wrong. MSRP of the near fully-loaded vehicle will be ~$42K which is well within the MSRP guidelines for the tax credit. Please consider adding this manufacturer to your list of acceptable electric cars. Thank you, Lizards. Much love from the real world. -Wes [https://ci3.googleusercontent.com/mail-sig/AIorK4yRcfUL6sNsqhBDjUJJ9DLBTxdAzncKyEBOFQZYJrVOIeVEeUAz0g_7ItybhSdG0QWp70LEsZM] Wes Wegert Senior Technical Recruiter, High Country Search [https://cdn.gifo.wisestamp.com/s/rfp3/5F7E49/26/trans.png] (720) 491-4344<tel:(720)+491-4344> [https://cdn.gifo.wisestamp.com/s/rfem1/5F7E49/26/trans.png] wes@highcountrysearch.com<mailto:wes@highcountrysearch.com> [https://cdn.gifo.wisestamp.com/s/rfa2/5F7E49/26/trans.png] linkedin.com/in/weswegert/<http://linkedin.com/in/weswegert/>
Clara Smith	1/4/2023 11:16	I agree with critics that have pointed out the unfair and illogical choice of cars that qualify for the EV tax credit. If the purpose of the incentive is to encourage the transition to the use of sustainable energy in transportation, the incentives should be heavily weighted toward the purchase of fully electric vehicles, secondarily plug-in hybrids, and lastly hybrids. The incentives should also take into account vehicle efficiency. For example, the exclusion of self charging three wheel solar EVs like Aptera, one of the most efficient EVs you can buy, is a major oversight, in my opinion. Sincerely, Clara Smith Yorkville, IL
Jeff P	1/4/2023 12:54	My comments on the EV Tax Credit are directed at the negative impact it is having on a variety of existing EV manufacturers and Startup EV Manufacturers. In particular, I am writing to advocate for the rules to be changed to include 3-wheel vehicles, and specifically, to include a car due to begin production in 2023 called Aptera. If the intent of the EV tax credit is to encourage the adoption of EV over ICE cars for the specific goal of reducing carbon emissions to address climate change concerns, an EV tax credit that discriminates against 3-wheel vehicles is counterproductive. Aptera is a Solar Electric Vehicle (SEV), 3-wheel vehicle that is completely enclosed, built with composite materials to be safe and lightweight, and is totally focused on efficiency. To that end, they have used computational fluid dynamics to reduce the coefficient of drag to 0.13, almost half of the closest competitor. As a result, it can provide up to 1000 miles per charge, and can collect up to 40 miles of free range per day from its embedded solar cells. Here is a list of its benefits: * Lightweight composite construction will never rust, providing an almost indefinite lifespan * Composite construction is extremely safe - comparable to F1 race car technology. * Coefficient of drag of 0.13 and light weight composite construction makes it efficient enough to use a battery 1/3 the size of other EVs, thereby reducing the environmental impact. * The high efficiency makes onboard embedded solar cells practical since they can provide up to 40 miles of free range per day, leading to a potential "never charge" car for most commuters. * The ability to collect meaningful range from the sun reduces the impact to the grid. * The relatively small battery allows the car to be sold at a price beginning at $25,900, which means it is affordable to lower and middle class families, not just rich people. When the IRS gives a $7500 tax credit to a Chevy Bolt but not to Aptera, it subsidizes the production of a car that is 1/3 as efficient and lowers the price below that of an Aptera. This could end up preventing the startup company from ever making it to market. APTERA SHOULD BE THE POSTER CHILD FOR THE CONVERSION TO EVs, BUT INSTEAD, MAY BE DESTROYED BY THE EV TAX CREDIT GIVEN TO LEGACY CARMAKERS BUILDING OLD SCHOOL, INEFFICIENT VEHICLES!!!!
Jeff P	1/4/2023 12:54	My comments on the EV Tax Credit are directed at the negative impact it is having on a variety of existing EV manufacturers and Startup EV Manufacturers. Freddy Bell	1/4/2023 16:48	Please add three wheeled vehicles with an enclosed cabin to the qualified vehicles for the Inflation Reduction Act clean vehicle tax credit. The three wheeled Aptera electric vehicle is the most efficient and clean vehicle currently in development but because it has three wheels it does not qualify even though it functions the same as four wheeled vehicles. If part of the Inflation Reduction Act is to increase clean vehicle usage than including three wheeled vehicles in the list of qualified vehicles is a no brainier.
Nicholas Stees	1/4/2023 17:08	Set them all to 55k and even smaller vehicles like 3 wheel Aptera that are hyper efficient. The definitions are silly. But the solution is not to include more expensive EVs into the program, the solution is to reduce the qualifying price down to ~$50 000 across the board. At the point of development that EVs have now reached, there is zero reason to be subsidizing the purchase of a vehicle that costs more than the annual salary of most Americans. What we need to now encourage is the production of affordable EVs. Continuing to offer these large incentives for these really expensive models is just encourage manufacturers to build for the minority of well off folks.
Scott Price	1/5/2023 0:47	The key basis of providing tax credits for new electric vehicle purchases should drive which vehicles are eligible and not be driven by arbitrary standards such as “must have 4 wheels”. The Aptera vehicle, for example, is a 3-wheel enclosed vehicle soon to be manufactured by a US-based company. It significantly reduces environmental impact through its very high efficiency yet reduced parts/consumption, and all while achieving the same ability to transport people as a 4 wheel vehicle can do. The Aptera, unlike almost all other vehicles being considered for the tax credits, also can produce its own power through integrated solar panels, thus reducing electricity grid strain and emissions sources even more than nearly all other vehicles. These kinds of major vehicle benefits should be actively supported, not ignored, if the foundational reasons for providing EV tax credits are as originally proposed. Thank you, Scott and Karen Price Coupeville, WA
Khanh Nguyen	1/5/2023 1:35	To the IRS, I am writing for your considerations to make fully-enclosed three-wheeled electric vehicles eligible for the EV tax credit. I am interested in purchasing an Aptera<https://aptera.us/>, a low-priced, American-designed and built solar EV that is a 3-wheeler. Our family believes the EV tax credit should support companies that accelerate the transition to carbon free transportation while creating jobs in America. Aptera's affordable, American built car is a perfect example of this. Thank you for your consideration! Khanh Nguyen Cupertino, CA
Andy Keck	1/5/2023 8:26	I would ask for fully-enclosed three-wheeled electric vehicles to be included. Aptera may be the first with many imitators that attempts to create a hyper-efficient car that can be at least partially powered by solar. A three-wheeled car allows for greater flexibility in aerodynamic design and lacking the fourth wheel, less rolling resistance. As a fully-enclosed vehicle, it is more like a four-wheeled car than not and so should be eligible for the EV tax credit. Andrew Keck
Philip Raymond	1/5/2023 13:51	EV tax credits should include the made in Carlsbad, California Aptera. As it is currently, Aptera is excluded because it's a 3 wheeled vehicle, though it's a car in all other ways. Production is scheduled to begin at the end of 2023. It's best feature, is that it can run up to 40 miles per day on solar power, as it is covered in solar panels. It also has a range of up to 1,000 miles per charge, due to it's aerodynamics and light weight. Please read more details on this amazing vehicle at their website, www.aptera.us<http://www.aptera.us> Philip Raymond Evanston, IL 60202
Richard Garlick	1/5/2023 14:19	Ladies and Gentlemen, Please INCLUDE fully enclosed 3 wheeled electric vehicles like Aptera to the $7500 tax credit plan. This vehicle will support Green goal and NOT OVERLY TAX the GRID ! Thank you ! Sincerely, Richard Garlick Phoenix, AZ
billgiff@aol.com	1/5/2023 15:25	OMB Control No. 1545-2137 I would like to make a modification suggestion for the EV tax credit. Currently the legislation seems to be oriented towards standard cars and trucks as we have come to know them. If the goal is to encourage electrification and to reduce our carbon footprint, then consideration should also be given to any other modes of transportation that currently uses ICE technology, but which can be replaced with electrification. A prime example would be the Aptera auto cycle that is being developed and will soon go into production. This vehicle is a three wheeled, all weather, fully enclosed, heated and air conditioned auto cycle that will be the world's most efficient EV. It is being designed to meet automobile safety standards, will have airbags, and will even reduce the draw on the electric grid in that it will have solar panels that can generate up to 40 miles of grid less driving per day by leaving it parked in the sun. In addition, this vehicle will be produced in the US. This unique vehicle does not currently fall under your definition for EV tax credit eligibility, and I think that it should. Taking the time to look at the Aptera concept might lead to change considerations that would have a wider impact than simply focusing on an old definition of eligibility which is centered around a technology that we now accept as damaging. My hope is that we can also focus on future oriented concepts that are advancing our technology and liberating us from our
Legere, Jeffery	1/5/2023 16:23	* Make it all MSPR $80k or less * EV's assembled in North America. We don’t have the raw material infrastructure as of yet. Encourage that in other ways. * Have a Minimal on EPA range/pack size for the full credit regardless of if it is a BEV or PHEV. If it falls under that EPA range/pack size, then it gets half credit. That will keep low mile PHEVs from getting the full credit. * Include Autocycle (3-wheel) EVs, like the Aptera that are fully enclose the passenger area. They should be encouraged more than any other vehicles. These are the most energy efficient vehicles that cover most daily use cases. They place less strain on the grid, take fewer resources to build and cost less. They are lighter, reduce wear and tear on road infrastructure, and are likely to be less deadly in the event of a pedestrian accident. Lighter weight vehicle will place less wear on tires during hard turns and less wear on brakes during hard or prolonged braking periods. This means less particulate matter in our air, water, soil and lungs.

Name	DateTimeReceived	Body.TextBody
Kevin Davis	1/7/2023 9:07	I am confused around a few points of the proposed tax credits: 1. Why are Aptera and other three wheeled EVs not covered? 2. Why is the credit the same for a full EV and a REX? 3. Why are the credits a single number? These credits should be a sliding scale based off efficiency, cost, and income. Trading a gas guzzler to an electric guzzler will not be beneficial; neither will pricing the average consumer out of the market. I do really like that the new credits take component sourcing into effect. I believe this will be great for our economy. Plus I believe the shorter supply lines for completed cars will be good for the environment. Thank you for your consideration, Kevin Davis
THOMAS BUSHAW	1/7/2023 10:19	This is a comment on your current efforts to finalize the rule on the EV tax credit. I STRONGLY encourage you to include auto cycles (three-wheeled vehicles) as eligible vehicles. They can be extremely efficient (as low as 100 Wh/mile); some have solar “trickle” charging adding as much as 40 miles of range per day (in sunny climates). An excellent example is the Aptera (www.Aptera.com) that is currently being developed near San Diego, CA and may go into production later this year. This particular vehicle should be the “poster child” for efficient “green” transportation at an affordable price and is a perfect example of the “spirit” (intent) of the EV tax credit. Thank you for soliciting and considering comments on this subject. Sincerely, Thomas Bushaw Kennewick, WA 99338
Stephen	1/7/2023 10:26	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include auto cycles, which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you
Martin Brock	1/7/2023 10:51	Excluding all 3-wheeled vehicles from the EV tax credit makes little sense to me. If the Aptera is produced, this credit will exclude the most fuel-efficient EV by far, meeting safety requirements beyond the autocycle requirements, made in the U.S. by a U.S. startup. Entrepreneurial opportunities with this potential don't grow on trees, and I suppose we still want to lead the world in entrepreneurial success. Picking winners with tax credits and similar subsidies offends my politics fundamentally, and EVs don't need subsidizing anyway, but if you can't resist the urge, try not to discourage the best, emerging products the credit is supposed to encourage. I know the credit really exists to benefit crony-capitalist constituents of Congressmen, but what I learned about government in school still haunts me. I prefer no credit to this credit's perverse
Gordon Niessen	1/7/2023 11:39	EV Tax Credit Comments Here are my comments on the current EV tax credits: • Make it all MSPR $50k or less. The income limits are fine. • EV's assembled in North America. We don’t have the raw material infrastructure as of yet. Encourage that in other ways. • Have a Minimal on EPA range/pack size for the full credit regardless of if it is a BEV or PHEV. If it falls under that EPA range/pack size, then it gets half credit. That will keep low mile PHEVs from getting the full credit. • Include Autocycle (3-wheel) EVs, like the Aptera that are fully enclose the passenger area. They should be encouraged more than any other vehicles. These are the most energy efficient vehicles that cover most daily use cases. They place less strain on the grid, take fewer resources to build and cost less. They are lighter, reduce wear and tear on road infrastructure, and are likely to be less deadly in the event of a pedestrian accident. Lighter weight vehicle will place less wear on tires during hard turns and less wear on brakes during hard or prolonged braking periods. This means less particulate matter in our air, water, soil and lungs. • Add a bonus rebate for built-in solar panels that generate at least half the daily mileage than the national average commute based on that vehicle’s measured efficiency rating. Thanks, Gordon Niessen
John Nalevanko	1/7/2023 12:36	Dear Sir or Madam at the IRS, I am writing in response to the IRS’s request for comments regarding the clarification of the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the IRS and the Federal government should do all they can to encourage the manufacturing of sustainably powered vehicles that are reasonably priced, no matter their shape, size, or number of wheels, including three wheeled vehicles such as the Aptera. And along with that, the Federal government should encourage and facilitate consumers to purchase said vehicles. We, as a country, should ween ourselves off of burning fossil fuels for transportation as soon as possible, and the IRS helping with that goal by applying tax credits to all sustainably powered vehicles that are reasonably priced plays an important part. Thank you for your consideration and service. John John Nalevanko Architect (current electric vehicle owner) Del Mar California 92014

Name	DateTimeReceived	Body.TextBody
Steve Kenyon	1/7/2023 14:45	Hello, I'm writing to suggest that the Aptera and other electric 3-wheeled autocyles should be eligible for the latest round of tax credits. The Aptera will be the most efficient production vehicle ever when it is produced, and will place much less stress on the electric grid than any other EV. This made-in-America innovation should be encouraged in any way possible. https://aptera.us/ Thank you, Steve Kenyon
Robert Marcotte	1/7/2023 14:48	To whom it may concern, I am writing in response to the acceptance of comments on the EV tax credit. I believe the intent of the tax credit is to incentivize the purchase of clean and efficient electric vehicles to reduce the burden of fossil fuels, however electric vehicles are contantly evolving in form and function driving demand into the most innovative areas like the Aptera where the innovation not only eleminates the use off fossil fuels but reduces the strain on the electric grid by augmenting its charging with onboard solar power. The Aptera is classified as an autocycle as it has 3 wheels but the vehicle is fully enclosed like a regular 4 wheeled vehicle and performs like a 4 wheeled vehicle but way more efficiently. The price point is more affordable starting at 25000 dollars but including them in the tax credit will allow a multitude of people to enter this market. Please consider broadening the tax credit to include the autocycle class of vehicles so that Aptera will qualify. Many a college kid and retirement couples will bennifit. Thank you
Jose Alcid	1/7/2023 15:18	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include auto-cycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see http://www.aptera.us for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles) Thank you. Jose A.
John Tepedino	1/7/2023 19:27	Dear Mr. Garcia, Thank you for soliciting comments about the electric vehicle credit. I'm happy to do so. First, the electric vehicle credit is a great way to help us migrate to greener, more environmentally friendly technologies. In my view, this credit should be extended to the three-wheeled Aptera. If you're not familiar with it, the Aptera is a solar electric vehicle preparing to go into production in California. It has a range of up to 1,000 miles and can charge as much as 40 miles a day from the sun. Forty miles a day from the sun! Forty miles a day easily takes care of my regular day to day driving. Imagine that, no gas, no strain on the grid for typical day to day travel, ever. I live in North Carolina and my house does not have a garage. Having a car that will charge from the sun is a tremendous benefit to people like me that can't charge in their garage. Think of all the people that live in apartments and no-garage houses that can take advantage of solar charging. Solar is the way to go for cleaner travel. Giving a tax credit for a solar electric vehicle will encourage more companies to embrace the technology and this will encourage innovation so that soon we can have a solar vehicle that charges 100 miles a day from the sun. This is so much better than chewing up the planet's limited resources. Again, thanks for soliciting comments. If you'd like to talk more about this you can contact me at this email or at XXX-XXX-3348. Thanks,
Syed Qadri	1/7/2023 22:19	Dear Sir / Madam, I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and the IRA (Inflation Reduction Act) that was passed in 2022. I believe that the intent of this Act was to enable incentives for more people to afford and drive efficient transportation. To this end, I believe the EV credit should apply to vehicles that are 3 wheels and classify as an auto cycle but looks more like a regular vehicle. Just because a vehicle is 3 wheels should not exclude it from these incentives. Although this vehicle is not yet in production it is probably one of the most efficient vehicles available in the market if and when it will become available and I am not sure why you would not interpret them to qualify for the tax credit. I have reserved one for myself (www.aptera.com<http://www.aptera.com>) and I would urge you to classify this as being eligible for the EV credit. Best Regards,
Doug Porter	1/8/2023 10:31	Regarding Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022-42 I support incentives designed to increase cleaner and more efficient transportation. I understand that it is difficult to fine tune incentives, as such we see some underwhelming plug-in hybrids receiving support. I think plug-in hybrids are a perfectly reasonable idea, in general, but things like the Jeep Grand Cherokee 4XE with only 25 miles of electric range? At the same time we are excluding some extremely efficient vehicles. Vehicles like the Aptera (approx 337 MPGe vs 56 MPGe for the Cherokee) are excluded simply because they have 3 wheels instead of 4. This is, for all practical purposes, a car (fully enclosed, includes air bags, and will undergo full crash testing), it simply has 3 wheels so is not eligible. I strongly encourage you to support adoption of such hyper-efficient cars by making them eligible for this tax credit. thanks, Doug Porter Winston Salem, NC 27106

Name	DateTimeReceived	Body.TextBody
Daniel Dorrance	1/8/2023 11:40	To: IRS and Staff The IRS is soliciting comments concerning qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I strongly encourage you to do the RIGHT thing and include EVs that do not currently meet the requirements because they are deemed auto-cycles, i.e. less than four wheels. The Solar EV Aptera should be included because of its efficiency on using both solar and electric. Solar is not always the answer but it is a HUGE component for reducing fossil fuel consumption by harnessing the energy from the sun. I have used solar panels for over five years and am excited to not only save money, but also producing energy back to the Power Grid. Helping to promote solar EV vehicles via tax credits should be at the TOP of the list for vehicles in line for the tax credit. I urge you to broaden the interpretation to include any such vehicle so that we can hasten the adoption of these ultra energy efficient vehicles. Thank You, Daniel Dorrance
Allen R. Bussell	1/8/2023 14:20	The updated EV tax credit, to help the goals of the IRA in bringing our country to self-sufficiency, improving the environment, helping American business and promoting social justice should be interpreted to allow credits to apply to ALL BEV electric vehicles with 3 or more wheels, made in the US, that provide an enclosed or semi-enclosed cabin. (See new US companies: Aptera & Arcimoto) Reasoning: 3-wheeled, fully, or semi-enclosed vehicles are far more efficient than those with 4 or more wheels, less friction means they use less energy to push the car down the road, 1. Reducing the need for long charges, providing less stress on the grid. 2. Reducing the need for large batteries and the materials to build those batteries. 3. Less weight helps our roads last longer, reducing the wear on our highways and local streets. 4. More sustainable, these vehicles use less and fewer materials to build and maintain. 5. Being much cheaper to build, these vehicles are more accessible to more people of all walks, incomes and areas! Thank you for allowing our input. I look forward to your decision. Sincerely and with all respect, Allen R. Bussell Sent from my iPad
Terry Bussell	1/8/2023 14:38	To Whom it may concern: The updated EV tax credit, to help the goals of the IRA in bringing our country to self-sufficiency, improving the environment, helping American business and promoting social justice should be interpreted to allow credits to apply to ALL BEV electric vehicles with 3 or more wheels, made in the US, that provide an enclosed or semi-enclosed cabin. Michael Rinehart	1/8/2023 20:33	I have pre-ordered an Aptera which is an enclosed 3-wheel solar-electric vehicle costing me less than $40,000. I believe it should qualify for the Federal $7,500 credit for domestically assembled. Please consider this request. Mike Sent from my iPad

Name	DateTimeReceived	Body.TextBody
James Castañeda	1/10/2023 17:04	I understand the IRS is probably getting a lot of pushback from industry and individuals to objectively define a "Sport Utility Vehicle." While this makes sense and I agree, myself and many others with whom I interact regularly both in person and online see a far more glaring omission that needs their attention... that the WHOLE purpose of the credit is to drive consumers toward a cleaner, more efficient, more sustainable form of personal transportation, and they are excluding the one vehicle that represents the paramount of that goal: the Aptera. And, the reason behind its exclusion appears to be one of the very things that helps make the car that efficient in the first place: it has three wheels, which helps reduce both aerodynamic and rolling resistance, while not interfering with its utility to serve as a car at all. The only other drawback one might point to about this car is its maximum capacity of two passengers in its current iteration However, in 2019 it was found that the average vehicle occupancy in the US is 1.5 people, down from 1.87 in 1977 (https://css.umich.edu/publications/factsheets/mobility/personal-transportation-factsheet), so the US could really use more vehicles on the road that transport one and two people more efficiently. Additionally, in sunny parts of the country, the Aptera will more than cover the average commuter's daily needs without drawing a single watt from the grid, as it's capable of driving 40 miles off the energy it collects from the Sun in a single day. I hope the IRS takes into account the spirit and purpose behind these incentives before again excluding the very vehicle most worthy of inclusion. Best regards, James Castaneda San Diego, CA 92114
Erik Biesemeier	1/12/2023 19:46	Good day, I am writing in regard to draft form 8936 Qualified Plug-in Electric Drive Motor Vehicle Credit. The form has lines for claiming the credit for vehicles with two wheels, and with four or more wheels, which would exclude vehicles with three wheels. This is a concern for anyone considering the purchase of an Aptera (https://aptera.us) or other three wheeled passenger or delivery vehicle. Serving the same transportation purpose as a two, or four wheeled vehicle, owners should be entitled to the same tax credit as other electric vehicles, and not penalized due to a slightly unusual design. Thank you, Erik Biesemeier
Jacob Davis	1/16/2023 2:34	I recommend allowing 3 wheel EVs to receive the tax credit, and to add an extra credit for cars with solar like Aptera. Best Regards, Jake Davis Aiea, HI 96701
Johnny Li	1/21/2023 12:29	Hi, as the intent of this bill is to lessen the effects of climate change, promote adoption of vehicles that run on clean energy, as well as encourage domestic manufacturing, I believe we should allow vehicles such as the Aptera to also qualify for these credits. Aptera meets all of these requirements except that it is a three-wheeled vehicle rather than a four-wheeled one. Encouraging purchase of this American-made, American-built vehicle will drastically lower our carbon footprint and help the country and the world reach our climate goals. Thank you.
Dario Vazquez	1/21/2023 16:37	To Whom It May Concern: This is in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. The goal of the EV credit is to promote a transition to more efficient transportation and sustainable manufacture of vehicles in the United States. The credit should include the lighter and much more efficient 3-wheeled EVs like the Aptera. Please broaden the interpretation of the credit to include these more efficient vehicles that make a bigger difference. Thank you, Dario Vazquez
Dominic Pirocchi	1/22/2023 20:15	Dear Andres, In regards to EV incentives. Please consider supporting completely free market systems and allowing the people to select the best technologies without interference from the government. Either completely remove ALL incentives including those on oil and other industries or if you insist on disrupting the free market, then make it so that the best and most efficient vehicles are included. Do not use weight as a factor, as by reducing the weight you increase the efficiency. Do not exclude vehicles by the number of wheels. The three wheeled Aptera, is one of the most efficient vehicles about to come to market. Additionally, a commuter may want a two wheeled EV to easily navigate city streets. Do not exclude by price, either high or low. You should simply have a tax rebate of X% of vehicle cost, to a max of Y amount. No other restrictions or putting Congress' thumb on the scales. If you want to limit it to only those vehicles assembled here in the US or in a country with an existing agreement. That is fine as many of the startup companies are US companies. Do not insist that the mining and/or parts also come from the US, as that just creates confusion. Again, the goal should be to incentify the most efficient EVs and that is it. Thank you, -Dominic Manor Township, PA

Harold Cheyne	2/8/2023 7:30	Dear Mr. Garcia, I am writing to propose an addition to the IRS rules for Form 8936, Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022-42. As written, vehicle eligibility is limited to four-wheeled vehicles, and I suggest expanding the eligibility to three-wheeled vehicles that would otherwise qualify under the remaining rules for that form. Specifically, the US company Aptera (aptera.us<http://aptera.us>) is set to begin manufacturing its three-wheeled, solar-powered electric vehicle later this year. The Aptera EV will be the most efficient electric vehicle on US roads, using the least amount of energy per mile and recharging itself with its solar panels. I believe this type of leap in technology should be encouraged by making the vehicle eligible for the Qualified Plug-In Electric Drive Motor Vehicle Credit. Thank you for your time and consideration of my request. Sincerely, Harold Cheyne
Bill Pretyka	2/17/2023 10:46	Please allow fully-enclosed three-wheeled electric vehicles to be included in this control. Companies such as Aptera, are trying their best to bring affordable, efficient, and usable transportation to the masses and including this vehicle type would go a long way to make that happen. Sincerely, Bill Pretyka
James Costello	1/3/2023 18:33	It is extremely disappointing to see hybrids with tiny batteries and horrible gas mileage qualify for $7,500 tax credits while some extremely efficient all Electric Vehicles do not qualify. You make our country look like fools to the rest of the world.
Robert	1/3/2023 19:41	You should be giving tax credits to all electric vehicles. At a minimum, you should have a minimal range of 150 miles. Robert Knapp
Max Follett	1/3/2023 19:43	All electric vehicles should qualify for the credit regardless of cost if they meet a minimum requirement. There's no reason cars that are no where near as environmentally friendly would get it.
Can you see the line	1/3/2023 20:19	The Electric Vehicle EV tax credit rules make no sense. If you want people to stop using fossil fuels, then all Electric Vehicles regardless of weight should qualify. G. G. Cooper
Richard Dugan-Starr	1/3/2023 21:07	EV tax credits shouldn't exist. I'm an EV enthusiast and it seems like foolish to intervene in an industry that is already functioning. Better to remove oil and gas subsidies than to prop up EVs by giving out tax credits. If you are going to keep EV credits all electric vehicles should be eligible for them provided that most of their range is from electricity. There should also be no manufacturer cap. Please take this comment seriously as I do intend on buying an EV one day. -- Richard Dugan-Starr
Jennifer Nicholson	1/3/2023 21:56	Please provide tax incentives for the purchase of all electric vehicles, regardless of their cost, the manufacturer, and the country of manufacture. The goal is clean energy, so providing tax incentives for all vehicles is important. Thanks, Jennifer
Zoe Nicholson	1/3/2023 22:07	Please provide tax incentives for the purchase of all electric vehicles, regardless of their cost, the manufacturer, and the country of manufacture. The goal is clean energy, so providing tax incentives for all vehicles is important. Thanks.
Sushil Nanavati	1/3/2023 22:24	Hi In regards to this policy, I believe it's unfair to include hybrid vehicles and not to all electric vehicles. Hybrid cars don't provide the advantage all electric do - it's a fake out marketing gimmick. All electric is the goal and that's what we should be incentivizing. Keep the all American parts though. That's important. Thanks for the opportunity to provide feedback.
Frank Raniolo	1/3/2023 22:26	IRS, My family came here on a ship over 400 years ago, founded Eastern Long Island, and we've fought for this country in all the wars. The IRS taking $7500 of United States Citizens tax payer money, which was passed as an "ELECTRIC VEHICLE CREDIT" and giving the money away to the benefit of non American manufacturers, and cars not made in America, and for cars that aren't even all electric, is morally reprehensible, unconscionable, and you should be ashamed of yourselves. Giving a tax credit to purchaser's of Audi, and BMW, is unconscionable. You are literally giving American money to Nazi companies! EV tax credits should go all ELECTRIC VEHICLES, made in the U.S.A., not hybrid vehicles made abroad, or in Mexico. Sincerely, Frank Raniolo J.D.
Dave Claudino	1/4/2023 0:54	Please ensure that the $7500 tax credit applies to all electric vehicles, regardless of cost, weight, type, or any other variable. It explicitly should not apply to vehicles that consume fossil fuels. - David Claudino Palo Alto, CA 94301
Andres Hernandez	1/4/2023 0:58	I am not a consumer of an Electric Vehicle at the moment but I do consider myself a potential one. I believe the tax credit is too low considering the fact that companies increased their prices on their vehicles due to inflation and/or supply chain issues. I also believe all electric vehicles should be able to obtain the tax credit.

Name	DateTimeReceived	Body.TextBody
Britny Lopez	1/4/2023 1:54	Thank you for allowing me to personally comment on OMB Control No. 1545-2137. I am very happy to know that the "EV Tax Credit" is being utilized as a step in to a democratic, "by the people, for the people", exercise. I do believe that we are making strides toward a future that we can all participate in creating. Thank you very much for proving to me that *we* all want the same thing. Regarding the issue at hand, I believe that it is important to take in to consideration that the Electric Vehicle Tax Credit is for the environments sake. Although, gas it self isn't in short supply, the air we breathe, and the earth that we live on, requires us to find alternatives for our current state. Although, I do acknowledge that this a wonderful step forward, I am unclear as to why all electric vehicles are not on the list of eligible households. I am sure, they too, would like to know. Please address this, if possible. Twitter is a great forum and should be utilized for public remark, if allowable. Please forward this message to whom this request concerns. I like to watch the progression, myself. ➡ "Public Relations" : I.e. Social Media and other e-messages should be on the list! Updates are great, but, so are tax tips! Infographics and statistics, as well. I worked in administration for the 2020 Census, so, I know what the government can put out there! In conclusion, I humbly request that the IRS include all electric vehicles, including those that are solely electric, at this point, for very obvious reasons. 🙏 I thank you for your time and the update. Sincerely grateful,
Corey Coddington	1/4/2023 3:09	I find it to be shameful that some all electric vehicles receive no tax credit while polluting plug in hybrids with 30 miles of range do. Miss handling of our tax dollars deteriorates an already low confidence level in policy making. Please remedy this as soon as possible and level the playing field. Act in the spirit of the law not special interest or lobbying!
Samuel Johnston	1/4/2023 9:19	As an American Citizen I do not believe any vehicle should be getting this qualification, but if you do I believe we should be subsidizing all electric vehicles.
PJ Delgado	1/4/2023 12:17	I am writing to express my concern about the unfair qualifications for the electric vehicle tax credits in the Inflation Reduction Act that is taking effect this year, 2023. It has come to my attention that many electric vehicles, which are more efficient than some hybrid vehicles, have been excluded from these credits. Furthermore, many of the excluded electric vehicles are some of the most American-made cars in the world. This incentivizes car manufacturers to produce inferior products, rather than those that would have the biggest impact on meeting the goals of the Inflation Reduction Act. I believe that all electric vehicles, regardless of their specific make or model, should be eligible for these credits. This would not only support the transition to a more sustainable and efficient transportation system, but also promote American-made products. I urge you to reconsider the qualifications for these credits and make them more inclusive. Thank you for your attention to this matter. Sincerely, Patrick M. Delgado
Dennis Morgan	1/4/2023 12:58	Dear Mr. Garcia, I am writing to you to provide feedback on OMB Control No. 1545-2137. While the intent of this legislation is good and just, the implementation has major issues. If the goal is to encourage transition to all electric vehicles then MSRP price should not be a factor in determining if a tax credit should be applied. Instead there are multiple other methods for achieving the goal of incentivising consumers to purchase electric vehicles: * tax credit based upon drivetrain (full credit to pure EV vehicles, partial to hybrids) * tax credit based upon MPe (must be greater than 50 MPe?) Thank you for your time. Dennis Morgan
Pakko	1/4/2023 13:11	I don’t believe we should be giving any tax credits for any vehicles. But if the government insists on giving tax credits, it should be for all electric vehicles not just some. Even have better tax credits for fully electric vehicles with smaller ones for plug in hybrids. Pakko
Andrew Krause	1/4/2023 13:21	Regarding the Form 8936 qualification for electric vehicles, the provision for "qualified electric vehicle" is narrowly tailored in a manner which is unconstitutional. The Agency should advise Congress that the provision is unenforceable as such, and enabling legislation should be passed which applies to all electric vehicles registered for roadway use by State or territorial governments subject to the jurisdiction. -- Andrew Krause Peachtree City, GA 30269
Sandy Bayes	1/4/2023 13:32	Dear IRS, 1)This is a complete absurdity adding hybrid autos as a recipient of the new tax credit! It does nothing to help with mitigating climate change and I totally disagree with this inclusion. Second: It would be more helpful to lower the requirements for all electric vehicles. Please change your requirements! Yours truly Sandra A Bayes Santa Fe, NM 87507
Stephen vasquez	1/4/2023 13:53	Any and ALL electric vehicles should receive the tax credit. Any vehicles with gas engines should NOT receive the tax credit. This seems like a simple concept. Anything else seems like the government playing favorites. Thnak you.

Name	DateTimeReceived	Body.TextBody
EvolverTTV	1/4/2023 16:44	To whom it may concern, It has come to my attention that you request the general public's comments in regards to the ev tax credit bill. I think all electric vehicles that are purely electric should qualify for the tax credit so long as all other basic criteria are met; such as being made in North America, not too expensive, etc....I think it is shortsighted to give tax credits to hybrid vehicles and not pure electric vehicles which maintain a higher efficiency rating across the board. If the aim of the initiative is to become green and efficient then encouraging pure electric car sales should be the first and foremost goal of the bill. Signed, Ryne McElroy
Chris Clabaugh	1/4/2023 21:40	Please consider tax credits for all Electric Vehicles. Save the planet! Lets encourage more EV ownership regardless of where or when they are built. Provide an annual credit for every vehicle!
melva zanella	1/4/2023 21:55	Regarding EV tax credits: All electric vehicles should receive the full credit. Hybrids should only get half.
Eric Rodriguez	1/4/2023 22:37	Give the tax credits to all electric vehicles! Be the adults in the room that we need. Eric https://t.co/uG9Uwgjdrw
Luca Traverso	1/4/2023 23:29	Dear IRS, I am writing to express my concern about the unfair qualifications for the electric vehicle tax credits in the Inflation Reduction Act that is taking effect this year, 2023. It has come to my attention that many electric vehicles, which are more efficient than some hybrid vehicles, have been excluded from these credits. Furthermore, many of the excluded electric vehicles are some of the most American-made cars in the world. This incentivizes car manufacturers to produce inferior products, rather than those that would have the biggest impact on meeting the goals of the Inflation Reduction Act. I believe that all electric vehicles, regardless of their specific make or model, should be eligible for these credits. This would not only support the transition to a more sustainable and efficient transportation system, but also promote American-made products. I urge you to reconsider the qualifications for these credits and make them more inclusive. **Please see attached tracker for examples** [image0.jpeg] Thank you for your attention to this matter. Sincerely, Luca Traverso
James Bush	1/5/2023 9:20	Hi, Why would cars with a gas engine get any tax credit at all? I understand no tax credits for cars not manufactured in the U.S. not receiving the credit. That part makes sense. All electric vehicles manufactured in the U.S. should receive the credit. It's ridiculous, obscure, nonsensical rules carve outs like this that make citizens not trust policy makers. James Bush
Noah Webster	1/5/2023 10:03	Team, I submit that all Electric Vehicles should be considered for continued Federal Incentives. Further, that the IRS must be inline with the EPA classification ratings. Noah Webster
Gary Brown	1/5/2023 11:31	I suggest extending the tax credits to all Electric Vehicles that use a battery. This could include vehicles that also have a combustion engine. Gary Brown
Tamara Prewitt	1/5/2023 14:49	The current system of providing Tax Credits for Electric Vehicles is too arbitrary and possibly subject to manipulation or favoritism or the appearance of favoritism by the government. I do not support the tax credit at all, but if it is required to provide tax credits for Electric Vehicles, there should be an independently verifiable litmus test for qualification purposes. For example, the vehicle must be proven to drive for x miles exclusively on electric charge or the vehicle must get over x mpg and have y miles of electric being used, etc. Currently all electric vehicles such as some Telsa models are not included but other vehicles like a Jeep that gets 20 mpg is included. This is not the purpose of the tax credit to get more people to drive low mpg Jeeps! You must provide a public and verifiable method of assigning tax credits that is fair to all. Sincerely, Tamara Prewitt Granite Falls, WA

Name	DateTimeReceived	Body.TextBody
Mihad Alzayat	1/5/2023 15:35	To whom it may concern, I believe the tax credit should apply exclusively to electric vehicles and not hybrid vehicles. This will incentivize many more people to make the transition away from fossil fuels. It doesn't make sense to offer this incentive to hybrid vehicles and not all electric vehicles. I hope you'll take our input and make the necessary adjustments. Thank you! Mihad
David Kaufman	1/5/2023 20:50	Not only should the irs fix the EV tax credit to apply to all electric vehicles, not just the inefficient ones, it should apply to foreign manufactured, imported and luxury EV's too. The president's agenda, and that of all humans, is about helping the planet, not just certain companies, certain countries or certain consumers. -- David Kaufman Gigawatt Digital
Wes B	1/6/2023 13:39	All electric vehicles should get a tax credit, it sure would incentivise me buying one. Also, tax credit if have to replace expensive batteries
Stephen Ingraham	1/7/2023 13:51	All electric vehicles should receive the EV tax credit. It is absolutely obvious the EV tax credit regulations were designed to punish a certain company for political reasons. That is not the type of government that leads humanity toward progress.
Samara Cullinan	1/9/2023 15:04	This new EV tax rule benefits few cars that actually contribute to lower emissions. Especially when a hybrid vehicle that gets 20 mpg gets a full rebate yet all electric vehicles are passed over. That was not the intention of this tax incentive! Samara Balter
RajSree Nair	1/13/2023 13:23	Hi, It would be helpful that all electric vehicles should be given tax credits for the next many years, say 5 years. No need to impose any conditions because it is for protecting the environment and increasing electric cars on the road. For instance, I am prevented from buying an electric car with certain color and amenities simply because I won't be eligible for any TAX credits which is the prime incentive to buy an electric car. Of Course government can impose a restriction on super rich people getting the car with tax credit, anyway they are not concerned with what the government offers. The current income level restrictions and prices of the electric cars are not matching considering the inflation and current material costs. This is actually hindering the propagation for electric vehicles, hope that is not the case. Hybrids also may be given tax credits but half of what is offered for fully electric cars . Imposing conditions means preventing any incentives to protect the environment. We are not batting for any vehicle manufactures but to protect the environment for future generations. Regards, Rajesh and Sreeja.
Jeff Pitoniak	1/3/2023 18:28	Three wheeled vehicles should be allowed. Sent by Jeff
Louis Jovanovich	1/10/2023 15:11	Hello, my name is Louis Jovanovich, I would like to comment on the EV tax credit. We need the tax credit to speed up the transition to EVs, and we need it allowed in more generous circumstances. It's infeasible considering the current supply chain to expect batteries to me made in the US, at least for now, and that requirement should be held for a couple years. Furthermore, an EV from the company Apterta is not eligible for the tax credit, despite being an American company, because it's vehicle is a three wheeled vehicle, and other than that, it functions as a car in every other way. Three wheeled vehicles like that should be eligible for the tax credit, because their low cost and efficiency can be a big part of making the transition to EVs quicker, cheaper, and more sustainable
Hansen Qian	1/3/2023 19:11	I write to encourage you to update the rules around the plug-in electric vehicle tax credit, publicly announced here: https://www.federalregister.gov/documents/2022/12/30/2022-28402/proposed-collection-requesting-comments-on-form-8936-qualified-plug-in-electric-drive-motor-vehicle I encourage the administration not to use the gross vehicle weight rating in determining whether or not a vehicle is a "SUV" or not. The definition of a "SUV" has changed over the years and there is no reason why we should stick with a traditional weight-based definition. There are many other ways that better fit the definition, such as the type of vehicle chassis used, the configuration of doors/trunks, and even vehicle suspension/ride height. By sticking with the weight classification, we push consumers towards heavier vehicles in order to obtain the tax credit, which significantly detract from pedestrian/bike safety, increase wear/tear on our publicly-maintained roads, and continue encouraging conspicuous consumption rather than promoting more efficient solutions. Thank you, Hansen
Monica Morin	1/3/2023 20:06	pra.comments@irs.gov<mailto:pra.comments@irs.gov> Include OMB Control No. 1545-2137 in the subject line of the message. It's absurd that the federal government offers $7,500 off an electric car, but $0 off an electric bike, cargo bike, golf cart, or Neighborhood Electric Vechicle— all of which have a much smaller carbon footprint. Monica Hope Morin

Name	DateTimeReceived	Body.TextBody
Jed White	1/3/2023 20:10	My comment on this matter is that there should be a credit for e-bikes. It is absurd that the federal government offers $7,5000 off an electric car, but zero for an electric bike. An e-bike is a car replacement, and it has a much small carbon footprint than any e-car. Thank you. [Bryan Cave Leighton Paisner Logo] JED WHITE Partner
Adam T	1/3/2023 21:13	I am writing to express my concern about the current qualified plug-in electric vehicle credit offered by the federal government. While I appreciate the incentive of offering $7,500 off the purchase of an electric car, I am disappointed that there is no similar credit offered for other electric vehicles with a smaller carbon footprint, such as electric bikes, cargo bikes, golf carts, or Neighborhood Electric Vehicles. As you may know, electric bikes, cargo bikes, golf carts, and NEVs all have a significantly smaller carbon footprint than traditional cars, and promoting the use of these vehicles could have a significant impact on reducing carbon emissions. By offering credit for the purchase of these types of vehicles, the federal government could encourage more people to make the switch to low-emission transportation options. In addition to their lower carbon emissions, electric bikes, cargo bikes, golf carts, and NEVs also have lower infrastructure and maintenance costs compared to traditional cars. For example, electric bikes do not require the construction of expensive roads or the maintenance of roadways, and they take up significantly less space for parking. Golf carts and NEVs also have lower infrastructure and maintenance costs, as they can often use existing roads and do not require the construction of specialized infrastructure. Promoting the use of these types of vehicles could not only help reduce carbon emissions, but it could also save money on infrastructure and maintenance costs. These cost savings could be passed on to taxpayers, making low-emission transportation options more accessible and appealing to a wider range of people. I urge the Internal Revenue Service to reconsider the current qualified plug-in electric vehicle credit and consider extending it to include electric bikes, cargo bikes, golf carts, and NEVs. These vehicles have the potential to make a meaningful contribution to reducing carbon emissions, and it is important that the federal government take steps to encourage their adoption. Thank you for considering my comments. Sincerely, Adam Tampio
P B	1/4/2023 1:21	Limiting electric vehicle credits to just automobiles is a terrible incentive if the goal is any greater than enriching auto manufacturers. To actually reduce carbon emissions, and see other net benefits you could include other electric vehicles like electric bicycles and neighborhood electric vehicles. Peter Beels
Jared Adrian Subia	1/4/2023 2:46	Dear Mr. Garcia Let's forget about the climate change debate and focus on energy efficiency which is something more agreeable on. Not to say climate change is not a factor, but this is something you might want to bring up in however you debate these proposals. Here in my state of California I experienced first hand the straining of our power grid and experienced numerous rolling black outs. Heavy electric automobiles, trucks, and SUV's would greatly add to the load on an already stressed grid. There may be very little to no long term benefit to the subsidization of heavy electric vehicles if they are consuming a power grid powered by a mix of fossil fuels and renewable energy. What really is worth subsidizing are light electric vehicles: electric bikes, scooters, golf carts, etc. Subsidies would be cheaper and more widespread as the cost of these light EV's are a fraction of heavy EV's. My own personal electric bicycle, Velotric Discover 1, cost me around $1300. And SO many other brands of electric bicycles fall under $2000. You are offering people $7500 for heavy EVs priced in the tens of thousands! This literally means that giving away approximately 10 electric bicycles is the equivalent to the subsidization of one heavy EV. Numbers vary but you get the gist of it. Light EV's accomplish the same task heavy EV's do, but cheaper, safer, and environmentally sound. And you obviously can tell that the production of light EVs use less rare metals and consume less energy to produce and use. Again , my bike can take me 60 miles on one charge. And you can take e-scooters and e-bikes on public transit for any long distance trips. Not to mention light EVs have very little road degradation, whereas heavy EVs will still cost billions in road maintenance. Please consider including light EVs to your EV credit proposal. Imagine the highways and roads cleared of millions of vehicles as citizens instead use their electric bicycle. Cities and states actually reach their emission reduction goals. It's a future you can help build if you make this happen. Thank you for your time. -Jared Subia

Name	DateTimeReceived	Body.TextBody
Olivier Bouan	1/4/2023 3:33	Hi, I'm sharing a comment on the $7,500 EV tax credit. Many may write in wondering why this credit does not apply to smaller EVs which are safer and better for neighborhoods than their heavier, larger "suv" counterparts. I support those comments. More importantly though, I think it's absolutely critical that this credit be extended to other forms of electric mobility that can reduce car usage overall including e-bikes, e-scooters, e-cargobikes. If we're willing to give a family of 4 $7,500 in credits for buying an electric SUV, we should be willing to give a family of 4 at least the same amount of money for buying 4 e-bikes. The latter will reduce congestion, is even better for the environment, is safer for communities, and will lead to better health outcomes for that family. Please consider revising the rules to support e-bikes. Best, Olivier Bouan -- Sent from my mobile device. Please excuse errors and typos.
Roslyn Chao	1/4/2023 6:52	If the goal is electrification, decarbonizing, and reducing energy/resource use, then support a rail system and better public transport. If the goal is to electrify and decarbonize, then e-bikes, EVs should receive a full tax credit amortized over x number of years of ownership. One credit per person (bike or EV). Plug-ins (ice + ev), used EVs, used e-bikes, and other forms of electric mobility should receive lesser tax credit (amortized over x years of ownership). Years of ownership should be as extensive as possible to minimize energy/resource use and to discourage planned obsolescence, which contributes to climate change and biodiversity loss.
Brian B	1/4/2023 7:12	Hello, I'm writing in regards to the proposed tax credits for EVs. I'm in favor of tax credits for EVs and think they should be even higher than they currently are to address the climate emergency. However, I find it strange that there are no tax credits for eBikes, eScooters, and other vehicles that have far less of a carbon footprint than an EV, and are considerably cheaper relative to a car. We need tax credits that also apply to other green forms of transportation. Thank you.
Carla Sanderson	1/4/2023 8:56	Hello, The irs should not give any tax break to any vehicle purchases. Even electric vehicles are awful for the environment due to the battery and production. Large ones are especially dangerous to pedestrians. The IRS should give full tax breaks to those who either do not own vehicles at all or purchase electric bikes. Stop pandering to the car lobby and car companies! Give tax breaks to those who choose not to own vehicles at all and who purchase bikes and electric bikes, cargo bikes instead.
Michael May	1/4/2023 9:09	It's absurd that the federal government offers $7,500 off an electric car, but $0 off an electric bike, cargo bike, golf cart, or Neighborhood Electric Vechicle— all of which have a much smaller carbon footprint. Michael May Bethesda, MD -- Mike May
Caryl Wyatt	1/4/2023 10:16	Public comment on Qualified Plug-in Electric Vehicle Credit and Rev. Proc 2022-46: It's absurd that the federal government offers $7,500 off an electric car, but $0 off an electric bike, cargo bike, scooter, golf cart, or Neighborhood Electric Vechicle— all of which have a much smaller carbon footprint. Thank you, Caryl Wyatt
James Popp	1/4/2023 10:17	Why isn't there a subsidy for electrically powered bicycles? The car oriented program should not be extended, whether internal combustion or electric, cars are still terribly damaging to the environment, people, and society and they should be taxed and discouraged appropriately. This is one of the most backward tax incentives out there.
Kurtis Pozsgay	1/4/2023 10:31	The federal government offers $7,500 off an electric car, but $0 off an electric bike, cargo bike, golf cart, or Neighborhood Electric Vechicle— all of which have a much smaller carbon footprint. I don't even totally mind an EV credit, but if we are truly trying to offer incentives correctly then it should be offered to these other uses as well, to say the least. Kurtis Pozsgay
Joseph Schiarizzi	1/4/2023 10:38	Hello, I am a citizen of Virginia. It's absurd that the federal government offers $7,500 off an electric car in tax credits, but $0 off an electric bike, cargo bike, golf cart, or Neighborhood Electric Vehicle (like golf carts)— all of which have a much smaller carbon footprint. If I buy a brand new 7,000 lbs F-150 truck, with a 1,500 pound battery I will get $7,500 in tax credits for "saving the environment." But if I take the bus and own no car I get nothing. This is clearly messed up and wrong. Joseph Schiarizzi
Leo Martinez	1/4/2023 10:53	E-bikes are selling twice as much as EV's & reduce our emissions by way more than EV's do. Because of this, there should be NO EV Credit without an EBIKE Credit. Thanks

Name	DateTimeReceived	Body.TextBody
Bobby Dunlap	1/4/2023 11:59	Hello, This is a comment on OMB Control No. 1545-2137. While I support the federal tax credit for electric vehicles, I believe it should be extended to electric bikes, cargo bike, golf carts, or Neighborhood Electric Vehicles. These have a much smaller carbon footprint and impact on the ability to get around communities. Please consider extending. Best, Robert Dunlap -- Robert M. Dunlap
ms meowkins	1/4/2023 12:09	Electric vehicle tax credit is great but it must be paired with a tax credit for e-bikes which have a much smaller carbon footprint. It is ridiculous to have tax credit for cars but not bikes.
Jordan Wyatt	1/4/2023 12:18	Thank you for taking comments about the EV tax credits. I'm deeply concerned with the financial incentives that this creates. I understand the logic in higher incentives based on battery size, but this essentially will subsidize purchasing larger, more dangerous vehicles (for pedestrians and cyclists) more than a car. EVs already weigh significantly more than standard vehicles because of the battery. This is going to create an increasingly dangerous situation for our most vulnerable road users, cyclists and pedestrians. Pedestrian and cyclist fatalities been increasing all around the country and subsidizing huge heavy vehicles will continue this slippery slope. Further, there's no credits for e-bikes or scooters. Not all of us want or need a car and would prefer to bike or scoot. It's unfair to continue to subsidize car users and provide no incentive for the rest of us. The EV credits you're providing would completely pay for these e-bikes or scooters. Mode shifting away from cars would help our cities save money by reducing our need for large roads that are a money-pit for our cities to maintain. PLEASE reconsider. Jordan Wyatt He/Him
Ashley Elliott	1/4/2023 12:27	Dear Andres Garcia, Many of the EVs listed on this tax incentive are large, dangerous, and too expensive for the average American to afford. It is ridiculous that the federal government offers $7,500 off an electric car or truck that causes more road damage, more pedestrian death/injury, and an inefficient use of resources, but $0 off an electric bike, cargo bike, golf cart, or Neighborhood Electric Vehicle— all of which have a much smaller carbon footprint than any of the vehicles currently qualifying under this incentive. Electric bikes are popular and have outsold EVs for the last two years. The government should be incentivizing the purchase of these smaller, more efficient vehicles and working with states and local governments to make them more viable forms of transportation. State and local level incentives have proven to be wildly popular and to help reduce VMT, and the federal government should be investing and incentivizing the adoption of these smaller vehicles, beginning with extending these refunds to electric bicycles, cargo bikes, golf carts, and Neighborhood Electric Vehicles. Thank you, Ashley Elliott
Israel Hadar	1/4/2023 12:33	Dear Andres, I saw that the IRS is looking for comment on EV tax credits. As a tax professional, I consider this issue very heavily. Tax credits are inherently a government subsidy of a project and subsidies, for either political or practical reasons, are limited in availability. It is my opinion that we need not subsidize large electric vehicles. Should the government subsidize EV's those should be limited in weight and size. Additionally, an expensive luxury vehicle should not be subsidized by the public. Luxury cars should not be subsidized. I do not believe that even a phase out would be appropriate. There should be a hard cap on which cars get support. Finally, it is my belief that the modes of transportation we should be supporting are those that promote better health, living conditions, and mobility. Subsidizing electric bikes, bike lanes, and trains are better for our planet, our health, and our wallets. Cars represent a massive burden to the average citizen, and the government should not be encouraging their further entrenched enforcement and maintenance. Best, Israel Hadar
Lisa Pfeiffer	1/4/2023 12:35	Dear Andres Garcia: This is a comment on federal tax credits for electric vehicles. I believe the program is misaligned with incentives. We want to incentivize the lowest-carbon footprint means of transportation. This includes electric vehicles, yes, but also electric bikes. The tax credit should also be decreasing with increasing vehicle weight, as vehicle weight is associated with additional carbon (such as road wear and repair) and non-carbon (such as safety of pedestrians) externalities. Therefore, tax credits should be the highest for electric bicycles and lightweight electric vehicles, and lowest for electric SUVs and trucks. Sincerely, Lisa Pfeiffer
Berman, Rachel	1/4/2023 12:37	Dear Andres Garcia, I saw that the IRS is looking for comment on EV tax credits. Tax credits are inherently a government subsidy of a project and subsidies, for either political or practical reasons, and are limited in availability. It is my opinion that we need not subsidize large electric vehicles. Should the government subsidize EV's those should be limited in weight and size. Additionally, an expensive luxury vehicle should not be subsidized by the public. Luxury cars should not be subsidized. I do not believe that even a phase out would be appropriate. There should be a hard cap on which cars get support. Finally, it is my belief that the modes of transportation we should be supporting are those that promote better health, living conditions, and mobility. Subsidizing electric bikes, bike lanes, and trains are better for our planet, our health, and our wallets. Cars represent a massive burden to the average citizen, and the government should not be encouraging their further entrenched enforcement and maintenance. Best, Rachel Berman

Name	DateTimeReceived	Body.TextBody
Miles Payton	1/4/2023 13:47	Hi IRS, my comment is that it is absurd that we taxpayers are subsidizing the purchase of luxury electric vehicles (it's hard to find new ones under $40,000) and billing it as a climate solution. This money could be far better spent on mass transit or bicycle infrastructure. Or, consider a smaller and far more impactful credit on e-bikes, which are safer and require a fraction of the resources compared to, say, a 6000lb electric truck. Thanks, Miles Payton
kent Strumpell	1/4/2023 13:56	Subject: OMB Control No. 1545-2137 Comment on Form 8936, Qualified Plug-in Electric Drive Motor Vehicle Credit Dear Andres Garcia, INCLUDE ELECTRIC BIKES IN THE PROGRAM The omission of electric bikes as a qualifying electric vehicle type is a missed opportunity for reasons noted below. Federal policies should be corrected to include incentives for electric bikes at the earliest opportunity. Electric bikes have many benefits over electric cars: - They use orders of magnitude fewer resources to manufacture; - They consume a fraction of the electrical energy. Our electrical grid will be seriously challenged to meet the high-energy charging demands of millions of EVs. In most cases, vehicle owners will be required to upgrade wiring and install chargers at considerable expense. In contrast, electric bikes can be charged with existing circuits in homes and elsewhere with a fraction of the energy required for full-sized EVs. - They consume minimal road space and parking space; - They cost a fraction of that of electric cars, making them available to far more people; - Widespread use of electric bikes can happen far quicker than the conversion of the motor vehicle fleet to EVs, and speed is essential in our response to climate change, the impetus that is driving this program. Electric bikes would make more efficient use of credits If electric bike purchasers were offered incentives similar to those for electric cars, far more people could take advantage of the resources, making very efficient use of the credits since electric bikes cost far less than full-sized electric cars. Comparable functionality for local trips Electric bikes are capable of serving the needs of many commuters and for utilitarian trips. The rapidly growing availability of electric cargo bikes expands the capability of this vehicle type dramatically, making it suitable for shuttling children to school, grocery shopping and transport of bulky

Mark Remy	1/4/2023 14:17	Here is my comment on Form 8936, Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022-42: Focus less on incentives that keep people in huge, heavy, infrastructure-destroying vehicles, most of whose trips will be less than a few miles, and more on incentives to get people on bicycles, including e-bikes. Our mindless addiction to cars and trucks is insane. Thank you. Mark Remy Portland, Oregon
Jacob Sodaro	1/4/2023 15:23	To whom it may concern, I am writing today to express my concerns regarding the electric vehicle tax credits. While possibly outside of the scope of the Inflation Reduction Act's provision, I am mainly disappointed to find that electric bicycles and electric scooters are being disregarded in this act. I would like to see the actually sustainable methods of transportation adopted and encouraged outside of passenger vehicles. Thank you
Roberto Flores	1/4/2023 16:10	We need a tax credit for e-bikes. I have a 10 minute commute I could do on an e-bike if they werent so expensive. -- Roberto Flores
David Lovitz	1/4/2023 16:30	Electric vehicles should include bikes and other lightweight, safer, and more environmentally friendly options besides cars.

Name	DateTimeReceived	Body.TextBody
Daniel Cd	1/4/2023 16:48	It’s absurd that the federal government offers $7,500 off an electric car, but $0 off an electric bike, cargo bike, golf cart, or Neighborhood Electric Vechicle— all of which have a much smaller carbon footprint, take way less space, not dangerous for society and keep people in better shape.
Bruce Lahmayer	1/4/2023 17:16	dropped as soon as they reached the 300000 limit. So We are against rebates for any of the OEM's because it doesn't benefit the consumer when the prices are held high to just soak up the rebate. Let the market decide and let these companies compete on the quality of their products. But, if you are going to have rebates in spite of my negative opinion on them, then here are my suggestions: 1. If you are going to have rebates, then there absolutely should not be any politics involved. Listening to Joe Biden praise Mary Bara for leadership on EV's was clearly pandering for UAW votes and it just showed that Joe is willing to lie just like all the other politicians. Punishing Tesla because they are not unionized should never happen. We should be thanking Elon Musk and Tesla because that is where the leadership is. We took a chance on the unproven Bolt in 2017 by purchasing one. We wanted to help GM with electrification and what better way than to purchase their new all electric car. We hoped that GM would do the right thing by setting up a charging network and coming out with more affordable EV's. What did we get? The Hummer EV which is an abomination, a horrible example of excess and stupidity that uses the mineral resources for at least 3 efficient EV's and it can't even carry much more weight that what you would get with putting 4 big people into it. What about a charging network? They have a nationwide presence with their dealerships. Nope. I assume they are waiting for another government bailout. I tried using the hodgepodge of charging stations that I could access with the Bolt. They were completely unreliable and I finally just gave up and never drove the car more than about 50 miles from home. The ultimate no good deed gets unpunished moment came when the Bolt battery fires started happening and our car became safety concern and therefore almost unusable. GM gave us an incredibly awful run around for over a year until we finally made it through the lemon law process. It was financially a poor outcome for us, but preferable to any further dealing with the awful company the GM really is. GM should have treated all Bolt owners the same no matter what state they bought their car in. They should have done it quickly and been generous in the buyout offers. 2. If you are going to have rebates then cars like the Hummer EV and all other high end EV's should be off the list. The people who buy those don't need rebates. 3. If your are going to have rebates then they should be aimed at the cars that can meet a certain level of efficiency and affordability. Car makers should not be allowed to raise prices to just absorb the rebate. 4. If you are going to have rebates they should not include motorcycles. Motorcycles are not usable much of the time because of weather conditions and so they don't get a lot of miles and therefore don't really help all that much with reducing carbon emissions. The vehicle needs to be used enough to recover the embodied carbon footprint of production. 5. If you are going to have rebates then autocycles should be included. The Aptera is one vehicle in this class and it is nearing production. It has the
Shawn DuLac	1/4/2023 17:55	Good Day, I wanted to provide my feedback on form 8936. 1. For credit qualification, Credits should be based or prorated based on the following: * Vehicle Propulsion i. 100% EV/Hydrogen qualifies should qualify for 100% of the amount based on the goals of the program. ii. Gas Hybrids should be at 50% or less depending on how much range the battery extends based on a full gas tank. IE if the hybrid can extend range by 50%, they qualify for 50% bonus. If 10%, then 10%. iii. Alternative vehicles such as ebikes, E motor cycle, Arciimoto FUVs and other non car EVs should be considered but at a reduced rate. These vehicles with lower price points allow entry for the EV market place or the ability for those with reduced incomes to give up their gas cars and go electric within the cities the reside. * Ebikes should have a min starting price to qualify * These vehicles are designed to be local transportation vs long distances and I would expect only a portion of the rebate to apply. 1. Vehicle types * Seating capacity should not dictate the vehicle type when determining SUVs. * Please use the EPA guidelines that are already in place vs customizing rules to include or exclude certain makes and models. 2. Vehicle Production location – This bill seems to be focused more on selling more domestically produced units then others built offshore. We should not be supporting units produced outside of US/Canada/Mexico. If you wanted to, then dictate that a majority % of the total vehicle build is manufactured in the US. Thank you for your time, Shawn Du Lac
Eric Olson	1/4/2023 18:16	It’s absurd that the federal government offers $7,500 off an electric car, but $0 off an electric bike, cargo bike, golf cart, or Neighborhood Electric Vehicle— all of which have a much smaller carbon footprint. Tax credits should be applied to those modes of transportation that have the lowest environmental impact. Eric Olson
Jenn Shasserre	1/4/2023 18:28	Hello. I am a graduate student earning a masters in Emergency Management, currently serving in a fellowship role for the Portland (OR) Division of Community Safety. I would like to comment that I believe there should be a credit on electric bicycles. I ride my (pedal) bike downtown, to avoid sitting in traffic and hunting for parking. When I have to carry things or need to wear business attire, I am forced to drive, unless I have time for 1 hour long public transit ride. An electric cargo bike (and faster transit) would solve these problems. I don't mind electric vehicles, we have a small (limited range) one, purchased used, at home. But traffic in our city is terrible! I worry about solutions that don't include alternatives to cars, which typically have a much lower carbon footprint than a Tesla! Thanks! Jennifer Shasserre

Name	DateTimeReceived	Body.TextBody
Elmedina B	1/4/2023 18:42	Hello Andres Garcia of the Internal Revenue Service, It is a bad idea to provide tax credit to electric vehicles when there are PLENTY of other means of transportation with a lower carbon footprint. I am in support of electric bikes AND regular bikes having tax credit opportunities before/during/after purchasing. I honestly don't like how TESLA is taking over the market and being given special treatment. -- Sincerely, Elmedina Brkic
Isaiah Berke	1/4/2023 19:38	Dear Andres Garcia, I applaud the federal government's efforts to encourage electric vehicle usage. However, I believe the lack of incentives for electric micro mobility, such as e-bikes, cargo bikes, scooters, golf carts, represents a failure of imagination and climate leadership. I live a car free life, relying chiefly on my ebike and public transit, and not only should my lifestyle be incentivized on its own terms, it would help unleash a revolution in safe transportation infrastructure that will remove the automobile as the main method of transport for americans. Sincerely, Isaiah Berke
Nelson Santry	1/4/2023 22:12	Please include electric bikes, scooters, golf carts in the tax credit for green transportation. I would much prefer to own an ebike than an electric car- and the ebike has a dramatically smaller carbon footprint, which is the whole point of the tax credit. Thank you for your consideration. Cheers! Nelson
Alysha Haggerton	1/5/2023 0:19	Electric Vehicles are the future of auto transport, but the future of transport in general is not the personal automobile - regardless of its engine-type. The federal government needs to extend tax credits to forms of transportation which have a much smaller carbon foot print than just single-occupant vehicles, especially for modes like electric bike, cargo bike, golf cart, or Neighborhood Electric Vehicle. Consider also ways to subsidize any mass-transit costs directly back to the consumer/rider when the transit authority moves a certain percentage of its service population via fleet methods with renewable energy sources. This would incentivize individuals to support local authority in adopting policy & infrastructure $ to implement mode-shifts as soon as feasible.
Trevor	1/5/2023 10:30	It's counter productive to offer tax credits on electric cars but not eBike, eScooters, eCargo bikes, eVelomobiles, and other forms of micro mobility, which have numerous benefits over electric cars. At a minimum, please expand this program to include micro-mobility options. Ideally- extend this credit _only_ to micromobility options and change vehicle registration to be based on dry curb weight- as electric vehicles are heavier and cause more damage to the roads, they should be responsible for more of the tax burden, not less. The increase in revenue should be used to invest infrastructure to protect micromobility users from dangerous, over weight, EVs which pose significant threat to life of more responsible road users. tg
Tim	1/5/2023 10:54	Hi! $7500 is great for a car. But, why nothing for ebikes, scooters, neighborhood EVs, etc? A $500 credit on an e-bike would have a much bigger impact on carbon footprints. Add it for ebikes! Tim Josephson Canaan, NH
Kate Phelan	1/5/2023 10:57	Hello, Although I'm pleased to see that the federal government will be offering tax rebates for electric vehicles, I would like to see this offer expand to include other electricized conveyances like ebikes, scooters, golf carts, etc., to help Americans continue to make choices that help them live a comfortable life while assisting with ending climate change. Thanks, Catherine --- Catherine Phelan
James Meiners	1/5/2023 10:57	It's truly absurd that the federal government offers $7,500 off an electric cars, but $0 off electric bikes, cargo bikes, golf carts, or even Neighborhood Electric Vehicles — all of which have a much smaller carbon footprints. _____ James Meiners
Alex Lawson	1/5/2023 10:58	To whom it may concern: The federal government should offer this rebate for less polluting electric vehicles like e-bikes and e-scooters. Sincerely, Alex Lawson
sean topel	1/5/2023 11:04	It's absurd that the federal government offers $7,500 off an electric car, but $0 off an electric bike, cargo bike, golf cart, or Neighborhood Electric Vehicle — all of which have a much smaller carbon footprint. Sean Topel, Frederick, MD

mark rauber	1/5/2023 11:12	I appreciate this kind of initiative but cannot fathom how a government agency of such proportion, power and skill set does not include electric bikes, moped, scooters etc. - all of which have a much smaller carbon footprint! I'm aware this is heavily influenced by certain lobbying groups but the people are desperate to get a government that cares for the ever day citizen rather than solely big companies. Thank you. Best, Mark
perezeric27@icloud.com	1/5/2023 11:12	To whom it may concern: It's absurd that the federal government offers $7,500 for electric car, but $0 for electric bike, cargo bike, golf cart, or Neighborhood Electric Vehicle — all of which have a much smaller carbon footprint. Sincerely Eric Perez
Todd Martino	1/5/2023 11:17	To whom it may concern, It's absurd that the federal government offers $7,500 off an electric car, but $0 off an electric bike, cargo bike, golf cart, or Neighborhood Electric Vechicle— all of which have a much smaller carbon footprint. Regards, Todd Martino Queens, NY
Justin McGown	1/5/2023 11:22	Hello, I am of the mind that the US should continue supporting tax subsidies for electric cars, however they should be somewhat reduced and the funds that frees up used to support micromobility solutions such as e-bikes and other small electric personal conveyances. These drastically increase mobility and decrease carbon footprints far beyond what electric cars can achieve. They are a worthwhile investment for people in almost every section of the country and require the use of far fewer resources. Many thanks, Justin McGown Norwalk, CT 06855
Simon Feeman	1/5/2023 11:49	Hello, I don't understand why this is limited to cars alone. Plenty of folks should be getting rid of cars not buying new ones, furthermore, they should be replacing them with a neighborhood vehicle or an Ebike/scooter. 750$ of credits to ebikes and 250$ to scooters would completely change how we travel. Best Regards, Simon Feeman
Leif Fedje	1/5/2023 12:00	Offering a $7,500 credit on an electric car but a $0 credit for an electric bike, cargo bike, golf cart, or neighborhood electric vehicle is a ridiculous handout to the auto industry. Every mode of transport listed above that is not recognized for that credit has a much smaller carbon footprint than any electric car. Leif Fedje Minnetonka, MN
Stephen Agnew	1/5/2023 12:10	If the federal government offers $7,500 off an electric car, it should also offer a substantial tax credit for an electric bike, cargo bike, golf cart, or Neighborhood Electric Vechicle, all of which have a much smaller carbon footprint. Stephen Agnew
Brooks Lawson	1/5/2023 12:21	1. The purpose of this legislation should be to transition to sustainable and independent energy. This should not be highjacked by special interest groups like unionized manufacturers, or legacy manufacturers that utilize the outdated middlemen known as "dealerships", it should be to the benefit of Americans. As much as the President likes to lie about who is innovating in the field of electric vehicles, it is STILL Tesla. No other OEM is investing in charging infrastructure like they are. Any incentives that do not include Tesla will be perceived as corruption at the highest levels. 2. The legislation should include "autocycles" that are far more efficient and use far less energy than typical vehicles, thereby reducing greenhouse gases on a much larger scale. These vehicles are also generally more affordable to the public, and can be made even more compelling with a tax incentive. Thank you
Nate Vack	1/5/2023 12:33	Dear Mr. Garcia: My only comment on 1545-2137 is that the credits should be available for other forms of electric transport as well — they should cover electric bicycles, mopeds, and electric golf carts that will be used outside of recreational sports. Thank you for your time, -Nate Vack Monona, WI
Mark Dorison	1/5/2023 13:07	It's absurd that the federal government offers $7,500 off an electric car, but $0 off an electric bike, cargo bike, golf cart, or Neighborhood Electric Vehicle— all of which have a much smaller carbon footprint.
Justin Thompson	1/5/2023 13:57	I think it is outrageous that the federal government offers $7,500 off an electric car, but $0 off an electric bike, cargo bike, golf cart, or Neighborhood Electric Vechicle— all of which have a much smaller carbon footprint. Maybe think about what's best for consumers and not what's best for Elon. Sincerely, Justin Thompson
Ryan Truitt	1/5/2023 14:00	Hello, Please include electric bikes in this provision. Thank you, Ryan

Name	DateTimeReceived	Body.TextBody
James O'Marr	1/5/2023 14:47	Just make it all MSPR $80k or less EV's assembled in North America. Have a Minumial on EPA range/pack size for the full credit regardless if it is a BEV or PHEV. If it falls under that EPA range/pack size then it gets half credit. That will keep low mile PHEVs from getting the full credit. Include Autocycles (3-wheel) EV like the Aptera that fully enclose the passenger area. Thank you, James O'Marr
Scott Delhommer	1/5/2023 14:54	Thank you for taking time to read this email and feedback on the electric vehicles tax credit. I think that it is absolutely ridiculous and absurd that our government is subsidizing electric cars and not electric bicycles. By further subsiding electric cars, we are continuing down an unsustainable path and transportation system. I know that this suggestion will fall on deaf ears, but this subsidy should be for ALL electric vehicles and not just electric motor vehicles. Electric bicycles have far lower emissions associated not just with production but also operation. Electric bicycles are also more popular than electric motor vehicles. Obviously this comment will achieve absolutely nothing, but I'd like to make it known that this is an awful policy as it is not inclusive enough of electric vehicles that are not motor vehicles. Thank you Scott -- - Scott D.
Jordan Lewis	1/5/2023 15:12	Hello, It is ridiculous that our country will offer 7500 dollars of tax credit for an electric car, but nothing for an electric bike, scooter or mobility device. Adoption of electric mobility devices would be far cheaper, require less subsidy, reduce vehicle miles traveled (VMT), make our streets safer, and reduce traffic for those who drive. Many states are considering benefits for electric mobility devices such as bikes or scooters; now is the time for the federal government to act.
Glenney, Matthew P. (Fed)	1/5/2023 17:07	Only include full EVs in the tax credit. Giving an EV tax credit to a vehicle that uses gasoline or diesel is a gross misuse of government funds, and it displays greater incompetency at not knowing what an EV is. By this logic I can get a $7,500 tax credit for buying a $500 electric bike. Matthew P. Glenney
LeoMMara	1/5/2023 17:25	Hi, I am writing you about the electric vehicle tax credit qualifications. I am asking you to have it cover 'all' MSRP EV's costing $60K or less which are assembled in North America. There should be a minimum on EPA range/pack size for the full credit regardless of if it is a sEV, bEV or phEV. If it falls under that EPA range/pack size, then it gets half credit. That will keep low mile phEVs from getting the full credit. Please include Autocycles (3-wheeled) EVs like the Aptera, which is the most efficient vehicle on the planet, that have a fully enclosed and protected passenger area, and all the amenities and safety of a fully equipped four-wheeled vehicle. Thank you for your consideration. Make Someone Smile. (It can be you. 😊) Leo M. Mara 😊 Livermore, CA 94550
Rhiannon Fox	1/5/2023 19:03	I find it absurd that the government offers $7,500 in incentives for an electric car, but no incentive whatsoever for an electric bike / cargo bike, electric scooter, or other micromobility options, despite these having far, far smaller environmental impacts and creating a much safer streetscale for all other users. Please change this. Thanks, Rhiannon Fox
Aziza Mara	1/5/2023 22:47	Good Day, I am writing you about the electric vehicle tax credit qualifications. I am asking you to have it cover 'all' MSRP EV's costing $60K or less which are assembled in North America. There should be a minimum on EPA range/pack size for the full credit regardless of if it is a sEV, bEV or phEV. If it falls under that EPA range/pack size, then it gets half credit. That will keep low mile phEVs from getting the full credit. Thank you for your consideration. Aziza Mara
Charles Kannel	1/6/2023 7:40	Hi, I'd like to comment on the Electric Vehicle Tax Credit. This tax credit should be extended to electric bikes and scooters, which have far lower externalities (in terms of traffic, emissions from manufacturing, and energy usage) than electric cars. We incentivize people to buy and drive cars when an alternative form of transportation would be a suitable substitute. Please consider mirroring the incentive for e-bikes and e-scooters. Thank you. Charlie Kannel

Name	DateTimeReceived	Body.TextBody
Michael A Gallo	1/6/2023 7:44	There is no reason that the federal government should subsidize any cars, electric or otherwise. Electric bikes make us healthier, have a much lower carbon footprint, are much less likely to kill other road users. Thank you, Michael A Gallo
Clara Raubertas	1/6/2023 10:57	It's absurd that the federal government offers $7,500 off an electric car, but $0 off an electric bike, cargo bike, golf cart, or Neighborhood Electric Vechicle— all of which have a much smaller carbon footprint. Tax rebates for electric vehicles shouldn't just be giveaways to big car companies - they should be designed to actually motivate individuals to use more efficient transport.
Daniel Brodie	1/6/2023 12:30	Hello, I am writing to you about the electric vehicle tax credit qualifications. I am asking you to have it cover 'all' MSRP EV's costing $60K or less which are assembled in North America. There should be a minimum on EPA range/pack size for the full credit regardless of if it is a sEV, bEV or phEV. If it falls under that EPA range/pack size, then it gets half credit. That will keep low mile phEVs from getting the full credit. Please include Autocycles (3-wheeled) EVs like the Aptera, which is the most efficient vehicle on the planet, that have a fully enclosed and protected passenger area, and all the amenities and safety of a fully equipped four-wheeled vehicle. Scott	1/6/2023 16:13	accelerate the shift to clean energy. * Applicable to all MSRP $80k or less EV's assembled in North America. * Establish a graduated or threshold credit for electric range providing partial credit only to low range PHEVs designed with a small supplemental battery but still relying heavily on ICE. * Include autocycles (3-wheel) EV's like the Aptera SEV that fully enclose the passenger area (designed to maximize energy efficiency and utilize solar power). * Include all-electric motorcycles and bicycles (2-wheel) which provides efficient commuter transportation in urban areas and reduces road congestion, getting people out of their trucks and cars. What seems to be muddying the waters in 26 USC 30D and IRS regs are the inappropriate and inconsistent specificity and definitions of vehicles such as vans, SUVs, and pickups, confusing the applicability of the regulations and seeming to convey political vs technical incentives. Scott Noga Pasco, WA
Mackey Guenther	1/6/2023 18:47	not offer any similar incentives for electric bikes, cargo bikes, golf carts, or neighborhood electric vehicles, which all have a significantly smaller environmental impact. If the rationale of this credit is truly the importance of vehicle electrification to reducing the carbon intensity of the American lifestyle, it is only logical to extend the credit to these smaller vehicles, which require less energy to produce, and can coexist more safely with pedestrians and other road users – ultimately empowering Americans to more frequently use the least carbon-intensive form of movement known to society: walking.
Stephen Osberg	1/6/2023 21:50	Hello, I appreciate the tax credits offered for electric vehicles, but I think the price limits are too restrictive. Why not put an $80,000 cap on price regardless of vehicle type? Additionally, I'd like to see the inclusion of electric bicycles. Best, Stephen Stephen Osberg, AICP Vice President – Project Development Paul G Smith Associates Mobile 308.440.8378 Sent from my iPhone

Christopher Gray	1/7/2023 10:28	Sent from my iPhone To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you.
Aaron Redus	1/7/2023 10:32	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include electric motorcycles and autocycles, which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. Aptera, Electra Meccanica and Zero Motorcycles by Harley Davidson are good examples. These should be eligible for a rebate, even if at a reduced value. Currently the tax code states that in order to qualify for the rebate the vehicle must have four wheels. As we try to usher in a new era of electric vehicle adoption and go green as a nation, limiting what qualifies based on the number of wheels the vehicle has is counterintuitive. I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you, Aaron Redus
Daniel Chin	1/7/2023 10:35	Dear Andreas Garcia, I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see http://www.aptera.us for a great example for implementing solar panels on an aerodynamically efficient vehicle) <http://www.aptera.us%20for%20a%20great%20example)%20I%20urge%20you%20to%20broaden%20the%20interpretation%20to%20include%20these%20innovative%20and%20hyper%20efficient%20vehicles.%20Thank%20you.> Sincerely, Daniel Chin, Ph.D.

Rolly Rauenhorst	1/7/2023 10:38	To Whom It May Concern: I am writing in response to the request for comments in regards to the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. It is my belief that the goal of the EV credit is and should be to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles, which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. I believe additional credit should be given to vehicles that directly use solar to provide the power they require to travel. (see https://aptera.us/vehicle/ for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. [https://149677290.v2.pressablecdn.com/wp-content/uploads/2021/09/Aptera-OG-Image.jpg]<https://aptera.us/vehicle/> Vehicle | Aptera<https://aptera.us/vehicle/> Lighter cars require less energy to move. Aptera weighs 65% less than other electric vehicles today. The body is built with ultra-lightweight composites and its arched shape mimics the physics of an eggshell — that protects you and your loved ones with a safety cell that is much stronger than steel. aptera.us Thank you. Roland J Rauenhorst (Rolly) Cell: 952-807-4472 Email: rollyrauenhorst@hotmail.com<mailto:rollyrauenhorst@hotmail.com>
Jason Morris	1/7/2023 10:39	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Miguel Pinheiro	1/7/2023 10:47	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you. All the best miguel
Ed Hansen	1/7/2023 10:47	Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically in the U.S. The EV credit should include three-wheeled autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you.
Erik Sleeuwenhoek	1/7/2023 10:48	I'm responding to your solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. As goal of the EV credit is to facilitate a transition to more efficient and sustainable transportation , the EV credit should include plug-in electric autocycles. These 3 wheeled vehicles are some of the most efficient and sustainable vehicles on the market. I urge you to broaden the interpretation to include these super efficient electric autocycles. Thank you, Erik Sleeuwenhoek

Name	DateTimeReceived	Body.TextBody
Tim Vachon	1/7/2023 10:55	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the EV credit should include autocycles. For reference, see www.aptera.us<http://www.aptera.us>. This vehicle is hyper efficient, affordable, innovative and assembled in the US. All apparent goals the EV credit is trying to promote. Thank you. Tim Vachon
Aaron Redus	1/7/2023 10:55	Hello Mr. Garcia, I saw the request for comments on Form 8936, Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022-42. What is the purpose of this requests? Aren't the details of it set by lawmakers, so what does public opinion matter? Is it not already set in stone? What can change? Personally, I'd like to see the tax credit expanded so as to include street legal vehicles that have less than 4 wheels, such as Autocycles or Motorcycles. The current code defines a motor vehicle as a vehicle with four or more wheels. (If only the DMV agreed so I could avoid paying those pesky registration fees.) Anyways, I sent an email to the correct address for my comments, I was just hoping you could enlighten me as to what effect requests for comments like this actually have on policy when that policy is set by Congress. Thank you,
Dennis OConnor	1/7/2023 10:55	Revenue Procedure 2022-42. It appears people with a specific agenda have had undue influence in the development of this program. I hope you will review the current instantiation of this program and make it something that will achieve its stated goal. My suggestions for the Plug-in Electric Drive Motor Vehicle Credit: 1) Should only be for pure EV's 2) Should use industry accepted vehicle designations (ie. SUV/Other) 3) The "Other" class of vehicles should include autocycles which Aptera is an excellent example Thank you for the opportunity to comment. Dennis O'Connor
Jeffrey Liu	1/7/2023 10:56	Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper-efficient vehicles. Thank you.
Richard Brown	1/7/2023 11:05	The IRA credits are meant to encourage sustainable transportation manufactured in the US. The most sustainable vehicle currently manufactured in the US is the Aptera, a three wheeled autocycle manufactured in San Diego, CA. Please allow autocycles in general, or at least the three wheeled solar powered autocycle, Aptera, to qualify for tax credits to encourage truly innovative, made in America clean transportation. Thanks Rick Brown rickbrownproperties@gmail.com<mailto:rickbrownproperties@gmail.com> 972-904-2672 - Cell 806-364-1255 - Hereford Office Author of ---- Lunch With the Mafia<https://www.amazon.com/Lunch-Mafia-Temptation-Richard-Brown/dp/1724169874/ref=sr_1_1?crid=DDIYAAB771ZQ&dchild=1&keywords=lunch+with+the+mafia&qid=1588881356&sprefix=lunch+with+the+ma%2Caps%2C176&sr=8-1> and --- Chambers Island<https://www.amazon.com/Chambers-Island-Story-Cheating-Revenge-ebook/dp/B07JGNCKWD/ref=sr_1_1?dchild=1&keywords=chambers+island&qid=1588881409&sr=8-1> [https://ci3.googleusercontent.com/mail-sig/AIorK4zjRGvuJNaVRfqajOB_gj-3qxkdvIsCVlip2_BP2MqcY1GyzDEkoogcOeY53IWm06saihQ1-J4] [https://ci3.googleusercontent.com/mail-sig/AIorK4wgDT49R2Z-IHSQ9vWzxfB2iW1GC1T4wA3VwxhvNlhcX1k4_7Aa_TyVFxuQWmSjabMi-4Rb528]
Joop Verbaken	1/7/2023 11:13	To Whom It May Concern: am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you.

Lesley Gresham	1/7/2023 11:14	Please extend the credit and qualify new types of vehicles such as autocycles with three wheels like the ultra efficient Aptera, which is expected to go into production in late 2023. This vehicle can run on solar power only for up to forty miles per day, making it an excellent choice for many people as a commuter vehicle or a last mile delivery carrier. A full description can be found at www.aptera.us<http://www.aptera.us>. A tax credit for vehicles like this could encourage even more innovation in the direction of clean transportation. Thanks for your attention. Sincerely, Lesley Gresham
PATRICK PHELAN	1/7/2023 11:19	Hello! I'd like to voice my support for offering the EV tax credit for smaller vehicles, autocycles (3 wheels), motorcycles and bicycles (2 wheels). And ideally not heavy SUVs and light trucks, given the amount of resources they use. Sincerely, Patrick Phelan
Trey Downey	1/7/2023 11:20	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you.
Steven Dunn	1/7/2023 11:21	Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you. Steven M. Dunn 2104 Bennington Av. Flowert Mound Tx. 75028
Chad Stockman	1/7/2023 11:21	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manutacture of these more etticient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacturing AND during operations. (see www.aptera.us for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thanks
Robert Kirchner	1/7/2023 11:22	I am writing to respond to the solicitation for comments regarding the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe that the credit should be extended to make electric autocycles eligible. The Autocycle format (driving controls of a car, but built on three wheels) allows for great innovation in designing vehicles that are more efficient than automobiles, both in their impact on the electrical grid, and because they can use a smaller battery, in their use of in-demand imported materials. The Autocycle format also presents lower barriers to entry into transportation manufacturing, so supporting their sale further encourages innovation and employment in a climate-critical industry. Please take some time to check out www.Aptera.us<http://www.Aptera.us> as an example of what can be accomplished within the Autocycle format. For example, Aptera's unprecedented low drag coefficient of 0.13 would not be possible within the constraints imposed on the bumper heights of four wheeled vehicles. I am a US citizen residing in Canada, so I will not personally benefit from this tax credit. Nevertheless, I respectfully urge you to include language which allows for at least a partial tax credit for purchases of electric Autocycles. Regards Robert L. Kirchner Halifax, Nova Scotia, Canada

Richard Alexander	1/7/2023 11:24	In response to your request for comment I would like to make three points/suggestions: 1.) Autocycles should be part of the credit program because of their extreme efficiency, both to operate and the lower impact to manufacturer. 2.) Lower SUV vehicle weight should not disqualify full credit for more efficient vehicles regardless of seating capacity. 3.) No hybrid vehicles with a range of under 100 miles should qualify for any credits, and the maximum credits should be half or less than full battery vehicles. Thank you, sincerely, Richard Alexander 1103 Scott Ave. Rockville, MD 20851 rockville.rich@aol.com 240-665-0144
colin casto	1/7/2023 11:25	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation, and there are several promising American companies producing such vehicles. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you. Colin Casto Boalsburg, Pennsylvania
Andrea Stockman	1/7/2023 11:27	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manutacture of these more etticient and sustainable vehicles domestically. Chris Schmidt-Wetekam	1/7/2023 12:40	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe that the EV credit should be broadened in order to include Autocycles. Due primarily to their smaller size, and superior aerodynamics, Electric Autocycles are far more sustainable and efficient, compared to conventional electric cars, both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper-efficient vehicles. Thank you.
Glen Yoshida	1/7/2023 12:49	That currently the EV credit does not apply to three wheeled vehicles such as the Aptera autocycle appears to be an oversight and one that is not likely to reflect in a positive manner as history judges. The Aptera and other similar vehicles are a much needed commuter car for national security, for the consumer, and for the environment. Without the tax credit including three wheeled autocycles, domestic development is sure to be stunted while other countries make the gains that our country desperately needs. We NEED that tax credit to include three wheeled autocycles for Americans and for the nation. Sincerely, Glen Yoshida Lakewood, CO
John Hermann	1/7/2023 12:53	To whom it may concern, The presumptive intent behind offering a credit for purchase of Plug-in Electric Drive Motor Vehicles is to encourage adoption of efficient modes of transportation powered from sustainable and renewable sources of energy. While noble in intent, the language in the current offering excludes many manufacturers and vehicles which align far better with that intent than do offerings from the existing manufacturers which stand to benefit from this credit as it is currently written. The existing legislation excludes some vehicles which are classified as autocycles due to their three-wheeled design, but which are enclosed, are functionally indistinct from their four-wheeled counterparts, and which offer equivalent driver experiences and safety features. Prominent examples would be the offerings from ElectraMeccanica (emvauto.com) and Aptera (aptera.us) which are purpose-built to be efficient modes of transportation which reduce the demands on both fossil fuels and the energy grid. The Aptera in particular could reduce electricity demands on an already taxed grid through use of its solar capabilities. Three-wheeled vehicles are inherently more energy efficient in design than those with four wheels and should be considered when offering tax
John Hermann	1/7/2023 12:53	To whom it may concern, The presumptive intent behind offering a credit for purchase of Plug-in Electric Drive Motor Vehicles is to encourage adoption of efficient modes of transportation powered from sustainable and renewable sources of energy. While noble in intent, the language in the current offering excludes many manufacturers and vehicles which align far better with that intent than do offerings from the existing manufacturers which stand to benefit from this credit as it is currently written. The existing legislation excludes some vehicles which are classified as autocycles due to their three-wheeled design, but which are enclosed, are functionally indistinct from their four-wheeled counterparts, and which offer equivalent driver experiences and safety features. Prominent examples would be the offerings from ElectraMeccanica (emvauto.com) and Aptera (aptera.us) which are purpose-built to be efficient modes of transportation which reduce the demands on both fossil fuels and the energy grid. The Aptera in particular could reduce electricity demands on an already taxed grid through use of its solar capabilities. Three-wheeled vehicles are inherently more energy efficient in design than those with four wheels and should be considered when offering tax

Orlando Terrazas	1/7/2023 12:56	Andres Garcia Internal Revenue Service, Room 6526 1111 Constitution Avenue NW Washington, DC 20224 I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. The primary goal of the legislation is to reduce harmful emissions caused by internal combustion vehicles (ICE) by promoting the sales of ZERO emission battery electric vehicles. Considering that goal I strongly urge the IRS to include “autocycles” as part of the tax initiative. Currently, the legislation does not. Case in point is the 3 wheel solar electric vehicle, “Aptera”. Although it is classified as a motorcycle for all intents and purposes it is an enclosed vehicle equipped with seat belts and airbags. That is why it is technically referred to as an “autocycle”. For more information on the Solar EV refer to www.aptera.us<http://www.aptera.us> To reiterate, I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you, Orlando Terrazas 8426 Friends Av Whittier, CA 90602
Joel Cordeiro	1/7/2023 13:00	Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Sincerely, Joel V.L. Cordeiro 9636 Yoakum Dr. Beverly Hills, CA 90210 JVLC1234@GMAIL.com
Spencer Peterson	1/7/2023 13:05	Aptera 3-wheel autocycle is the most efficient vehicle design ever and should be included in the IRS rules for tax credits in order to help the transition of private transportation to efficient electric propulsion. Please include autocycles in the EV tax credit! Sincerely, Spencer Peterson, Prescott, AZ
Ian Mc Calum	1/7/2023 13:07	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you. John W. Malcom, Ph.D.
Adam Brown	1/7/2023 13:09	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. The goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary purpose of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles, some of the most efficient and sustainable vehicles during manufacture and operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper-efficient vehicles Thank you.
Adam Brown	1/7/2023 13:10	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. Jerry Kingzett	1/7/2023 13:54	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is primarily to reduce the greenhouse gases of transportation with a secondary goal of promoting the manufacture of these vehicles domestically. The EV credit should include Motorcycles, Low Speed Vehicles, and Autocycles. Anything that requires a license plate to be on the road. Since these vehicles tend to be lower cost, limit the EV credit to 20% of the purchase price. Sincerely Jerry L Kingzett 106 Chatham Rd Columbus, OH 43214 DECLASSIFIED by Jerry Kingzett OhioStateJerry@gmail.com<mailto:OhioStateJerry@gmail.com>
Ben Wild	1/7/2023 14:07	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper-efficient vehicles. Thank you, Ben Wild
Enoch Smith	1/7/2023 14:10	To whom it may concern, Please include autocycles in the EV tax credit. The intent of the bill is to help our economy move to a more sustainable means of transportation. Autocycles offer an inherent improvement to efficiency, and new models of autocycle EVs (such as the Aptera) offer a dramatic reduction in fuel use. Autocycles are safe to drive, and use fewer materials and consume less energy. A tax credit would help increase their adoption and ease the public into more sustainable vehicle types. Thank you for your time, Enoch Smith
David Almandsmith	1/7/2023 14:50	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. The EV credit should include three-wheeled EV cars (EV autocycles) which are some of the most efficient and sustainable vehicles both during manufacture and during operation. (Example: see https://aptera.us/) I urge you to broaden the interpretation to include these extremely efficient vehicles. Thank you, David Almandsmith [https://ci3.googleusercontent.com/mail-sig/AIorK4zM3wEx4-SX6wdo1P4uMkfbYWbK-6aDCX5UsZu4j6ywfwssXHx4x_uj5Dv5z5HM9uZkDVOphrM] Tilting windmills for over 60 years. Cogito<https://cogito.blog/> Bay Area Skeptics<https://baskeptics.org/> "One metric of human progress … is the expansion over time of our empathy sphere. By this I mean the range of beings that we consider coequally a person with ourselves, deserving of the same rights, dignities, and protections." —Ada Palmer, Professor of History sent from my IBM mainframe

Daniel Seger	1/7/2023 15:50	Hi, Ideally subsidies would be scaled to the efficiency of the vehicle (more efficient vehicle, more credit). Autocycles are more efficient than 4-wheeled vehicles. Therefore, to make the interpretation as meaningful as possible, it must be interpreted to include hyper-efficient EV's such as Aptera. To not include the Aptera in EV credits would defeat the purpose of the credits all together. American company, American factory, hyper-efficient EV. No good reason not to include them. Thank you for your time. Dr. Daniel Seger
JOHN PUTNAM	1/7/2023 15:57	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles (3 wheeled vehicles) which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us for a great example, it is entirely electric, plug in plus Solar powered and has a very low drag coefficient). I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you. ---John Putnam

Santanu Maitra	1/7/2023 17:32	I am hereby requesting the IRS to kindly consider including "Autocycles" for the qualified plug-in electric vehicle credit. This inclusion will aid the ongoing effort in the US to establish an efficient, sustainable, and harmless transportation system world-wide for the better health of Mother Earth. Autocycles, such as the upcoming Aptera (www.aptera.com<http://www.aptera.com>) is a closed 3-wheeler, and is significantly closer to a regular 'family car' than an open motorcycle on 2 wheels. The incredible efficiency of Aptera will catapult the cleansing process of our environment toward a better and sustainable future for generations to come. I sincerely applaud this noble effort from the IRS to solicit comments from common people like us and it makes me proud to be an American! Thank you very much. Santanu Dr. Santanu Maitra, Professor Department of Chemistry and Biochemistry California State University Fresno
Arixon Veras Hernandez	1/7/2023 17:32	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacturing of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are typically three-wheeled vehicles. These are some of the most efficient and sustainable vehicles both during manufacturing AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Best, Arixon Veras
Timothy Medema	1/7/2023 18:02	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you, Tim Timothy Medema Email: timothymedema@gmail.com<mailto:timothymedema@gmail.com>
Rusty Stratman	1/7/2023 18:11	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I 😁believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles (3-wheeled vehicles) which are some of the most efficient and sustainable vehicles both during manufacture AND during operation (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you.
Jonathan Elliott	1/7/2023 18:20	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation (see www.aptera.us<http://www.aptera.us> for a great example). Jonathan Stewart	1/7/2023 18:28	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. Currently, the EV credit excludes all but 4 wheeled vehicles. The EV credit should also include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation (see www.aptera.us for a great example). I urge you to broaden the interpretation to include these innovative and hyper efficient domestically produced vehicles. Thank you, Jonathan Stewart Sent from Yahoo Mail on Android<https://go.onelink.me/107872968?pid=InProduct&c=Global_Internal_YGrowth_AndroidEmailSig__AndroidUsers&af_wl=ym&af_sub1=Internal&af_sub2=Global_YGrowth&af_sub3=EmailSignature>
Mo W	1/7/2023 18:30	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include AUTOCYCLES (I.e. Aptera) which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you
Michael Magoon	1/7/2023 19:01	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit. I believe that the electric vehicle tax credit should apply to 3-wheeled autocycles such as the Aptera<https://aptera.us/>. The goal of the legislation in discussion was to promote domestically-produced electrical vehicles. Aptera fulfills the spirit of that goal at least as well as any other vehicle in existence. The Aptera is far more energy efficient than traditional 4-wheeled EVs, and it should not be penalized for having one less wheel. The 3-wheeled design of the Aptera was specifically to increase energy efficiency. In addition, Aptera can solar charge up to 40 miles ranger per day, something no other car on the market can achieve. Please extend the credit to include autocycles. Sincerely, Michael Magoon https://aptera.us/
Ross Nicholson	1/7/2023 19:04	Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles.
Jim Tokarski	1/7/2023 19:05	Please read I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us for a great example) | urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. 		To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42 as posted on your website [https://www.federalregister.gov/documents/2022/12/30/2022-28402/proposed-collection-requesting-comments-on-form-8936-qualified-plug-in-electric-drive-motor-vehicle#addresses] I believe it is important to re-think transportation and move from AS BIG AS POSSIBLE to AS EFFICIENT AS POSSIBLE. Developing highly efficient and sustainable transportation includes improvements in aerodynamics, weight and roll resistance. A complete sector making huge progress in all these areas are autocycles. Some of them have even integrated solar panles to provide up to 40 mi/day of electricity without the need of accessing the electric grid every day. That could satisfy the energy need for an average commuter in the US. Example: https://aptera.us/ As current law is written, autocycles do not qualify for tax credits, thus styfling adoption of these highly efficient vehicles and thereby hampering further development/optimization. We have to transition to highly efficient transportation wherevere possible and NOT simply subsidize vehicles just because they are electric. Efficiency must also be rewarded / incentivized. Inefficient vehicles will be a huge burden on the electric grid infrastructur. Efficient vehicles might not even require the grid (see example above) In sum, the EV credit should include autocycles which are the most efficient and sustainable vehicles both during manufacture AND during operation (see www.aptera.us<http://www.aptera.us> for a great example). I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you. Matt Schnizer

fkweigand@aol.com	1/7/2023 20:07	
		Regarding the Qualified Plug-in Electric Vehicle Credit, i have very strong feelings that the Aptera project should be included in the credit. See: https://aptera.us As a 3-wheel "autocycle", it is presently excluded from the credit, which is truly tragic, as the Aptera is the most efficient enclosed vehicle ever conceived (or darn close to it). I feel the same about electric motorcycles and electric bicycles… that's the direction we should be encouraging US citizens to go. Large, heavy, un-aerodynamic SUVs & trucks … well, yes we may need some of those too, but something like the Aptera is exactly what we want to be promoting to the masses. Similarly, i think it's a shame to impose restrictions on the sourcing of materials & manufacture of vehicles & parts. Don't get me wrong, i'd love to see more EVs (and their component parts) produced in the US, and we should encourage that, but i'm not convinced the place to do that is with the tax credit (or lack thereof) to the consumer … there must be better ways to incentivize US vehicle production. Thanks for your consideration! Sincerely, Karl •——> efficiency enthusiast, not affiliated with Aptera, other than greatly desiring one i ride my e-bike most of the time!
Karl Hanzel	1/7/2023 20:17	
		To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. The current interpretation of the bill seems to inadvertently incentivize heavier and (necessarily) less-efficient vehicles, in allowing for a higher price ceiling for heavier vehicles (trucks/SUV's). This, despite the fact that the vast majority of drives are single-person trips. The EV credit should include two-door and two-seat vehicles, including autocycles, which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. There is no reason why a vehicle such as this can't be someone's main mode of transportation, given that it protects the user from the elements and has the option of all-wheel-drive. It seems counterproductive to incentivize people to buy bigger, heavier, more expensive vehicles, if the end goal is efficiency and sustainability. Thank you.
Cavill Henriques	1/7/2023 20:31	
		Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Eric Jessop	1/7/2023 23:09	To Whom It May Concern: I am writing in response to the solicitation of comments concerning reduced paperwork and respondent burden for qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. The tax code forms 8936 for a clean vehicle credit must help facilitate the transition to more efficient and sustainable vehicles of electric transportation with 3-wheels in section 30D(g). Therefore manufactures should certify clean vehicle law requirements by the ability of its occupants to travel all electric miles. The EV credit must include 3-wheel autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient electric vehicles. Thank You
Ronnie Bickers Jr	1/7/2023 23:12	like to suggest a change to the qualifying requirements. The way I see it, the EV tax credit should include electric autocycles. They are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (www.aptera.us<http://www.aptera.us> for an example) I implore you to widen the scope of EVs that qualify for the credit to include these forward thinking and extremely efficient vehicles. If you are concerned about lighter vehicles being included unnecessarily, (i.e. ebikes, electric scooters, etc.) you can limit the smaller electric vehicles by requiring a minimum weight of 1,000lbs to 1250lbs or more. Sincerely, Ronnie Bickers Jr.
michael alexander sirr	1/7/2023 23:30	Hello Mr. Garcia, Please consider adding Autocycles to the Qualified Electric Vehicle Credit. APTERA is a 3 wheeled AMERICAN car that should be supported. It has airbags, superior crash architecture, and is the most efficient vehicle there is. It gets the equivalent of 350 miles/gallon, is solar powered, and uses electricity only. It is made in California. Cutting edge auto design. I have mine on order now with a 600 mile battery for $38,000. thanks , Michael Alexander Sirr M.D. Bozeman, Montana.
René Voss	1/8/2023 0:26	I am writing to express my support for the inclusion of autocycles, such as the Aptera, in the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. As a highly efficient and sustainable mode of transportation, both during the manufacturing process and in operation, I believe that the inclusion of autocycles in the EV credit aligns with the primary goal of facilitating a transition to more efficient and sustainable transportation and the secondary goal of promoting the domestic manufacture of such vehicles. I highly recommend taking a look at the Aptera (www.aptera.us<http://www.aptera.us/>) as an example of the innovative and hyper efficient capabilities of autocycles. Thank you for considering my comment on this important matter. Sincerely, René Voss 15 Alderney Rd San Anselmo, CA 94960 415-446-9027

KS2	1/8/2023 14:30	Greetings! I am writing in response to the request for comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is too primarily facilitate a transition to a more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. I strongly suggest that the EV credit should include autocycles (i.e. 3-wheel, highway qualified vehicles; see https://www.aptera.us) which are some of the most efficient and sustainable vehicles both during their manufacturing and lifetime operation. Therefore, I urge you to broaden the interpretation to include these innovative and hyper-efficient vehicles. Thank you. Kevin Sears 2956 Ellsworth Dr Yorkville, IL 60560 262-951-6561
chinni rajesh	1/8/2023 15:40	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you, Rajesh Chinni
Robert Henry	1/8/2023 16:56	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (check out www.aptera.us<http://www.aptera.us/> for a great example, it's planned to be assembled here in the US.) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you.

PETER TORRANO	1/8/2023 20:53	This email is in response to your request for comments about the plug-in EV credit and Revenue Procedure 2022-42. I thought the aim was to move on to more efficient vehicles as well as to promote the domestic manufacture of them. IMHO this should also include autocycles as the one being made by Aptera from https://aptera.us which, I believe to be THE most efficient and sustainable enclosed EV on the planet. Most people won't even need to plug this Electric Vehicle in because it automatically charges from the sun as a renewable source. As such, it won;t even put a drain on our national grid! Please reconsider your wording to also include such highway-ready 3-wheeled vehicles. For the sake of the planet. And that way the EV credit won't just be by the letter but also by the spirit of that for which it was intended. Thank you very very much, Peter Torrano 609-902-1545 1 Ivins Drive New Egypt, New Jersey 08533
David George	1/8/2023 21:10	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us for a great example) I urge you to

Robert Horton	1/8/2023 23:08	I am writing this in response to the call for comments on for Revenue Procedure 2022-42. I think that part of the goal of these policies is the shift of consumers towards more efficient and less environmentally impactful vehicles. Therefore to exclude the most efficient proposed vehicles is counterproductive. Three-wheel vehicles (autocycles) have reduced mass and reduced rolling resistance. Therefore fewer resources are used in the construction; especially in the reduction of battery capacity required per mile. The Aptera is one vehicle that is estimated to provide a 400-mile range with a 350 MPGe rating. This type of vehicle also costs less due to this reduction in mass and consequent improvements in efficiency. Particularly if they can meet the crash testing requirements for normal 4-wheel passenger cars, these low-weight vehicles will push manufacturers to offer something more efficient than an SUV-sized EV. These lower-weight vehicles will also reduce electricity demand and road wear. Very efficient vehicles such as the Aptera should be included in the rules for EV credits. The marketplace should include examples of extremely efficient vehicles. --
Cindy McLaughlin	1/8/2023 23:23	To whom it may concern, While I very much appreciate the effort to decarbonize transportation as quickly as possible, it's surprising and disappointing that the federal government offers $7,500 off an electric car, but $0 off an electric bike, cargo bike, golf cart, Neighborhood Electric Vehicle, scooter, or any other micro mobility option — all of which have a much smaller carbon footprint. Especially in urban environments, allowing people to cost-effectively mode-shift from cars to something smaller creates a set of positive externalities (reduced PM2.5, safer for pedestrians, reduced need for highways, etc.). Please help those of us who can do something much greener. Thank you! -- Cindy McLaughlin 646-752-7527
Matt Beane	1/9/2023 10:10	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation (for example www.aptera.us<http://www.aptera.us>). Stewart Hester	1/9/2023 14:59	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the primary goal of the EV credit is to facilitate a transition to more efficient and sustainable transportation, with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. With that in mind, I believe the EV credit should include autocycles (three-wheeled vehicles) which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper-efficient vehicles. Respectfully, William Stewart Hester, Jr.
Ian Hales	1/9/2023 15:07	To Andres Garcia, I'm responding to the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. The EV credit should include autocycles if they meet the battery requirements, regardless of how many tires they have. We live in a world where most vehicles can carry 5 occupants, but often only have the driver and passenger. Three-wheeled vehicles that hold two occupants are more efficient, and since efficiency and sustainability are the primary goals of this tax credit, excluding autocycles defeats that purpose. Autocycles are also more affordable, so lower-income citizens may not benefit from it if we're all expected to shell out $50k for an electric vehicle. Please consider a broader interpretation of the bill that allows more companies and consumers to take advantage of it. Included below are links to companies that are in their way to producing electric autocycles. SIncerely, James Hales https://nimbusev.com/ https://aptera.us/ https://www.arcimoto.com/
Carl Baer Schwartzman	1/9/2023 18:14	Revenue Procedure 2022-42. Dave Daiker	1/11/2023 14:44	To whom it may concern, Clearly the goals of the Qualified Plug-in Electric Vehicle Credit is to promote the purchase of domestic electric vehicles due to their reduced environmental impact vs. ICE vehicles. I suggest that autocycles like the Aptera (aptera.us<http://aptera.us>) are demonstrating these goals even moreso than the traditional 4 wheeled EVs that are currently on the accepted list. Please consider the inclusion of vehicles of this nature in your interpretation of the law. Get BlueMail for Android<https://bluemail.me>
Abi	1/11/2023 18:54	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I the goal of the EV credit is to primarily reduce pollution with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include 3 wheeled autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us<http://www.aptera.us> for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. This is the only affordable solar vehicle that didn't need external charge.
Haig Balian	1/11/2023 21:06	Both aims of facilitating a transition to more efficient and lower polluting vehicles built in the USA are clearly in line with a vast majority of domestic drivers. Please consider the qualification of autocycles for the EV tax credit. I am a reservation holder and investor in the Aptera Motor Company. The Aptera is by far the most environmentally friendly vehicle with solar charging capability. The State of California has backed up the company with a major grant, and the movement toward such vehicles is a great step in the future of electrification of vehicles. Thank you for your consideration.
damon martinez	1/11/2023 23:48	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. With that in mind, we should also be looking at companies that can provide affordable transportation and promote domestic production. To that end, the EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see http://www.aptera.us for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Sincerely, Damon Martinez
Joseph Smelser	1/12/2023 19:09	Please consider the following comment in regards to OMB Control No. 1545-2137 (Qualified Plug-in Electric Vehicle Credit and Rev. Proc 2022-46)… Reading this as a layperson the intent of this credit is primarily focused on encouraging the adoption of clean non-combustion engine transportation options and is further limited to “electric vehicles”. The implicit contract with the tax paying public is that allowing this credit hastens the adoption of clean energy solutions leading to a variety of outcomes that benefit the wider public/economy. With that in mind… no person, company, government, entity, or similar should be allowed to claim this credit if the main method of propulsion is not fully electric. Vehicles that primarily rely on internal combustion engine propulsion should be explicitly disqualified. Indirectly providing benefits to manufacturers for bolting a larger battery on a gas/diesel engine is not consistent with the intent of the Credit (or its underlying goals) and is not consistent with the expectation of taxpayers who are funding this credit. Hybrid engines still rely primarily on internal combustion engines and should also be explicitly disqualified. Only fully electric vehicles should be allowed to claim this credit (e.g., Cars, Motorcycles (bi, tri, or quad)/Mopeds, E-Bikes, Planes, Buses, Trains, Boats/Ships/Jet Skis, Semi’s, etc). If a min range constraint is required for qualification then maybe use something like 4 times the mean daily commute of average Americans in the continental United States. Furthermore, I think the wider public would be happy to support the inclusion of other fully electric purpose-built motorized vehicles that are not typically used to transport people (Ex. Airport luggage vehicles, construction vehicles (diggers, lifts, etc.), farm equipment, trash collection trucks, last mile delivery, mail/package delivery, municipal services, etc…). Thank you for the opportunity to comment, I hope this is clear. If you have any questions, feel free to contact me Sent from Mail<https://go.microsoft.com/fwlink/?LinkId=550986> for Windows

Rowerpilot1111	1/13/2023 8:40	Aloha! I am writing in response to the solicitation of comments you had requested in regards to qualified plug-in electric vehicle credit and revenue procedure 2022-42. I would like to urge you to please include autocycles (3 wheeled vehicles) in the EV Tax credits. These vehicles are some of the most efficient and sustainable out of all vehicles being produced. One such example is the Aptera (www.aptera.us<http://www.aptera.us/>) which uses about 1/4 the energy that most electric vehicles use to go the same amount of distance. If the goal is a more sustainable and cleaner future these vehicles will absolutely help obtain that goal. Thank you so much for your consideration on this matter. Sincerely,
Larry Thorne	1/13/2023 12:28	I'm writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is primarily to facilitate a transition to more efficient and environmentally sustainable transportation with the secondary goal of promoting the manufacturer of these efficient vehicles domestically. The EV credit should include autocycles, which are some of the most efficient and sustainable vehicles, both during manufacture and during operation (see www.aptera.us<http://www.aptera.us> for a great example). I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you. lgthorne@gmail.com<mailto:lgthorne@gmail.com>
Arvind Shrestha	1/13/2023 20:17	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you. Arvind
Joseph Gabunilas	1/15/2023 8:54	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you. Joseph E. Gabunilas
Jam	1/15/2023 12:15	Hello, It seems to me the purpose of this credit is to encourage EV adoption, both to decrease reliance on diminishing resources which need to be imported in an increasingly-uncertain global trade environment as well as to encourage US companies to scale up production & be competitive in this market of the future. By this reasoning, I believe this should apply not only to 4 wheel cars but also other electric conveyances like highway-legal autocycles such as the Aptera, which is the most-efficient production car ever built & already has 30,000 reservations. Thanks for your time, Jon M
Roy Currie	1/15/2023 18:11	Hi there, Re: Form 8936, Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022-42 It is great to incentive these behaviors which have long-term gains. However, I would like to see similar motivation for no-car or encouraging alternative forms of transportation (such as Public Transit only households, ebikes, regular bikes, etc). These would be both cheaper than Electric Motor Vehicles and are much more sustainable in the long run. Thank you
randolph.williams@gmail.com	1/16/2023 11:54	To Whom It May Concern: I am submitting a response to the request for opinions concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. The purpose of the EV credit is to make a shift towards more efficient and sustainable transportation, with the added benefit of encouraging the manufacture of these types of vehicles within the country. The EV credit should encompass autocycles, which are among the most resourceful and sustainable vehicles both during production and utilization. Visit www.aptera.us for a beautiful example. I urge you to broaden the interpretation to include these innovative and hyper-efficient vehicles. Thank you, Randolph Williams

Name	DateTimeReceived	Body.TextBody
William Ebersohl	1/16/2023 16:15	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you. William Ebersohl
David Rosenthal	1/17/2023 17:08	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. Because most current electric vehicles inherit their technology base from gasoline cars and trucks they are too big and too heavy. This means they use too much battery, a scarce resource, place too big a load on the grid, and pose too great a danger to others in accidents. Many of the smaller companies developing a more appropriate technology base, using composites to reduce weight and improve safety, to reduce grid load by reducing battery size, and to further reduce load on the grid by equipping the vehicle with solar panels, build autocycles. Aptera is an example of this more appropriate technology base. Autocycles are, as I understand, currently ineligible for tax relief. Disadvantaging the most efficient electric vehicles in this way seems counter-productive. -- David.
Chris Fisher	1/19/2023 20:22	I am writing about the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. For the EV credit to encourage a transition to more efficient and sustainable transportation and promote the domestic manufacture of these vehicles, the EV credit should include autocycles and other 2-3 person capacity vehicles. Autocycles are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us for a great example) Many of us need to transport only one or two people for many years (or all) of our life, but the market only has 4-5 seater cars available to buy. Without financial encouragement, we're forced to buy and fuel larger vehicles than we really need to get around every day. Please include autocycles and other smaller-than-standard cars in the plans to encourage consumers and manufacturers to shift to more efficient and sustainable vehicles. Please broaden the interpretation to include these innovative and hyper efficient vehicles. Thank you for your time, Christine Fisher Sent from Mail<https://go.microsoft.com/fwlink/?LinkId=550986> for Windows
Jason Holden	1/22/2023 0:30	IRS staff, I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and revenue procedure 2022-42. I believe the legislature's primary goal for the EV credit was to accelerate the transition to more efficient and sustainable transportation. Thus, I urge you to broaden the interpretation of qualifying vehicles to include autocycles. Three wheel EVs have the potential to be approximately twice as efficient as standard EVs for commuting 1-2 people due to their lighter weight and greater aerodynamic potential. Some domestic examples include Aptera, Nimbus EV and Solo Electrameccanica. Artificially lowering the net cost of a 4 wheel EV to a price near or below that of a 3 wheel EV could eliminate or delay the adoption of the most energy efficient vehicles available to commuters in the near future. Thanks, Jason Holden
Joel Battistoni	1/22/2023 14:11	Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. In order to support the primary goal, I assert that any leeway allowed within the Inflation Reduction Act for allowing extension of the previous EV tax credits be extended to allow for EV adoption while companies transition production and sourcing of materials to US operations. Specifically, I recommend including the ability to receive credit for a firm order (or even reservation) for an EV placed prior to the enacting of the IRA, it should be allowed to fall under the old credits, even if placed in service in 2023 or 2024 – as supply chain disruptions and production start-ups mean this is likely. Secondly – I assert the EV credit should be extended to the utmost extent allowed by statute to include autocycles and electric personal mobility devices, which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. Exclusion of these is likely to limit investment and adoption of these products, leading to the loss of US manufacturers such as Archimoto, and even Aptera who are currently facing existential threats due to financing risk, not demand. Thank you for your time. Joel Battistoni 25 SW Ruellen Road Stevenson, WA 98648 541-400-0765

Nels	1/27/2023 23:31	I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe a main goal of the EV credit is to facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture and during operation. (See www.aptera.us<http://www.aptera.us> for a great example.) I urge you to broaden the interpretation to include these innovative and highly efficient vehicles. Thank you, Nels Olson (Berkeley, CA)
Andrew "Bernie" Bernstein	2/9/2023 13:50	Hello, This is a comment on Form 8936, Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022-42 My comment is as follows: While I agree with the proposal to extend access to the existing credit, I believe it is important that the IRS offer a credit to people who purchased e-bikes in the same time frame. E-bikes are significantly less consumptive than traditional motor vehicles and take up less space, an important consideration, especially in urban areas. These vehicles should receive tax credits. Thank you for receiving my comment, Andrew J. Bernstein he/him/his voice/text: 610.618.6272 pictures: Instagram.com/bernietweets<http://Instagram.com/bernietweets> work: linkedin.com/in/a-bernstein<http://linkedin.com/in/a-bernstein>
Matthew Crawford	2/15/2023 18:05	To Whom It May Concern: I am writing in response to the solicitation of comments concerning the qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. I believe the goal of the EV credit is to primarily facilitate a transition to more efficient and sustainable transportation with a secondary goal of promoting the manufacture of these more efficient and sustainable vehicles domestically. The EV credit should include autocycles which are some of the most efficient and sustainable vehicles both during manufacture AND during operation. (see www.aptera.us for a great example) I urge you to broaden the interpretation to include these innovative and hyper efficient vehicles. The Aptera is a 2-seater, 3-wheel solar electric vehicle with incredible efficiency that is preparing to launch later this year. This vehicle is exactly the sort that should be promoted by the EV tax credit. If you or any of your coworkers are interested in getting an Aptera of your own, please consider using my referral link to get $30 off the $100 deposit for the waiting list. https://lz953.isrefer.com/go/preorder/a35773 (The discount will show up at checkout.) Thank you.
Scott Medling	2/27/2023 14:24	Attached are my comments on Form 8936, Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022-42 Document number 2022-28402 <https://www.federalregister.gov/documents/2022/12/30/2022-28402/proposed-collection-requesting-comments-on-form-8936-qualified-plug-in-electric-drive-motor-vehicle#addresses> Request Access<https://www.federalregister.gov/documents/2022/12/30/2022-28402/proposed-collection-requesting-comments-on-form-8936-qualified-plug-in-electric-drive-motor-vehicle#addresses> federalregister.gov<https://www.federalregister.gov/documents/2022/12/30/2022-28402/proposed-collection-requesting-comments-on-form-8936-qualified-plug-in-electric-drive-motor-vehicle#addresses> [X]<https://www.federalregister.gov/documents/2022/12/30/2022-28402/proposed-collection-requesting-comments-on-form-8936-qualified-plug-in-electric-drive-motor-vehicle#addresses> There are several things that can be changed to make the program more effective: 1. Plug-in hybrids should not have a rebate disproportionately larger than their avoided emissions, compared to EVs. If we're subsidizing EVs with 200mi batteries $7500, then a plug-in hybrid with a 20mi battery should be eligible for much less. How about $50 subsidy per mile of electric range up to $7500? 2. Aerodynamically, it is generally more efficient to have a vehicle with less ground clearance (and thus smaller angles of approach, breakover, and departure). So if any purpose of this law is to improve efficiency or range, then incentivizing increasing these four metrics is counterproductive. This program would be more effective without the higher price limit for SUVs, most of which are only used to drive around well-paved suburbs. 3. It would be nice to have a graduated rebate drop off instead of all at once. Maybe vehicles under $40k being eligible for the full amount and
Kyra Maine	1/4/2023 8:05	I think it's unfair that the Cadillac lyriq does not qualify for the tax credit because of its price. Isn't part of the goal of the tax credit to incentives zero emissions vehicles?? For the first ever and brand new Cadillac vehicle to not be covered because it falls within a black hole of requirements by not costing low enough or having 7seat capacity is not incentivizing. They need to raise the threshold on the cost allowed especially with the rate of inflation and the cost of everything having increased. It just doesn't make sense to not cover the lyriq. Regards Kyra Maine

Glen Mullet	1/3/2023 17:03	The IRS is soliciting comments concerning qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. In my opinion, the Inflation Reduction Act EV Tax Credit is deeply flawed, and will not accomplish the stated goals of the legislation if it is not fixed. Please fix it. Please review the petition at the link below for a detailed explanation. https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit?recruiter=1088551134&recruited_by_id=b44359f0-93e8-11ea-b6b1-d7d7536458d9&share_bandit_exp=initial-35382588-en-US A concerned citizen, Glen Mullet
John Crist	1/3/2023 20:02	Hello, I'm writing in regards to what I believe is the mischaracterization of automobile types. It seems there was discretionary decisions made on which vehicles would qualify for credit, without any input from EPA or logical reasoning. Why would gas vehicles receive credit for a bill intended to reduce carbon emissions, while pure EV vehicles are left out? Currently EV are harder to produce at scale at a lower cost, and those are the vehicles that need to credit the most to incentivize buyers to transition to a healthier and cleaner vehicle. Please do the right thing and allow all EV to receive the credit. https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit?recruiter=1290758235&recruited_by_id=073c0570-8a0f-11ed-8a45-67f4de4114d4&utm_source=share_petition&utm_campaign=share_petition&utm_term=share_for_starters_page&utm_medium=copylink&utm_content=cl_sharecopy_35382588_en-US%3A8
Tom McMorrow	1/3/2023 20:10	by claim the absolute necessity of abandoning fossil fuels, but have them pick winners and losers in the competition to fill this claimed need is preposterous. Sent from my Verizon, Samsung Galaxy smartphone Get Outlook for Android<https://aka.ms/AAb9ysg>
Kevin Mayo	1/3/2023 20:17	Here are a few thoughts on why. Encouraging the adoption of EVs: One of the main goals of offering tax credits for EVs is to encourage more people to switch from gas-powered cars to EVs, which can help reduce carbon emissions and improve air quality. By offering tax credits to all EV models, regardless of price, more people would be able to afford to make the switch, which could help accelerate the transition to a cleaner transportation system. Reducing the upfront cost of EVs: EVs can be more expensive than gas-powered cars, especially for models with higher list prices. By offering tax credits to all EV models, regardless of price, the upfront cost of EVs would be more affordable for more people, which could help make EVs more accessible to a wider range of consumers. Promoting economic equality: Offering tax credits to promote economic equality in rapidly-evolving high-tech markets is rarely effective. EVs and their required infrastructure to make them usable, is too imature to solve with tax credits that only go to the cheapest cars. Only individuals in relatively strong financial positions can conveniently operate electric cars today. (E.g. Charging infrastructure is not convenient enough (yet) to get along without a charger installed at your home, or you may need to have a flexible work schedule in order to deal with long charge times, or even a second car to use when the electric car is not convenient.) Similar to tax credits for solar panels, someone living on a tight budget may not have the means to make the upfront investments to install solar panels. So, those tax credits/rebates are only being used by wealthier people to encourage them to buy solar panels from even wealthier people. And, that is likely OK in this stage of the technology. We need to encourage people with money to buy into the technology so that the technology will eventually get cheaper as it advances, with the support of the revenue from the early stage purchases. Encouraging innovation in the EV market: By offering tax credits to all EV models, regardless of price, manufacturers would have an incentive to continue innovating and developing new, more advanced EVs. This could lead to more competition in the market and ultimately benefit consumers by driving down prices and improving the overall quality, convenience, and accessibility of EVs. Overall, offering tax credits to all EV models, regardless of list price, can help encourage the adoption of EVs, reduce the upfront cost of EVs, promote
Falgun Patel	1/3/2023 20:27	Tesla Model-Y 5 seater should be included in $7500 EV tax credit. See below petition for more details. https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit

Name	DateTimeReceived	Body.TextBody
Robert Redding	1/3/2023 20:52	Dear IRS, I am writing to advocate for the implementation of tax credits for all electric vehicles (EVs). As you may already know, EVs are a vital component of achieving a sustainable future. Not only do they produce significantly lower emissions than traditional gasoline-powered vehicles, they also have the potential to greatly improve energy efficiency and reduce our reliance on fossil fuels. In the long term, investing in EVs will save money on emissions and efficiency costs. As the technology continues to advance, we will see a shift towards more automation and robotics in the EV industry. By offering tax credits to companies that produce EVs, we can give a much-needed boost to the development of these innovative technologies. I believe that it is fair to apply these credits to all companies that produce EVs, regardless of size or sector. This will encourage competition and innovation in the industry, leading to more affordable and reliable EV options for consumers. I urge you to consider the benefits of implementing tax credits for EVs and the positive impact it could have on our transition to a more sustainable future. Thank you for your consideration. Sincerely, Robert K. Redding
CJ Bezak	1/3/2023 21:01	I own and drive a tesla, it is light-years ahead of these other companies who are building vehicles that game the tax credit system, they further raise prices once credits in place, look at Ford lightning as example. This tax credit simply benefits unions who are wasting money and scamming the tax payer over tesla which is a decade or more ahead of the competition. Sent from my Verizon, Samsung Galaxy smartphone
Adam Murphy	1/3/2023 21:04	Mr musk is tricking people into contacting you, in order to get the gov to subsidize his overpriced, unreliable vehicles. Please keep the credits as they are. Taxpayers should not be footing any more of his bills. Rv needs competition, and this is a great way to ensure competition continues Sent from my iPhone
Amanda Michaud BS, BSN-RN	1/3/2023 22:10	EV vehicle safety should be the largest determining factor of EV tax credits as safe vehicles decrease the risk of MVAs resulting in injury, therefore decreasing public healthcare costs. The upfront investment supports increased public safety and saves tax-payer dollars. EV vehicle safety as a determinant of EV vehicle tax credits also provides manufacturers with positive competition to make their vehicles safer, therefore further increasing public safety and saving tax payer dollars. Determining factors, rationals and conflicts of interest involved in the decision making process of qualifying vehicles should be public information, as tax credits are paid for by public tax dollars. Amanda Michaud RN Cranston, RI 774-644-9942
Tsvi Benson-Tilsen	1/3/2023 22:31	Hi, Please apply the electric vehicle tax credits fairly and sanely, so that fully electric vehicles are credited more than hybrids. See https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit Thank you.
Steven Horris	1/3/2023 22:51	To Whom It May Concern: It is absolutely ridiculous to not include TESLA vehicles in the EV tax credit. This is an United States car company that is blowing away the competition. Penalizing them for their success is absolutely poor form. It feels like there has been dirty business in the backroom on this. Please correct this obvious error. Sincerely, Steven Horris

Name	DateTimeReceived	Body.TextBody
Di	1/4/2023 0:42	Greetings! From what I've learned, some manufacturers of EV's have already raised prices in comparison to the TAX credit? Is this true? I myself would (eventually) prefer a HIGH MILEAGE electric HYBRID, (not less than 200 miles)! That would be a huge stepping stone to EV's during the clearly MUCH needed time and transition of, say 20 years? ☆☆☆☆ Like flat screen TV's, cell service and other new items, prices need to drop by supply, creativity and competition. NOT through tax credits. ⃠⃠⃠ I wasn't the first to buy flat screens, couldn't afford them. But, I was early to get a cellphone in 1994, as well as ONLY laptop computers. Eventually, EVERYONE can afford these items now! This progress took about 20 years from high prices to affordable. Average people from East to West, HAVE to keep their vehicles for 8-10 years +/-. I'm still paying off a USED vehicle and will keep it for an additional 3+ years after payoff. This is the NORM. There is no way I can afford ANY vehicle over, 😉 maybe, $15k. So tax credits do nothing for me or MOST everyone I know, and I'm an RN. America is NOT ready for en mass EV's right now anyway. Structurally and especially financially, and, a BIG tax credit is unaffordable by our Government right now, and, the inflation along with increasing interest rates to even finance one, right now. WAIT! Not now. 🕊 Blessings!
E H	1/4/2023 9:46	Mr. Garcia and staff: I would like to submit comments regarding Document Citation: 87 FR 80578 Page: 80578-80579 Document Number: 2022-28402 surrounding EV tax credits. I strongly believe that the IRS and thereby the US government is doing a disservice not only to potential EV buyers in America but to the country itself by allowing for such nuanced rules and stipulations that impose restrictions on particular manufacturers or vehicle types based on such tailored criteria to qualify for an EV tax credit. These stipulations clearly favor some manufacturers over others and creates an unfair competition platform for other manufacturers that might have "missed" the target stipulations not because of an inferior product or lack of technological progress but actually quite the opposite; some manufacturers and/or vehicles that are facing exclusion are being excluded solely because the manufacturer has exceeded adoption / sales targets by huge numbers and/or because the vehicles are by design more capable, lighter, and more advanced and fall outside of some of the proposed criteria. Not only does this restrict the EV credit from being applied to the most popular vehicles in some categories but it prevents the credit from being applied to arguably the most domestically produced EV's on the market from both a design and manufacturing standpoint. By allowing manufacturers who have foreign design, production and corporate structures access to the EV tax credits and simultaneously restricting the most thoroughly domestic companies from a design, headquarters and manufacturing perspective, the IRS and US government by extension display a clear bias that can only be explained by political influence and not the expected intent of it being for the good of the planet, the country, and its citizens. The IRS and US government should put favoritism and politics aside and allow the most successful manufacturers of EV's and their vehicles to qualify for all available tax credits and/or adjust the qualifications for the credit to favor or at the very least include the best designs, technology and domestic integration so the American people can get the best quality product and our country can continue to be the leaders in innovation! Sincerely, Eduardo Herrera 13 Calle Uno Key West, FL 33040
Glenn McCall	1/4/2023 18:59	I am opposed to OMB Control No. 1545-2137 in its entirety. As a mechanical design engineer with over 15 years of experience in manufacturing I know that it is impossible for the government to drive innovation through the use of tax credits. An environment for innovation can only be fostered, not forced. What this bill does will actually stifle innovation in the EV space. And funnel much needed taxpayer dollars toward companies designing sub par products designed to meet the needs of the credit, rather than meet the needs of the people. Innovation does not come from bureaucrats and poorly run businesses that need to rely on the government to set up the rules so they can succeed. Innovation comes from a government that takes a step back away from business and fosters an environment of competition. Let the teams play the game, stop changing the rules to favor companies that are looking out for their own good and not the American people. If we hinder innovation in our country, other countries will surpass us quickly. Please kill this tax credit in its entirety. Let the automakers not willing to innovate to survive, die. Others will take their place quickly. This will provide all the incentive necessary to foster a bright future and keep the US on the forefront of technological advancement. -- Glenn R McCall Jr.

Jessica Pearson	1/4/2023 23:49	January 4, 2023 Andres Garcia International Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Andres Garcia, I am writing to request that Tesla vehicles should be included in the Electric Vehicle (EV) tax credit. Despite the fact that Tesla is a very young company, its vehicles are more popular than other competitors. Tesla currently holds 73 percent of the U.S. electric-vehicle market share and their market share growth is only increasing. Right now, very few of Tesla's vehicles are eligible for the EV tax credit, and those that are eligible are older models. This puts Tesla at a unique disadvantage as its competitors are able to offer their customers the incentive of the tax credit. The lack of incentives make it difficult for potential Tesla customers to choose Tesla over competitors that have models that are eligible for the tax credit.
Jessica Pearson	1/4/2023 23:49	January 4, 2023 Andres Garcia International Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Andres Garcia, I am writing to request that Tesla vehicles should be included in the Electric Vehicle (EV) tax credit. Despite the fact that Tesla is a very young company, its vehicles are more popular than other competitors. Tesla currently holds 73 percent of the U.S. electric-vehicle market share and their market share growth is only increasing. Right now, very few of Tesla's vehicles are eligible for the EV tax credit, and those that are eligible are older models. This puts Tesla at a unique disadvantage as its competitors are able to offer their customers the incentive of the tax credit. The lack of incentives make it difficult for potential Tesla customers to choose Tesla over competitors that have models that are eligible for the tax credit.
Sean Rooney	1/5/2023 10:47	The current IRA legislation regarding the EV tax credit unfortunately appears disingenuous for it's purpose to promote adoption of EVs. It seems arbitrary, poorly devised, & poorly executed. It promotes small battery hybrid vehicles, which require substantially smaller than a $7,500 investment into vehicle production, to inappropriately qualify for a proportated EV tax credit. It also arbitrarily sets a line on vehicle inclusion & exclusion by type/MSRP, which again seems disingenuous for a proportated EV tax credit to advance EV adoption. If the goal of this EV tax credit is to promote the adoption of true EVs, it does not meet this goal & actually plays a fairly significant role to further limit true EV adoption. As I believe others have already commented, I would propose amendments to this legislation to disincentivize or remove hybrid and very low kWh EV inclusion, as well as establishing less arbitrary guidelines to determine vehicle type by staying more in line with the EPA in order to incentivize EV manufacturers to produce qualifying EVs. Additional thoughts are being made via the change.org<http://change.org> petition as well (https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit). Thank you for your time & I hope the IRS takes my and others' input into serious consideration. Sincerely, Sean Rooney

Neil Kelly	1/5/2023 12:09	My comments on this bill are that Tesla's exemption is absurd. Tesla is a prominent U.S.A Brand that actually builds in the USA and is superior in its electrification efforts than most other brands. Tesla should be considered for the $7,500 Tax Credit. By including Tesla, the intent of this bill would be accelerated given the intense competition Tesla provides to traditional automakers. Tesla should not be exempt from this credit and it should most definitely qualify for the $7,500 credit. Thank you, Neil Kelly -- _____ Neil Kelly R.I.T Environmental Health Safety Management M.S. 2020 R.I.T Environmental Sustainable Health Safety B.S. 2020 EHS Consultant
ramdai@juno.com	1/5/2023 13:06	In looking at the recent tax incentives for purchasing an electric vehicle, it becomes apparent that there is an over emphasis on hybrids since they are cheaper to make and fit within the price guidelines. It also seems like some models made in Mexico or out of the country will also qualify for the full amount, while others made totally in the US do not. A much better way to incentivize actual electrification would be to disqualify all hybrids, or make them eligible on a sliding scale according to their battery size or electric only range. Since the battery is a primary cost factor this would limit cheaper vehicles that would still rely primarily on gas from sneaking into the incentive meant to promote electrification of the transportation sector. With competition for battery materials raising prices well beyond normal inflation levels, there needs to be some work around for maximum prices, especially when longer range vehicles price themselves out of qualifications because they are doing a better job at the stated goal. Patrick B	1/7/2023 13:10	Dear Representatives, I am writing to express my disappointment and frustration with the current state of the electric vehicle (EV) tax credits. Specifically, I am concerned that these credits do not apply to all Tesla vehicles. As a Tesla owner and strong supporter of EVs, I had hoped that these credits would incentivize more people to make the switch to electric transportation. However, the fact that they do not apply to all Tesla models means that many potential buyers may be discouraged from making the transition. I urge you to consider expanding the EV tax credits to include all Tesla vehicles. This would not only provide a much-needed boost to the EV market, but it would also help to reduce our reliance on fossil fuels and contribute to the fight against climate change. Many others also agree with me and have started a petition of which there are now 50,000 signatories. https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit?recruiter=1290758235&recruited_by_id=073c0570-8a0f-11ed-8a45-67f4de4114d4&utm_source=share_petition&utm_campaign=share_petition&utm_term=share_for_starters_page&utm_medium=copylink&utm_content=cl_sharecopy_35382588_en-US%3A8 Thank you for your attention to this matter. I hope to see positive changes in the near future.
Chris Fickett	1/7/2023 13:20	Please review this petition and change the EV Tax Credit planned for 2023. https://chng.it/SbxtZt2X4d<https://www.youtube.com/redirect?event=comments&redir_token=QUFFLUhqbWxGblpfc2tlb2NZajh4ejRNNV9uaENIUGh4QXxBQ3Jtc0tsM2otRVhaTWJxallLdFdJVnBuZHQ2VHR1MDR1ZHBZOW53MUl2eXYtSG1QM0QzbjFmXy1mZ3l4MmZaZURqa2hPd2N1b3JlOUV0TVg4OVBpSm9aNlA0NVJPcXpGLVhuR3ZpNkFsUkRyODJ2dlBHaEd5bw&q=https%3A%2F%2Fchng.it%2FSbxtZt2X4d&stzid=Ugy08t9qUUnhn6jawIl4AaABAg> Thanks, Chris Fickett

Aaron Steps	1/14/2023 11:24	With regard to the changes in the EV tax credit: The original purpose of the tax credit was to encourage the adoption of electric vehicles by consumers and both new and existing auto manufacturers to enter the market without creating a permanent subsidy. Tesla demonstrated a successful strategy by producing expensive vehicles marketed to high-income individuals in order to build expertise and economies of scale before developing lower price mass-market vehicles. This strategy worked and Tesla is selling the largest number of luxury vehicles in the United States, having eclipsed BMW in 2022. Other start up EV manufacturers copied this successful strategy, including Lucid, Rivian and Canoo, among others. However, because of its success, Tesla had exceeded the 200,000 vehicle threshold for the original tax credit while its new have not yet done so. This gives these new competitors an opportunity to do what Tesla did and establish themselves with some protection from aggressive price competition. In a rather shocking display of crony capitalism, Tesla successfully lobbied congress to change the tax credit and impose limits on vehicle MSRP and the purchaser's income. This new credit provides a significant advantage to Tesla while damaging its competitors ability to ramp up production. The recent across the board price cuts by Tesla demonstrate that Tesla no longer needs the tax credit to be profitable. In conjunction with the price and income limitations on the new tax credit, Tesla is able to significantly under cut the prices of new EVs. This will have the effect of limiting sales of rival vehicles and may drive one or more of Tesla's competitors from the marker. This will result in less competition, fewer choices for consumers, slower adoption of EVs and, eventually, higher prices. The best solution would have been to keep the original tax credit in its original form and all manufacturers would have been treated the same and all would have had the same 200.000 vehicle sunset, thus limiting the duration of the subsidy and any resulting long-term market distortions. However, since congress has already passed the new rules, the second best option is to fully follow the letter of the law, which allowed for anyone who had binding purchase agreement as of the date of the signing of the inflation reduction act to claim the credit. Given the long wait lists for EVs,

Tony Davila	1/3/2023 20:15	Dear IRS, I am writing to express my concern about the unfairness of the EV Tax on fully electric vehicles compared to hybrid vehicles. Specifically, I am troubled by the fact that a hybrid vehicle that only gets 15 miles on electricity is eligible for a tax credit of $7,500, while a fully electric vehicle does not receive any tax credit. As you may know, fully electric vehicles are more efficient and produce fewer emissions than hybrid vehicles. Therefore, it seems counterintuitive that fully electric vehicles should be punished with a higher tax burden than hybrid vehicles, which still rely on fossil fuels for a significant portion of their energy needs. I understand that the tax code is complex and that there are often competing interests at play. However, I believe that the EV Tax on fully electric vehicles is fundamentally unfair and undermines the important goals of reducing greenhouse gas emissions and increasing the adoption of clean, renewable energy technologies. I urge you to reconsider this policy and to provide tax credits for fully electric vehicles on par with those offered to hybrid vehicles. This would not only be a more equitable approach, but it would also encourage more people to make the switch to fully electric vehicles, which would have significant benefits for both the environment and public health. Thank you for your consideration.
David Becker	1/3/2023 20:49	don't are overly complex and make little sense. Things should be more straightforward. PHEVs are a half-measure at best and is the legacy fossil fuel industry's way of paying lip-service to fuel economy requirements. FCEV are a complete joke that only still exist because of legacy auto manufacturers (who started their investment in it before modern BEVs got good) and are desperate to recoup their investment. Hydrogen production is far more energy intensive than just putting the electricity directly into a battery; to say nothing of the need to truck it all over the place, which still burns gas, to fueling stations. And those stations are WAY behind in coverage area than EV chargers are. -- -- This message was sent from my mobile phone. Please excuse any typos or auto-corrections I might have missed.
Royal EM	1/4/2023 6:58	technology and infrastructure problems related to transitioning to EVs are large and complex and will take time for market forces to respond with solutions. Credits attempt to accelerate this process, always with deleterious effects, rewarding companies better at applying for credits (or assisting consumers in applying) than actually solving problems. No to EV subsidies and credits of all kinds. Kindest regards, Royal
Thomas Waters	1/4/2023 9:24	Andres Garcia - Re the EV credits they are WAAAAAAAAY to complex. Buy an EV within the time period, get a credit. Period. Please simplify everything. Thanks, Tom Waters

Name	DateTimeReceived	Body.TextBody
ken.dickey@whidbey.com	1/5/2023 9:18	The purpose of the legislation is to hasten the transition to vehicles which produce zero carbon in operation -- those without tail pipes. The proposed rules appear designed to support fossil fuel burning by [A] largely benefitting vehicles which produce carbon (have tail pipes, i.e. HEVs), [B] largely excluding most currently produced zero carbon vehicles (BEVs, hydrogen) [C] adding complexity, causing purchase confusion and distorting markets and [D] adding expense (price reduction makes loans less expensive than after the fact tax credits). The recommendation is to support the intent of the legislation by adding clarity and simplicity. [A] Require that purchased vehicles emit zero carbon in operation (eliminate tail pipes) [B] Keep the income caps, but completely remove any relation to vehicle price [C] Favor price reduction at point of sale over tax credits and of course [D] Favor USA assembly and US alliance sourcing Kenneth Alan Dickey Taxpayer planning to purchase an EV
Jacques Malette	1/5/2023 12:21	To whom it may concern: Though this is a layman's perspective, tax credits should be used to incentivize and disincentivize behavior. The inconsistencies and complexity introduced with this recent law is likely leading to confusion vs the goal of incentivizing consumers to lean towards the EV path. We need government to drive/push EVs and this tax credit is a really good incentive if we can just let it be simple - every EV gets credit and this is phased up/down depending on cost. Thanks for the consideration!
Katalin E Pusztavari	1/4/2023 21:27	allows people with less money to participate and encourages purchasers to consider smaller footprint and smaller carbon footprint forms of transportation. In addition, including motorcycles directly benefits the IRS with more taxable income as local companies like Arcimoto have a chance to compete. - Katalin Pusztavari 2913 NW Lincoln Ave. Corvallis, OR 97330 541-612-2228
Crissa Kentavr	1/4/2023 22:23	Cars and SUVs should be classified on their capabilities and efficiency, not their weight. Nowhere in the law as written did it specify the weight of the vehicles between cars and SUVs and trucks. If a car has the same seats or more seats, the same or more cargo capacity, it should be an SUV. And we should specify a lower bound for efficiency as well. It makes no sense that an inefficient hybrid gets the full credit just because it has a small battery in it which would more a motorcycle - which doesn't get the credit at all yet has the same battery - ten times the distance. You're created perverse incentives to make less efficient SUVs. Capabilities, not weight. -Crissa
Virgil Gipson	1/6/2023 13:13	Good Day, I'm writing you concerning the tax credit for new electric vehicles. I support the position that a New plug-in electric vehicle should receive a tax credit. Regardless of quantity sold, or any other restrictions. All New plug-in electric vehicles should be eligible for the tax credit. To include cars, trucks, commercial vehicles, semis, motorcycles, and aircraft. I bought my Nissan Leaf new in 2013, and without the credit I could not have afforded the purchase. The quantity of carbon, and other negative, emissions I have saved is worth the investment of our tax dollars by way of this tax credit. The more plug-in electric vehicles in use, the better our environment will be. Virgil T. Gipson Cell : (502) 599-0394 Email : thevirg@gmail.com Sent from my iPhone

Lynn Yeager	1/6/2023 15:05	I'm reaching out regarding feedback on including 3 wheel electric vehicles in the tax credit framework for EV incentives. 3 wheel OEMs like Arcimoto, Aptera, ElectraMeccanica offer diverse cost efficient solutions for both consumer and business application use across multiple channels of use cases. They are safe, well designed, and create a new market between micro mobility and small sedan. They reduce the footprint of oversized vehicles. This is a new space we are just entering and these should be included in the rebates, considered valuable assets in a lifestyle shift towards a more sustainable way of moving around. They also offer a broader group of consumers a way to drive electric under 20k which is nearly impossible in the current state. Please consider including these vehicle solutions and platforms in the rebate. They are not motorcycles they are ultra efficient vehicles with a purpose and value to our sustainable transportation options with use for consumers, municipalities, businesses, food deliveries, emergency use, military and car sharing. They also offer a much more viable solution for future autonomous technologies. Thank you, I appreciate your time and attention in reading this. I'm an EV executive, enthusiast and support our shift to sustainable transportation solutions. Lynn Yeager

Stephen Fogard	1/7/2023 14:06	emergency.
michaelschuyler@comcast.net	1/7/2023 14:57	I am responding to the IRS's request for comments on Form 8936 regarding EV vehicle credits. Back in 2022 I learned of the development of the Aptera plug-in car. I spent a lot of time studying this vehicle and placed an order for one. I expect to receive mine near the end of this year. Months after I placed my order I learned that the most recent version of the EV vehicle credit bill, for some inexplicable reason, suddenly included an exception for three-wheeled cars. Both motorcycles and 4-wheel cars are promoted....but not 3-wheel vehicles. What?! This car is not only far more efficient than anything else on the market, but it is also equipped with solar charging that allows owners accomplish daily driving without having to resort to plug-in charging (except for longer trips). There is simply NO REASON to exclude 3-wheeled vehicles from this credit, and I encourage you to have the bill revised back to its original version, which did not exclude 3-wheeled cars. Sincerely, Michael Schuyler
Chris Demcak	1/8/2023 8:50	The Aptera autocycle should be included as part of this program. The bill excluded 3 wheel vehicles as a way of excluding motorcycles and other forms of personal, less expensive transportation. The Aptera is a new class of vehicle. It is a 3-wheeled car. It should be part of the program.
Aaron Bullock	1/8/2023 11:14	Defer to the manufacturer for classification. The EPA and NHTSA do this. No need to reinvent the wheel taking on additional work and potential public ire. The one listed by the EPA comes from this source, and should be the controlling document. Commercial Vehicle Unless the vehicle is used exclusively (not primarily), for commercial use, the vehicle should not be counted under the commercial rules. The standard rules (including country of manufacture) should still apply. Would like to see commercial vehicles follow the same manufacturing and sourcing rules either way. Used EV Credits Would like to see a retroactive effective date of when the legislation was introduced. Since this was an expansion of the current section, it was just a natural scope increase. Misc: Would also like to see the aptera included. It is a fully enclosed 3 wheeled vehicle with heating and cooling, This vehicle is being cross shopped as a substitute for traditional 4 wheeled cars, and should be treated as such. Many states exclude it from motorcycle regulations due to falling in the gray. Additionally PHEVs should only get half credit. They rely less (slow charging is fine for them) on the charging infrastructure (or not at all). So don't solve the chicken / egg problem that this bill is attempting to go after. -Aaron Bullock

Name	DateTimeReceived	Body.TextBody
Richard Pare	1/11/2023 15:15	Please consider the $7500. tax credit for the Aptera. It is a vehicle that is powered by solar panels and electricity. It is a two passenger vehicle where the people sit side by side, not front and back like a motorcycle. So for all practical purposes, it is a car. It has three wheels to eliminate extra drag which makes it more aerodynamic. Thank you for your time. Rick Pare 207-745-3846
Bill Kadish	1/12/2023 20:03	Dear IRS Official, I am writing to you about the $7,500 EV tax credit. I am concerned that because 3-wheel vehicles are excluded the law excludes the Aptera from qualifying. I totally agree that 3-wheel ATVs and motorcycles are not cars and should not qualify for this credit. However, an Aptera is a car in every sense of the word. It happens to have 3 wheels because that makes it even more efficient and saves more energy. In fact, compared with a standard EV such as a Tesla the Aptera is 3X more efficient! Not only that, but the Aptera is covered in solar panels that provide up to 40 miles per day of driving range - directly from the sun! I applaud the federal government taking an active role in assisting citizens to transition to electric vehicles. The Aptera is exactly the vehicle that this program is designed to encourage because of its radically efficient design. Please reconsider the current policy. It would be a terrible shame if our tax policy ends up discouraging consumers from buying an Aptera and leads them to choose a vehicle that consumes more energy, all of which comes from the grid and none of which comes directly from the Sun! Thank you for your consideration. Best regards, Bill Kadish (508) 254-0981
Kyles Spam	1/2/2023 10:34	Hi Andres, I'll keep my comment short. Please change the IRS rules on allowed vehicles to follow the vehicle classifications of NHTSA and EPA when seeing the credit thresholds for electric vehicle's eligibility for the tax credit. For example, a Tesla Model Y should be an SUV regardless of the number of seats. Also, research shows that hybrids are used like traditional ICE vehicles so are less efficient and should not qualify. Thank you for taking comments. Kyle Holt
Robert Kyhn	1/2/2023 12:19	It is absolutely absurd to exclude the Tesla Model Y 5 seat and the Mustang Mach-e from the qualifying list. Both of these vehicles are being produced at scale and are true EV's as opposed to many Hybred fossil fuel consuming cars that qualify. You made the Jeep with combined 20 mpg effeiency a qualifying vehicle??? The vehicle qualification list is littered with poor choices based upon very questionable data and as an EV owner, I am outraged! Robert Kyhn Robert Kyhn 3644 Voleyn St Carmichael, CA 95608
Kevin Vogt	1/2/2023 12:48	Hi Andres So first I am glad the IRS team is putting out documents and taking public feedback. While I am sure that a lot of effort was put into the " Qualified Plug-in Electric Vehicle Credit and Rev. Proc 2022-46" document, several of the proposed items for credit are not consistent at all and I feel they should be changed to be consistent across the board. This is likely an item for future litigation as well as public ridicule of the agency for such glaringly obvious errors. Specifically while the car companies and FTC/EPA/DOT and other agencies all use similar definitions for SUV and this applies to the Tesla model Y as an SUV in all trims yet your recent proposed guidelines are trying to say that some versions of this (the 5 seat/2 row) are NOT SUV {thus getting a $55k sales limit} while the 7 seat (3 row) variant is an SUV {thus getting a $80k sales limit}. This is stupid and obviously absurd since the 5 seat versions are much better at carrying things like all our earlier SUV's that the 7 seat version would be since the seats fold fully flat and let me carry appliances in back. It is bigger and better than most all other SUV's and any electric SUV available. Thus this opens the door to lawsuits IMHO. Tesla is the most American car company in the world now, and the only one truly advancing the US car industry, so why the IRS has decided to use such misguided and inconsistent guidelines for a new federal program indicates either a desire to invite lawsuits, or to specifically harm the car maker (Tesla mostly but also GM to a FAR lesser extent) for what can only be the most poorly thought out and anti-american reasons. This draft of these guidelines poorly reflects on the IRS team and should be updated and fixed so such obviously absurd inconsistencies within this ruling are corrected and properly help both the people of the USA as well as US based manufacturers. Thanks for taking the time to read this and I wish you also a happy, healthy and productive new years! Sincerly Kevin P. Vogt

M McCreary	1/2/2023 14:36	1111 Constitution Avenue NW Washington, DC 20224 Dear Mr Garcia, I am writing in response to the 12/30/2022 publication of guidance regarding Revenue Procedure 2022-42 and the associated web publication of https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after which is providing guidance on which vehicles makes and models qualify for the tax incentives. In the table in the Tesla section of the about webpage there seems to be an error of misclassification of the 5 seat variant of the Model 7. It should be noted that all variants of the Tesla Model Y are classified as SUVs by the US Department of Energy<https://www.fueleconomy.gov/feg/PowerSearch.do?action=noform&path=1&year1=2022&year2=2023&mclass=Sport%20Utility%20Vehicles&srchtyp=newMarket&pageno=1&rowLimit=50>, the EPA<https://www.fueleconomy.gov/feg/pdfs/guides/FEG2023.pdf> and NHTSA<https://www.nhtsa.gov/vehicle/2022/TESLA/MODEL%20Y%20%205-SEAT/SUV/RWD>. It should be noted that other similar vehicles that are less energy efficient than the Model Y are listed as qualifying as SUV's https://youtu.be/fBMC_kojBgI The IRA's misclassification of the 5 seat variant of the Model Y is harmful to consumers, and should be considered arbitrary and capricious in violation of the Administrative Procedures Act. Thank you for your consideration, Marvin McCreary 637 Seabury Dr. Worthington, OH 43085
Samantha Hong	1/2/2023 22:14	To Whom it May Concern: The Tesla Model Y 5 seater should be considered as an SUV. It is not a sedan. The Model Y consists of significant raised ground clearance compared to the Model 3 sedan. In addition, the Model Y has larger wheel options compared to the Model 3, which is a sedan. The Model Y can accommodate 21" and 22" wheels, whereas the Model 3 can accommodate up to 20". Please alter the Tesla Model Y to be considered as an SUV, qualifying for the tax credit when MSRP is $80,000 or less. This will appropriately incentivize many people who are looking to transition to sustainable energy and methods of transportation with Tesla. Thank you for your consideration, Samantha Hong
Jason Lee	1/3/2023 2:01	The tesla model Y is an SUV and should receive the full tax credit. Jason jasonlee7891@gmail.com
Wisefull	1/3/2023 2:32	I have 3 questions with this bill 1. Why are some 5 Seater SUVs allowed and some aren't (like the model y 5 seater) 2. Why are the requirements making companies make their cars less efficient, when the goal is climate change? 3. Why are hybrids with 25mpg allowed to have a tax credit, there Gas cars... there should be a minimum of 70mpg or more...
James Riley	1/3/2023 6:51	vehicles being qualified. Plug in hybrids with under 50 miles of EV range should not get the credit at all, as it is an emissions compliance vehicle from the manufacturer. This is a waste of resources (the $7500) as well as a waste of batteries for these vehicles which could be going to pure EV's. Also the Ford Mach E and Tesla model Y need to qualify, they are SUV's. There is a clear bias going on here and it is not ok. Use your judgement on what is right and what is wrong, a pure EV with over 300 miles of range should ALWAYS qualify for the EV tax credit, not the plug in hybrids with no EV range. Stop the corruption on your part, and if you are the one causing the corruption, you should resign. This is not ok AT ALL. James Riley
James Riley	1/3/2023 6:53	vehicles being qualified. Plug in hybrids with under 50 miles of EV range should not get the credit at all, as it is an emissions compliance vehicle from the manufacturer. Rodney Niya	1/3/2023 6:57	Hello, Please reconsider the current status of the Tesla Model Y classification based on weight. Being 238 lbs below the threshold significantly hurts consumers and the shift to Electric Vehicles. The Model Y is the number 1 electric SUV globally, and buyers should not be penalized for 238 lbs. Best, Rodney Niya

Sapan Patel	1/3/2023 7:23	After researching the new EV tax credit that was drafted it is evident that this is a complete waste of taxpayer money. How dare you include a Jeep that gets 20 mpg while not including a tesla model Y that is actually one of the most American made cars ever. Not only is this a complete waste of tax payer money but it is proof that this new ev tax credit is created internally by lobbying and corrupt union partnerships. Your credibility as an organization that serves the tax payers is on the line. Please rectify this current incentive to give the full benefit to the most American made EV tesla. EVs are far more beneficial for the environment compared to hybrids so I am not sure why hybrids that just slap on a small battery just to qualify are getting the full credit. Regards, Sapan Patel
Zach Butcher	1/3/2023 7:25	current proposal, EVs like the Ford Mach E VW ID 4 and Tesla model Y do not all qualify. The epa classifies the vehicles as SUVs and should receive the tax credit in line with that classification. Hanging different trims qualify differently is bad for the consumer and does not promote the adoption of EVs as the credit proposes. I suggest following the EPA definition of vehicle classifications and have all trims of a given model either be approved for the rebate or not so the lines are really clear for consumers buying the vehicles. Zach Butcher
mick newman	1/3/2023 8:04	Comments on proposed EV tax credit guidelines: 1. Hybrid should not receive full $7,500 tax credit for a vehicle with only a 20 mile approx battery range. Prorate credit compared to an average EV battery of 70kw. For comparison, a 7kw hybrid would recieve a 10% credit of $750. 2. Standardize vehicle classification by using EPA classifications. 3. Do not understand how a VW ID4 with AWD is an SUV, but a Tesla Model Y AWD is a sedan. Tesla model is bigger and has more cf storage capacity. I believe the Mustang Mach E is larger too. Sincerely, Michael Newman
Barry Steinhart	1/3/2023 8:23	I protest the omission of the popular American made Model Y from the SUV category is confusing to me, and the public at large. The intention of the legislation is to promote the use of EV cars. Great. But, in its uneven treatment of cars vs SUV (and EV vs hybrids) the current form of this legislation is unfair. Please remedy. American Tax payer fairness is at stake. Regards, Barry
Rolando Velez	1/3/2023 9:34	Hello, Why are ICE vehicles with very small battery packs getting the $7500 credit and fully EVs like the Tesla Model Y not getting the credit? This seems very strange at best or very corrupt at worst. Changes need to be made so the correct cars get the credit. https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit?signed=true https://www.change.org/p/stop-excessive-hybrid-vehicle-subsidies-in-the-inflation-reduction-act-of-2022?signed=true -- Thanks, Rolando Velez (562) 507-1312 rolandovelez13@gmail.com<mailto:rolandovelez13@gmail.com> rolandovelez.com<http://www.rolandovelez.com>
Lang Xia	1/3/2023 10:23	Hello, my name is Lang Xia. Tax incentive should be used to incentivize customers to purchase the electrical vehicle to facilitate our economy to a sustainable and greener future. As of now, many inefficient SUV that have as small as15kwH of batteries which pollute no less than their internal combustion engine counterparts are being awarded the 7500 dollar tax credit while Tesla's Model Y, a pure electric EV isn't. This is an egregious oversight to punish the one company that is unarguably doing the most to contribute to the renewable energy transition in America. Without Tesla's innovation, commitment and salesmanship, many customers would've never touched an EV. it boggles my mind that a supposedly fair federal government agency would make such spiteful and illy conceived tax rules. I doubt this is the intended use for the tax credit. This is an extremely biased, uneducated and maliciously conceptualized decision to skew the competition and misinterpreted the intention of such tax incentives. Please stop punishing Model Y customers and Tesla

Name	DateTimeReceived	Body.TextBody
Srinivas Thottempudi	1/3/2023 11:10	Exclusion of Tesla Model Y 5 Seater configuration from $7500 EV tax credit (while giving it to 7 seater) is totally unfair. It is straight up punishing a company for making their car more energy and mass efficient. I see this as an attempt by Lobbyists from legacy auto to stiffle competition from Tesla and to give themselves a market, funded by Tax payer's money to continue their lethargic culture to innovate in BEV category. I am not ruling out current Admin looked through all possibilities to remove the top energy and mass efficient BEV from Tesla out of reach from public. You like giving tax incentive to Ford Escape plugin with 30 mile range battery while removing incentives for Tesla Model-Y (5 seat) with 330 miles range ? EPA classsifies Tesla Model Y 5 seater as SUV but IRA as a sedan ? That is something telling how brainless and partisan these federal agencies becoming!
Bill Huggin	1/3/2023 11:40	The EV tax credit incentivizes less efficient foreign car brands over efficient American car brands. For example the Tesla Model Y LR does not qualify but the Audi does. It also incentivizes small battery plug in hybrids that burn gas and have a small battery and range. This is poor policy and a waste of taxpayer resources. Please address this.
njdeputter@gmail.com	1/3/2023 12:13	When a 20mpg Jeep qualifies for an $80k MSRP ceiling but a 90mpg+ Ford Mustang Mach-E or 110mpg+ Tesla model Y (both of which are roughly the same size as the Jeep) doesn't there is something wrong with your criteria. You should be using EPA classification (which classifies all three as "small SUVs") not 49 CFR 523.5. Link to EPA comparison: https://www.fueleconomy.gov/feg/Find.do?action=sbs&id=45138&id=46252&id=46212 Thank you, Nathanael dePutter
Siddharth Dalal	1/3/2023 12:19	The IRA Specifically states this: For purposes of this paragraph, the Secretary shall prescribe such regulations or other guidance as the Secretary determines necessary for determining vehicle classifications using criteria similar to that employed by the Environmental Protection Agency and the Department of the Energy to determine size and class of vehicles You should be using EPA classification (which classifies all three as "small SUVs") not 49 CFR 523.5. When a 20mpg Jeep qualifies for an $80k MSRP ceiling but a 90mpg+ Ford Mustang Mach-E or 110mpg+ Tesla model Y (both of which are roughly the same size as the Jeep) doesn't there is something wrong with your criteria. Link to EPA comparison: https://www.fueleconomy.gov/feg/Find.do?action=sbs&id=45138&id=46252&id=46212 Thanks Sidd -- https://s1dd.com/
William Belcher	1/3/2023 13:32	Gas electric hybrid technology is already well established and approaching standard ICE pricing. Their electric component is rare more than a boost, less than 30 miles of electric range. Full electric vehicle technology is still in development and fighting for market share. The USA needs to further the push for market share for EVs and in particular US manufacturing market share. Please modify the guidelines to exclude or reduce benefits to hybrid vehicles. Please allow the Tesla Model Y 5 seat variants as SUVs. My understanding is that they are too light? That is not a logical exclusion factor given the goals of this program. Model Y 5 seat variants are among the safest and most developed EVs at this time and are 100% US manufactured. They are also larger than some other SUV units getting credit to $80k from overseas based manufacturers. Bill B.
joy xia	1/3/2023 15:37	Crazy to disqualify Tesla Model Y, while giving other cars like VW ID4 Pros or Ford Escape Hybrid top price of $80k and qualify for $7500. EPA, NTHSB classify Tesla Model Y as SUV, why IRS doing so differently? Understand it may be due to SUV definition in IRA, but why such weird definition in IRA? Should IRS be reasonable and consistent with EPA, NTHSB in defining SUV? Regards, Zhongjian Xia(US Citizen/taxpayer in Scottsdale, Arizona)
Adam S. Weltz	1/3/2023 16:08	Hello- I am a big supporter of EVs and appreciate the federal governments desire to provide tax incentives for these vehicles. However, the current strategy unfairly looks at the Tesla Model Y 5 seater specifically. Why does the 7 seat model Y variant qualify for the credit but the 5 seater does not? Both cars are considered SUVs by NHTSA and both are under $80k. I hope you will look closer at this specific issue. Also keep in mind Teslas are fully electric, unlike many hybrid SUVs that will qualify for the tax credit despite doing much less to reduce carbon emissions. Thank you -Adam Weltz <http://mail.mobile.aol.com>

Stephane Baudin	1/3/2023 16:08	How can certain Model y and certain Mach E not qualify for tax credit when other plug in hybrid with tiny batteries do. Is it an EV tax credit or a fossil fuel tax credit ? Thank you
Matt S	1/3/2023 16:10	increase its limit for the tax credit! We are trying to incentivize the saving our planet from fossil fuels, the Model Y 5-seat is by all standards an SUV! It should receive the same $80,000 cap for the credit as other SMALLER SUVs are receiving! Such as the Ioniq 5! Why is the Model Y 5-seat version outcast for being mass efficient by just 250 lbs! Sincerely Someone wanting to buy an electric vehicle
DAVID URBAN	1/3/2023 16:10	You have to add the Model Y and the Ford Mach E. All trims as SUVs. This is ridiculous that you support hybrid vehicles that are less efficient than these two vehicles. This is an embarrassment. Thank you, David Urban
Nancy Remkus	1/3/2023 16:11	To Whom It May Concern I feel that the Tesla Model Y/ 5 seat vehicle was incorrectly disallowed as an SUV that qualifies for the $7500 EV Tax credit. I own this vehicle and it is in fact an SUV. Many gas powered vehicles that have only 5 seats are considered SUVs. Thank you Nancy Remkus
Paul Dell	1/3/2023 16:11	I believe than no hybrid vehicles should get any ev credits. And I believe only evs built in North America should receive credits. Also size only should determine car vs suv. Weight of vehicle should not matter. And # of seats should not matter eg 5 vs 7 Paul Dell 55 Antrim rd Hancock, nh 03449
Michel Albrecht	1/3/2023 16:12	I am writing to express my concern about the current tax credit incentives for electric vehicles. It seems unfair that cars like the Tesla Model Y, which are fully electric, do not qualify for these incentives, while cars that are not fully electric do. In my opinion, fully electric vehicles like the Model Y should be eligible for these incentives, as they are a key part of the transition to a more sustainable and environmentally friendly transportation system. These vehicles produce zero emissions, and their adoption can help reduce our reliance on fossil fuels and combat climate change. I understand that the current incentives are designed to encourage the adoption of electric vehicles and support the development of this technology. However, it seems shortsighted to exclude fully electric vehicles from these incentives, as they represent the future of transportation. I urge the IRS to reconsider its policy and extend tax credit incentives to fully electric vehicles like the Tesla Model Y. By doing so, we can help accelerate the transition to a cleaner and more sustainable transportation system, which is in the best interests of both the environment and the American people. Sincerely, Michel Albrecht (954) 383 - 7731
GreenFleet LLC	1/3/2023 16:12	I'm a small business owner looking to purchase all electric SUVs for my interstate ride service. Please make all electric SUVs eligible for the tax credit. Specifically models from Ford and Tesla should be treated as other SUVs and eligible up to $80k, not $55k. Best, Bill Lobner Green Fleet - Founder and CEO

Mike Stokes	1/3/2023 16:19	Hello, We're writing you about the EV Tax credit going into effect in 2023. We're concerned with the vehicle classification of the Tesla model Y 5-seat SUV. This car is listed as an SUV at the NHTSA and the EPA (both government organizations). I wish to purchase a 5-seat Tesla Model Y SUV in 2023 but the IRS has the vehicle incorrectly classified as a non-SUV for the MSRP pricing cap of $80,000. Oddly you have smaller SUVs like the Ford Escape Hybrid listed as an SUV but for some reason the larger Tesla Model Y is not yet classified as an SUV. The Tesla Model Y is a pure 100% battery powered SUV that is produced in America. As a tax-payer I have serious concerns with excluding this vehicle from SUV classification in the EV tax code. Will the IRS look at the Tesla Model Y 5-seat variant again to consider changing the vehicle to the correct classification of SUV? Please provide an update on your decision and the reason if you decide not to change the classification. Thank you, Mike and Lexi Stokes 330-701-1727 6770 Akron Peninsula Rd. Peninsula, OH 44264
Greg Matuzak	1/3/2023 16:24	Thank you for taking the time to read my comment on the EV Tax Credit system as currently being managed. I have also signed a Change.org petition that points out that the IRS isn't categorizing the Tesla Model Y as an SUV even though the Environmental Protection Agency does. Furthermore, it has also come to my attention that the NHTSA also categorizes the Tesla Model Y. In my opinion, it is not the job of the IRS to determine which vehicles qualify for the EV tax credit by overriding the definitions already developed by the appropriate agencies in charge of developing such definitions. This means Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit unless it is a 7 seater version as opposed to the 5 seater version. This is as you know completely arbitrary given that the vehicles themselves have no difference except for the addition of a flip up two seats in the very back, which makes a 5 seat version a 7 seat version. Lastly, it is incomprehensible that hybrid vehicles that are getting only 20 to 25 MPG as an internal combustion vehicle with a very small battery (in some cases with a battery range of only 15 to 20 miles) would be available to receive a $7,500 tax credit, but a 5 seat Tesla Model Y does not. I recommend that you reclassify the 5 seat Tesla Model Y version as an SUV based on the existing definition of the vehicle as an SUV by both the EPA and NHTSA. It is their job to set those standards in the USA, not that of the IRS. Sincerely, Greg Matuzak
TAO GAO	1/3/2023 16:25	I just learned that some models of Tesla Model Y will not receive any tax credit. In the meanwhile, some hybrid cars primarily burning gas will receive the full $7500 tax incentive. I think this is a huge mistake. It makes the tax incentive working against its purpose. Now, more ICE vehicles will be produced simply by adding a 20 miles electric range as a decoration for receiving the tax credit. No hybrid vehicles should receive the full tax credit. In the meanwhile, there is no reason to exclude mass produced full battery vehicles (including tesla model Y). Certainly should not exclude a car because it is lighter -- Achieving the same function with less mess means more energy efficiency. It should be awarded, not punished. I hope this error can be corrected. Best, Tao
Dave Tyler	1/3/2023 16:26	Please consider that the Tesla Model Y is one of the MOST American made cars in our country. All specs of the Tesla Model Y should receive the max 7,500 tax credit. Up $80,000 cost. Sent from my iPhone
Tom Hoida	1/3/2023 16:29	IRS, Love that we have this tax credit for Electric vehicles. I personally don't think that Hybrid vehicles should be credited. You need to relook at SUV's like Tesla Y 5 seat and the Ford Mustang, there is no good reason for them not to have the credit available. Especially with having the model Y 7 seat available, the 5 & 7 as the same size. My family size is 4 and I will never have the need for 7 seats. I was about to pull the figure on one of these 2 cars and now I'm not sure what I will do. Please adjust he models of cars that are available for credits, the current list doesn't make sense. Thank You, Tom Hoida
Cengiz Ozturk	1/3/2023 16:30	It's a shame that a most American made electric SUV gets $0 , but a Mexican made SUV hybrid that makes only 21 miles with electric gets $7,500. And this administration gloats about being green! Really? Why is this administration hates an American car made by Americans? I really would like to know the source of this hate. Cengiz Ozturk

Name	DateTimeReceived	Body.TextBody
Jeffrey Chen	1/3/2023 16:37	Hello, This is to comment on the IRS EV credit for Tesla Model Y. Model Y is considered a SUV by most people. Even the IIHS and few other government agency recognize model Y as SUV. It is an absolute absurd that IRS does not recognize the model Y as SUV. Model Y looks like a SUV, build as a SUV, function as a SUV. There is not a single reason it is not a SUV. If IRS is using weight as a factor, that is just unreasonable. Thanks.
James Davison	1/3/2023 16:37	I have had an opportunity to review certain details of the Inflation Reduction Act which includes 369 billion for Energy Security and Climate Change. However, I don't understand how giving a tax credit to SUV hybrids getting under 30 mpg can be anything but negative toward reduction of greenhouse gas. Frankly, it looks like this is just a handout to give free money to legacy automakers that are the worst offenders in contributing to the problem caused by internal combustion engine vehicles. As many countries are moving to phase out this dangerous and obsolete technology, the Inflation Reduction Act will actually slow that transition. As a voter I have a deep concern for the issue of climate change due to greenhouse gas emission -- an issue that is long-term, but in my opinion the most catastrophic problem facing humans and the rest of Earth's biosphere. Low mileage small-battery hybrids should be excluded from the tax rebate. That money could be better spend on our electric infrastructure which badly needs it. Thank you for reading my concerns. James Davison
Todd Richards	1/3/2023 16:40	Can you explain why the 7-Seat version of the Tesla Model Y is allowed the tax credit as it is considered an SUV and can have a value up to $80,000 where the EXACT same Tesla Model Y in a 5-Seat variant is NOT considered an SUV but in the category of an Other or Sedan and has a value limit of $55,000. This is just wrong if not criminal on the government's part to exclude this most popular vehicle that clearly encourages the transition to EVs. It also makes no sense why hybrid vehicles with on gas engines and only ~20 miles of electric range are being incentivised to be purchased. Is this not contrary to the intent of the bill? Thanks for your consideration and re-evaluation of what vehicles should be allowed the tax credit. Todd A. Richards 511 Wyndhurst Drive Lynchburg, VA 24502
Andrew Eickhoff	1/3/2023 16:44	To Whom it May Concern: Tesla Model Y and Ford Mach E are both full BEV and should receive the full credit in all configurations. All PHEV should not qualify for any credits. Only full BEV should qualify for any type credit. Thank you. Regards, Andrew Eickhoff +81 80 39372821 Skype: Tokyo.live Sent from my iPhone
Pavel Levine	1/3/2023 16:44	Hello, I would like to provide a comment. I believe this is an absolute disgrace that Model Y 5 seats does not qualify as an SUV under IRS tax rebate while Hybrids of the same size do qualify. This needs to be fixed as it does the opposite of the intended effect of the bill that uses tax payers money! This classification is a bail out to inefficient gas car manufacturers that would like to milk profits from making gas cars. Thank you. Pavel Levine Sunny Isles, Florida. Sent from my iPhone

Name	DateTimeReceived	Body.TextBody
Russell Riopelle	1/3/2023 16:44	Every vehicle that is 100% EV (for example, all Tesla vehicles and certainly all Tesla Model Y's, all Ford Mustang Mach-E's, etc.) should be eligible for the $7,500 EV tax credit. We need to transition to 100% EVs on our roads as quickly as possible. Therefore all EVs should be eligible for this $7,500 EV tax credit, and if it were up to me I would exclude any hybrids from receiving the tax credit, as hybrid cars are not clean enough. Thanks. Russell J. Riopelle, COO, CFO Legacy Partners, LLC 1999 Avenue of the Stars, #3150 Los Angeles, CA 90067 W: (424) 777-0776 Cell: (310) 926-5950
Joan Subrath	1/3/2023 16:45	As a US citizen and tax payer, I strongly protest the IRS rules on the EV incentives. Tesla Model Y 5 seats and Ford Mach E are SUV and should all be counted as SUV with cap at $80,000, NOT cap at $55,000. They are sold as SUV. Many people get hybrids for the extra boost to power the cars, not to save on gas. Why can hybrid get incentives but not pure EV? You are encouraging people to buy gas hybrid and not pure EV by this rule. If you want to encourage EV adaption, stop the unfair rules to Ford Mach E and Tesla Model Y 5 seats. Put them back in SUV cap at $80,000. Respectfully, Tax payer citizen
Kevin Chau	1/3/2023 16:45	(CC Adam Smith's Chief of Staff, Senator Patty Murray, Senator Maria Cantwell) My comments on on the vehicle qualifications are as follows: 1. The IRS and EPA definitions of an SUV do not align - this causes mass confusion in the market, and creates an imbalance. For example, a 5 seater Tesla Model Y and Ford Mustang Mach-E (both 100% electric vehicles), are not considered SUVs by the IRS. This excludes them from the tax credit due to the lower MSRP requirement. However, a Jeep Wrangler 4xe PHEV, a plug-in hybrid that only gets 21 miles of pure electric range, qualifies. This should not happen. There should not be a convoluted list of requirements to classify a vehicle separate from the EPA classification. If a Vehicle is listed as an MPV or SUV with the EPA, the IRS should adopt those classifications. There should be no reason why a Volkswagen ID4 AWD Pro with 5 seats is classified as an SUV, and a Tesla Model Y 5 seats is not. This will confuse consumers. 2. The requirements for PHEVs to qualify are too relaxed. Using the same example above, a Jeep Wrangler with only 21 miles of range, and only gets 22mpg should not qualify, it's atrocious. Please restrict PHEVs more, or give them a reduced tax credit. 3. Although this is a stretch, PHEVs should be excluded altogether. They are last decade's technology, and do not promote use and investment in charging infrastructure. Most people will not even use the EV charging functionality as they can just go buy gas. For those that do, I have experienced PHEV drivers taking up limited chargers in sparse areas where they don't need it, but BEVs do. Please don't promote and reward buying PHEVs. Expanding on #1; my disagreements to the individual classifications are below: Weight, axle height, ground clearance(s): BEVs gain the most benefit from being designed efficiently. In order to do so, there are different requirements from ICE vehicles, many of which won't allow them to classify as SUVs by the traditional means of approach angle/breakover angle/etc.., they are SUV's in all usages and spirits. The Tesla Model Y is the most aerodynamic SUV made, it's also the most efficient on range per KwH. It can haul a lot of cargo inside the vehicle, it can off-road quite well, and it can tow 3500lb. However with the current IRS rules it does not qualify as an SUV. It's being penalized for being designed efficiently, rather than to meet outdated standards. The same can be said for the Ford Mustang Mach-E. 7kWh PHEV battery: Encouraging Automakers to put 7kWh of batteries into their PHEVs is a waste of batteries and taxpayer dollars. We should be
Nick Villalon	1/3/2023 16:49	I am an ER doctor and father of 4 in Portland, OR. For years I have been excited by the prospect of transitioning to an electric car, and have already made the switch to having all of our home utilities being electric. I firmly believe that if the government's priority is to amplify the desire that so many Americans have to leave a better future for their children, that we need to keep the incentives for the IRA in line with a better future. Specifically, a hybrid vehicle that gets 20 mph (Jeep) should not be allowed to get the $7,500 tax credit while a fully electric vehicle (a car determined to be the 'most American' made car in the country) like the Tesla Model Y does not even qualifying because it is considered a sedan, and exceeds the $55,000 cap. The EPA lists this as an SUV, and it has all the features of an SUV. I hope that the incentives of our government officials are aligned with the good of our people and with the best possible outcome for our country's future. Please reconsider this perverse incentive structure, and restructure it to align with the helping America transition completely to battery-powered vehicles. Respectfully- Nicholas Villalon, MD
Antonio Mustico	1/3/2023 16:51	I believe the exclusion of all electric vehicles made 100% in America from the federal plug-in electric vehicle credit to be ridiculous. The fact that a 100% electric vehicles like the Tesla Model Y and Mustang Mach E to name a few are not eligible, but a gas powered plug in hybrid SUV that drives the majority of its miles on fossil fuel. Is completely ridiculous. This credit seems to be favoring big oil legacy auto makers who have already under delivered on a renewable energy future however they keep getting handouts along the way.

Daniel Snyder	1/3/2023 16:51	Petition · Fix the Inflation Reduction Act EV Tax Credit · Change.org<https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit?recruiter=1290758235&recruited_by_id=073c0570-8a0f-11ed-8a45-67f4de4114d4&utm_source=share_petition&utm_campaign=share_petition&utm_term=share_for_starters_page&utm_medium=copylink&utm_content=cl_sharecopy_35382588_en-US%3A8> A closer look needs to be paid to which models are being classified as SUVs. In particular, how is the Model Y AWD 5 Seat variant not considered an SUV, when the same vehicle with a 3rd row and 7 seats is? Meanwhile, other auto manufacturers with similar vehicles are getting the SUV designation allowing for up to $80k MSRP and full credit! Lastly, while hybrids are good and better than full ICE cars, I do not believe they should be receiving the full $7500 credit, especially when their effective MPG is much less than that of the MPGe of EVs. I think a better solution would be to set a Minimum MPG/MPGe and have it raise incrementally each year. Let the market dictate which cars get sold from there. _____ Warm Regards, Daniel B. Snyder dbsnyder125@gmail.com<mailto:dbsnyder125@gmail.com> (601) 672-5369
Chris Llana	1/3/2023 16:52	Certainly the Model Y should be eligible for the tax credit (and Ford Mach e), as they are SUVs—certainly not sedans. I have owned a Model Y for 2.5 years (not eligible for the tax credit when I bought it). I can say it holds a huge amount with its rear hatch, and with seats folded down, more than a pickup truck. It's also "tall". What is a crossover? Compact SUV? Apparently someone had an inappropriate agenda when making the call that Model Y/Mach E are not SUVs. Also, I am deeply disturbed that plug-in hybrids are getting any Federal incentive at all! This is just a way for people to get a government incentive to buy a gas burner; that's why anyone buys a PHEV. If they wanted to plug in, they would have bought a BEV. The vast majority of PHEV owners just get their government handout and drive the car like a regular gasser, without ever plugging it in—that's common knowledge. The day for PHEVs was five to ten years ago. BEVs are so good now, and affordable, with a large number of models available, that it makes no sense at all to drive a car around that has two separate drivetrains, and a crime for the Federal government to reward them for doing that. An outrage! My sister is in the market for an electric car, but wants a sedan. There are some good EV sedans, but not currently made in the US. Since she needs the Federal tax credit (or better yet a rebate) to afford a new EV, she will have to buy an electric SUV/crossover. There should be some relaxation in the US content requirement for eligibility, for a couple of years, to allow foreign manufacturers time to expand/convert their existing US production facilities to include their EV models. Thinking of VW/Hyundai/Kia. Perhaps if there is an agreement with the U.S. government to bring production to the US within a couple of years (or so). . . Thanks!
Patrick	1/3/2023 16:55	Thank you for taking the time to read my email. I mostly just want to comment on the intent of the act itself, and how that might apply to guidance. From all I understand, the point of the act is to help America wean itself off of oil and foreign supply chains, while helping more Americans afford quality EVs, especially if those EVs are made in America. Given that background, I don't understand how a Tesla Model Y is not eligible for the SUV credit, but a foreign built Jeep Wrangler that still uses gasoline as it's primary fuel source is. I'm a current Model Y owner and won't be eligible for any credits for future purchases due to income limits so I have no direct skin in the game. I'd just ask that these rules be given a second look with the context I've listed above. Does this vehicle sale help American workers? Does it help the American Economy? Does it help drive the goals of reducing pollution and fossil fuel consumption? If the answers to these questions are all "yes", and the only barrier is a bit of weight or suspension height that seems to be missing the forest for the trees. Thank you Patrick Loftus
Edson Barlow	1/3/2023 16:58	I would like to submit my humble opinion on the 2023 tax credits qualifications. I personally don't stand to gain, as I have never purchased a new vehicle. I have owned 4 electric vehicles (zero ICE vehicles) and still have 2 of them. All of them were used, so I missed the tax credits. It is what it is, I'm not really bothered. But I am confused that the Model Y 7 seat configuration misses the tax credit, while inefficient hybrids get it. It doesn't seem like this Administration is truly focused on EV's, more like they care about power (union-made) and money. Obviously what I said my opinion, but I think a great many Americans would agree.
Suwon Kil	1/3/2023 16:59	I think that all variants of Tesla Model Y and Ford Mach-e should be considered as SUV and their MSRP limit should be set to $80,000 for the IRA credit. Thank you, Suwon Kil

Name	DateTimeReceived	Body.TextBody
Donald Edmondson	1/3/2023 17:02	Dear sir, I am writing to criticize the current guidelines for EV credit qualification in the Inflation Reduction Act. As written many fully electric vehicles, including the most popular and most efficient models from Ford and Tesla, are excluded while other, primarily gasoline powered hybrids, qualify for the tax credit. The definition of “SUV” is written such that it excludes more efficient and “green” vehicles that are essentially identical in form to the more polluting hybrids that qualify. This makes no sense and is counter to the stated purpose of the legislation! Please reconsider. Sincerely,
Franklin Margolis	1/3/2023 17:02	Dear IRS As much as I would love to force tesla to lower the price on a model Y long range to $55000 to qualify for the $7500 credit, I don’t see that happening. I prefer not to pay $3000 on top of the current price for a model Y just to get the 7 seat version to qualify for the tax rebate. Can we please just approve the model Y five seat long range for the $80000 price cap? And while you are at it don’t have a $7500 rebate for stupid hybrid cars. What a waste of taxpayer money. We want to save the environment by stopping fossil fuel use. Hybrids barely rarely run on electric. I know cars are not the main cause of global climate change, but fixing the infrastructure related to Battery EVs and our further priorities to replace all fossil fuel vehicles (boats trucks motos planes) with electric everything starts here. Regards
Chris Moulton	1/3/2023 17:04	I am writing to express my concern that the Tesla Y 5-seater does not qualify for the new $7500 tax credit. This clearly violates the intent of Congress and the American public to incentivize the reduction of fossil fuel consumption for transportation. The Y one of the most fuel efficient, safe, American-made cars on the market today, and the IRS law is penalizing them for that. I request that you revise the law to remove the non-sensical requirement that the 5-seat Model Y be 250 lbs heavier to qualify. Thank-you for your time, Christopher Moulton Maine
Vikram Mayya	1/3/2023 17:05	The Inflation Reduction Act qualification for tax credits for EV's are strange cos I thought it was meant towards the betterment of the environment. A Tesla Model Y AWD or a Mustang Mach-E do not qualify whereas more polluting gas powered hybrids qualify which is strange. An EV which should qualify as an SUV should not be penalized cos it does not meet the weight requirement of SUV's cos the lower weight actually makes them more environmentally friendly. Please review this flaw in the IRA and rectify it. regards Vikram Mayya Cincinnati, OH
Justin Goodnight	1/3/2023 17:05	I am writing to express my deep displeasure with the recent decision to withhold the EV tax credit from the five seat model Y Tesla. This decision appears to be punitive and illogical and fails to make any sense to the large percentage of taxpayers in the United States. Not only does it punish electric vehicle owners, it also erodes the public's trust in the government. Hybrid vehicles have long been lauded for their improved fuel efficiency and their ability to rely on both gasoline and electric power. However, fully electric vehicles produced in the United States offer a superior performance over hybrids and may very well be the future of transportation. For this reason, I find it absurd that hybrids should be rewarded with the EV tax credit while fully electric vehicles are being punished. It appears to me that unless there is a sound and logical reasoning prior to withholding the EV tax credit from the five seat model Y Tesla, the public is likely to be angered. Moreover, if this decision holds, it is possible that citizens may even bring a lawsuit on the matter. As a taxpayer, I do not like to see my hard earned money used this way. Every citizen of the United States has an equal right to use their tax money for the benefit of the nation, and this decision goes against my expectation as a tax payer. I understand that there are valid reasons to deny the EV tax credit, but I believe that the IRS should publicly announce their reasoning and provide evidence for their decision in order to prevent further unrest. Thank you for your time. Sincerely, J. Waco Goodnight, MD, FAAP Mobile: 7858424477

Jim Alonso	1/3/2023 17:06	I am appalled at the categorization inconsistencies for SUV under the 2023 Clean Vehicles list. <https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after> [logo_small.jpg] Manufacturers and Models for New Qualified Clean Vehicles Purchased in 2023 or After | Internal Revenue Service<https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after> irs.gov<https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after> Looking specifically at the Tesla Model Y, and for Comparison Stellantis. It makes no sense that a fully electric SUV (as categorized by the EPA) only qualifies as a 7 seater, and not as a 5 seater for the MSRP Limits. [PastedGraphic-1.png] If the spirit of the law is to promote electric transportation and to make it more affordable, how can an all electric SUV (Tesla Model Y - 122MPGe) not qualify when it has 5 seats, is more efficient and less expensive than the 7 seat option. To add insult to injury, The Jeep Wrangler 4xe, a 5 seater that can only go UP TO 21 miles in all electric mode (49 MPGe) and otherwise is a 20 MPG rated gasoline hybrid, qualifies for the full incentive as an SUV. [PastedGraphic-2.png] A plug in hybrid that can only (at best) travel 21 miles in all electric mode and otherwise only gets 20MPG on gasoline should NOT qualify as an electric, alternative energy vehicle, but that, I realize, is not what you are asking comment on. Please fix this oversight by making the Tesla Model Y SUV qualify as an SUV for both the 5 seat and 7 seat options. Thank you.
Spencer Mitchum	1/3/2023 17:11	As you can see (yellow highlighted text) the NHTSA clearly views this vehicle as a SUV and this is the five seat version. You could verify this result by entering any Tesla model "Y" five seat unit VIN number into the NHTSA VIN decoder page and you would find similar results. It would perhaps reduce the confusion between all interested parties (IRS & general public) if the IRS published the parameters used to make the decisions regarding what vehicle did or did not make the cut for the full $7,500.00 credit. If you open the CARMAX website and perform a search for a Tesla model "Y" long range 5 seat model you will find the car's VIN number displayed in the upper right corner of the page next to the stock number. If you scroll down the page until the following text appears in blue outlined box (see standard OEM features) and open this link you will find that it corresponds to a 5 seat model "Y". If you performed this process only 4 to 5 times (find a VIN on CARMAX -> enter it into the NHTSA VIN decoder) a pattern will emerge. [image.png] [image.png] [image.png]
John Graves	1/3/2023 17:14	As part of the upcoming IRA in relation to Electric Vehicle incentives, I believe there has been a significant miss in the current verbiage. The fact that hybrid and semi-hybrid vehicles qualify at all is concerning. The reason for these incentives is to get more gas cars off the road and more electric cars on it. Incentivizing hybrids does not accomplish that goal. Sure, hybrids are more efficient than gas cars, but they still pollute the air every time they are turned on. Hybrids also already significantly undercut most EVs of a similar vehicle class in price. By offering them the same incentive (if not more of an incentive than full BEVs), we're further incentivizing continuing to pollute. Price is the greatest barrier to everyday BEV ownership - sure some BEVs can come in less expensive if you drive around town - but if you want a BEV that can do everything a gas car can, it is more expensive. If Hybrids are to be included, they should not receive the full credit - only half (as they are a half solution) - and be required to meet certain EPA all-electric range estimates and certain MPGe requirements. For example - a Jeep Wrangler 4xe that gets 20 mpg combined and only 21 miles of mpge has no business being included in this incentive. But a Prius with 51mpg combined and nearly 40 miles of all electric driving could. Additionally - the IRA was signed in the hopes of invigorating American Industry. This current interpretation clearly discriminates against what has been identified as the "most American made" car currently on sale in the US - Tesla. Legacy automakers may assemble their cars in the US, but most components are made in foreign countries. Tesla makes most of its components in the US AND assembles them here to. All Model 3 and Model Y vehicles should qualify for the full credit, without exception. They are the best selling vehicles in the world that are all electric and made in America. Anything less is unacceptable. Sincerely, John Graves
James Noelle	1/3/2023 17:16	I would like to comment on the latest IRS rules regarding Electric Car rebates. The fact that the 2023 Tesla Model Y does not qualify for the $7500 rebate is absurd! The EPA and the NHTSB both classify it as an SUV but the IRS does not. I own a 2022 Model Y and it is without a doubt the most versatile vehicle I have ever owned and it is pollution free. And gets 113 e miles per gallon. The IRS needs to rethink some of the rules regarding this Model Y. It should fall into the under $80K SUV category. Thank You! James E. Noelle 166 Bay Shore Loop

Scott A. Muller	1/3/2023 17:18	Dear Mr. Garcia; We welcome the 2023 Federal Tax Credits for New All-Electric vehicles. But we are miffed at why a tesla model y long range AWD 5 seater is excluded (applicable MSRP limit of $55k is a non-starter as the car costs slightly more than that...); but the 7 seat variant with a MSRP limit of $80k is included? The 7 seater actual MSRP is much less than that… but the 5 seater MSRP is more than the "allowed"? This seems a clear error. It's the same car. the upgrade to a 7 seat is a $3k charge. Why would that be the requisite that qualifies for the $7.500 rebate? So then, we are supposed to upgrade to a 7 seater (+$3k) (when we don't need and would prefer the cargo space) to get the $7,500 rebate? for an effective rebate of $3500?? This seems a clear overshight. Please revisit that calculation. Thanks,
ron nelson	1/3/2023 17:21	Dear Internal Revenue, Thank you and your team for all the good work you do. The IRA excluded 70% of every electric vehicle in dealerships across this great United States of America. That definitely slowed down EV adoption. Manufactures were ramping up to save the planet, and then got punched in between the eyes in August 2022. My Hyundai 2022, Ioniq 5 is all electric and 303 miles per charge. I bought it in January 2022 and the $7500 federal income tax credit came with it. As of August, It no longer receives the credit. How are even, low middle income folks, going to be able to afford these cars that are going to save the planet? Low income folks, no way. All five seat variants of the Tesla y should get the $7500 income tax credit as long as they meet the SUV MSRP cap. The plug-in hybrid vehicles, especially the ones that get less than 50 miles per charge, should not get the entire $7500 federal income tax credit. I think 15 kWh should be the cut off. I also feel plug-in hybrid electric vehicles should get 40 to 50 miles per gallon to qualify. Audi, BMW, Volkswagen, Ford, Hyundai, Kia, Genesis, Chevy, Tesla are going to save the air and the water single-handedly, but they need your help. I 100% believe that the supply chain should be 100% American but we should give them five years to get that done. Battery factories and recycling plants should be built in the United States. Mining of minerals should be done in our great country. Automobile assembly Plants should be built in the United States. EV charging manufactures, the same. I have owned solar panels on my home since 2012 and we have had an electric vehicle in our driveway since the summer of 2015. Next will be heat pumps for heating……..
Irfan M	1/3/2023 17:24	Tesla model Y is the size of a medium SUV and as such should qualify for full tax credit of $7500 for MSRP of $80,000 or less.
Charles Jaekle	1/3/2023 17:24	To whom it May Concern. How is it possible that a 3,900 lb Ford Escape plug in hybrid, with a minimal EV range qualify as an SUV, and may have a retail price of as much as $80,000 and still qualify for the full rebate, while a 5 passenger Tesla Model Y, 5 seater, that is assembled in the US, and has a 330 mile range be considered a car, and must retail for $55,000 or less to receive the rebate? Why does the heavier less efficient 7 passenger Tesla Model Y qualify as an SUV, and may retail for up to $80,000 and get the rebate while the more efficient 5 passenger version is categorized as a car? You are rewarding inefficiency. Charles Jaekle Sent from my iPad
Alexander Mattmann	1/3/2023 17:27	The Tesla Model Y and Ford Mustang Mach-E are the best-selling battery electric vehicles BEV in their class (SUV). The EPA and NHTSA gave the SUV classification to the mentioned models. It is therefore hard for me as a consumer to understand why another government agency (IRS) is classifying certain trims of these vehicles completely differently. Especially when the full $7,500 tax credit is on the line. U.S. Companys build these vehicles in the U.S. for the U.S. market! It is very unfortunate that with this classification, the ELECTRIC Vehicle tax credit is hugely incentivising buying Plug-in hybrids in the SUV class rather than BEVs. Their efficiency is terrible in comparison and a good number even have less cargo space than the mentioned BEVs above. It is therefore very unfortunate that the most popular BEV SUVs do not get incentives in many trim levels doe to specifications set by the IRS. Furthermore, the top trims of the VW ID 4, a smaller car than the Tesla Model Y with less towing capacity and manufactured by a non US company, gets the tax credit. I hope you take my comments into consideration and revise the IRS classification guidelines for SUVs, especially BEV SUVs. Regards, Alexander Mattmann

Name	DateTimeReceived	Body.TextBody
Dietrich Schmidt	1/3/2023 17:28	My wife and I purchased a Toyota Rav4 Prime (PHEV) in February of 2022, solely based on the fact that we would be receiving a $7500 tax credit. We are so thankful and consider it a tremendous blessing! Since, we have only purchased about 3 tanks of gas and drive 95% of the time on our 45 EV mile charge most days. We were huge advocates for others to look into purchasing PHEV and EV's given the helpful incentive to lower the cost. We were even considering purchasing a full EV vehicle given the incentives. However, that changed for us and all of our friends who were considering purchasing an EV when the Inflation Reduction Act was passed. There are some very helpful items in the bill like removing limits from certain automakers, price and income limits, incentives for used cars,and helping provide the incentive at point of sale, but the bill dramatically reduced the number of vehicle options. Unfortunately, we would not consider buying any of the current options. For example, the SUV of the year from Motor Trend was the Hyundai Ioniq5, which previously qualified and now no longer qualifies. Please consider adding excellent quality EV's (like the Rav4 Prime, Ioniq 5, etc) back on the list. We would love to consider purchasing a vehicle such as a Hyundai Ioniq 5 or a Toyota Prius Prime in the next year or so, but we like most consumers can't justify the price gap yet in electric vs. gas vehicles without an incentive/rebate. We would appreciate choice in what for us, and most people, is the largest expenditure outside of purchasing a home. Thanks for your consideration! -Dietrich-
John Youngman	1/3/2023 17:28	Writing to you about the Qualified Plug-in Electric Drive Motor Vehicle Credit, and specifically about how and why vehicles qualify. Two main points: One, the inclusion of relatively mild hybrids (e.g., the Jeep hybrid that has 21 miles of battery range, making it basically an old-fashioned gas guzzler) that receive a $7,500 tax credit, and two, the strange rules used to determine if a vehicle is a “car” or a truck/van/SUV. The first point questions the incentive itself—if the tax credit is supposed to encourage the transition away from gas vehicles and towards electric vehicles, it doesn’t make much sense to me to support vehicles that primarily use and need gasoline. The second point is equally important—pure EVs (like the five seat Ford Mustang and the five seat Tesla Model Y) don’t qualify based on purchase price ($55,000 max sales price) because they have been designated as being cars and not SUVs. But, in the case of the Tesla, it does qualify (magically?) if it has extra seats! Contrast that to the VW ID4 which has five seats (like the “car” Model Y) but is somehow considered an SUV and therefore qualifies if priced at $80,000 or less. These qualifications seem inconsistent and irrational. I think that other governmental agencies have already determined that the Mustang EV and the Tesla Model Y are both SUVs, as has the general public. What artificial determination is being used by the IRS to arbitrarily recategorize these vehicles as cars? A final thought—cars, trucks, vans, SUVs, etc. are all used for similar things, like getting from A to B. It’s one thing to limit the credit to vehicles at a certain price point. Why complicate things with arbitrary definitions as to what is a car vs an SUV? Who cares? The goal, in my mind, should simply be to help the transition from gas to electric—for all sorts of good reasons, specifically the environment. My Best, John R. Youngman
Mark Haney	1/3/2023 17:28	It appears to me the vehicles eligible for the IRA is not aligned with the goal of this program - to drive down harmful CO2 emissions It makes no sense why gasoline vehicles are on the list at all. Hybrids should not be qualified whatsoever. Having said that I could understand having hybrids if all fully electric vehicles (under the price cap) were included - but the fact the Tesla Model Y and Ford Mustang Mach-E are excluded shows the asinine ineffectiveness of the IRS and our federal government. It makes no sense at all. Thank you for opening up to public comments -- Mark Haney haney.mark@gmail.com<mailto:haney.mark@gmail.com>
Bob Smith	1/3/2023 17:30	Please change your definition of SUV to incentives weight reduction and not inefficiencies. A hybrid that gets 20 miles on electric battery only should not qualify for a 80k tax credit, while the certain variants of the Mach E and Model Y don't qualify, both of which are fully electric. We need to be incentivising the transition to clean energy not throwing money at a dying gas industry. Please reconsider.
Davey Jung	1/3/2023 17:31	$80,000 vs. the same Model Y with 5 seats have $55,000 limit ? The only difference between these vehicles is the 3rd row seat. I would like to believe that this is an oversight. Appreciate your review and timely correction. Additionally, why would we even allow hybrids to get tax credit ? If we are truly going to pursue cleaner environment, then incentives should only apply to pure EV. Thank you for your consideration. Dave

Name	DateTimeReceived	Body.TextBody
David Shapiro	1/3/2023 17:32	I am writing a public comment with respect to the upcoming IRS guidelines on which vehicles are eligible for the tax credit as part of the Inflation Reduction Act. I think it is wrong to assign the same level of tax incentive to a plug-in hybrid vehicles as a pure EV vehicle. Studies consistently show that plug-in hybrids have a much worse environmental track record than pure EVs. The batteries are small and contribute and are much less costly to produce than batteries for pure EVs. It is absurd to think these vehicles are the same and should qualify for the same tax incentive. Doing so would worsen our environment and our domestic battery supply chain. Further, you are needlessly excluding EVs that are pure EVs, such as the Model Y and Mach-e (specific trims). It is beyond parody to include plug-in hybrids and exclude pure EVs. Thank you. -David -- David Shapiro
Alex Huang	1/3/2023 17:35	Hello, Tesla model y 5 seater should be classified as SUV and allow for MSRP limit of $80,000. The most expensive part of ev is the battery. The goal for the tax rebate should be help to reduce the price of the battery. The 7 seater and 5 seater has the same battery so should both qualify for $80,000 MSRP limit. Current only 7 seater qualified. Also, the hybrid has very small battery. The rebate should be base on size of battery. There should be a scale base on size of the battery. The goal is to get people off gas car. (Hybrid included) . The gov should have more rebate for bigger battery car like a full ev and smaller rebate for hybrid. Thank you for consideration.
Pratap Kode	1/3/2023 17:36	The following models need to be considered as SUVs - 2023 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) - 2023 Tesla Model Y Long Range - 5 seat variant (2-rows) - Tesla Model Y Performance - 5 seat variant (2-rows) The are considered SUV by EPA and NHTSA and so should the IRS. Please tweak/remove the weight requirement that disqualifies above. Thanks
Ian Smith	1/3/2023 17:36	I was much looking forward to receiving this information as my family members were very likely to buy electric vehicles when our current gas guzzlers call it a day. Not with the current tax credit qualifications though... As most of the planet seeks to reduce the impact of climate change, it seems bizarre to us that the current tax credit qualification criteria allow "hybrid" gas guzzlers with EPA ranges less than 30 miles when in electric mode to qualify for $7,500 when the free world's most popular car - the Tesla Model Y 5 seat - with an EPA range >300 miles - does not! Similar offerings from Ford and GM are also discriminated against, when the IRA was supposed to be accelerating the move the all-electric, domestically produced, vehicles. PLEASE RE-EVALUATE YOUR QUALIFICATION CRITERIA AND ENSURE YOUR DECISIONS (A) SUPPORT 'ALL-ELECTRIC' DOMESTIC CAR MANUFACTURERS ONLY AND (B) DO NOT EXCLUDE THE MOST POPULAR MODELS IE. THE TESLA MODEL Y 5 SEAT AND THE FORD MUSTANG MARK E..
James Ellison	1/3/2023 17:36	Hello! I'm a long-time electric vehicle owner (10years) and have driven a Nissan leaf, tesla model 3 and tesla model y. I'm super disappointed that the guidelines exclude many of the model y variants because they are 'not SUVs'. Having owned many suvs I can clearly confirm that the tesla model y is an SUV. I understand that getting the policy 'completely fair' is difficult...but this seemingly obvious blunder makes it appear that the anti tesla sentiment from our federal government has created bias in the irs policy. Seeing that the gas guzzling jeep that gets 20mpg receives the rebate bc of a 21 mile electric range but the 100+mpge model y doesn't is offensive. Appreciate you taking comments and can hopefully address this issue. James

Name	DateTimeReceived	Body.TextBody
Agatha Yeung	1/3/2023 17:39	I am planning to purchase a Tesla Model Y, however the tax credit for electric vehicles (EVs) for Tesla Model Y is based on the number of seats, it does seems unfair and confusing to consumers. According to Edmunds, Tesla Model Y is classified as a SUV (https://www.edmunds.com/tesla/model-y/). With its All Drive Wheel, it is ideal for vacation trips for my family of 3. However for the same car with range and speed, its 7 seats go to $80000, but 5 seats credit is only $55000? Its base cost is already $58190 and I do not want to spend $3000 more to get 2 more seats. Please help customers like us to get a good EV to save the environment which the EV credits is about. Thank you for looking into the matter. You are appreciated, Agatha Yeung
Roman	1/3/2023 17:40	Tesla model Y, 5 seater is an SUV. It has to be included in the $7,500 credit. This is absurd that the most American and the most efficient suv in not included. Please add this vehicle to the list so myself and many of our friends can go ahead and purchase this amazing car. Thank you, Roman Goldring, MPT
Wilfred Miranda	1/3/2023 17:41	switch to an EV? Who cares if it is a Bolt or a Lucid Air? Setting limits for vans, trucks, SUVs, and cars only creates weird situations for automakers as they try to comply. The earning limit is bad too, because if wealthy people don't want to lose $7500 resale on every car they purchase, they have to buy non-electrics. With how many cars wealthy people tend to buy and trade off, that's a lot of extra gas cars on the used market. Why does the hybrid cars getting full credit. They should be getting partial credit as they are not 100% EV. Thanks Wilfred
Ryan Albrecht	1/3/2023 17:46	Good Morning, I am petitioning the IRS to add the Tesla Model Y (5 Seat Variation) to the EV IRA Tax Credit. It is unjust & unfair that vehicles that only get 20 miles of electric range, are built in Mexico, and are powered by fossil fuels will receive $7500 and the Tesla Model Y (5 Seat Variation) which is fully electric and built in the United States will not. This is unacceptable and needs to be corrected. https://www.cars.com/american-made-index/ Thank you for your concern.
Nick Adamakis	1/3/2023 17:46	Hello. I find it ludicrous and politically and poetically motivated that at 5 seat Tesla Y gets no credit while a gas guzzling “hybrid” does, specifically: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Fix this IRS!
Patrick	1/3/2023 17:48	Thank you for taking the time to read my email. I mostly just want to comment on the intent of the act itself, and how that might apply to guidance. From all I understand, the point of the act is to help America wean itself off of oil and foreign supply chains, while helping more Americans afford quality EVs, especially if those EVs are made in America. Given that background, I don't understand how a Tesla Model Y is not eligible for the SUV credit, but a foreign built Jeep Wrangler that still uses gasoline as it's primary fuel source is. I'm a current Model Y owner and won't be eligible for any credits for future purchases due to income limits so I have no direct skin in the game. I'd just ask that these rules be given a second look with the context I've listed above. Does this vehicle sale help American workers? Does it help the American Economy? Does it help drive the goals of reducing pollution and fossil fuel consumption? If the answers to these questions are all "yes", and the only barrier is a bit of weight or suspension height that seems to be missing the forest for the trees. Thank you Patrick Loftus

Name	DateTimeReceived	Body.TextBody
Mohamed Rabbani	1/3/2023 17:49	Dear IRS The IRS is not categorizing the Tesla Model Y 5 seater as an SUV. Tesla Model Y is a pure EV with 330 mile range, 117 MPGe (very efficient) with SUV form factor but it is not categorized as SUV and hence missing the the $7,500 tax credit since it is categorized as sedan which has a lower price limit ($55,000) There are other vehicles with the same form factor as Model Y are classified as SUV and they are getting tax credit including hybrids that runs only few miles with battery * Remove incentives for all hybrid vehicles and only have them apply to pure EVs. * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill.
Prat Kode	1/3/2023 17:51	Dear Andres, The following models need to be considered as SUVs - 2023 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) - 2023 Tesla Model Y Long Range - 5 seat variant (2-rows) - Tesla Model Y Performance - 5 seat variant (2-rows) They are considered SUV by EPA and NHTSA and so should the IRS. Please tweak/remove the weight requirement that disqualifies above. Thanks
Tobey Reichman	1/3/2023 17:53	I am writing to request that the Tesla Model Y 5 seat configuration be classified as an SUV and therefore be eligible for the $7,500 electric vehicle tax credit if MSRP remains below $80,000 as part of the inflation reduction act. As a college student at California State University of Northridge, I am writing on behalf of my class, which recently had a discussion about the various electric and hybrid vehicle options available on the market. During our discussion, we noticed an unfair discrepancy in the eligibility for the electric vehicle tax credit. Specifically, we observed that the Model Y 7 seat configuration would qualify for the credit, but the 5 seat configuration would not. This seemed unjust to us, particularly when compared to other vehicles that are classified as SUVs, including hybrids with only 5 or even only 4 true seats. After conducting further research, we found that the Tesla Model Y with 5 seats exhibits many characteristics of an SUV. It has a spacious interior, making it practical for families or individuals who need a vehicle with ample room for passengers and cargo. It also has a high ride height and all-wheel drive capabilities, which are common features of SUVs and enhance the Model Y's off-road and inclement weather capabilities. Additionally, the Model Y has a towing capacity of up to 3,500 pounds, similar to many traditional SUVs. In fact, the Model Y has consistently been advertised as a mid-sized SUV and is considered as such by the Insurance Institute for Highway Safety, the European Union, and other governments. Given these qualities, we believe that the Tesla Model Y meets the criteria for classification as an SUV. Therefore, we request that it be eligible for the electric vehicle tax credit as long as the MSRP remains below $80,000. This credit is a crucial incentive for individuals and businesses to choose full electric vehicles over hybrids, and including the Model Y 5 seat configuration in this program would encourage the adoption of full electric SUVs and help reduce greenhouse gas emissions. Furthermore, we believe it is unfair that vehicles such as the BMW X5 Hybrid, Jeep Grand Cherokee 4xe, and Jeep Wrangler 4xe, which all have an electric range of less than 10% of the Tesla Model Y's range, would be eligible for any partial credit, let alone the full credit. Those vehicles have similar out the door MSRP's (before any common dealer markups) and have gas engines. I find little to no reason why they should be rewarded while Tesla should be punished. As a prospective Model Y customer, I can personally attest to the fact that my family is interested in purchasing a Model Y in the future because of its
Raj Ardham	1/3/2023 17:54	Please include all Model Y variants as SUV. They are more efficient than many plug in hybrids that qualify for the 7500 incentives. Thank you. Raj Ardham
Lalit Wadhwa	1/3/2023 17:57	I sincerely hope that the IRS will understand, acknowledge and correct the issues related to its interpretation of the EV tax credit qualifications. 1. The intention of the Inflation Reduction Act is to reward manufacturers and consumers for transitioning to electric vehicles. As interpreted by IRS, Hybrids and Plug-in Hybrids will end up receiving more credit. This is not what the Act intended to do. I would suggest that Hybrids and Plug-in Hybrids be completely removed from any consideration for tax credits. Hybrids and Plug-in Hybrids do nothing to help our country transition to electric, and actually end up harming that transition. 2. Inconsistent application of definitions between various government agencies is incorrect and unfair. As an example, EPA classifies a Tesla Model Y as an SUV, but the IRS definition does not. I think the IRS can definitely do better. Thank you, and hoping that the IRS lands on the right side of history with its interpretation of the Inflation Reduction Act Lalit Wadhwa 2704 W Oakland St Chandler, AZ 85224 -- [photo] Lalit Wadhwa 480 330 1074<tel:480+330+1074> | lalit.wadhwa@gmail.com<mailto:lalit.wadhwa@gmail.com> [https://cdn.gifo.wisestamp.com/social/linkedin/0077b5/32/0/background.png] <https://www.linkedin.com/in/lalitwadhwa> [https://cdn.gifo.wisestamp.com/social/twitter/55acee/32/0/background.png] <http://twitter.com/wadhwal> Create your own email signature<https://www.wisestamp.com/create-own-signature/?utm_source=promotion&utm_medium=signature&utm_campaign=create_your_own&srcid=>

DREW REEDMAN	1/3/2023 17:59	I'm writing to share my concerns on the current proposed EV tax credits for 2023. If I understand correctly, the whole point of creating incentives for consumers is to advance the transition to sustainable EV transportation. To me this means incentivizing more consumers to purchase those vehicles from those manufacturers that are making significant strides in producing true EV vehicles that give practical range and efficiency. It should also be an incentive for those same manufacturers to move further from using ICE in their vehicles and truly move to BEV. Below is the most blatant example of how your criteria neither promotes consumers to move to full EV nor pushes manufacturers to making true EVs while simultaneously making non EV hybrid vehicles cheaper to consumers vs true EVs and allowing manufacturers to slow their transition. [IMG_9893.PNG] How on earth could a bill trying to get people to move to EVs offer $7500 credit for hybrid cars capable of only ~30 electric miles and still relying heavily on polluting with a stinky gas engine and NOT offer consumers anything to purchase the Tesla Model Y? All these vehicles are SUVs. All have 5 seats. Of all these vehicles, the one you'd think the government would want to credit for faster EV adoption would actually be the one car on the list getting $0 credit. I've read some stories that the Tesla doesn't meet the criteria (in someone's eyes) as an SUV based on the fact it is a few hundred pounds to light to be considered an SUV??? If this is true it's absolutely absurd. Also heard it might not have sufficient ride height to be considered an SUV. Again this wound be absurd. EPA has officially classed this vehicle as an SUV so why would the government issue a conflicting classification via this bill for any other reason than for political reasons or market manipulation? If this bill and your execution of tax credit approval criteria continues as is, you are totally misappropriating these funds to millions of customers that are hardly moving the needle to EV adoption (the sole purpose of this bill) and penalizing customers and Tesla for building a true EV SUV that they've
Emmet Peppers	1/3/2023 18:03	Why is 5 seater Tesla Model Y not included in IRA deduction? Makes no sense as that is top selling EV in the world right now…please fix this asap I pay the Us Gov a ton of taxes so please restore my trust in our govt to fix this Thank you Emmet Peppers Sent from my iPhone
Zack Nagler	1/3/2023 18:08	Hi, I have feedback on this control. The Model Y 5 seater should be included. It doesn't make sense that is not. Please take that into consideration. Thanks, Zack Sent from my iPad
Dan Weinstein	1/3/2023 18:09	that is somehow beyond your bureaucratic ability, then at least switch to a volumetric standard. The current method rewards designing less efficient vehicles; which goes against the whole reason for transitioning to electric vehicles. Also, including any hybrid vehicles is absolutely ridiculous; since they are not significantly more efficient than a traditional ICE vehicle. -- Dan Weinstein danjw1@protonmail.com<mailto:danjw1@protonmail.com> Sent from Proton Mail for iOS
Ed Webb	1/3/2023 18:10	Hello, I fail to understand why a Tesla Model Y, especially the 5 seat version, does not fall under the $80K price limit for an EV. It is clearly a hands down winner compared to every other SUV on the list (and sedans for that matter) in terms of efficiency and safety. Instead, the IRS is now incentivizing less efficient SUVs and sedans. In all fairness, the playing field should be level. Regards, Edwin G Webb Jr.
D Song	1/3/2023 18:10	Hello, I would like to comment on the IRA (inflation reduction act) and the definitions which the IRS has determined regarding which vehicles qualify to be classified as an SUV. It is shocking that the Tesla model Y 5 seat version does not qualify for the EV rebate based on your definitions, whereas many other vehicles which are not true EVs and have much lower fuel and emissions efficiency do qualify. Please look into these criteria and consider modifying in order to make your ruling more consistent with the intent of the bill which congress passed. Thank you.
Matt Koehler	1/3/2023 18:11	This needs to be fixed and make more clear why things are allowed and not allowed. Hybrids should not qualify for as much money as true EVs. Trucks should qualify for as much or more than an SUV. Matt

Name	DateTimeReceived	Body.TextBody
Suneet Bhatia	1/3/2023 18:11	Re- Feedback regarding IRA To whom it may concern, The IRA is not appropriately structured and includes several gas powered hybrid vehicles but does not include all Tesla models including the 5 seat model y (due to weight) whereas a heavier gas powered hybrid would qualify. It doesn't make sense to qualify vehicles based on weight as gas cars would naturally have a higher weight given the architecture of these vehicles. Assuming the goal is to increase adoption of EVs I suggest the weight rating be removed and allow all fully electric vehicles to qualify for this credit. -- Best Regards, Suneet Bhatia
Ling Huang	1/3/2023 18:12	Tesla Model Y 5 seater should be included in the $7500 EV tax credit. The Model Y is the most efficient electric vehicle available in the current market. How can you give the less efficient EV $7500 credit but not the Tesla Model Y 5 seater. I demand the model Y 5 seater to be included to the tax credit. Otherwise, it just should the corruption of the current administration and its bias of favoring the legacy auto maker against Tesla Company. Please implement the right policy and give the credit to Tesla which is helping moving the auto industry towards the sustainable environment. Thank You !
Jason Turuc	1/3/2023 18:12	I think it is criminal that tesla Model Y 5 seater is not included and silly that it's not from the beginning. This needs to change immediately Sent from my iPhone
Sea Wolf	1/3/2023 18:13	Dear IRS, All versions of the Tesla Model Y should qualify for the $80k cap as they substantially conform to the intent of congress in passing the IRA legislation and help further the goals embodied in the Act. Kind regards, Adam Stone
Ray	1/3/2023 18:13	Dear IRS, I personally think the Tesla Model Y 5 seater should be included and it is silly that it's not from the beginning. I hope you listen to the public and do what's right to make the world a better place.
Blane Aument	1/3/2023 18:13	Tesla's Model Y 5 seater should be included as a qualifying auto in this bill Sent from my iPhone
Chris Espindola	1/3/2023 18:13	Tesla Model Y should be included in the IRA tax credit for EV incentives. It is clearly an SUV and weight should not be the defining factor. EVs should be made to be as light as possible for efficiency. Sent from my iPhone
Evan Smith	1/3/2023 18:16	I feel the model y 5 seater should be included with the 80k msrp limit. It is one of the few truly all electric suvs available. This credit would enable my family to transition to ev Thanks
Andrew Nash	1/3/2023 18:18	Please reconcider the Tesla Model Y 5 seater, Mach E.. etc from your "SUV" classification. We should NOT encourage people to make heavier SUVs using more energy / carbon just to meet these requirements. Consider your role in the climate battle, and honestly, the economic impact of using more energy unnecessarily. The model Y is an SUV. People know it is and the EPA agrees. Please rethink what you have created and the incentives it pushes to add 250lbs of lead weight to efficient SUVs. It's bad enough the bill congress made gives EV credits to Jeeps that get 20MPG, lets at least get this part right. Thank you for your time! --Andy
Jon Guillou	1/3/2023 18:18	Hello The Tesla model Y should be included in the IRA tax break. It's silly that it's not right from the start! Kind Regards Jon Guillou This message was sent to you on my iTelephone 14.
Filip Ljunggren	1/3/2023 18:18	This is insane! You are incetiveising bad engineering and more gas guzzling cars. If the EPA and NHTSA classifies both the mach-e and Tesla Model Y as SUV's, why aren't you? It is a taxcredit for EVs yet you are giving to PHEVs before you give it to Tesla and full BEVs!?!?? Skickat från min iPhone

Ben Toskey	1/3/2023 18:18	Hello- Please make the Tesla Model Y 5-seater eligible for the $7,500 EV tax credit. Thank you, Ben Toskey Stillwater, MN
Trung Vu	1/3/2023 18:19	Tesla Model Y 5 seater should be included and silly that it’s not from the beginning. Jeep wrangler e4x has 21 miles of electricity and received $7500 while Tesla model Y has 330 miles of electricity does not. Makes me doubt the true intention of this EV tax credit.
Couch Investor	1/3/2023 18:20	I am emailing you because I find it ridiculous that Tesla's Model Y 5 Seater is not considered a SUV (it is considered by EPA) and therefore does not get the $7,500 EV tax credit. But a gas-engine Jeep, with 21 miles of electric range does get the tax credit. Let me remind you that this is an EV TAX CREDIT and the actual EV vehicle is being penalized here while the gas-engine one is being rewarded. Please reconsider. Thanks Neil
Scott Leavitt	1/3/2023 18:20	Please review inclusion decision @ Tesla Model Y 5 seater, and if not included, please provide clear communications around your decision Thank you Scott Leavitt Sent from my iPhone
jeff larson	1/3/2023 18:20	1, ford lightning pro qualifies, but lariat with extended battery does not based on the $80k cutoff. The lariat only has some extra options (safety, range, leather seats and radio) - any trim should qualify 2, tesla model y with 5 seats has 55k limit but 7 seats is 80k limit. They have the exact same specs otherwise. Again, qualifying depends on the trim you choose - makes no sense. This is especially true for all electric plugins above, compared to plug-in hybrids, which may offer minuscule electric range (eg, Jeep Wrangler 4xe with 20-ish electric range). If the point of the incentive is to promote non-ICE transportation, all electric cars should have the cap raised a lot so a different trim does not disqualify the incentive. Thanks, Jeff Sent from my iPad
Jarrod Buchanan	1/3/2023 18:20	same car with an extra two seats qualifies for the higher price tax credit, but the 5 seater does not? This list is already quite skewed as you allow $7,500 tax credits for vehicles that have very small, useless batteries in them and probably cost the OEM a few hundred dollars to include in the build, but not a fully American made vehicle that runs solely on EV power!! Take the politics out of your decisions and make good use of our tax dollars. I say all of this and am not even eligible for the tax credit as I make too much money. If you are going to stimulate the EV space, please do it fiscally responsibly!! Best regards, Jarrod Buchanan 9238 Pipilo St. San Diego, CA 92129
Brian Gibson	1/3/2023 18:20	Hi, I'm a tax payer from Rhode Island wanting to chime in on the EV tax credit qualifications. I'm a big believer that Americans should pull together and do the right thing to mitigate the risk of climate change. The fact that, for example, a Jeep Wrangler hybrid gets a $7,500 rebate, but the Tesla Model Y 5 seater doesn't. Seems like a decision not made in the interest of climate change risk mitigation. I'm not sure in who's interest that decision was made. But it frustrates me that my taxes go to putting more hybrids on the road at the expense of less carbon intensive pure EVs. Hopefully this issue is considered in future revisions. Thank you, Brian Gibson
Mario Alberto Martínez Vilalta	1/3/2023 18:20	Allow that the 100% electric vehicles Tesla Model Y and Ford Mustang Mach-E are included to the 7500$ tax reduction subsidy! These are the cars that trully help the enviroment, not hybrids. Thanks

Name	DateTimeReceived	Body.TextBody
Neil Rozenbaum	1/3/2023 18:21	I am emailing you because I find it ridiculous that Tesla's Model Y 5 Seater is not considered a SUV (it is considered by EPA) and therefore does not get the $7,500 EV tax credit. But a gas-engine Jeep, with 21 miles of electric range does get the tax credit. Let me remind you that this is an EV TAX CREDIT and the actual EV vehicle is being penalized here while the gas-engine one is being rewarded. Please reconsider. Thanks Neil
qun ding	1/3/2023 18:21	I think tesla Model Y 5 seater should be included for EV tax credit. Thanks, Qun Sent from Outlook<http://aka.ms/weboutlook>
John W	1/3/2023 18:21	Dear IRS, I am writing to voice my complaint that the 5 seater Tesla Model Y is not considered a SUV and does not receive the $7500 EV tax credit at the $80,000 price limit. This definition by the IRS is in contradiction to the Environmental Protection Agency rating of the same vehicle as a SUV. The 5 seater Tesla Model Y is likely to be the most American made and best selling vehicle in the United States and I urge you to use the EPA rating of the vehicle and assign the top selling price as $80,000 as eligible for the $7500 tax credit. Sincerely, John T. Wu 7303 Mannix Ct San Diego, CA 92129 -- G.K. Chesterton: "Anything worth doing is worth doing poorly" If something truly matters, and you want to do it well, you need to start somewhere, and over time refine and improve it. Start by doing it poorly.
vamsi subba raju kanumuri	1/3/2023 18:22	Please include Tesla model Y as an SUV as defined by EPA. Thank you
Mario Alberto Martínez Vilalta	1/3/2023 18:22	Allow that the 100% electric vehicles Tesla Model Y and Ford Mustang Mach-E are included to the 7500$ tax reduction subsidy! These are the cars that trully help the enviroment, not hybrids. Thanks
Bal	1/3/2023 18:22	I believe the Tesla model y (5 seater) should be classified as an SUV, this is clearly a mistake. Regards, Bal Jagpal
Naila Webb	1/3/2023 18:22	Requesting Comments on Form 8936, Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022-42 Tesla Model Y 5 seater should be included. Thanks Naila
David I Blatt	1/3/2023 18:23	Tesla Model Y 5 seater should be included and silly that it’s not from the beginning
Xianzhong Zhu	1/3/2023 18:23	OMB Control No. 1545-2137” in subject line Type in that you think tesla Model Y 5 seater should be included and silly that it’s not from the beginning Sent from my iPhone

Mike Haldas	1/3/2023 18:23	Dear Sir or Ma'am, I am writing to express concern that the 5 seat Tesla Model Y is not considered an SUV for the $7500 tax credit. I have several friends that own the 5 seat version of the Tesla Model Y and it is clearly an SUV. They would not have purchased it otherwise. Please reconsider the decision that was made that did not classify the 5 seat Telsa model Y as an SUV. It clearly is. Thank You. -Mike Haldas
sonuthind tonnelletire.com	1/3/2023 18:23	Tesla Model Y 5 seater should be included. Sent from my T-Mobile 5G Device Get Outlook for Android<https://aka.ms/AAb9ysg>
Malte Ohlsson	1/3/2023 18:24	The Tesla Model Y 5 seater should be included in the ev tax credit!
Xeno Muller	1/3/2023 18:24	Tesla model Y should be included. Sent from my iPhone
Jason Benson	1/3/2023 18:25	I am in favor of the IRA, but to leave out the Model Y 5 seat variants is frankly ridiculous. Please fix this as soon as possible as it currently looks like blatant favoritism and/or corruption. Jason Sent from my iPhone
Lee McCaleb	1/3/2023 18:25	To whom it may concern, I am very concerned that the Tesla Model Y (5 seat models) is not classified as SUVs by your office and therefore do not qualify for the $7500 EV purchase rebate at the higher 80K price level. This makes no sense given that the EPA categorizes the Model Y as an SUV for emissions purposes. In addition, you give the 7 seat variant the qualification even though the only difference is the number of seats and a slightly higher curb weight. Please rectify this immediately by qualifying all variants of the Model Y as SUVs eligible for the 80K purchase price cap. Sincerely Lee McCaleb Herndon, VA
Malte Ohlsson	1/3/2023 18:25	The Tesla Model Y 5 seater should be included in the ev tax credit and the Jepp trangler should not!
Meladee Noble	1/3/2023 18:25	The Tesla Model Y 5 seat SUV should be included on the 7.5K tax rebate list! Meladee Noble-Carbajal Sent from Meladee's iPhone
Comcast	1/3/2023 18:26	Please ensure all Model Y's are counted as a SUV in the IRA. It is by all accounts, including the EPA, a SUV. It is American made and mist efficient SUV EV. every Model Y should receive the $7500 tax credit. If it does not, I will consider it corruption and negligent. Please correct this mistake. Sent from my iPhone
Gregory Garofolo	1/3/2023 18:26	As a mid sized suv and sedan they can hold a lot of storage due to fold flat seats and extra large trunk and frunk which makes them idea for family and businesses. Majority of SUVs sold never go off road or use towing so breakover ankles really don't matter. Thank you for your consideration Sent from my iPhone
Dustin Higdon	1/3/2023 18:26	The qualifiers for this tax credit are ridiculous. The Tesla Model Y 5 seater needs to be included as an SUV and hybrids with ranges less than 100 miles need to be excluded. This is silly, get it together.
itsaduesy	1/3/2023 18:26	All tesla Model Y should receive the credit, not just 7 passenger version. Furthermore, no kind of Hybrid should qualify.... An EV has no gas tank whatsoever. Sent from my Galaxy

Name	DateTimeReceived	Body.TextBody
Bradley Nelson	1/3/2023 18:28	Andres Garcia Leon, Supervisory Tax Analyst United States Internal Revenue Service Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224 Dear Andres Garcia Leon, I am writing to you to submit comments in regards to the recently released IRS list of "Manufacturers and Models for New Qualified Clean Vehicles Purchased in 2023 or After."<https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after#:~:text=If%20you%20bought%20and%20placed,Internal%20Revenue%20Code%20Section%2030D.> After careful analysis and consideration of the current list of fully electric and plug in vehicles that the IRS has approved as qualifying for at least partial Federal EV credits by meeting North American Assembly requirements, I have identified serious flaws in the methodology to determine applicable vehicle caps. The current methodology for determining how to assign price caps lacks sufficient clarity, goes against the intention of the updates made to Internal Revenue Code Section 30D through the Inflation Reduction Act, and undermines the development of a fair, competitive, and strong US EV industry. I have listed some of the issues in more detail and recommendations for your consideration. Issues 1. Higher emission Plug-in vehicles seem to be provided higher price caps despite their reduced environmental benefits and for reasons that don't seem to based on either vehicle weight or vehicle class. 2. Many fully electric vehicles that are crossover SUVs such as the Tesla Model Y 5 seat option and the Ford Mach-E are assigned a $55k price cap
Anthony Do	1/3/2023 18:29	Hi, The Tesla model y 5-seater should be classified as an SUV in the new IRA EV rebates. It's very silly to not include the safest and most American compact SUV to benefit the people. The EPA classifies the model y as a small sport suv. Thank you for doing this right for the American people. [cid:ebb3576e-fd30-4754-9f92-92b5f9c27a8e@namprd09.prod.outlook.com]
Tim Minore	1/3/2023 18:30	Dear Sir or Madam, I'm writing to express my feelings regarding the recently added EV tax credit qualifications. I think it's unfair that the Tesla model Y 5 seater is not included, while some cars that are not even electric, but are just hybrids. Do get that credit. This seems unfair and against the spirit of rewarding the creation of electric vehicles. A hybrid is nice, but it pollutes much more than any full electric vehicle does. It also seems unfair that if the Tesla Model Y 5 seater weighed more, it would then qualify for the $7,500 credit. This is punishing it for being made more efficiently. I would humbly ask you to please reconsider this, and include the Tesla Model Y 5 seater in the list of vehicles that qualifies for the tax credit. I also think all electric vehicles should qualify, if some hybrids have already made it in. Thank you, Tim Minore
Roger Bass	1/3/2023 18:30	Hello, I am interested in purchasing a Tesla Model Y 5 seater. However, my purchase depended on this vehicle being eligible for the $7500 tax credit. To my surprise, this SUV now appears to not qualify as an SUV at the $80000 price point. I'd like to help our country move toward a green energy future, but this oversight is preventing me from participating. Please adjust the rules for the Tesla Model Y 5 seat all electric SUV to qualify at the $80,000 price point eligibility for the $7500 tax credit. Thank you. Regards, Roger Bass Newtown, CT

AlamoCity20	1/3/2023 18:30	Unfortunately, the combined NHTSA and EPA criteria lead to misclassification of the Ford Mach E and the Tesla Model Y (5 seat). While I support the IRA the EV tax provision leads to perverse incentives misaligned with the IRA intent. The Model Y (5 seats) in particular is penalized for tremendous efforts to reduce weight, gain efficiency, and build in two major factories in the USA. Somehow, gas guzzling, inefficient, heavy hybrids with specifications similar to both the Mach E and the Model Y gain full incentives. They do nothing to accelerate the shift to zero tailpipe emission vehicles or creating lasting BEV related capacity, infrastructure, and sustained employment. Please apply common sense aligned with intent and foster the rapid transition to cleaner vehicles and significant progress in reducing anthropomorphic Greenhouse Gas emissions. Best wishes and Happy New Year Robert in San Antonio
Mahesh Sadarangani	1/3/2023 18:30	Dear IRS, I am writing regarding the tax code for 2023 and Electric Vehicles. I am confused why the 5 seater Model Y is not included in the rebates? Can you please help me explain why? Thanks, Mahesh Sadarangani Cell 214.601.8780
Sebastian Sølvstad Nielsen	1/3/2023 18:30	Hello, Please include Tesla Model Y under the $80K MSRP requirement. Med venlig hilsen / Best Regards Sebastian Sølvstad Nielsen
Nick Methe	1/3/2023 18:31	Hi, The Tesla model Y 5 seater should be included in the IRA EV tax credit. Thank you, Nick
Pedro Talarico	1/3/2023 18:31	Hello I'm Pedro Talarico, from Nashville TN. I'm writing this email because I believe the IRS made a mistake regarding the classification of SUVs when it released the list of vehicles that will qualify for the full $7,500 tax credit. One example is the Tesla Model Y 5 seater not being considered a SUV when the BMW ID.4 AWD Pro is. Tesla Model Y 5 seater is also an AWD, with bigger dimensions, bigger battery and bigger cargo. Also, it's very frustrating to see this credit being fully given to hybrid cars that have 30-40 mile range batteries, which only encourage OEMs to not fully commit to clean EVs. Hybrids should not be eligible for the full $7,500. We should give customers and manufacturers an incentive to build pure EVs. Give some credits to Hybrids, yes, but not the entire amount.
Brady Dayton	1/3/2023 18:31	Hello, I am reaching out about the recently released IRA tax credits for electric vehicles. I was planning on buying a Tesla model Y, but was waiting for the credit to kick in this year. The five seater is what we wanted and for some reason it’s not included as it exceeds the MSRP of 55,000. I really feel like the model Y should qualify for this incentive at an $80,000 threshold. Thanks Brady Dayton Sent from my iPhone
AJ Loringer	1/3/2023 18:32	Tesla Model Y 5 seater should be eligible for the $7500 tax credit as an SUV under $80,000. Thanks, AJ Loringer
Ken Pho	1/3/2023 18:32	Tesla Model Y 5 seater should be included, and silly that it’s not from the beginning. PHEVs are not electric vehicles, yet they get the EV tax credit. This is just not fair for EV players like Tesla. Please reconsider including Tesla’s Model Y 5-seater. Thank you, [cid:image002.png@01D91F88.973EAA20] Thank you, Ken J Pho
Bao Quach	1/3/2023 18:33	Tesla Model Y 5 seats should be considered as an SUV and should be qualified to receive the $7500 EV rebate.
Tuan Nguyen	1/3/2023 18:33	Hi IRS, Why Tesla model Y 5 seats is not qualified as SUV? It seems you make you own rules about the vehicle types. It also seems very cunning wa. We want our government act true fully as we are paying taxes true fully. We are the ordinary citizens not a cunning politician. Thanks Tuan

Name	DateTimeReceived	Body.TextBody
Casper Keilstrup Jacobsen	1/3/2023 18:34	Hi IRS, It makes no sense that the tesla Model Y 5 seater is not included in the tax rebate of $7500 as it is an SUV. Corruption imo. Br, Casper
Rajiv Arora	1/3/2023 18:35	Tesla Model Y 5 seater is an SUV and it should be included in EV rebate like other EV SUVs. This is the most popular EV and it's not right use of Tax payer money to exclude this amazing SUV from EV rebate. Model-Y is the most efficient and sought after SUV across the world. Please make necessary changes. regards, Rajiv Sent from my iPhone
Shannon Oudman	1/3/2023 18:35	This IRA bill has turned into a boondoggle. Why does the IRA benefit hybrids that get about 25 miles of EV range vs an actual EV like the Tesla Model Y long range and Mach E? Most use hybrids as just gas cars. This whole bill is absurd and is not reducing Emissions at all. At a bare minimum, all EVs with at least 150 miles of range should qualify up to 85k. Shannon
Jamie Klopp	1/3/2023 18:37	Please include the Tesla Model-Y 5-seat model as a qualifying vehicle under $80k. It is clearly an SUV as much as the 7-seat version. Please disallow PHEVs that achieve pathetic MPG and eMPG numbers. Thanks! [https://ci3.googleusercontent.com/mail-sig/AIorK4wFjKCQJSyJUSZcEUj-O7uxLzHASX1pBFS0tH0-Fun9rnhSGVXxqthn5ViM1WFca5TJnnMtqvc] Jamie Klopp +1 541.288.1808
June Ruby	1/3/2023 18:37	tesla Model Y 5 seater should be included and silly that it's not from the beginning.
trickykill@gmail.com	1/3/2023 18:37	Hello, I am a US tax payer and a shareholder in Tesla and have learned that the Tesla Model Y 5 seater is not classified as an SUV because of technicalities around vehicle weight and ride height. Tesla, Tesla shareholders and US consumers are being hurt by such technicalities. Please revisit the weight requirement for SUVs and or consider an exception for this car. The model Y is lower weight than competitor legacy vehicles because of a more efficient design and optimization. A lower ride height improves efficiency and should be encouraged, not penalized. Also, I am deeply unhappy that my tax money is being used to subsidize hybrid vehicles which do absolutely nothing to help transition us to a sustainable future. These contraptions have a gasoline engine, fuel tank a battery and an electric motor. A complicated design that ignores first principles. Please remove all but pure EV from these EV subsidies. Thanks Richard K
Hue Tran	1/3/2023 18:38	Hi, I am writing to express my disapproval of how the vehicle list is at its current state, which allows a hybrid that isn't even built in the US and has a tiny battery to be eligible for the $7,500 while a fully electric SUV that is the 5-seat model Y doesn't. This is against the spirit of the bill, which meant to encourage adoption of clean cars, of which fully electric cars are the cleanest. While I understand there might be nuances around definition of what a SUV is, I don't think it is in the consumer interest or good for the environment to incentivize worse performance car and punish an efficient SUV. Please work with Tesla and other manufacturers to twist the vehicle list so that the cleanest SUV like 5-seat model Y is eligible for the rebate. Thank you Hue Tran

Name	DateTimeReceived	Body.TextBody
Michael Burnett	1/3/2023 18:38	Hi It's Michael here The Tesla model y seater needs to be included for the full 7500 rebate Thank you Sent from my iPhone
HW	1/3/2023 18:38	Dear Sir/Madam, I think tesla Model Y 5 seater should be included and I don't understand why it is not included from the beginning. Sincerely Hao Wang, MD
Erik Dunham	1/3/2023 18:39	Please categorize the Tesla Model Y 5 seat variant (2 rows) in the $80,000 cap for Applicable MSRP Limit. re: https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after -Erik Dunham
Harry Chu	1/3/2023 18:39	This corespondent is provided for the agency's consideration during the public comment period related to its rule making around Revenue Procedure 2022-42 aka, the IRA's EV Tax Credit Program. As a taxpayer, battery electric vehicle supporter, EV Owner and consumer, the recent guidance provided on and around January 1st 2023 contains inconsistencies that must be reconsidered. 1. SUV Classifications: The Agency provides a list of qualifying vehicles that misclassified SUVs as Sedans and is entirely inconsistent with EPA and NTSHA established classification. These errors creates confusion and mistakenly assign MRSP restricts where they should not be. For instance the Tesla Model Y - 3 Row Seat variant is designated by the Agency as an SUV (Correctly). This is consistent with the EPA and NTSHA. While the Model Y - AWD is classified as a Sedan with a $55,000 MSRP limitation imposed to qualify for the EV Tax Credit (Incorrectly). This is not consistent with the EPA and NTSHA classification which designates all Tesla Model Ys as an SUV. Overall, the Agency should use existing and wildly accept classification for what is a SUV or Sedan. The current approach by the agency creates unnecessary confusion and appears arbitrary. Confusion and complexity could discourage consumers from taking advantage of the EV Tax Credit and therefore the broader policy goals of the act may not be met. 2. Plug In Hybrid: The legislative intent of the Inflation Reduction Act's EV Tax Credit subsection are not consistent with the Agency's proposed rules which incentivize Plug-in Hybrid (PHEV) over Battery Electric Vehicles (EVs). PHEVs typically provide around 30 miles of sustainable energy range while EVs typically provide 250 miles to 350 miles of range. The agency should reconsider the rules that provide an incentive for PHEVs while disqualifying the incentive for EVs. Based on the legislative intent of the Act, pure EVs must be viewed in the most favorable light when implementing the act. The rules implementing the Act must strive to be inclusive of EVs over PHEVs. The current guidance mistakenly gives deference for PHEVs over EVs. 3. Lease ownership: The Agency has released rules that allow non-US built vehicles to qualify for the EV Tax Credit. This is entirely inconsistent with the stated legislative intent of the Act which in relevant part, is to explicitly encourage domestic manufacturing. The Agency must reconsider these rules which are contrary to the legislative intent of the Act. Thank you for your consideration Harry K. Chu
Daniel R. McConnell	1/3/2023 18:40	I'm writing to express concern over the classification of vehicles in the Inflation Reduction Act. Specifically, the metrics the divide an SUV (eligible for credit up to $80,000) and sedan/other ($55,000 cap.) The Telsa Model Y is considered in all other ways an SUV, and adding the third row does not change this classification. I am disappointed that the leader of the EV revolution, and the most successful American auto company of the past 5 years, has the most popular EV of all time excluded from this higher threshold. My understanding is that if Tesla artificially made the vehicle heavier, or higher off the ground, it would qualify. But doing so would make the car less efficient and lower the MPGe, which is in opposition to the goals of this program! Please reconsider how you classify the "SUV" designation and include all trim levels of the Model Y up to the $80,000 cap. A registered and regular voter, Daniel McConnell
Miles Abbey	1/3/2023 18:40	As it currently stands, the Tesla model Y doesn't qualify for the federal tax credit because it doesn't meet the weight requirements. My understanding is it will qualify if it is the 7 seat configuration, while the Jeep Wrangler qualifies, even though it has limited EV only mode and only gets 21mpg. Please make the changes to include the Tesla model Y, as it is clearly a more environmentally friendly vehicle. Thank you, Miles Abbey Sent from my iPad
Daniel Oros	1/3/2023 18:40	Please do not provide a tax break for HYBRID CARS. The aim of the IRA was to move us toward sustainable energy use and away from fossil fuels use in order to minimize the impacts of climate change, which in the United States is caused primarily by automobile emissions of carbon dioxide gas (70%). Please continue to provide necessary tax breaks for all 100% electric sedans, SUVs, trucks and sport cars so that we can reduce greenhouse gas emissions under the IRA and meet our Nationally Determined Contribution (NDCs) in accordance with the US Climate Change Strategy. Thank you very much. Daniel Oros
Brad Schmitt	1/3/2023 18:41	The Tesla Model Y 5 seater should have this tax break as well. Bradley Schmitt

Name	DateTimeReceived	Body.TextBody
zack haverland	1/3/2023 18:43	I am writing to request you re-classify the 5 seat, Tesla Model Y as an SUV. I find it ridiculous that it wasn't classified as an SUV in the first place, while plug in hybrids with very small battery packs are getting the full credit. Thanks Zack
Drew Pine	1/3/2023 18:43	When a Jeep Wrangler that has 21 miles of electric range, a gas engine, and gets 20 MPG qualifies for a $7,500 clean vehicle credit, but a Tesla Model Y that gets 113 MPGe and has 330 miles of ELECTRIC range (along with no internal combustion engine) does NOT qualify for a $7,500 clean vehicle credit, something is obviously completely wrong and the standards should be rewritten. There is simply no reason to subsidize the purchase of any vehicle that contains an internal combustion engine, but there is a reason to subsidize fully electric models. Let's incentivize transitioning to sustainable energy and not be stupid about it! Thank you, Drew Pine
Leon Page	1/3/2023 18:44	Attention Internal Revenue Service: Exclusion of the Tesla Model Y (5 seat version) from the EV tax credit qualifications is arbitrary and capricious, inconsistent with both the plain language and intent of the underlying statute, and lacks any rational basis. Leon Page 13 Corte Loarre San Clemente, CA 92673 (949) 482-5728 Sent from my iPhone
John Bender	1/3/2023 18:44	Tesla model Y Seater should be included and it is not right that it wasn't included in the beginning. Sent from my iPad
Jose Perez	1/3/2023 18:44	Tesla Model Y 5 seater should be included. This doesn't make any sense. Please correct this ridiculous mistake. Jose Perez
Dan P	1/3/2023 18:44	Tesla Model Y 5 seater should be included. This is concerning some of the other vehicles that made the list and are approved for tax credits. Best Regards Daniel Peoples peoples3a@gmail.com<mailto:peoples3a@gmail.com> Cell 808-798-1912
Evan	1/3/2023 18:45	Tesla model Y 5 seater should be considered SUV and thus get $7500 tax credit. Thanks, Evan Armitage
jdw@eldertek.net	1/3/2023 18:46	I don't understand why the Tesla Model Y 5 Seat SUV isn't included in that category. It's exceedingly suspicious ruling in light of the current political environment. This an American Made SUV the Tesla Model Y 5 Seat as of this writing isn't qualified to receive EV subsidies program for 2023. What are the guidelines that disapproved the Tesla Model Y? [cid:image001.png@01D91F9A.73778E60] EV subsidies program for 2023 [cid:image002.png@01D91F9A.73778E60] This is not a BEV but a wanna be. Please review and revise the subsidy approval for the Tesla Model Y 5 seat and approve as is an obvious mistake in the first review and publication. Sincerely JD Williams
christian karlsson	1/3/2023 18:46	In an act of what appears as brazen corruption the IRS has decided Teslas model Y 5-seater does not qualify under the 7500$ tax credit. The reason being you classify this not as a sedan while we clearly know this is government corruption against Tesla for not using unions How is the electric vehicle inflation reduction act not including the best sold American automotive produced electric vehicle? Amend this and amend this fast please 🙏 . Or it will look like the most corrupt IRS in history and loose all credibility to us your tax payers?! [cid:44ffb7b0-9fbb-4081-b53e-df698352d819@namprd09.prod.outlook.com]

Name	DateTimeReceived	Body.TextBody
Dave Sivak	1/3/2023 18:46	Allow Tesla Model Y to receive tax credit. Thanks Dave
Gregory Plett	1/3/2023 18:46	categorized the Tesla Model Y. It makes no sense to me that the Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit, while PHEVs having poor (gasoline) fuel efficiency and very low EV range are considered to be eligible. It makes no sense to me that the IRS categorizes this vehicle as a sedan whereas the EPA categorizes it as a SUV. It is further very confusing that the the IRS categorizes the 7-seater Tesla Model Y as a SUV, whereas it categorizes the 5-seater Tesla Model Y as a sedan, even though they have exactly the same dimensions and frame. Regards, Dr. Gregory L. Plett Professor, Department of Electrical and Computer Engineering Director, GATE Center of Excellence in Innovative Drivetrains in Electric Automotive Technology Education University of Colorado Colorado Springs 1420 Austin Bluffs Parkway, Colorado Springs, CO 80918 p: 719 255-3468; email: gplett@uccs.edu
TL Waller	1/3/2023 18:47	Good afternoon, I wanted to express my EMBARRASSMENT, and DISAPPOINTMENT with the latest EV tax incentives. There seems to be some obvious issues that are allowing extremely INEFFICIENT HYBRID full tax credit of 7500, while actual REAL electric vehicles such as the Tesla Model Y, and the Ford Mache E to not qualify for the SUV category credit. It's really disappointing as a tax paying citizen to think that I'm supporting this. We can do better. PLEASE reconsider the qualifications and categories of vehicles. Hybrids getting 20mph should not get full credit, thats absurd. Incentivize BATTERY ELECTRIC VEHICLES not hybrid vehicles pretending to be green vehicles just because their oem hasn't figured out how to make profit off BEV. TODD WALLER OF CALIFORNIA
Peter Mach	1/3/2023 18:48	Model Y 5 seat variant is an SUV. Stop this blatant corruption to remove this benefit from Tesla and buffering other companies.
Yoav Podemsky	1/3/2023 18:48	I don’t believe hybrids should be included in the EV tax credit since they have an internal combustion engine! Additionally I think tesla Model Y 5 seater should be included and silly that it’s not from the beginning. Thank you, A tax payer
Kevin Wolthuis	1/3/2023 18:49	I'm so confused at the new EV tax credit. Based on the current guidelines, I'm incentivized to buy a Hybrid Jeep Wrangler with 20 MPG and 21 miles EV range vs. a Tesla Model Y 5 seater with 113 MPGe and 330 miles of electric range. Are gas guzzling hybrids with internal combustion engines prioritized over PURE EVs in the new EV tax credit? Surely this isn't the intention of the credit. Maybe you can help me understand... Kevin Wolthuis
Miguel Juteau	1/3/2023 18:49	Hello, This is my feedback regarding the electric vehicle tax credit qualifications that came into effect on Jan 1, 2023. I have an old gas-powered SUV and have been waiting for years for this tax credit so I could purchase what is in my opinion the best EV for my budget, the Tesla Model Y 5-seats. I was very disappointed to find out that it does not qualify for any tax credit, because it exceeds the $55,000 threshold. Please consider giving at least a partial credit, instead of giving credits to hybrid vehicles that are still generating emissions. Best, Michel Juteau

Name	DateTimeReceived	Body.TextBody
Rushabh Shah	1/3/2023 18:51	This is with regard to the IRA for EV tax credit. I believe the implementation is flawed and benefits inefficient heavier vehicles with low MPGe. This goes against the explicit intent of the law to transition US to a cleaner greener economy. Case in point - Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit with its 5 seat variant. On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. I have some other examples of much less efficient vehicles with very little actual electric range - <https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/7030a68c-9d90-499b-a4b7-b6aa8ca7e046.jpeg> [preview.png] 7030a68c-9d90-499b-a4b7-b6aa8ca7e046<https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/7030a68c-9d90-499b-a4b7-b6aa8ca7e046.jpeg> JPEG Image · 114 KB<https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/7030a68c-9d90-499b-a4b7-b6aa8ca7e046.jpeg> I would appreciate a response or an opportunity to discuss this further. I believe it is the best interest of tax payers that this system is not abused and doesn't because another Hummer tax credit incentivizing the wrong behavior. Regards Rushabh Shah Sent from my iPhone
Martin Cahill	1/3/2023 18:51	My comment: Tesla model Y, 5 seater should be included as SUV. This is a very serious issue.
rob216@gmail.com	1/3/2023 18:51	Fix to include all variants of Tesla model Y. It's the most efficient SUV on earth and is all electric and made in the USA. WTF Robert Yadrick 412-296-2535 Nevada resident US citizen
Michelle Vitale	1/3/2023 18:52	Hello, I'm a bit confused about reports I've been seeing that the Tesla Model Y with 5 seats is excluded from the $7500 EV tax credit, where many similarly sized gas-engine cars with much lower range qualify. Can you please explain the reasoning for this? Hopefully it's an oversight, otherwise I hope you reconsider including this vehicle for the credit. Thanks
Liping Wang	1/3/2023 18:53	Dear Madam/Sir, I am writing to express my opinion that I believe that the Tesla Model Y 5 seater should be rated as SUV and qualified for the $7500 tax credit with an $80,000 MSRP under the Inflation Reduction Act EV Tax Credit. My reason is that Tesla Model Y, regardless the variants, are categorized as SUV by the Environmental Protection Agency. Therefore, it would make sense for IRS to list the entire Model Y as SUV. Best Regards, Liping Wang Liping Wang Research Scientist, Lab Manager Summers/Holland Investigational Team<https://summersholland.u2m2.utah.edu>, Dept. of Nutrition and Integrative Physiology University of Utah 15 N 2030 E, EIHG 3470 Salt Lake City, UT 84112 Mobile 919-345-4616
dilip bharadwaj	1/3/2023 18:53	Hello, I think Tesla Model Y 5 seater should be included in the tax credit program and it's silly that it's not from the beginning. Thanks
John Kundert-Gibbs	1/3/2023 18:54	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. John John Gibbs Theatre & Film Studies University of Georgia jkundert@uga.edu
Alyssa Jian	1/3/2023 18:54	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Thank you, Alyssa Sent from my iPhone

Name	DateTimeReceived	Body.TextBody
James DeOliveira	1/3/2023 18:55	The tesla Model Y 5 seater should be included and it is absurd that it's not included. How can the same body type be classified as an SUV and not an SUV? This needs to be corrected. James DeOliveira 818-294-4510 james@xponentialtech.com
ZACH Middleton	1/3/2023 18:55	Tesla model Y five seater should be included in the EV tax credit and it does not make sense that a hybrid does while it does not.
Dan lacinski	1/3/2023 18:55	Your ruling on the Tesla Model Y SUV not being an suv is misguided. The tesla Model Y 5 seater should be included in the SUV EV credit. Including hybrids with 21 miles of electric range is also misguided. Dan Lacinski Sent from Dan Lacinski 's iPhone
Sachin Gandhi	1/3/2023 18:56	Sir's Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves Sent from my iPhone
robert marti	1/3/2023 18:58	To whom it may concern, I think tesla Model Y 5 seater should be included and silly that it's not from the beginning. The limit should be raise to $80,000 to qualify for the $7500 tax credit for the model Y 5 seater. Kind regards, Robert Marti
Jack Ellis	1/3/2023 18:58	I believe the Tesla model Y 5 seater should be included for the credit as an SUV and not a sedan. It's classified as an SUV by NHTSA and other agencies and should be treated so, regardless of technical legal arguments that defy logic. john Ellis Mentor, OH
Michael Davis	1/3/2023 18:58	I recommend that the 5 seat Model Y receive the $7,500 EV tax credit. There's no logical reason for it to be excluded. Sent from my iPhone
Vineet Ahuja	1/3/2023 18:59	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit. Thank you!
Patrick Linsenmeyer	1/3/2023 18:59	Please include all variants of the Model Y
Ken Pho	1/3/2023 19:00	spirit of the relevant law. Thank you, Ken J Pho
Nicholas Brennan	1/3/2023 19:00	Dear Mr. Garcia/Whom it may concern, I'm writing in regard to the IRS' request for comments pertaining to the electric vehicle tax credit. Specifically, I'd like to express my dismay at the exclusion of the 5 seat Tesla Model Y and the Ford Mustang Mach E. These vehicles are SUVs in every respect- measurements relative to other vehicles classified by the IRS as SUVs in the tax credit, consumer usage and marketing by the respective automakers. Please classify these vehicles as SUVs. The above point is most important. However, I'd like request consideration of the following as well: *There should not be an income limitation - The electric vehicle tax credit is intended to encourage adoption of low/zero emission vehicles. This is not related to income. A $7,500 difference in effective cost will also sway high income consumers to purchase an electric vehicle over an internal combustion vehicle. *As a result of their usage of gasoline, hybrid vehicles produce considerably higher emissions than electric vehicles. Thus, hybrid vehicles should either not qualify or qualify for a lower electric vehicle credit than full electric vehicle credits. Thank you for your consideration, Nicholas Brennan 508 245 6078 nb1277@hotmail.com

Name	DateTimeReceived	Body.TextBody
Matthew Claassen	1/3/2023 19:01	I am writing to you in regard to your ruling on whether a vehicle is an SUV or not for the Electric vehicle rebates. Currently you use a metric of GVW to decide, a metric that is surely used for simplicity, not accuracy. Electric vehicle's weight depends much more on its battery size, not the vehicle size, as was the case for ICE vehicles. You should therefore consider using more accurate metrics like seating & cargo capacity. To do otherwise would result in you considering small, inefficient, vehicles (with a correspondingly large battery) as SUVs, and large, efficient, vehicles as not. Please consider aiming for accuracy, and not simplicity, when constructing these impactful classifications. Best, Matt
Jim&Elaine Stack	1/3/2023 19:01	To: pra.comments@irs.gov<mailto:pra.comments@irs.gov> Subject: OMB Control No. 1545-2137 Hello. I find it politically that a 5-seat Tesla Y gets no credit while a gas guzzling "hybrid" does, specifically: The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Fix this IRS! Jim and Elaine Stack
Crown Development	1/3/2023 19:01	Hello, I have to say that I'm disappointed that the Tesla model Y was not included for the $80,000 price limit. It should be included and I'd like to know why it wasn't if possible.
Stephen heil	1/3/2023 19:02	it makes no sense that the Tesla Model Y five seater vehicle has been excluded from the IRA $7,500 credit. What were they thinking? Best Regards, Stephen Heil
Jamie Hogan	1/3/2023 19:06	Tesla's model Y, 5 seater is specifically excluded from the SUV category and benefits for electric vehicles in the Inflation Reduction Act. THIS IS WRONG!! Please have the IRS fix this intentional punishment of Tesla. Tesla makes the most American made EVs of all EV makers….. Jamie Hogan 858-204-6164 jamieahogan@gmail.com
Eric Walton	1/3/2023 19:06	To Whom it May Concern, The Model Y 5 seater MOST definitely SHOULD be included in the incentives for the IRA...it is honestly insane and embarrassing that officials would exclude it while including other cars the USE GASOLINE!!! Please revise this and include the Model Y 5 seater. Thank you. Sincerely, Eric Walton Rush Services, LLC 2360 Mendocino Ave., Ste A2-301 Santa Rosa, CA 95403 707-536-6888 - Cell rushserves@gmail.com<mailto:rushserves@gmail.com> http://www.rushservices.net/ ~Service Beyond Expectations~ NOTICE: This e-mail (including any files transmitted with it) is being sent by an attorney service. Jamie Hogan	1/3/2023 19:07	Tesla's model Y, 5 seater is specifically excluded from the SUV category and benefits for electric vehicles in the Inflation Reduction Act. THIS IS WRONG!! Please have the IRS fix this intentional punishment of Tesla. Tesla makes the most American made EVs of all EV makers….. Jamie Hogan 858-204-6164 jamieahogan@gmail.com
Scott Elliott	1/3/2023 19:07	The Ford Mustang Mach-E is not a sedan, it is a compact SUV. It should be eligible for the IRA tax credit at up to $80,000 MSRP. The same goes for the Tesla Model Y in any configuration. Scott Elliott scottpelliott@gmail.com<mailto:scottpelliott@gmail.com>
Christopher Boyd	1/3/2023 19:08	Please revise the proposed guidance on Qualified Plug-in Electric Drive Motor Vehicle Credit(s) to include the Ford Mustang Mach E and the Tesla Model Y as Sports Utility Vehicles (SUVs). Based on the cargo space and size of the vehicles, these are more properly viewed as SUVs. It seems contrary to the will of Congress to classify these as passenger vehicles rather than SUVs. These vehicles are lighter and more efficient than smaller Plug-In Hybrid (PHEV) vehicles that will receive the full SUV credit such as the Ford Escape PHEV, that can still burn gasoline and produce harmful emissions. We should encourage their production and purchase with the full EV tax credit by categorizing them as SUVs. Thank you. Christopher Boyd Las Vegas, NV
Adeel Ahmad	1/3/2023 19:08	Hello, Thankyou for taking the time to read feedback on the EV tax credit. A jeep with a gas engine that gets 20 MPG and only has 21 miles of electric range is eligible under SEC guidance for the $7.5k tax credit. However, a Tesla Model Y with 113 MPEe and 330 miles of range is not eligible. I find this hypocrisy deeply concerning, especially when the 7 seater variant does get the credit simply because it weighs more. Thanks again for your work, Adeel Ahmad 571 425-9292
Chad Whitlock	1/3/2023 19:09	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle Sincerely, Chad Whitlock Sent from my iPhone
Ted Kidd	1/3/2023 19:10	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version) and Ford Mach E. As a consumer interested in purchasing a clean energy vehicle, I am frustrated that these vehicles are not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
Naeem Rahman	1/3/2023 19:10	Hi. Tesla model Y 5 seater must be included in the IRA for the $7,500. It does not make any sense that it was not included. It must be fixed so Americans can receive the credit, meaning hardworking, intelligent and loyal American citizens - the people who elected this government. Regards, Naeem

Name	DateTimeReceived	Body.TextBody
Ben Koehler	1/3/2023 19:11	Writing to express my disapproval of how the IRA's EV tax credit is being applied. As it currently sits, hybrids with extremely little EV range will qualify for the credit while many cars that are fully EV (Tesla Model Y and Ford Mach E to name a couple) will not receive any because of a weight requirement. This incentive should be applied to encourage the purchase of full EVs, not at sad attempts at an 'electrified' vehicle. Why this weight requirement is in place at all is baffling, and the way the bill currently sits will do the opposite of encouraging people to buy full EVs, it will encourage them to buy combustion engine cars disguised as hybrids. While the stipulation that a cars final assembly should occur in north america does make sense, this bill should be rewritten so that full EVs qualify for the $7500 regardless of weight. An alternative/logical requirement should be that a car must have at least 75-100 miles of fully EV range to qualify (or something to that effect). For the good of the planet, and to strongly encourage our country to transition away from fossil fuels as quickly as possible, please amend this bill. Thank you, Ben
Jen Ragen	1/3/2023 19:11	The Tesla Model Y 5 seater and Mustang Mach-E are fully electric vehicles that deserve to be eligible for the full tax credit awarded to battery and plug in SUVs. To penalize them for being underweight - which is more efficient - is wrong. To knock them out but leave gas powered vehicles with tiny batteries in is a total affront to the spirit of advancing the adoption of electric vehicles.
Kevin Mccarthy	1/3/2023 19:11	add extra weight to the cars that don't which seems pointless. It seems that vehicle dimensions are a better way to determine what an SUV or car is. Or maybe how the IIHS classifies vehicles. Thanks
Bob deWitt	1/3/2023 19:11	Dear Sir; I wish to petition the powers-that-be to add the Tesla Model Y, long range, 5-seat version to the qualifying SUVs for the new tex credit. It is by far more qualified than any of the Hybrids on the list. In fact, the Hybrids should not qualify at all since they are primarily an Internal Combustion Engine vehicle with virtually no all-electric range. Regards,
Jeff Ford	1/3/2023 19:12	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves Sent from my iPhone
Timothy Dodaro	1/3/2023 19:13	Hello, it seems strange the model Y 5 seat version isn't eligible for the tax credit. It's clearly and SUV and it should quailify. Same with the Ford Mach - E. Thanks Tim Dodaro
Beth Turner	1/3/2023 19:13	the $7500 tax credit. Tesla's Model Y is the safest SUV on the road and using the number of seats to disqualify it from the credit is illogical and smacks of some sort of bias against those who wish to drive this SUV. The IRA was passed by our congress and signed by our president promising to support the Electric Vehicle industry and promote US-made automobiles and US material sourcing. Telsa is the most American-made vehicle in America and should not be passed over for the likes of vehicles with horrible gas mileage hybrids like the 5-seat Jeep hybrids that are more un-environmentally friendly than the comparable ICE Jeep!! I have confidence that this was an error that will be rectified as soon as possible or if not an error then you will revisit the classifications and reevaluate in favor of placing all Model Y's on the eligible list. Thank you for your consideration, Beth Turner
Brian Hale	1/3/2023 19:14	Tesla model Y five seater should be included.
Curtis Bolton	1/3/2023 19:14	Dear IRS. It's pretty ridiculous that a vehicle that is 100% electric does not qualify for the EV Tax Credit. I've been informed that the Model Y doesn't meet the requirements for the tax credit. Please fix this.
Derek Ault	1/3/2023 19:14	Hi, The 5 Seat Variant of the Tesla Model Y is classified as an SUV and should receive the $7500 tax credit under the 80k cost cap. Thank you, Derek
Jimmy Myong	1/3/2023 19:16	Hello, I strongly believe the Tesla model Y 5 seater and Ford Mustang Mach-E should be eligible for $80,000 SUV limit, not $55,000. These models are fully battery electric and have a much better MPGe rating than other gas hybrid models which qualify for the $80,000 SUV limit. Thank you for your consideration. Jimmy

Name	DateTimeReceived	Body.TextBody
Ande Jacobs	1/3/2023 19:17	Hi, I am writing to complain about what qualifies as an SUV in the new tax credit. It makes no sense that the Model Y 5 seat is not an SUV but the 7 seat is. Or that the ID4 AWD is but the 2WD is not. Or that the Mach-E is not but Ford's hybrid Escape is. Speaking of hybrids, it makes no sense that these even qualify. How is a Jeep that gets 20mpg going to help clean energy? This should be corrected quickly and retroactively. Thanks, Ande Jacobs
David Lewis	1/3/2023 19:18	Why is the Tesla Model Y 5 seat configuration not on the SUV IRA list. And why is a Jeep hybrid that only gets 21 miles per charge on it. The Jeep does nothing for the climate!!!! David Lewis Sent from my iPhone
Scott Kirkman	1/3/2023 19:18	The Tesla Model Y 5 seater should be classified as an SUV and silly that it’s not. NTSA and the EPA classify it but the IRA doesn't. Really? Scott Kirkman (404) 434-4140<tel:(404)%20434-4140> Scott@Kirkman.com<mailto:Scott@Kirkman.com>
Bryan Hader	1/3/2023 19:18	The Inflation Reduction Act has a stipulation where Pure Electric Vehicles and Hybrid Electric Vehicles are able to take advantage of up to $7,500 as Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. Here are the primary qualifications for the EV tax credit: [https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/e9f76bb1-fcee-4219-a088-6d19cd025729.jpeg] However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Here's an example of the broken nature of this incentive in its current form: [https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/7030a68c-9d90-499b-a4b7-b6aa8ca7e046.jpeg] Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit.
Michael Henry	1/3/2023 19:18	Please reconsider adding the Model Y 5 Seater SUV so that I can afford a pure EV and support going green. Regards, Mike Henry Sent from my iPad
Thomas Olmstead	1/3/2023 19:19	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves The full tax credit. Thomas Olmstead
Chad Hunt	1/3/2023 19:19	I would like to comment on the $7500 EV tax credit. The Tesla model Y is an SUV as per NHTSA, Edmunds, and the EPA. It is incorrect, and irresponsible to not include it (and the Mach E) in the credit list. They have a far greater positive impact on the environment than the others listed Sent from my iPad

Steve Borsch	1/3/2023 19:20	As a recent retiree and new owner of a 2022 Ford Mustang Mach-e, I'd like to add my comment to the classification of my vehicle (as well as Tesla's Model Y) as a non-SUV in Form 8936, Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022– 42. The $7,500 tax credit was key to purchasing an electric vehicle for us, especially as both of us were entering retirement at the time of deciding, and ordering, an electric vehicle in December 2021. Without this easy-to-comprehend tax credit (unlike the new requirements, by the way!) we might have remained owners and users of an internal combustion engine (ICE) vehicle. My previous vehicle was a Honda Clarity PHEV, but couldn't be used electrically for anything other than short around-town trips, unlike my new Mustang Mach-e which is viable electrically for long road trips. My wife and I clearly purchased the Mach-e—while also considering the Tesla Model Y before ordering the Mach-e—as they were both "SUV-sized" vehicles. In addition both allowed us to sit high like SUVs, were shaped and had storage exactly like SUVs, and had nearly all of the utility inherent in a sport utility vehicle. To classify either vehicle as something other than an SUV—by you basing criteria for classification solely on weight—is wrong. I urge you to carefully broaden classification of both the Ford Mustang Mach-e and Tesla Model Y. Best Regards, Steve Borsch Lake Forest, CA
Michael Gomez	1/3/2023 19:20	I think their is a lot of waste of money as a tax payer money in the new bill that gives $7500 to hybrid plug-in that only have like 20 miles of Ev range , this this makes the transition to sustainable energy very slow , while like the Tesla model Y5 seater with 300 miles of Ev gets 0 also the Ford Mustang Mach-E gets 0 Hybrid plug-ins should not receive the credit Only pure Ev
steve	1/3/2023 19:21	$7500 credit. Having minimum criteria for an electric SUV based on the weight and ride height of the vehicle is the opposite of an optimized fully electric vehicle. Reducing the ride height and lowering the weight of a vehicle increases the range, especially at highway speeds. Range is a key metric for purchasing an EV. More EV's can be produced using the same quantity of battery cells if they are lower to the ground and weigh less. Currently and for the transition period to 100% EV's, the limiting factor on their production is the availability of battery cells. The intention of this bill is to support the EV transition and in that spirit I ask that for fully electric vehicles for the ride height and weight limits be removed for the criteria of determining an SUV with respect to this credit. Thank you.
Abbas Vakil	1/3/2023 19:22	Model Y as per the following EPA link 2023 Tesla Model Y AWD (fueleconomy.gov)<https://www.fueleconomy.gov/feg/Find.do?action=sbs&id=46211> is categorized as a Small Sport Utility Vehicle 4WD. It would be consistent and accurate if IRS uses the same definition and categorizes Tesla Model Y as an SUV or creates a third category for Small SUV's. Feel free to reach out to me if you have any questions or concerns. Thanks Qamar Vakil
Jason Dunn	1/3/2023 19:22	The classification logic used to decide which vehicles qualify as SUVs is faulty. Weight should not be the basis for which a vehicle is considered an SUV; size and utility should be. If a vehicle is bigger/holds more than a sedan, it should qualify as an SUV, regardless of weight. Please reconsider this ill-conceived classification system: we need more pure EVs on the road in the next decade, and the USA is in a position to take strong leadership on this matter if incentives are aligned for the customer. Jason Dunn | @jasondunn<https://twitter.com/jasondunn> | www.jasondunn.com<http://www.jasondunn.com/>
James Aitken	1/3/2023 19:23	Hello, As the most made American car, the Tesla Model Y 5 seater should be included in the $7500 tax credit and silly that it's not from the beginning. James Aitken Sent from my iPhone
RAJ RAMAMURTI	1/3/2023 19:23	This is to state my opinion that the Tesla Model Y should have the $80,000 price limit to qualify for the Federal EV tax rebate regardless of the seating configuration. This is a Small SUV as classified by the EPA, so it should be treated as such by the IRS for the EV tax rebate, and the price limit should be $80,000, consistent with other AWD EVs in the SUV class. Per your guidelines, the 5-seat configuration of the Tesla Model Y SUV does not get the $80,000 price limit , which is inconsistent with the EPA classification. I hope you will correct this oversight so consumers can get the full benefit of the Inflation Reduction Act when they opt to purchase a Tesla Model Y with the 5-seat configuration. Thank you for your attention to this important matter. Raj Ramamurti

Jeffrey Lutz	1/3/2023 19:23	The Tesla Model Y 5 seat version should be included for the EV tax credit please. There is no size difference between in and the 7-seat version that does qualify. It does not make sense for Tesla to add weight or seats to qualify, the right thing to do would be to include the Model Y 5 seat version to ensure the most amount of EVs possible can take advantage of the credit fairly. This is a total mis use of my tax dollars to apply this $7,500 credit to cars with gasoline engines (see below) vs the fully electric made in the USA Tesla Model Y 5 seater. Thanks for your attention on this matter. With Regards, Jeffrey Lutz [Screenshot 2023-01-03 at 6.21.01 PM.png]
Justin Barnes	1/3/2023 19:23	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves
John Sweet	1/3/2023 19:24	A gas hybrid should not receive a $7500 credit because it will set back the advancement of pure BEV's. If the incentive is to transition to electric vehicles and reduce the need for fossil fuel, we should not contribute to manufacturing of gas vehicles. To not include Tesla model Y 5 seat all wheel drive in the $7500 credit is not right. A decision to exclude an American company that has proven to make superior BEV's. for not having two additional seats is extremely wrong. Unless this is to penalize a company that has not contributed to the corrupt government please correct this. Sincerely yours, John Sweet 14 Ashford Oaks Court Maryville, IL 62062 Sent from my Verizon, Samsung Galaxy smartphone Get Outlook for Android<https://aka.ms/AAb9ysg>
Otto Leinsdorf	1/3/2023 19:24	Hi, I am writing to express my extreme disappointment with how certain EVs have been classified according to the new IRA law. Specifically, I am most disappointed that some variants of the Tesla Model Y will not receive the incentives from the IRA, yet some vehicles that use fossil fuels will. The Tesla model Y is the single most American made automobile<https://www.deseret.com/2022/6/24/23180720/tesla-models-american-made-cars-2022-elon-musk> and is fully electric. Why is the IRS enacting the will of lobbyists and special interests to prevent this vehicle — the vehicle most in keeping with the spirit of the law — from receiving this benefit? I feel very let down by whoever is responsible. Otto
hamzaxz	1/3/2023 19:24	I wanted to give my opinion on the exclusion of multiple all-electric EV's including the 5-seater Model Y and Mach-E. They are clearly SUV's and the size of the vehicle doesn't change between the 5-seater and 7-seater Model Y. It makes no sense. Nobody would classify the Model Y as a sedan, including the EPA. Please fix it. Dr. Rabi
Jeffrey Lutz	1/3/2023 19:26	The Tesla Model Y 5 seat version should be included for the EV tax credit please. There is no size difference between in and the 7-seat version that does qualify. It does not make sense for Tesla to add weight or seats to qualify, the right thing to do would be to include the Model Y 5 seat version to ensure the most amount of EVs possible can take advantage of the credit fairly. This is a total mis use of my tax dollars to apply this $7,500 credit to cars with gasoline engines (see below) vs the fully electric made in the USA Tesla Model Y 5 seater. Davide De Santis	1/3/2023 19:27	Hello Please reconsider classifying the Tesla Model Y 5-seat option as an SUV for the IRA tax credit cap of $80,000. This car is an SUV, categorized as such by the EPA, and is a highly efficient, 100% electric vehicle. If that's not possible, then clarify why the following cars do qualify as SUVs, and the Model Y doesn't: Audi Q5 TFSI e Quattro (PHEV) Ford Escape Plug-In Hybrid Jeep Wrangler 4xe Jeep Grand Cherokee 4xe Volkswagen ID.4 AWD Pro Volkswagen ID.4 AWD Pro S Thank You Dave.
Matthew Wallace	1/3/2023 19:28	Good Evening, It has come to my attention that the Tesla Model Y 5 seater nor certain Mustang Mach E EVs do not qualify for the $7500 tax credit which I believe is incorrect. Please update the EV tax incentive to include these vehicles and do not include gas powered hybrid variants. Thank you VR Matthew Wallace
sllerenas@gmail.com	1/3/2023 19:28	All variants of the Tesla Model Y should be considered an SUV for the federal credit msrp cap of $80,000. Having gas hybrids in the bill is a joke. Thank you Sergio Llerenas Sent from my iPhone
Scott Wainner	1/3/2023 19:28	The US must create a level playing field for those auto manufacturers leading the way to an all electric future. All Tesla vehicles should be included to quality for the full IRA credit, particularly the 5 seat Model Y. It is clearly an SUV and should be classified as such. Anything less is unfair treatment and is against the goals of the IRA. Thanks, Scott
Kathie Swanson	1/3/2023 19:28	The Tesla Model Y 5 seater should be included in the $80,000 designation. It's amazing to me that it isn't. Kathie Swanson Broker www.colopropertyfinder.com 970-405-6605 cell/text kathieswanson7@gmail.com Serving Northern Colorado for over 20 years
Robert Kiminecz	1/3/2023 19:29	Dear IRS, The most American EV, the Tesla Model Y, should be included in the EV Tax Credit under the IRA 2023. The fact that it has 5 Seats, like the other Hybrids that qualify yet is slightly underweight clearly shows there were some errors in calculating the EV Tax Credit guidelines. The fact that Hybrid gas guzzlers are able to take advantage of the EV Tax Credit is wrong.
stephen hawk	1/3/2023 19:30	Hello, Please correct the inappropriate label on the Tesla model y being not eligible for the IRA tax rebate. Thank you Stephen Hawk
Patrick Kenny	1/3/2023 19:30	I find the barring of many EPA-Classified SUVs such as the Tesla Model Y (5-Seat), among others, from the IRA tax credit to be a disservice to the intent of the legislation, especially as plug-in hybrid vehicles (PEVs) are allowed. I do understand that congress included PEVs specifically even at an all-electric range that provides zero value. I also understand the IRSs definition of Truck/Van/Off-Road vehicle and it has been constant. It is simply unreasonable to apply the $55k price cap to non-luxury EVs, especially when they are the most readily available models on the market today. I respectfully hope the IRS reconsiders their ruling. Regards, Patrick Kenny 59-615 Ke Iki Rd, Unit B

Name	DateTimeReceived	Body.TextBody
Alex Levy	1/3/2023 19:30	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Additionally, I don't believe hybrids should be included in the EV tax credit since they are basically just internal combustion engines with an extremely tiny battery. They are primarily internal combustion engine vehicles with a battery that has a very limited range just so it can be claimed to be a "hybrid". Only full battery electric vehicles should qualify for the tax credit. Thank you, Alexander Levy
Francisco Duran	1/3/2023 19:31	Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves
chris fleck	1/3/2023 19:31	Please do what the IRA was intended for and follow simple logic. Do not include hybrids as owners can simply treat the as ICE cars with no benefit to the climate. Do include the Tesla Model Y 5 seat SUV. The most American made car. Thank you Chris Fleck
Anthony Saporito	1/3/2023 19:31	tesla Model Y 5 seater should be included and silly that it’s not from the beginning Sent from my iPhone
Matthew Lambert	1/3/2023 19:32	Dear Sir/Ma’am, Please receive this comment as a dispute to the recent irs classification of the Tesla model Y, 5 seat, mustang mach-e, and other like “crossover” type EV’s as “not SUV’s” and limiting their msrp tax credit value to 55k vs 80k. The single GVWR should not be the only consideration for category definition for the above criteria and should at a minimum be expanded to promote the intent of the IRA which is incentivizing EV purchases and not narrowly discriminating specific models due to a draconian definition. Lighter vehicles are more efficient and should be considered as additional factors. Thank you for your time.
Luke Mueller	1/3/2023 19:33	I am writing to express my concern and confusion as to why Tesla's 5- seater Model Y does not qualify for the IRA. If it weighed 238 lbs more, my understanding is that it would. It makes no sense to punish Tesla for being able to make a ligher, more efficient vehicle than others. Please ammend this to allow the 5 seat Model Y to be eligible. Further, it is laughable that there are plug in hybrids eligible for the full credit when the all-electric Model Y is not. Thank you Luke Mueller
ajp403@gmail.com	1/3/2023 19:33	limiting these vehicles to the lower MSRP cap, but allowing the higher cap for other hybrid “SUVs” disincentivizes good environmental choices. Specifically, for Tesla, the IRS defines as a car the Model 3 (all variations, which the EPA defines as and manufacturer markets as cars) and the Model Y (5 seater only, which the EPA defines as and manufacturer markets as SUVs), but defines the model Y 7 seat configuration (which the EPA defines as and manufacturer markets as SUVs) as an SUV. The SUV classification of the Tesla Model Y 7 seater but not the 5 seater makes little sense. The inclusion of these seats (which can only be used for small children) is less passenger volume per person as the vehicles have the same cabin size—basically forcing consumers who want the 5 seat version to opt for the 7 seat version instead (which raises overall prices). Here, the government incentivizes carrying more children at the expense of carrying less cargo space—that attribute does not make a 7 seater more of an SUV than a 5 seater. Two vehicles appearing similar on the outside but being treated differently for tax purposes needs serious reconsideration. I also include here other larger EVs marketed as SUVs by the manufacturer/EPA such as the VW iD.4 and Ford Mustang Mach-E. This puts larger EVs further out of budget for the average American as consumers must either choose one of the lower cost (with the incentives) but higher MSRP models (7 seater for the model Y, AWD for the iD.4) or the lower MSRP model without tax incentives—which costs the consumer more overall.
Samuele Zanini	1/3/2023 19:33	I believe tesla Model Y 5 seater should be included and should have been included from the beginning. Samuele Zanini
Justin c	1/3/2023 19:34	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y as a non-SUV. I believe that this classification is unfair, as a vehicle that has a lower gross vehicle weight would give benefit to the efficiency rating. Furthermore, I am frustrated that hybrid vehicles (such as the Ford Escape PHEV and Jeep PHEV) that only gain a small amount of range from their electric motors are eligible for the full $7500 tax rebate, while fully electric vehicles are not. This does not seem to accurately reflect the environmental benefits of electric vehicles and does not provide a level playing field for all types of alternative transportation. I urge the IRS to reconsider these classification and tax rebate policies and to take into account the unique features and benefits of electric and hybrid vehicles when determining their treatment. Thank you for your attention to this matter.
Alex Sandu	1/3/2023 19:34	$7500 credit. Having minimum criteria for an electric SUV based on the weight and ride height of the vehicle is the opposite of an optimized fully electric vehicle. Reducing the ride height and lowering the weight of a vehicle increases the range, especially at highway speeds. Range is a key metric for purchasing an EV. More EV's can be produced using the same quantity of battery cells if they are lower to the ground and weigh less. Currently and for the transition period to 100% EV's, the limiting factor on their production is the availability of battery cells. The intention of this bill is to support the EV transition and in that spirit I ask that for fully electric vehicles for the ride height and weight limits be removed for the criteria of determining an SUV with respect to this credit. Thank you.

Joel Atyas	1/3/2023 19:35	The proposal for determining which electric vehicles will qualify for the federal rebate is in need of significant revision. Specifically, the proposed guidelines for determining whether or not an electrified vehicle can be classified as an "SUV" are malformed. For example, a plug-in hybrid Ford Escape under $80k should NOT be classified as an "SUV" and therefore eligible for the full rebate while neither a Ford Mach-e nor a Tesla Model y (5 seat) are eligible any rebate since they are not classified as "SUV"s. Requiring an electric vehicle to have a certain ground clearance or exceed a certain weight in order to be classified as an SUV is absurd. Increasing weight or ground clearance reduces efficiency, burns more fuel, reduces the whole benefit of incentivizing the switch to EVs. Please create a saner and better reasoned set of criteria for determining whether or not an electrified vehicle is or is not an "SUV". Perhaps base it on the amount of interior volume.
Joel Atyas	1/3/2023 19:37	The proposal for determining which electric vehicles will qualify for the federal rebate is in need of significant revision. Specifically, the proposed guidelines for determining whether or not an electrified vehicle can be classified as an "SUV" are malformed. For example, a plug-in hybrid Ford Escape under $80k should NOT be classified as an "SUV" and therefore eligible for the full rebate while neither a Ford Mach-e nor a Tesla Model y (5 seat) are eligible any rebate since they are not classified as "SUV"s. Requiring an electric vehicle to have a certain ground clearance or exceed a certain weight in order to be classified as an SUV is absurd. Increasing weight or ground clearance reduces efficiency, burns more fuel, reduces the whole benefit of incentivizing the switch to EVs. Please create a saner and better reasoned set of criteria for determining whether or not an electrified vehicle is or is not an "SUV". Perhaps base it on the amount of interior volume.
Chad Whitlock	1/3/2023 19:38	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full EV tax credit. Sincerely, Chad Whitlock Sent from my iPhone
Yarin Kessler	1/3/2023 19:39	efficient) SUV, which is absurd. Forcing a minimum weight on vehicles of any type in order to qualify is obviously counterproductive from an economic, emissions, and environmental standpoint. It's also absurd to offer tax credits to hybrid vehicles with sub-30 mile electric ranges, while fully electric Tesla vehicles that have 10x the electric range and many times the MPG equivalence are denied the credit. The qualification requirements for this program are ill-conceived, illogical, and incredibly counter-productive at every level.
David S	1/3/2023 19:40	Hello, I'm writing to let you know it doesn't make sense that the Tesla Model Y 5 seater is not included in the list of vehicles eligible for the $7,500 credit. Not only does it share the same specifications as other vehicles that were included, it's among the most American made vehicles in the world, built on American soil by Americans, using a large percentage of American parts! David Schnitzer Wantagh, NY

Priorukon123	1/3/2023 19:40	Tesla model Y should be qualify as an suv and therefore should qualify for the $7,500 tax credit. Tesla does not make 3 row model y .
Dan Ecclestone	1/3/2023 19:40	Please know the tesla Model Y 5 seater should be included for $7500 tax credit. Dan Ecclestone Sent from my iPhone
Ben Friedman	1/3/2023 19:40	Hi, The regulations need to be adjusted. The Tesla Model Y is classified as an SUV per the EPA. I drive one and all my DMV paperwork state it's an SUV as well. Seems like the vendetta against Tesla has clouded judgement but this needs to be fixed.

Name	DateTimeReceived	Body.TextBody
Andrew Castillo	1/3/2023 19:40	The way that the IRS has classified certain electric vehicles as SUV and non-SUV makes no sense. You classified the Tesla Model Y (5 door) as a sedan, when the EPA classifies it as an SUV, and it is listed as an SUV by every common measure. The whole purpose of the infrastructure bills was to encourage the purchase of EVs, and you are circumventing that purpose by applying some asinine definition of what an SUV is. Please change this to at least match what the EPA defines and actually encourage EV adoption. Sincerely, Andrew Castillo
Luke Richard	1/3/2023 19:40	To whom it may concern, I am very concerned that the Tesla 5 seater Model Y is not currently included in the EV Tax credit scheme. This is the epitome of an American made electric vehicle and should have always been included as the flagship example of what this scheme is designed to achieve. Please review the corrupt policy to ensure the 5 seat Tesla Model Y is available for the $7,500 credit. Sincerely, Luke B-C
Jeremy Treadwell	1/3/2023 19:40	please include the 5 seat Tesla Model Y for the $7500 EV tax credit. It's the right thing to do. Please do not be part of the corruption. We are watching. Sent from my iPhone
Benjamin Lerch	1/3/2023 19:40	THE TESLA MODEL Y 5-SEAT SHOULD QUALIFY FOR THE $7500 TAX CREDIT. THERE IS NO BETTER VEHICLE THAN THE MODEL Y 5-SEAT TO ACCOMPLISH THE GOAL OF EV ADOPTION. IT IS TOTAL NONSENSE TO EXCLUDE IT FROM THE TAX CREDIT.
Aaron Smith	1/3/2023 19:41	Please remove the weight minimum for SUV EVs. Why a Jeep with 21 miles electric but otherwise gas is getting the rebate but not all variants of the fully electric Mach-E and Model Y, makes no sense. Sent from my iPhone
Joseph Mack	1/3/2023 19:41	Dear IRS, The fact that the 5 seater Model Y is not part of the EV incentive program is absolutely bizarre. As a tax payer and voter I respectfully request that you fix this. Thank you, Joe Mack
rank3230@gmail.com	1/3/2023 19:41	It is messed up how the government is providing tax credits for vehicles that are not even fully electric while vehicles like the Tesla model y are not given a tax credit for this. Please also fix this inflation increasing spending bill which will not even help a majority of us citizens and is overspending especially in a time when inflation is high. Fiscally irresponsible.
brandon@360digital.pro	1/3/2023 19:41	The tesla Model Y, 5 seater should be included and silly that it's not from the beginning.
Avi Swerdlow	1/3/2023 19:41	I am disappointed that the Tesla Model Y is not included in the $7500 tax incentive. Given the car's efficiency, it seems as if we should be encouraging people to buy it rather than the opposite.
Dana Oredson	1/3/2023 19:41	Tesla Model Y is an SUV, no matter what the seating arrangement or weight. If weight of the vehicle determines if a vehicle is classified as an SUV, then that disincentivizes manufacturers from saving weight and making vehicles efficient. Please include Tesla Model Y (all variants) in Inflation Reduction Act incentives. It's highly questionable that Hybrids with tiny batteries have full incentive, but a fully-electric vehicle like the Tesla Model Y does not (or only does if it weighs a certain amount). Regards, Dana Oredson.

Name	DateTimeReceived	Body.TextBody
Paul Price	1/3/2023 19:41	As a citizen, taxpayer and Tesla owner I would like you to reconsider you implementation of the tax credit rules. Don't give inefficient hybrids the maximum credit. Reward efficient EV's with a tax credit. Don't use vehicle weight as a SUV credit. Regards, Paul Price Po Box 682174 Park city UT 84068 tel 435-655-1575 comments. Comments can be submitted by mail or email. For those submitting by email, you need to include OMB Control No. 1545-2137 in the subject line and send it to pra.comments@irs.gov. ---------- :)
Doug Green	1/3/2023 19:41	To whom it may concern, The Tesla Model Y 5 seater should be re-considered for the $7500 tax credit under the inflation reduction act. It is 100% electric, one of the most American made cars out there and by far the best example of a smaller full electric SUV. It seems silly that this variation of the Model Y was left out in the first place especially considering some of the car models that made it in. I appreciate the consideration. Thank you Regards, Doug Green Sent from my iPhone
Luke Ding	1/3/2023 19:41	My name is Luke Ding and I live in vancouver washington. I plan to buy a Tesla Model Y SUV, but the tax credits have brought ambiguity to my decision. I support all models of Tesla Model Y qualifying for the tax credit. It makes no sense and hurts our belief in government that a gas SUV with 20 miles of electric range qualifies for the EV tax credit but a Tesla Model Y does not. Luke
Vanishiva	1/3/2023 19:41	I think it is ridiculous that Tesla Model Y is not qualified for the EV credit.. All Tesla Models deserve to qualify with no exception. Please help correct this completely biased , unfair and bad mistake by the government. Regards Vani
Sean Reynolds	1/3/2023 19:41	I think it's a bit shady that the irs is bending the rules to make sure the model y doesn't qualify for the ev tax credit! I am genuinely confused about why politicians are opposed to Tesla because they create more of the vehicle in the USA than any other automaker. Please set this right. -- -Sean Reynolds
Camille Harman	1/3/2023 19:42	The Tesla Model Y should qualify for the EV tax credit incentive.
mamma.lords.0j@icloud.com	1/3/2023 19:42	The decision to exclude Tesla Model Y 5 seater EVs, is disingenuous to the mission and an abuse of our tax dollars.

Name	DateTimeReceived	Body.TextBody
J Adam Hinze	1/3/2023 19:42	Hello Andres Garcia, I'm writing to question why some SUVs were excluded from the IRA EV tax incentive? Can you please provide clarity on why the American made 5 seat Model Y I want to purchase doesn't qualify for the incentive when other 5 seat SUVs do? I do not need 7 seats and would prefer not to pay for an extra option I would never use to qualify. Are you able to share why this variant was logically excluded? Thank you, Jon Hinze
Daniel Riley	1/3/2023 19:42	The EV tax credit rules that are used to define what a SUV is need to be changed. All Tesla Model Y trims should qualify for the credit. The same goes for the Ford Mach E. Thank you for considering this feedback. Daniel Riley
Michelle Schwandt	1/3/2023 19:42	Good afternoon, My name is Michelle and I am confused as to how your department picks and chooses which vehicles get the tax credit. Tesla's Model Y 5 seater is not included in the $7,500 tax credit while other vehicles are. Please help me understand. Best, Michelle Schwandt
Emmanuel Fischman	1/3/2023 19:42	and while you gave the $7500 credit to hybrid vehicles and the electric ID 4 how is it even possible not to include the model Y??????? Please fix it because it looks very bad on democrats trying to take revenge on Elon musk while screwing so many people…… is this in what's on the president agenda? Thanks Emmanuel Fischman
Doug Kennard	1/3/2023 19:42	It's awful that the Tesla Model Y 5 Seat Long Range is NOT included in the IRA tax credit cap of $80,000. It should NOT be capped at $55,000, when Gas hybrids with terrible EV range are getting the $80,000 credit. Something is terribly wrong with your classifications. Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Tesla Model Y 5 seat car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Regards, Doug Kennard
Larry G	1/3/2023 19:42	Tesla Model Y 5 seat vehicle should qualify for the tax credit. Meanwhile a 5 seat hybrid with 25 mile EV range gets the credit vs a Tesla with 330 miles. This makes no sense and should not be because the 5 seat Model Y version is too light. [cid:4fc06e71-02e1-4c75-bffd-dae00e682115@namprd09.prod.outlook.com]
ShotAmazing	1/3/2023 19:42	A Jeep that has a gas engine and gets 20 MPG. It has 21 miles of electric range. It gets a $7,500 EV Tax Credit. Meanwhile, a tesla model Y is ELECTRIC ONLY and gets 113 MPEe. It has 330 miles of range. IT DOES NOT GET A $7,500 EV TAX CREDIT. This is ridiculous. Can't wait to fall behind to China. A concerned citizen.
Dan Herres	1/3/2023 19:42	Please include the Tesla Model Y into the $7500 rebate category. How does the Jeep Wrangler EV with gas motor get the $7500 and Tesla does not. It seems uncategorically unfair to not include the Y. Not sure if the IRS is displaying bias because Tesla does not have a union laborforce. It seems as if IRS is picking winners and losers.
Remco van den Elzen	1/3/2023 19:42	I think it's great that a lot of EVs are getting federal tax credits now. It seems wrong though to not have the Tesla Model Y qualify for those subsidies, while other (more pollutive) cars do. End customers should not be penalized for driving a fully electric vehicle simply because it's too light (and therefore, efficient). Thank you, Remco
Dat Kha	1/3/2023 19:42	This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Thanks.

Name	DateTimeReceived	Body.TextBody
Allen Patch	1/3/2023 19:43	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Allen Patch 12889 Annapolis Rd Rockton, IL 61072
Craig Fessel	1/3/2023 19:43	omitted is a travesty. Sent from my iPhone
flyboy82nd@gmail.com	1/3/2023 19:43	Good evening. In response to the rules for EV tax credits. The rules need changing. For a Jeep with 20 mpg and 21 miles total of electric capacity to get $7500 and many full electric SUVs like the Model Y and Mach E left out because they are 250 lbs too light is not acceptable. Thank you. Chris Hesse
Mister J'remy	1/3/2023 19:43	Model Y 5 seater SUV should be classified as an SUV. Sent from my iPhone
Steve Zap	1/3/2023 19:43	The Tesla Model Y is an SUV and should qualify for the Tax incentive despite not having 7 seats. Other SUVs qualify for this rebate despite having only 5 seats and they aren't even fully electric. Please include the Tesla Model Y on the list of vehicles that qualify for the full $7500 Tax Rebate. -Steve Zap
Greg O'Brien	1/3/2023 19:43	The Tesla Y Model should likely be upgraded to SUV status, going along with intent, since this is an SUV, all things considered. Taxpayers are confused and this should be examined closely to ensure intent matches reality. Thank you Greg
Sam Hendren	1/3/2023 19:43	Hello IRS Folks, I find it ludicrous and politically and poetically motivated that a 5-seat Tesla Y gets no credit while a gas guzzling "hybrid" does, specifically: • The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. • On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Fix this IRS! Sam
Valerie King	1/3/2023 19:43	I am writing to request all trims, styles, and price points of the Tesla Model Y and Ford Mach-E be awarded the full 7,500 Federal EV credit. I believe the intention of the bill is to include all vehicles mentioned above and not allowing those vehicles to receive the credit decreases the credibility of the federal government. Thank you, Valerie King-Peters
Enrique Moctezuma	1/3/2023 19:43	Hello, I am writing to communicate my frustration about the recent releases of IRS data on the new EV incentives. Tesla Model Y 5 seater should be included and silly that it's not compared to other larger, hybrid vehicles that run mostly on fuel.
Kyle Stricklin	1/3/2023 19:43	I am commenting on some of the absurdity in EV classifications that has been established. I had been considering buying a EV but the one I want (Tesla Model Y) apparently doesn't even qualify. Please classify vehicles that are all electric a blanket coverage status.

Name	DateTimeReceived	Body.TextBody
Joshua Ponsano	1/3/2023 19:43	Please include all models of the model y and Mach e in the IRA tax credit. It doesn't make sense to exclude the most efficient EV (model y) from a credit based on weight in favor for less efficient hybrids. Thanks, Joshua Ponsano Sent from my iPhone
Mikhaele Ible	1/3/2023 19:43	The EV credit presented is a bit flawed. Gas vehicles camouflaged as hybrids are getting the full $7,500 credit while the IRS isn't categorizing the Tesla Model Y as an SUV even though the Environmental Protection Agency does. This isn't right and won't get America to the sustainable future we need. Please advise, Sent from iPhone

Alex Ben	1/3/2023 19:43	Farzad Mesbahi, who pointed out this fact and received a response from Elon Musk, launched a petition titled, Fix the Inflation Reduction Act EV Tax Credit<https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit?recruiter=1290758235&recruited_by_id=073c0570-8a0f-11ed-8a45-67f4de4114d4&utm_source=share_petition&utm_campaign=share_petition&utm_term=share_for_starters_page&utm_medium=copylink&utm_content=cl_sharecopy_35382588_en-US%3A8>. At the time of this article, the petition has 20k+ signatures. The petition pointed out that the IRS isn't categorizing the Tesla Model Y as an SUV even though the Environmental Protection Agency does "This means Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit." The 5-seat variant of the Model Y needs to qualify up to the $80k MSRP limit like other less efficient SUVs. Please fix this gross negligence.
abraham navarro	1/3/2023 19:43	Please include Tesla Model Y in the tax credit. It's not right Tesla has been excluded. Abraham Navarro 281-455-5647 Sent from my iPhone
Chris Minshall	1/3/2023 19:43	To whom it may concern: I own several Teslas including a 5 seat Model Y that you are currently excluding from qualifying for the $80k SUV EV classification. This is absolutely ridiculous and needs to be corrected immediately. Its a travesty to see that you have made non-EVs like Hybrids qualify for this tax credit but not the most obvious best example of an EV that SHOULD qualify easily. Please correct this wrong and allow the 5 seat Model Y to qualify for the full $7500 tax credit by placing it in the SUV category with the $80k MSRP limit. Thank You. Chris Minshall
Ezra Hunt	1/3/2023 19:43	Please correctly classify the Tesla Model Y as an SUV. Ezra Hunt
Gustavo	1/3/2023 19:43	Dear IRS, I am writing to express our concern about the ruling on the Tesla Model Y SUV and the Ford Mach-E not being considered SUVs. I believe that this decision is misguided and request that it be reconsidered. The Tesla Model Y is a 5-seater SUV and should therefore be included in the SUV EV credit. Excluding it from this credit unfairly disadvantages those who have chosen to purchase a more environmentally-friendly vehicle. Additionally, we believe that the inclusion of hybrids with only 21 miles of electric range is also misguided. These vehicles do not have the same environmental benefits as fully electric vehicles and should not be eligible for the same incentives. We urge the IRS to reconsider its ruling on these vehicles and to provide equal incentives for those who have chosen to purchase fully electric SUVs. Thank you for your attention to this matter. Sincerely, Gustavo Covarrubias

Name	DateTimeReceived	Body.TextBody
john damoulakis	1/3/2023 19:43	Hi, I don't see why you wouldn't be fair in the classifications. Seems shady, I'm a tax payer why shouldn't I get the $7,500 EV TAX CREDIT on the Tesla Model Y but a gas Jeep would. Please make this right. John Damoulakis
Josh Bright	1/3/2023 19:43	The Tesla Model Y all configurations must have the Tax Credit. Absolutely ridiculous that Jeep that has an EV Range of 21 miles and the 20 mpg has the credit while the Model Y that is pure EV and gets a 114 mpge does not. The Cybertruck should also. Thank you for taking the time to receive feedback.
Jat	1/3/2023 19:43	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y We need all teslas to qualify for the tax credit. This is unfair to the EV community. Thank you.
Joe Borelli, MD	1/3/2023 19:44	Dear Madam or sir, I've heard that only the 7-seat Tesla model Y is eligible for the $7500 tax credit for SUVs costing up to $80,000. All versions of the Model Y should get such a tax credit. Don't we want to incentivize the most efficient, American made vehicles? It makes no sense to incentivize the sale of much less efficient, gasoline powered or hybrid vehicles. Please don't hesitate to contact me if you'd like to discuss further. Sincerely, A. Joseph Borelli, Jr., M.D. MRIatBelfair.com
Meladee Noble	1/3/2023 19:44	I think the Tesla Model Y 5 seat SUV should qualify for the 7.5K tax incentive. Meladee Noble-Carbajal Sent from Meladee's iPhone
Paul Hess	1/3/2023 19:44	I am writing to express my concern about the qualifications for the electric vehicle tax credit under the Inflation Reduction Act. It seems unfair that some variants of the Tesla Model Y and the Ford Mustang Mach-E will not receive any incentives, while some vehicles that use fossil fuels are classified as electric vehicles and eligible for the credit. As a consumer, I believe that the electric vehicle tax credit should be used to encourage the adoption of truly zero-emission vehicles, rather than subsidizing vehicles that still rely on fossil fuels. The primary purpose of this credit is to promote the use of clean, sustainable transportation, and it should be reserved for vehicles that meet this criteria. I urge the IRS to reconsider the qualifications for this credit and to prioritize the promotion of genuine electric vehicles over those that still rely on fossil fuels. Thank you for considering my comment. Sincerely, Paul Hess
Ian Clark	1/3/2023 19:44	Tesla Model Y 5 seat version should be included in the tax credit. Regardless of use on CEO, Tesla is helping to advance sustainable clean energy future and are American made. Please recognize this.
James Cho	1/3/2023 19:44	The IRS should allow the Tesla Model Y 5 seater to be eligible for the full rebate . Doesn't seem fair to the most efficient electric SUV out there. jamescho
Michael Austin	1/3/2023 19:44	Fix the Inflation Reduction Act EV Tax Credit to include Tesla Model Y. [cid:1857a3ba4e91d59b7601] -- Michael Austin 239.784.0481
Milford Ford	1/3/2023 19:44	To whom it may concern, I do think it's a bit unfair to not include all Tesla Model Y vehicles in the EV tax incentive, when all Mustang qualify, as well as sole gasoline vehicles. Please do the right thing and include all model Y vehicles. Very Respectfully, Milford L. Ford
Jack Robbins	1/3/2023 19:44	I am submitting my opposition to the Inflation Reduction Act provision that results in some variants of the Tesla Model Y not receiving credit from the IRA at all, while some vehicles that use fossil fuels do. Those vehicles are classified as electric vehicles because they are plug-in hybrid EVs. This seems non sensical - all Y models should qualify. Jack Robbins

Name	DateTimeReceived	Body.TextBody
Vasyl Boychuk	1/3/2023 19:44	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future.
Jose Posada	1/3/2023 19:44	I don't believe hybrids should be included in the tax credit since they have combustion engine. I do believe that Tesla Model Y 5-seater should be I included, and it is silly that is not from the beginning. Thank you
Ron	1/3/2023 19:44	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves to be classified as an SUV. Thanks Ron
WHAT MATTERS MOST TRUTH	1/3/2023 19:44	The Model Y 5 seater not being considered an SUV and not qualifying for the pending tax credit does not seem sensible at all. I feel it should be included. As the 7 seater is currently according to current guidance.
Dave Brushett	1/3/2023 19:44	Good evening, The 5-seat Tesla Model Y SUV does not qualify for the $7500 credit in the Inflation Reduction Act but some less efficient 5-seat hybrid SUV's do qualify. This seems like discrimination or just bad policy. We should be encouraging all-electric vehicles. Please fix this. A concerned American Citizen, Dave
Mingson Wang	1/3/2023 19:44	Please remove the hybrids that get 21 - 40 miles of pure electric range from the list of vehicles that qualify for the EV incentive. As a United States citizen and a tax payer, this is a terrible use in our transition to a carbon neutral society. Let us incentivize real EV's like the Tesla Model Y 5 seater which is more American made than any other car. Americans should drive the most American EV and be proud! Sincerely, Mingson Wang 650-245-1658
Lionel Sabbah	1/3/2023 19:44	Model Y should qualify for tax credit. I think tesla Model Y 5 seater should be included and silly that it's not from the beginning. Car is green and made in the US. We should provide incentives to this car in lieu of hybrids.
Joe Cooper	1/3/2023 19:45	To whom it may concern, I worked my butt off to afford a tesla model y to be environmentally concious and fully electric. It is beyond comprehension that I would not be allowed to use the EV tax credit for a fully electric vehicle just because it is over a made up price threshold. I do not think the EV credit should apply to cars that are not fully electric just because they cost less than fully electric vehicles. This is just simply wrong and the rule needs to be changed. Please advise, Joe Cooper Joecoop55@gmail.com
Kevin Huynh	1/3/2023 19:45	Hi IRS, I'm reaching out to comment on the unfair treatment of EV vehicles in the new tax credit for environmentally friendly cars. The classifications of certain vehicles that are SUV as sedans sections off a huge group of cars from Ford and Tesla who are US manufactures from qualifying for the tax credits while cars that are simply hybrids getting horrible GAS mileage are included in the tax credit. I suggest that the IRS revise their list and take in consideration the fuel usage as well as the classifications of vehicles when providing this tax credit. Thanks Kevin
Chris Butler	1/3/2023 19:45	The Tesla model Y needs to be classified as an SUV as it is by NHTSA and the EPA. Your classification of this vehicle is wrong and your choice to include inefficient gas guzzling hybrids is also wrong. Sent from my iPhone

Name	DateTimeReceived	Body.TextBody
Ville Witt	1/3/2023 19:45	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). I don't see the common sense of having the INTENTION of an EV tax credit given to cars like hybrid Jeeps, but not the Tesla Model Y. This reduces trust in our society and feels more like corruption. To help increase trust in our Republic, please revise the decision. Best regards, Ville Witt
Larry G	1/3/2023 19:45	> Tesla Model Y 5 seat vehicle should qualify for the tax credit. Meanwhile a 5 seat hybrid with 25 mile EV range gets the credit vs a Tesla with 330 miles. > This makes no sense and should not be because the 5 seat Model Y version is too light. [cid:6db306c2-550c-4b56-aef0-1118dfec406b@namprd09.prod.outlook.com] >
Rick Wolkenberg	1/3/2023 19:45	Regarding the electric vehicle tax credits qualification, please explain how the number of seats in an SUV is a criteria in determining qualification. There are many other 5 seats SUV's on your qualified list. How is the Tesla Model Y 5 seat excluded from your list? This makes no sense! Richard Wolkenberg
Luke Richard	1/3/2023 19:45	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of this scheme. Sincerely, Luke B-C
Dimitry Berger	1/3/2023 19:45	Tesla Y 5 seats is SUV and should be in 80K basket. It is really unfair.
Brian OConnor	1/3/2023 19:45	The Jeep below has a gas engine and gets 20 MPG. It has 21 miles of electric range. It gets a $7,500 EV Tax Credit. The Tesla Model Y Performance SUV is ELECTRIC ONLY and gets 113 MPEe. It has 330 miles of range. IT DOES NOT GET A $7,500 EV TAX CREDIT. So you are awarding people purchasing ICE cars impacting global warming while buying a full BEV does not qualify. Please make this right. Thanks, Brian O'Connor [cid:be7e1c0a-a02f-4f12-bb91-058ed06b2ab4@namprd09.prod.outlook.com] [cid:2d76a879-8a54-4fea-bed2-585ef02f2b96@namprd09.prod.outlook.com]
Shmuel Dubinsky	1/3/2023 19:45	Hi, Please include all variants of tesla model Y in the IRA tax credit. Thanks
Joe Win	1/3/2023 19:45	There is a huge mistake in the list of qualified vehicle for new $7500 credit. For example: The Jeep that has a GAS engine and gets only 20 MPG. It has 21 miles of electric range and It gets a $7,500 EV Tax Credit. The Tesla model Y 5 seater is ELECTRIC ONLY and gets 113 MPEe. It has 330 miles of range. BUT IT DOES NOT GET A $7,500 EV TAX CREDIT. This is a huge mess up. Fix it!
Austin Tebbe	1/3/2023 19:45	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease.

Yazen Karadsheh	1/3/2023 19:45	Dear IRS, I am a USA citizen and tax payer. I was shocked that Tesla model y not qualified as SUV for the tax credit while hybrids with much smaller battery gets full credit. This defeats the purpose of accelerating the EV transition and not fair for customers and hardworking Tesla employees that started this transition. Thank you! Yazen Karadsheh Sent from Yahoo Mail for iPhone<https://overview.mail.yahoo.com/?.src=iOS>
David	1/3/2023 19:45	Therefore more fuel efficient vehicles such as the Ford Mustang Mach-E and the Tesla Model Y should receive higher MSRP limits for rebates than less fuel efficient vehicles such as Jeep Wrangler Hybrid. But current MSRP limits seem to only be taking vehicle weight into account, not vehicle classification or fuel efficiency.
Warren Redlich	1/3/2023 19:45	Hi. As an EV fan and owner it seems odd to me that some versions of the Ford Mustang Mach-E and Tesla Model Y don't qualify for SUV status for the IRA tax credit. I know more about the Model Y as I have friends who own them and I've driven one. I sat in a Mach-E once. The 5-seat version of the Model Y is not very different from the 7-seater. There are plenty of vehicles considered SUVs that are similar to the Y 5-seater. Please reclassify the Model Y 5-seater and the Mach-E as SUVs. Both are much more energy efficient than comparable gas and hybrid SUVs and I think that's the intent of the IRA. Thank you Warren Redlich Cape Canaveral, Florida -- Warren Redlich
Emmanuel Fischman	1/3/2023 19:45	Thanks Emmanuel Fischman Begin forwarded message: From: Emmanuel Fischman <im455@aol.com> Date: January 3, 2023 at 6:42:20 PM CST To: pra.comments@irs.gov Subject: Model Y incentive Why do we even have to comment on model y not being included in the $80k suv tax credit incentive? This is the most efficient suv on the market and while you gave the $7500 credit to hybrid vehicles and the electric ID 4 how is it even possible not to include the model Y??????? Please fix it because it looks very bad on democrats trying to take revenge on Elon musk while screwing so many people…… is this in what's on the president agenda? Thanks Emmanuel Fischman
Mike Ryder	1/3/2023 19:45	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5-seat version). As a consumer, I am frustrated that this vehicle is not classified as an SUV and therefore not eligible for the $80k limit. This is especially shocking given it is classified as an SUV from NHTSA themselves! Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. Sad to see the state of affairs of these details…I expect to see them changed asap! Mike
wilhelm Schmidt	1/3/2023 19:46	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version).
Ben C	1/3/2023 19:46	Hello, My name is Ben Connolly and I am from western Massachusetts. I would like to see the tax credit area of the inflation reduction act modified so it is more fair to electric vehicles. Specifically I would like to purchase a 5 seat tesla model Y but it doesn't qualify. If it were heavier and less efficient then it would qualify. This logic doesn't make sense and I think it should be changed. Thank you, Ben

Charles Nordeen	1/3/2023 19:46	you have the audacity to play politics with our earth. It makes no sense based on everything I've read. Please accelerate progress and give them both the tax credit. Totally nuts that that isn't a given when you have hybrids with 25 miles compared to 300 plus Charles Nordeen Commercial Director @ The Garage <https://www.the-garage.tv/> 646.505.8003 | charlesmn@mac.com<mailto:charlesmn@mac.com> | CHARLESNORDEEN.COM<https://charlesnordeen.com/> | INSTA<https://www.instagram.com/charlesmn/> | LinkedIn<https://www.linkedin.com/in/charlesnordeen/> Personal Representation @ Dubay.tv<https://dubay.tv/>
Dom G	1/3/2023 19:46	lighter weight. It should not be penalized for efficiency. This is an American built vehicle with the largest percentage of American made components. I do not believe any plug in hybrids should qualify unless they do more than 40 miles of all electric range without requiring the gas engine to be started. When running the hybrid should get better than 45 mpg or it should also not qualify. At this point we need to encourage the American companies to build efficient EVs or we are going to be destroyed by foreign competition in a very short period of time. Sincerely, Dominic Giambo
Daljit Singh	1/3/2023 19:46	Some pure EVs such as Tesla Model Y 5 seater are not qualified as SUV. However, 7 seat version is qualified. Both SUVs are of same size and dimensions. At the same time there are some PHEVs with 21 miles EV range are qualified for full $7500. Please fix it.. Sent from Yahoo Mail on Android<https://go.onelink.me/107872968?pid=InProduct&c=Global_Internal_YGrowth_AndroidEmailSig__AndroidUsers&af_wl=ym&af_sub1=Internal&af_sub2=Global_YGrowth&af_sub3=EmailSignature>
Hunter M	1/3/2023 19:46	By making it so only the heavy SUVs there is an incentive to create less efficient and worse technology vehicles. Incentivizing PHEVs $7,500 the same amount as a full EV is also dumb because they pollute way more and are not the technology of the future. China will easily pass us if we incentivize a 20 mile electric range Jeep over the tesla and Mach-e
Jeff Greenfield	1/3/2023 19:46	I would like to express my disappointment with not seeing the Tesla Model Y on the list of the products eligible for the rebate. I want to buy an American made, all electric SUV with industry leading safety for my family. This rebate is important for me to be able to afford it. I don't understand why similar cars with worse specifications would qualify but not the Tesla Thank you for your time Jeff Greenfield
Arthur Perry	1/3/2023 19:46	Hi, I am reaching out regarding public comments on the "EV" tax incentive. I believe that the ratio of electric to gas usage in a car should be what determines the tax credit incentive. I understand rewarding all electric cars could be damaging to certain companies and, in turn, the economy so I certainly understand why hybrids are being rewarded. However, it seems outrageous that some extremely efficient all electric vehicles are not being awarded this incentive while hybrids are despite being classified as SUVs by other organizations. Thanks, Peter
chad wales	1/3/2023 19:46	I am deeply troubled with the Structure of the IRA and its use of American's tax dollars to be used to subsidize the cost of EV's, yet it includes hybrids. These vehicles are not Battery Electric Vehicles and they still emit toxic fumes as a gas internal combustion engine is the main source of power. Also, whoever wrote the guidelines was clearly not well informed into what makes EVs efficient. There are qualifications that the vehicle must be a certain weight to qualify an SUV. Efficiency of electric vehicles comes from simplification of components and reduction of weight. Cars with the greatest range and efficiency should be the cars that qualify. Not cars that weigh a certain weight or have a certain clearance height. Thank you for hearing my thoughts and opinions on this matter and I hope that you take the time to rethink the subsidies and your methodology for which vehicles qualify. Best regards, Chad Wales -- Chad M. Gary Lavin	1/3/2023 19:47	I am confused as to why the 5 seat version of the Tesla Model Y is not eligible for the tax credit. This is the most popular car period in California (including all non electric). Why would it be excluded? Regards Gary, +1.858.776.2646
Jeff Ford	1/3/2023 19:47	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves Sent from my iPhone
Derek Pierce	1/3/2023 19:47	The Tesla Model Y 5-Seater should absolutely be included in your electric vehicle robin hood initiative also known as the IRA. This is me voicing my opinion! Reference this link for more details to my complaint. https://www.teslarati.com/irs-invites-consumers-to-comment-on-ev-tax-credit-qualifications/ Thank you for your time and will be looking forward to a correction. Regards, Derek Pierce Mobile: 281.799.3750 derekpierce84@live.com
cole price	1/3/2023 19:47	The tesla model y should completely be eligible for the $7500 tax credit. It's wrong to not allow because of the weight of the car. The weight directly correlates to efficiency. Since this tax credit is for the health of the environment by getting people to buy more efficient cars. It is completely wrong to penalize tesla for making a more efficient car than the out of date standards of what a SUV is considered. Please rethink this choice. Also tesla is the most American made car made. Support American manufacturers please!
Brayton	1/3/2023 19:47	I think tesla Model Y 5 seater should be included and silly that it’s not from the beginning
Vishwas Basarkar	1/3/2023 19:47	I'm writing to request a review of the Model Y 5 seat configuration to be evaluated as an SUV the same as the 7 seat version to be eligible for the $7500 credit. Having minimum criteria for an electric SUV based on the weight and ride height of the vehicle is the opposite of an optimized fully electric vehicle. Reducing the ride height and lowering the weight of a vehicle increases the range, especially at highway speeds. Range is a key metric for purchasing an EV. More EV's can be produced using the same quantity of battery cells if they are lower to the ground and weigh less. Currently and for the transition period to 100% EV's, the limiting factor on their production is the availability of battery cells. The intention of this bill is to support the EV transition and in that spirit I ask that for fully electric vehicles for the ride height and weight limits be removed for the criteria of determining an SUV with respect to this credit. Thank you.
Shainil Shah	1/3/2023 19:47	Hi, I believe for a fact that this is policy is made to prop up any company not named Tesla. If this incentive is to truly increase EV adoption then a 5 seater Tesla Model Y should not be capped at 55K. The current administration's pro-union stance seems to be a attempt to alienate other companies and prop up these other companies for favor and political clout. There a also "Electric Vehicles" that have no business being qualified for any incentive. If your not going to fully incentivize the largest American EV maker, then this is a bandaid with holes for climate change and energy security. Thanks.
Matt Zebert	1/3/2023 19:47	Hi, As an engineer it’s incredibly frustrating to see how this is being qualified. Your own EPA considers it an suv but you don’t? How absurd - number one selling pure ev brand on the planet. - pioneer in the ev market, the exact one you’re trying to incentivize. Shouldn’t you want to include it? Don’t we want to incentivize people to guy buy evs instead of gas guzzlers ? And this is pure ev! Not even a hybrid. So disappointing and I really hope you reconsider. Best, Matt

Name	DateTimeReceived	Body.TextBody
Ben Talmi	1/3/2023 19:47	To whom it may concern, It is deeply concerning that the Tesla Model Y 5 seat edition is NOT eligible for the federal EV tax credit. This specific EV is on its way to becoming not only the number one selling EV in America but the entire world. This EV will be made 100% in America and is VITAL to America maintaining its leadership position. It makes no sense whatsoever that a 100% American made EV that is ready to ship immediately will not be included in an EV tax credit. Please rectify this issue immediately and make the Tesla Model Y 5 seat edition eligible for the $7500 tax incentive. Thank you very much. -- -Ben Ben Talmi<http://bentalmi.com/> Greylock Records<http://www.greylockrecords.com/> 413-329-5550
Ming Dong	1/3/2023 19:47	I strongly think that Tesla Model Y 5 seater should be included for the $7,500 credit and it is silly that it’s not from the beginning. Tesla is the most efficient EV manufacturer in the USA and including a sales credit for Model Y 5 seater is beneficial for a sustainable future of the USA. Ming Dong Professor, York University
Ryan Barnes	1/3/2023 19:47	IRS- As a whole the tax credits for plug in hybrids is just completely unhelpful for future energy needs and goals of our country. Dont think thats a comment you can act on. At minimum its clearly unfair the tesla 5 seat mode Y suv should be at the $80k marker with all other types of suvs. We should not be incentivizing making less effecient cars Thank you, Ryan Barnes - Philadephia
Khai Tran	1/3/2023 19:47	I think tesla Model Y 5 seater should be included and silly that it’s not from the beginning. Christian Tran
Will Miller	1/3/2023 19:48	I believe the proposed tax credit is unfair to Tesla vehicles, especially with regards to the Model Y 5-seat configuration. There is no evidence or metric that would position that vehicle for a credit lower than it's peer set. Furthermore, brief investigation into the list of vehicles eligible returns obvious misapplication of credits when vehicles such as hybrids with minimal battery architecture enjoy the higher end of tax benefit for no obvious or inobvious reason. I would like the metrics for applicability to be equally applied and it is obvious that is not the case as it stands. Thanks, Concerned Voter and American Will Miller 4109252202 -- William W. Name	DateTimeReceived	Body.TextBody
Joe	1/3/2023 19:48	Like many others, I am writing to express my concerns about the recent decision by the IRS on which vehicles qualify for the electric vehicle tax credit. It appears that the Tesla Model Y 5 seater, a purely electric vehicle, is not classified as an SUV by the IRS and therefore does not qualify for the credit whereas other similar sized 5 seater vehicles are classified as SUVs and despite their low electric range (hybrid) qualify for the tax credit. This seems to be contrary to the intent of the bill to encourage electrification of vehicles in order to reduce fossil fuel emissions. Tesla has an all electric fleet yet it seems that they are being unfairly treated when compared to other legacy auto manufacturers who are being incentivized to continue a largely gas powertrain (hybrids). Maybe this is not the intention, but many including myself are concerned that our government agencies are catering to certain labor lobbies and failing to use our tax dollars as intended to encourage and reward companies like Tesla that have invested heavily in electrification and singlehandedly jump started the clean energy vehicle movement in the car industry. Thank you for your consideration. Sincerely, Joseph Park
Phillip Burns	1/3/2023 19:48	The Tesla Model Y is classified as an SUV because it is a larger vehicle that is designed for utility and off-road capability. It has a higher ride height, more ground clearance, and a more spacious interior than a typical car. It also has available all-wheel drive and the option for a third row of seating, which are features commonly associated with SUVs. Thanks Phillip O. Burns
Miguel Hernandez	1/3/2023 19:48	Dear IRS, I am writing to express my concern about the electric vehicle tax credit qualifications. It has come to my attention that some variants of the Tesla Model Y and the Ford Mustang Mach-E are not eligible for the credit, while certain hybrid vehicles that use fossil fuels are classified as electric vehicles and do receive the credit. I believe that this is a gross misuse of taxpayer dollars and goes against the original intent of the Inflation Reduction Act. It is especially frustrating to see pure electric vehicles like the Tesla Model Y, which have impressive efficiency and range, not receive the credit while inefficient gas-powered vehicles do. I strongly urge the IRS to take action to fix this issue. The ideal solution would be to remove incentives for all hybrid vehicles and only offer them to pure electric vehicles. However, at the very least, I request that the SUV/non-SUV rules be applied fairly and consistently across all vehicles in order to correctly incentivize automakers and the public. I hope that the IRS will take this opportunity to demonstrate to the American taxpayer that these categorizations are being done in error, rather than being the result of negligence or corruption. Sincerely,
Julie Lindner	1/3/2023 19:48	Please change the way you classify all configurations of the Tesla Model Y to an SUV so they qualify for the tax credit. Secondly, no gasoline using hybrids should be included as they are in no way functional as an EV except for very short distances. This defeats the stated purpose of the credit.
Son Pham	1/3/2023 19:48	The Tesla Model Y all-wheel drive, long-range, and performance five-seat variants do not qualify for the tax rebate because their MSRP exceeds the IRS $55,000 threshold. The MSRP for the Tesla Model Y 5-seats versions should all be raised to $80,000 same as the 7 seats version because they're the same car in every ways except the two extra seats instead of cargo space. The IRS should fix this as it will benefit the US citizen greatly and as the law passed by congress intended. Thanks, Son
Joshua Spears	1/3/2023 19:48	To whom it may concer: The 5 seat model Y from Tesla should qualify for the tax credit. Half the cars that you have listed to qualify should not. They are not EV's they are hybrids. Stop the biased nonsense. Joshua Spears Sent from Joshua Spears iPhone

Name	DateTimeReceived	Body.TextBody
Eric Murray	1/3/2023 19:48	Hello, I am writing to you to comment on the IRS guidelines for EV tax credits. The 5 seat model Y should be classified as an SUV, and I think it’s a mistake to exclude it from the 80k cap. How is this justified with hybrids from foreign manufacturers qualifying for this credit? This gives the the illusion that the IRS is corrupt, and I hope it changes. Thanks. -- Eric Murray University of Delaware '17 B.S. Finance Economics Minor (516) 361-3196
Franco Grisafi	1/3/2023 19:48	Only cars that should qualify are 100%. No need to punish Tesla model y Sent from my iPhone
Sushil Mathakari	1/3/2023 19:48	Dear Officer, I am considering buying a Tesla Model Y 5 seater and it is classified as an SUV as per DMV however it is not eligible for IRS tax rebate of $7500. Please add it to the rebate list like other similar clean vehicle SUVs are included in the list. Best regards, Sushil Mathakari 4087992339
Allen Herrera	1/3/2023 19:48	Teslas Model Y in all configurations should be an SUV and qualify for the 7500 credit.
Andrew H	1/3/2023 19:48	I think it is utterly ridiculous that a half-gas powered jeep that has 20 miles of electric range gets a $7500 tax credit but a fully electric Model Y tesla is not considered for the $7500 tax credit. This to me indicates favoritism and is a perfect example of a government agency mucking up something that should be pretty straight forward. I want to buy an electric car but i dont want a poorly made jeep. I would rather put my money towards a reliable electric vehicle. Stop having favorites and start treating the car companies fairly. Give me a $7500 tax credit for the Model Y i want to purchase. -Andrew Haslett
Pablo Vela	1/3/2023 19:48	I am writing to request that the Tesla Model Y 5 seater long-range be included in the list of vehicles eligible for the $7500 tax credit. I am a strong believer in the benefits of electric vehicles, both for the environment and for personal cost savings. The Model Y 5 seater long range is a particularly impressive vehicle, with a range of over 300 miles and a reputation for safety and reliability. I understand that the tax credit is intended to encourage the adoption of electric vehicles, and I believe that the Model Y 5 seater long-range is an excellent candidate for this credit. It is an innovative and high-performing vehicle that would make a significant contribution to the transition to a cleaner, more sustainable transportation system. I hope that you will consider my request and give the Model Y 5 seater long-range the recognition it deserves as a leading electric vehicle. Thank you for your time and consideration. Sincerely, Pablo
Shainil Shah	1/3/2023 19:49	Hi, I believe for a fact that this is policy is made to prop up any company not named Tesla. If this incentive is to truly increase EV adoption then a 5 seater Tesla Model Y should not be capped at 55K. The current administration's pro-union stance seems to be a attempt to alienate other companies and prop up these other companies for favor and political clout. There a also "Electric Vehicles" that have no business being qualified for any incentive. If your not going to fully incentivize the largest American EV maker, then this is a bandaid with holes for climate change and energy security. Thanks.
Sri Panduranga	1/3/2023 19:49	Thank you for considering the feedback. In my opinion, Tesla Model Y (5 seater) is SUV and fully electric - it should be classified as SUV and enabled $80,000 EV credit instead of just $55,000 EV credit Thank you again! Regards Sri -- Best Regards, Sri Panduranga
Bill Stout	1/3/2023 19:49	Not including the Tesla Model Y or the Ford Mach E - both true EVs is absolutely ridiculous.

Name	DateTimeReceived	Body.TextBody
Stefan Birkner	1/3/2023 19:49	Hello, I believe the EV Tax Credit should be given to only fully electric cars. Doing this would incentivize for consumers like myself to make the move to electric and not depend on fossil fuels. Moreover, I believe certain cars variations such as tesla Model Y should all be included with the tax credit. Additionally, premium cars such as the Tesla Model X and Model S should also be included in the tax credit. Including hybrids that only have on average 25 miles of electric will not convert consumers to electric as most of their tank is gas. Additionally, incentivizing consumers who like premium cars with a tax credit will heavily motivate them to make the move as well. Thank you very much for your time!
John Braden	1/3/2023 19:49	I wanted to comment that the IRA should only include battery electric vehicles- not hybrids. Also, the model Y 5-seater should be classified as a SUV as that is how the EPA classifies it. Regards, John Braden 503-550-9032 Sent from my iPhone
mallasani@gmail.com	1/3/2023 19:49	Dear IRS, I strongly think tesla Model Y 5 seater should be included and silly that it's not included, it is a pure electric vehicle built on American soil, it looks like the bill is drafted in such a way that Tesla will be punished and Legacy auto get advantage even if the cars are not as superior as Tesla cars. Sent from my iPhone Sincerely Venkat Mallasani
Nicholas Chan	1/3/2023 19:49	I believe the Tesla Model Y 5 seater should be included in the credit. It doesn't make sense to exclude it because Tesla optimized the car to be hyper efficient that it doesn't meet the weight requirements.
Krishna C Palavarapu	1/3/2023 19:49	Regarding the IRS tax credits for the EV vehicle purchases, Tesla Model Y 5 seat all variants is not being considered as an SUV and the limit is set at $55,000 at the moment. Tesla Model Y 5 seater is a SUV and it should get $80,000 MSRP limit in my opinion. Thanks for inviting us to comment on this matter! Regards Krishna
MR Rogers	1/3/2023 19:49	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future.
Adam Engel	1/3/2023 19:49	The fact that hybrid vehicles are even on the tax credit list is crazy. The Tesla model y should receive the same or more tax credit than hybrid vehicles. Best, Adam Engel Running Robots, Founder http://runningrobots.com <http://runningrobots.com/> 1232 Teg Drive Iowa City, Iowa 52246 Office: 319-359-3350 Cell: 319-333-9320 Schedule a meeting: GetMeaRobot.com<http://getmearobot.com/>
Gemma Paris	1/3/2023 19:49	To whom it may concern, I am very concerned that the Tesla 5 seater Model Y is not currently included in the EV Tax credit scheme. This is the epitome of an American made electric vehicle and should have always been included as the flagship example of what this scheme is designed to achieve. Please review the current policy to ensure the 5 seat Tesla Model Y is available for the $7,500 credit. Sincerely, Gemma
Ben Copeland	1/3/2023 19:49	While I appreciate the government's continued investment and allocation of investments in electric vehicles and infrastructure, Tesla is a global leader of electric vehicles and has the most advanced technology available to consumers. Tesla's supercharging infrastructure allows the owner of a Tesla to travel anywhere in the United States and in many places around the world. This is very important to the wide adoption of electric vehicles. Please add the Tesla Model 3 and Model Y to the list of vehicles available for tax incentives. Contrary to common belief, Tesla Model 3 and Y owners are not any wealthier than the average car buyer and adding these vehicles to the incentive would allow an even larger group of individuals to purchase these cars. Thank you.

Name	DateTimeReceived	Body.TextBody
F The Pump	1/3/2023 19:49	Looking over the list of so called EV's that starting in 2023 do he do not qualify for the tax credits, I see some very weird so called EV's getting the tax credit and some EV's that do not. Mustang Mach e- Full BEV- should be an EV not a car. Tesla Model Y 5 Seater, listed as needing to be under 55k to receive credit but 7 seat Tesla Model Y needs to be under 80k? Doesn't make sense. Jeep Wrangler Plug in Hybrid gets an mpge of 20 miles and an EV range of 21 miles but qualifies as a SUV and gets the credit if under 80k. Why is this considered qualifying for the EV credit with 21miles of EV range and an mpge of 20. You are incentivizing buyers to buy a very fuel inefficient vehicle with tax credits that are meant for very efficient EV's. Can you explain why? Thank you! Sent from Yahoo Mail for iPad<https://overview.mail.yahoo.com/?.src=iOS>
nickymidnite (null)	1/3/2023 19:49	The Tesla model Y is clearly a SUV I should know I have one already. It is really bad that pure EVs including the ford Mach E are not getting the tax credit yet card with a gas engine are getting $7500! That is crazy! It's a bill for EVs! Which do not have a gas engine inside of them! Thanks, Nick Carulli
Mikey H	1/3/2023 19:49	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. ali sailan	1/3/2023 19:49	I believe that the Tesla model Y 5 seater should definitely be included in the EV tax credit. It's not right that it wasn't included in the first place. Sent from my iPhone
GREG WALDO	1/3/2023 19:49	The IRA should include the Tesla Model Y 5 seat SUV. Sincerely, Greg Waldo Sent from my iPhone
Ryan Dominick	1/3/2023 19:49	The Tesla Model Y five seat option should be included in the new Inflation Reduction Act. It should fall under the higher $80,000 since it is the same exact size as the 7 seat variant. Also, people who purchase an EV anytime in 2022 should be able to qualify as well. Respectfully, Ryan Dominick 909-560-4764
Jonathan Crites	1/3/2023 19:50	To whom it may concern; This email is to express my extreme displeasure in the way the IRS has defined which vehicles qualify for the federal tax credit in regards to electric vehicles. It is wrong not to include all models of the Tesla model Y, specifically the five seat version. It seems against what the spirit of the law was written for in trying to promote the transition to electric vehicles. This is one of the most fuel, efficient vehicles, and should be categorized as a SUV and not a sedan and the MSRP limit should be adjusted. Thank you for your consideration in taking another look at this as accelerating our country towards an electrified future and away from fossil fuels is very important to me and my children. Sincerely, Peter Crites
Hans Kumar	1/3/2023 19:50	I think tesla Model Y 5 seater should be included and silly that it's not from the beginning Thanks, -Hans
Ross Rohrer	1/3/2023 19:50	Electric vehicle tax cretic should apply to only electrical cars or cars that get more than 250 miles of electric range. It is silly that you leave out the best EV's from the tax credit. Teslas model y and 3 should definitely be part of it.

Name	DateTimeReceived	Body.TextBody
Scott Heichel	1/3/2023 19:50	Mr. Garcia and Whomever Else It May Concern: The IRS interpretation of the electric vehicle tax credits in the awkwardly-named Inflation Reduction Act is a complete and total sham - as I'm sure you're aware by now. How could the IRS possibly think that a Jeep Cherokee Hybrid with TWENTY FIVE MILES of electric range should qualify for a $7,500 Federal Tax Credit, while the purely electric Tesla Model Y with THREE HUNDRED MILES of purely electric range does not qualify. In what sane world does that make any sense whatsoever? Unfortunately, we have come to expect this pure and total incompetence from our government. It's a disgrace, quite honestly. I am embarrassed as a tax-paying citizen of this country. China will most certainly pass an electric vehicle credit that achieves what this bill was supposed to achieve.. and they will do it the right way because they don't have these asinine political infights that are destroying us from the inside. To quote Nancy Pelosi, "I would say Good Morning, but it MOST CERTAINLY is not one". Thank you for at least hearing public comment on this matter. For whatever that is worth. Scott Heichel
Owen Zhao	1/3/2023 19:50	Dear Sir/Madam I think Tesla Model Y seater should be included from the beginning of the EV tax credit. Thank you Owen
bedfordfsbo@gmail.com	1/3/2023 19:50	I stongly believe that Tesla Model Y 5 seater should be included. It is an oversight that it has not been included from the beginning of the IRA.
Richard Kwiat	1/3/2023 19:50	I'm a lifelong Democrat. I think it is outrageous that a bill intending to speed up our transition to battery electric vehicles and to "say goodbye to the pump" as President Biden has said is rewarding so many gas powered vehicles with tiny batteries while leaving out the most popular electric vehicle in the world, the Tesla model Y. This moves stinks of corruption as a favor to the UAW and paints this administration as corrupt and intending to harm Tesla when they are responsible for moving toward electric vehicles in the first place. Please reconsider. I already have a model Y so this is not for me, but it just looks terrible. Sincerely, -- Richard Kwiat
Maria Tovar	1/3/2023 19:50	All Tesla Model Y & 3 should be eligible for the $7,500 tax credit. I used to own a model 3 and now own a model y and they are the safest cars and help the environment. EV tax credit should be for EV cars.
Satish Gannamaneni	1/3/2023 19:50	Tesla Model Y 5 seater should be included in the $7500 EV tax credit. The Model Y is the most efficient electric vehicle available in the current market. How can less efficient EV get $7500 credit, but not the Tesla Model Y 5 seater. Please include Tesla Model Y 5 seater for $7500 EV tax credit Thank you
Gianmatteo Costanza	1/3/2023 19:50	Dear sir or madam, The EV tax credit was designed to incentivize middle class Americans to buy electric vehicles, to help move the whole country away from polluting fossil fuels to efficient and environmentally friendly electric vehicles. Additionally, the rules were intended to incentivize car manufacturers to build and assemble the vehicles and batteries in the United States. Looking at the proposed rules, they clearly fall short. Tesla cars, especially the Model Y, which are the most American-produced EV cars to date, are subjected to an arbitrary rule in being categorized as SUV (with a higher price limit) if a 7 seat configuration, the 5 seat configuration is categorized as sedan (with the much lower price limit). Supposedly this is due to the fact that the weight of the vehicle is used to classify between sedan and SUV. This is patently nonsensical, and counter to the basic premise of the law to incentivize efficient and environmentally friendly cars. If heavy cars get subsided, it is actually counter-productive! SUVs that are built more light and efficient, should not be penalized! The incentive should go to vehicles that offer the best to society. The most energy efficient, the most locally produced. Please revise the rules to reflect the higher-order objectives of the law. Best regards, Gianmatteo Costanza

Name	DateTimeReceived	Body.TextBody
Ron Baakkonen	1/3/2023 19:50	Dear Mr. Garcia, I am writing to express my strong objection to the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure, specifically the exclusion of the US-manufactured Tesla Model Y from the SUV category. I am extremely disappointed to see that vehicles largely manufactured outside of the US and with much worse environmental profiles are being allowed for this credit, while the Tesla Model Y, which is manufactured in the US and has a significantly better environmental profile, is being excluded. This seems completely arbitrary and unfair. I urge the IRS to reconsider this decision and include the Tesla Model Y in the SUV category for the Qualified Plug-in Electric Drive Motor Vehicle Credit. As a taxpayer and a concerned citizen, I strongly believe that we should be supporting and incentivizing the production of environmentally-friendly vehicles, especially those made in the US. Sincerely, Ron Baakkonen
Matt Aarstad	1/3/2023 19:50	Hello, I am writing to voice displeasure in the fact that the Tesla Model Y 5 seat version is not classified as a SUV. It makes little sense that this car does not qualify for the EV tax credit when other vehicles that can travel only around 20 miles on a charge and then get less than 20 mpg after that qualifies. The Model Y is far better for the environment than the Jeep and many other SUVs that qualify. Thanks, Matt A
Mike Deese	1/3/2023 19:50	Please include all versions of the model y tesla in the 7500 dollar rebate as this is the best electric suv and it is unreasonable to not include. Mahalo! Mike Deese Honolulu, Hawaii
randallg2233	1/3/2023 19:50	Dear IRS, I feel you are in error on what vehicles should be allowed your $7500 Electric Vehicle credit. Please include the Tesla Model Y 5 seat. Doing so would be fair to all and avoid controversy in your program. Best regards, Randy
Addison Robertson	1/3/2023 19:51	The qualifications a vehicle must have to be eligible for the $55k and $80k maximum asking price are inconsistent how the current structure is set up. Some vehicles that the EPA deems sport utility vehicles that have 5 seats qualify for $80k, while others with 5 seats that the EPA also deems a SUV do not. And the incentive guidelines explicitly say "vans, sport utility vehicles, and trucks" will qualify for the $80k maximum selling price. Also, hybrid power trains should NOT be included on this list. While using the battery power, these vehicles can have MPG ratings of 20, with a battery range of only 21 miles, these cars will spend a large majority of their miles driven without any electric power! This will lead to an increase in fossil fuel consumption due to the weight of the powerless electric battery and motor needing to also be propelled by the ICE engine. Thank you for taking the time to read my opinions. Addison Robertson
Chris Zheng	1/3/2023 19:51	Hi, I want to submit my comment on the new IRS guidelines for the new Inflation Reduction Act. I would like to see the tax credit that I am paying for using my tax dollars to be better aligned with the core objective of IRA, which is to accelerate our transition to sustainable energy and strengthen the domestic/US EV manufacturing industry. In order to best achive that, I believe: 1) hybrid vehicle incentives should take a back seat to pure EV incentives 2) SUV/Non SUV categorization is applied fairly and consistently across manufactures - Ford Mache E and Tesla Model Y 5 seater should both qualify for the $7500 tax credit like their SUV counterparts. Chris Zheng 617.233.6429
Russell Albert	1/3/2023 19:51	Dear Internal Revenue Service, I am writing to express my dissatisfaction with the Inflation Reduction Act rules regarding vehicle classification and qualification, specifically the classification of the Tesla Model Y (5 seat version). Frankly, it makes no sense to me that the 5 seat version of the model Y does not qualify for the $7,500 credit while the 7 seat version does. Both versions are essentially the same vehicle. Whether it's 5 or 7 seat has no bearing on the utility, or efficiency of the vehicle. It certainly DOES makes sense the 7 Seat version does quality. However, it makes even less sense when you consider that other SUV vehicles with very small batteries and extremely limited EV range are able to qualify for the credit, while at the same time burning gasoline and achieving very low (~20 mpg) mileage overall. Please correct this error in the determination. I am writing about the Tesla Model Y specifically because I wish to purchase this vehicle in the near future. The $7,500 credit would be essential in my purchase decision. With Best Regards, Russelll Albert 21 Reussner Road Southington, CT 06489

Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
John K. Stringer	1/3/2023 19:51	Please add the Tesla Model Y 5 seater to the $7,500 tax credit. It's insane that other vehicles like below are getting it and Tesla Model Y is: [image.png] If this current administration wants to see change towards EVs you have to unlock this. I appreciate if you make this change ASAP.
Joshua Smith	1/3/2023 19:51	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version) and Cybertruck. These vehicles should receive a full, maximum credit regardless of a person's tax owed or income. This credit helps support American businesses and reduce carbon emissions. Joshua Smith 8160 Rossman highway Dimondale, Michigan
Ghazi Aryan	1/3/2023 19:51	Dear IRS, I am writing with frustration and disappointment regarding the Inflation Reduction Act's SUV requirements and how they treat the Tesla Model Y 5 seat variant. It is unacceptable to me that the Tesla Model Y, a fully electric vehicle with a range of over 300 miles and a lower carbon footprint than the Jeep PHEV, is not given the same tax incentives as the hybrid Jeep. I am also concerned that special interests may be influencing the decision-making process in a way that is unfair to fully electric vehicles like the Tesla Model Y. It is essential that the transition to sustainable technology be based on objective criteria and not swayed by outside influences. The fact that the Tesla Model Y is manufactured in the United States, while the Jeep PHEV is imported from Europe, only further highlights the injustice of this situation. It is imperative that we support domestic manufacturing and the transition to sustainable technology, and yet the Inflation Reduction Act is failing to do so in this case. I understand that the Act has to balance the need for fiscal responsibility with the desire to promote sustainable technology, but the current criteria for these tax credits are unfairly biased towards hybrids and do not adequately support fully electric vehicles. This does not align with the Act's stated goal of promoting sustainable EV technology and I urge you to reconsider the criteria for these tax credits, taking into consideration the range, domestic manufacturing, and potential special interests of these vehicles. I hope that the IRS will recognize the error in this decision and take steps to correct it. The transition to sustainable technology is crucial for the future of our planet, and it is important that we do everything we can to support and promote it in a fair and unbiased manner.
Pradeep Velma	1/3/2023 19:51	This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Thanks, Pradeep.
Ignacio Jiménez Salvador	1/3/2023 19:51	This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law.
alan havatek.com	1/3/2023 19:51	Every version of the Tesla model Y should qualify as an SUV for the IRA credit. Sent from Alan's mobile. Please excuse typoes. ;-)
Randy Jensen	1/3/2023 19:51	Hi Andres - the Tesla Model Y of all trims should be eligible for the tax credit. This tweet explains why this must happen https://twitter.com/farzyness/status/1609651117356351488?t=aAJXI-YiCdsjASUZaeZx4A&s=19 Thanks for your consideration!

Mohamad El Nsouly	1/3/2023 19:51	To Whom it may concern, As a concerned global citizen and as someone who believes in President Biden's presidential agenda, his past, present and future legacy I believe that this is a missed opportunity to really drive the electrify America Agenda. Hybrid cars have always and will always be a stepping stone towards full electrification; which is clear to all manufacturers and vehicle owners. Given the above incentivizing companies to pause electric development by having equal subsidies on electric and hybrid would be off the mark. Additional to that having American SUV's that are fully electric not be subsidized by the same law would be absolutely sending the wrong message, I am certain that this is probably a technical miss but would absolutely believe for the Electrify America Agenda to move forward untarnished it would absolutely need to be rectified. Thank you With a lot of respect and humility
enzoucp@yahoo.com	1/3/2023 19:51	To: IRS I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version)
Lee Cephas	1/3/2023 19:51	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified. 1. Demand far outweighs supply, so having such a credit doesn't make sense. 2. Vehicle classifications are incorrect. Why does the standard model Y not qualify, but many vehicles with significantly less MPGe do?
Paul	1/3/2023 19:51	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Looks like regular cars with a large battery (ie hybrid) get credits while some all electric cars do not. Thank you, Paul Towler
Bobby Siler	1/3/2023 19:51	Tesla EV model Y 5 seat option should get 7500 credit at its current price. It's absurd that ICE vehicles are getting 7500 credit. Please amend this immediately Bobby Siler
Nagrani, Navin	1/3/2023 19:51	Dear IRS - Please make the Tesla Model Y eligible for the EV tax credit. The Tesla Model Y 5 seat configuration is the most American-made car and safest car you can buy. The US govt says it's NOT eligible for the $7.5k.
Suren Tekkem	1/3/2023 19:51	Dear Sir/Madam, The Tesla Model Y 5 seat configuration, best selling fully electric EV in America with more than 300 miles of range. It is the most American-made car one can buy. But Model Y did not make it to the list of cars eligible for $7,500 tax credit, published by IRS. There are several other 5 seater vehicles that were included, with a battery range between 20-40 miles. Can you please rethink this decision and include model Y in the eligible list of vehicles for the $7,500 EV Tax Credit. Thank you for your attention. Suren
kujtim bashota	1/3/2023 19:51	I think tesla Model Y 5 seater should be included
klbrown4711	1/3/2023 19:51	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules.The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Krysta Brown
Nicholas Dwork	1/3/2023 19:51	Regarding the electric vehicle tax credit, all fully electric vehicles should qualify for the tax credit regardless of their weight. Definitely, the Model Y manufactured by Tesla should qualify for the tax credit. -Nicholas Dwork

Name	DateTimeReceived	Body.TextBody
Jarett Gross	1/3/2023 19:51	As a taxpayer I am appauled you would include so many non US made electric cars and hybrids in your incentive program but not a 100% USA built tesla model Y. This makes no sense, I cannot imagine how anyone could justify a decision like this without external influences. Why would you include hybrids that are so much less efficent than the model Y?
Max Duenner	1/3/2023 19:51	To whom it may concern, The Tesla model Y 5-seater should qualify for the $7,500 EV tax credit. It is no different than any other SUV and should be considered one by the IRS. It is a purely electric vehicle, and the most popular EV in the US. It's also made in the US. If the goal is to transition more people to EV's, it only makes sense to make this vehicle eligible for the tax credit due to how many consumers want to buy this vehicle with or without the credit. Thank you for your time, -Max
Tim Walter	1/3/2023 19:51	To whom it may concern, I would ask that you reconsider the decision to exclude the Tesla model Y5 seater from the SUV category. This is the most popular fully electric SUV in the world end excluding it from the designation, will hurt the goal intended by the legislation. Thank you for your time. Tim Walter 4 Lockhaven Ct Bedminster, NJ 07921 (W) 908-231-1160 (C) 908-347-0128 Sent from mobile device
Jason Binder	1/3/2023 19:51	happen. I do NOT believe any vehicle that takes gas should qualify. It incentivizes oil and slows progress.
Christopher Holt	1/3/2023 19:51	credit cap. According to the EPA, the Model Y 5 seat option is clearly categorized as an SUV. As a highly efficient, fully electric vehicle, the Model Y 5 seat option meets the criteria for receiving the full tax credit in accordance with the relevant law. I believe that it is in the spirit of this law to extend the full tax credit to the Model Y 5 seat option, given its classification as an SUV and its status as a highly efficient, fully electric vehicle. Thank you for considering my request. Chris Holt
Peter Lucier	1/3/2023 19:52	$7500 credit. Having minimum criteria for an electric SUV based on the weight and ride height of the vehicle is the opposite of an optimized fully electric vehicle. Reducing the ride height and lowering the weight of a vehicle increases the range, especially at highway speeds. Range is a key metric for purchasing an EV. More EV's can be produced using the same quantity of battery cells if they are lower to the ground and weigh less. Currently and for the transition period to 100% EV's, the limiting factor on their production is the availability of battery cells. The intention of this bill is to support the EV transition and in that spirit I ask that for fully electric vehicles for the ride height and weight limits be removed for the criteria of determining an SUV with respect to this credit. Thank you. Peter Lucier 4519 Pinebluff Trail Reno, NV 89519

Eric	1/3/2023 19:52	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version), among other pure EVs. As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Thank you,
JR Payne	1/3/2023 19:52	To those whom this concerns, I am writing in regards to OMB Control No. 1545-2137 The "IRA" provision of a $7,500 tax credit for non-EV's is an outrage. An internal combustion engine car with a 30-mile range battery receiving credit as an EV is a violation of the spirit of the tax incentive and completely unacceptable--especially when the very best (cleanest, most efficient, safest) car ever made is excluded from this same provision. I am referring to the Tesla Model Y, which currently does not qualify for the $7,500 credit. I request that the credit be extended to the Tesla Model Y immediately. Best Regards, Jayson Payne US Citizen Taxpayer Senior Software Engineer
Corwin	1/3/2023 19:52	Dear Mr. Garcia, I my name is Corwin and I'm a 25 year old kid with a solid job so I want to buy the safest American made SUV ever made. I see the tax code now blocks the Tesla Model Y from the EV tax rebate simply due to an arbitrary metric (weight) used to identify what is an SUV. This appears to be glaringly suspicious and further erodes the little trust left in our country. Please leverage a more comprehensive industry standard for what is an SUV. Please do something that's clearly not corrupted. With low hopes and zero expectations
Jim Cook	1/3/2023 19:53	MSRP limit. Jim
Ryan Loshaw	1/3/2023 19:53	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. David Howard	1/3/2023 19:53	To whom it may concern The proposed classification of 5 Seat Model Y Teslas as not SUVs for the purpose of max price limitation is a mistake. From the point of view of fairness, logic or fuel efficiency having a minimum weight to qualify as an SUV makes no sense. Please reconsider Sincerely David Howard
kujtim bashota	1/3/2023 19:53	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves ons 4 jan. 2023 kl. 01:51 skrev kujtim bashota <kujtim.bashota@gmail.com<mailto:kujtim.bashota@gmail.com>>: I think tesla Model Y 5 seater should be included
Brad Hilton	1/3/2023 19:53	To whom it may concern: I would like to strongly urge you to change the current IRA EV credit structure that leaves the Tesla Model Y 5 seat model effectively out of the program by limiting it to a price of 55k rather than the 80k that is granted seemingly arbitrarily to other competitors. Tesla continually wins awards for building the “most American” cars. If any brand deserves special consideration, it’s Tesla. But they don’t want special consideration, they just want to be treated fairly. I do not believe cutting out the Model Y - seemingly on purpose for political reasons (perhaps not, but it sure looks that way) is fair, and you should address this immediately by changing the limits for all specs of the Model Y to 80k. Thank you for your consideration, Bradley Hilton Dover, NH
Bram Augat	1/3/2023 19:53	Please consider. All Tesla model Y and model 3 vehicles should qualify for the credit. They’re the best most energy efficient vehicles on the market. Bram Augat Sent from Bram's iPhone
menno kamerman	1/3/2023 19:53	Please do not lose all credibility by stimulating Hybrids with no eclectic range and exclude the Tesla model Y and Ford Mach E. The subsidy should not exist at all but if you implement it do it in a fair way and allow real American companies to benefit The Ford Mach-E and Tesla Model Y should be included just like the German made Volkswagen ID4 Menno Kamerman
william haskins	1/3/2023 19:53	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Anthony Langton	1/3/2023 19:54	As of 1/3/2023 it doesn't seem like the vehicle qualifications are very consistent or are very well defined. Something is wrong when a gas powered vehicle getting 21 mpg with an EV range of 21 miles qualifies for the $7500 credit but a vehicle that is a pure EV with 115 mage doesn't qualify. Or a particular model with 5 seats that doesn't qualify but the exact same model with 7 seats does. Or a vehicle that is considered an SUV by the EPA isn't considered a SUV by the standards of the tax credit. These qualifications need to be revised by an unbiased official with intimate knowledge EV's. I would suggest making the credit as a percentage of the MSRP up to a maximum value. Say 10%. A $50k vehicle would qualify for $5k A $75k vehicle would qualify for $7.5k This would eliminate defining what is an SUV or a Sedan. Anthony Langton anthonylangton@Icloud.com<mailto:anthonylangton@Icloud.com> (651) 262-6716
Josh O'Neill	1/3/2023 19:54	To whoever reads this: I'm hoping the fact you left the Tesla Model Y - 5 seat and the Mach -E out of the EV - SUV $7500 credit was an accident. If it is not an accident it can only be considered a blatant misuse of government money pretending to be an EV Tax Credit. I'd like to add the EPA considers the Model Y - 5 seat an SUV and so does ever other ranking system in the world. Please correct this action asap while you have still a brief chance to save face and prove this is not pure corruption. - Josh
Jessie Chimni	1/3/2023 19:54	It is absolutely TESLA Model Y 5 seater is not included in the IRA. It is a 100% EV SUV and u are giving credits to hybrids. Completely backwards. They have a full ICE engine. This is not progressive and defeats the purpose. Dont waste tax payer money. Use the money to support the EV transition!! Jasbinder Chimni
Umar Raja	1/3/2023 19:54	Please review the qualifications for eligible EVs. The 5 seater Tesla model Y not being eligible is beyond insanity. Allowing ICE hybrid vehicles with low battery mileage qualify but not tesla model Y and mustang Mach E is beyond ridiculous.
Adam Welander	1/3/2023 19:54	I would like to address the definition used by the IRS to define an electric SUV. The arbitrary rules seem to be based purely on older gas vehicles and not the modern EV SUV. The law says to use the EPA as guidance which is not what was followed. Because of this, many popular EV SUVs don't qualify as expected for the $80K limit. Please review your definition of an SUV with an eye towards modern design and efficiency, not the past of gas vehicles and yesterday's designs. Thank you, Adam Welander

Max G	1/3/2023 19:54	I am writing in regards to the new EV Tax credit. I was banking on this to help me purchase a Tesla model Y. This is the most American car built, yet it does not qualify for the $80,000 threshold. This is pretty disgusting when you learn that hybrid suvs with very small batteries qualify for the tax credit. I expect more from our government, please make this right
Sanjay Mathew	1/3/2023 19:54	I am writing this letter to express my opinion that hybrid vehicles should not be eligible for the EV tax credit, and that the Tesla Model Y should be considered a SUV. Hybrid vehicles are not 100% electric, and thus do not qualify as true electric vehicles. These vehicles are powered by a combination of gasoline and electricity, and as such, should not be eligible for the same tax credits or incentives that are available to truly electric vehicles. The Tesla Model Y should be considered a SUV for the purposes of tax credits and incentives. The Model Y has been designed to provide the space and convenience of a traditional SUV. Its design features, such as its all-wheel drive, large cargo area, and seating for up to seven passengers, make it an ideal choice for those looking for a traditional SUV. Thank you for your time and consideration on this matter. Thanks Sanjay Mathew [cid:d699072a-df3b-487c-82fa-d56ce3f1311b] Synetics Computers Inc. 7256 Glenview Drive Richland Hills, TX 76180. Direct: 817 484-5603 www.syneticstx.com<http://www.syneticstx.com> Please review us here <https://www.google.com/search?source=hp&ei=DIbPW4LtEsiUsgW_7LOQAQ&q=synetics+computers+inc&btnK=Google+Search&oq=synetics+comp
Jim	1/3/2023 19:54	I bought a SUV in August of 2022, a 2022 Tesla Model Y Performance. It has 5 seats. This is not considered a SUV because you apparently think a Tesla SUV must have 7 seats. Not sure where this logic came from, as you qualify other vehicles with "only" 5 seats as a SUV. I'm not eligible for any tax credit, but to deny the 5 seater Tesla Model Y as not being an SUV is ridiculous. I'm pretty sure you would consider a Ford Bronco or Explorer an SUV, yet those are only 5 seaters too. Surely the amount of seats doesn't mean a vehicle is a SUV or not, lol. Thanks, James Tanner Jtanner@tampabay.rr.com
Max Correa	1/3/2023 19:54	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play. Tesla model Y is an American made, efficient, and the most compelling SUV in the market, not to mention the safest car in the road. Not including it is a disfavor to the American consumer. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility of cars that are barely electric and are likely to run almost exclusively on fossil fuels. President Biden is self promoting this as clean energy, yet some of these beneficiaries are barely clean. Thanks for your consideration. Max Correa.
Lockie Garnett	1/3/2023 19:54	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version) and the Ford Mustang Mach-E Regards Lockie Garnett [PRINTCOST] www.printcost.com<http://www.printcost.com/>
Tiffany W.	1/3/2023 19:54	* Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Sent from my iPhone

Kristen Fenton	1/3/2023 19:54	It is absurd that some variants of the Tesla Model Y and the Ford Mustang Mach-E will not receive any incentives from the IRS at all, while some vehicles that use fossil fuels will. All fully electric vehicles should qualify. Respectfully, Kristen Fenton 1526 Francis Ave Mansfield, MA 02048
Tim Hartford	1/3/2023 19:54	timhartford@gmail.com Please change the Inflation Reduction Act to allow all configurations of Ford Mustang Mach E AND Tesla Model Y 5 seater to qualify for $80K ceiling for SUV $7,500 consumer tax credit. It is unconscionable that many high-emission Hybrids are qualified for the tax credit and these two low-emission vehicles do not. Sincerely, Tim Hartford
Dmitry Negai	1/3/2023 19:54	I seriously suspect there is pay for play here, how is it that the inflation reduction act has EV incentives that do not include any of the major electric vehicles that are being in the market today, that includes vehicles such as the Tesla model Y which is the most sold, and most American popular electric vehicle to date, as well as Ford mustang Mach, E and others, It is either that there is lobbying involved, which undermines the adoption of electric vehicles, or that the government is not necessarily interested in the adoption of vehicles, as much as it is manipulating the market to appease its investors which could be the very same people working for the government, i.e. the congressmen and senators. Please consider using taxpayer money fairly to increase electric vehicle adoption without discriminating, one vehicle manufacturer from another. Thank you for reading. Dmitry N. Sent from Proton Mail for iOS
Scott Wasser	1/3/2023 19:55	I would like to understand why an EV in the Tesla Model Y that is all electric and gets 330 miles on a charge is not eligible for an EV Tax credit. This exclusion of this vehicle makes the Inflation Reduction Act look like another partisan hack bill and calls into question the authenticity of the governments actual concern in climate crisis issues. Do better. Concerned Citizen, Scott W
Ryan Hagan	1/3/2023 19:55	To whom it may concern, Please reconsider the $7,500 credit criteria for SUVs. By all vehicle standards the 5 seater Ford Mach e and Tesla model y meet SUV standards, however the IRS didn't certify either of these vehicles as SUV for the purposes of the $7,500 EV tax credit. The purpose of this credit was to support electric vehicle adoption and living in a greener world. By not certifying the MACH e and Tesla model y (5 seater) as SUVs, they don't meet the dollar limitations for the credit. This doesn't make any sense and needs to be fixed. There are currently SUV's on the list with a gas engine and gets 20 MPG. With only a 21 miles of electric range. It gets a $7,500 EV Tax Credit. While an SUV like the Tesla model Y is full ELECTRIC and gets 113 MPEe. It has 330 miles of range. However, based on the strange SUV criteria, it doesn't get the EV tax credit. Please correct as soon as possible or provide reasoning for the illogical criteria. Please help make for a greener world and not let politics get in the way. Thanks,
Greg Lukes	1/3/2023 19:55	The inclusions of some select EVs in this tax credit at the expense of much more efficient vehicles does not seem to run parallel with the intent of the Inflation Reduction Act as written. In fact, it seems like a targeted attack on the very company doing the most to rectify the issue this credit was created to address. Please re-consider aspects of this and other directives to re-designate the Model Y as a SUV.
Mark Zylka	1/3/2023 19:55	Dear Andres Garcia, Please classify the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categrized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full $7500 tax credit. Mark Zylka P.S. I own two Tesla Model Y 5 seat vehicles and my sister, a middle school teacher, was planning to purchase one this year under the assumption that she'd get $7500 off. I know others who are likewise appalled that the IRS did not do the right thing. Now is your chance to correct this oversight and correctly classify this car as a SUV so that hard-working taxpayers can get the full tax credit for the safest, most American made SUV on the planet.

Name	DateTimeReceived	Body.TextBody
nelson ortiz	1/3/2023 19:55	Federal Tax Credits when purchasing these types of vehicles. The IRS is not categorizing the Tesla Model Y 5 seat as an SUV, even thou the EPA does. This means Tesla Model Y with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. On the other hand, as an example, you have a Jeep Grand Cherokee 5seat 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. Weight should not be used to categorize because the end goal is to make electric vehicles lighter and more efficient. Please use the EPA to guide on SUV definition. Sent from my T-Mobile 5G Device Get Outlook for Android<https://aka.ms/AAb9ysg>
Tu Bui	1/3/2023 19:55	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. I believe that these rules are misguided and do not accurately reflect the environmental benefits of electric vehicles. Hybrid vehicles may have some benefits compared to traditional gasoline vehicles, but they are still powered primarily by fossil fuels and do not offer the same level of emissions reduction as pure battery electric vehicles. In fact, hybrid vehicles can actually be worse for climate change compared to pure battery electric vehicles if they are charged primarily from the electric grid, which is often powered by fossil fuels. I urge the IRS to reconsider these rules and to more accurately reflect the environmental benefits of electric vehicles in their classification and incentives. Sincerely,
David Schwall	1/3/2023 19:55	Tesla Model Y 5 seater should be included. Why was it excluded? David Have a great day!!
Lance Nord	1/3/2023 19:55	EPA classifies it as an SUV?!?!? It's so clear that you are passive-aggressively punishing Elon Musk by punishing his customers. You and state governments are pushing consumers to buy electric to save the planet, but when we do you punish us by disallowing tax credits because the owner of the manufacturer doesn't advocate the Swamp's agenda. And, why would you cap the value on the EV? You should be applauding AND awarding ANYONE who buys an electric vehicle because that's what you want the public to do, right? Is it a requirement to check your brain at the door when you come to work in the morning? Do you ever wonder why you are so hated? Perhaps it's because of your pettiness, distinctive lack of common sense, and inconsistency. Lance Nord
gist_sloshes_0d@icloud.com	1/3/2023 19:55	Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Please amend the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022-42 in better keeping with the intent and spirit of Inflation Reduction Act. And specifically to more adequately characterize the (nebulous) notion of what constitutes an SUV to include the leading Battery Electric Vehicle (BEV) in the category, namely the Tesla Model Y. And likewise to include another leading domestically produced option in the way of the Ford Mach-E. These incentives should apply consistently but preferentially to the vehicles with the greatest net efficiency and fewest emissions Battery Electric Vehicles (BEV) over Plug-in Hybrid Electric Vehicles (PHEV). Regards, Robert Esker Austin, TX
Ann Murphy	1/3/2023 19:55	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Greg Adair	1/3/2023 19:55	To whom it may concern, I am writing because I am concerned about the new electric vehicle tax credit criteria. The criteria does not seem to support the spirit of the bill, which is to incentivise and help people make the switch to cleaner and more efficient electric vehicles. More specifically, the Telsa Model Y does not qualify as an SUV because it doesn't meet the weight requirement. An incredible amount of engineering has gone into that vehicle to reduce weight and therefore increase efficiency. Clearly weight isn't the right metric to consider in this case as the spirit of the law would absolutely be to encourage more efficient use of our energy resources. This criteria appears even more egregious when considering that a Jeep plug-in hybrid qualifies for the full credit while only having a 20-25 mile range while running on battery. I encourage the IRS to revisit these requirements. thanks, Greg Adair
Bernice Parrott	1/3/2023 19:55	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Bernice Parrott
Doug Rosenfeld	1/3/2023 19:55	The tax credit should be a level playing field and allow all EVs to qualify for the 7500. It makes no sense to omit some based on being too light, like that Tesla Model Y with 5 seats or the Hyundai Ioniq 5 since it's made in South Korea. This will choke the EV adoption in the US and will also also the few that qualify for the credit, to gouge consumers. Today, Chevrolet already raised the price of the Bolt $900, without adding equipment or citing any reason. On 12/31, the same model year car had a lower MSRP. Now that demand is skyrocketing, they raised the price. We will continue to see this happen, just like Ford, raising the price of the Mache E and F150 Lightning by 10s of thousands. We should also eliminate the income limit, as if the goal is truly ev adoption, what does income have to do with it? If someone makes more than the income limit, it does not mean they can afford an EV. I thought the point of adopting EVs was to help reduce emissions? So why is that tied to income? If anything, people that earn more have more choices, meaning they would be even less inclined to buy an EV, since they know they're paying $7500 more than someone that makes less than them. --
Paul Herlihey	1/3/2023 19:55	Hello, I am in favor of including the Model Y all-wheel drive, long-range, and performance five-seat variants in the EV and all excluded variants of the Ford Mustang Mach-E to be eligible for the inflation reduction act ev tax credit. Best, Paul -- Best, Paul
James Meece	1/3/2023 19:55	I just wanted to say that obviously the Tesla Model Y should qualify for this. https://www.federalregister.gov/documents/2022/12/30/2022-28402/proposed-collection-requesting-comments-on-form-8936-qualified-plug-in-electric-drive-motor-vehicle#addresses Thanks for your time! Scott Martin	1/3/2023 19:55	I am writing to express my dissatisfaction with the Inflationary Reduction Act, specifically the exclusion of the Tesla Model Y from the $7500 tax credit. As a consumer and proponent of electric vehicles, I was excited to see the inclusion of the tax credit in the act. However, upon further review, I was disappointed to see that the Model Y was not included among the eligible vehicles. The Model Y is a highly popular and efficient electric vehicle, and its exclusion from the tax credit feels like a missed opportunity to encourage more consumers to make the switch to electric. The tax credit has the potential to be a powerful incentive for consumers, and the exclusion of the Model Y seems arbitrary and unfair. I urge you to reconsider the inclusion of the Model Y in the tax credit, and to consider the impact on consumers when drafting future legislation. Thank you for considering my concerns. Sincerely, Scott Martin 306 519 8229
Steven Abramson	1/3/2023 19:55	Dear IRS, I am writing in regards to the Inflation Reduction Act. It has come to my attention that pure EV's such as the Tesla Model Y (5 seat variants) and Ford Mustang Mach-E do not currently quality for tax credits for the $80,000 price cap even though they are classified as SUV's by the EPA. Meanwhile, vehicles like the Jeep Grand Cherokee with a gas engine and much lower miles per gallon and significantly less electric range are scheduled to receive the tax credit. This does not meet the intention of this bill, and should be corrected immediately. Please let me know if you have any questions. Sincerely, Steven Abramson
jesse munyard	1/3/2023 19:55	Hi there, I think the decision to exclude the 5 seat variant of the model Y Tesla was made with very poor judgement, it makes no sense as it is clearly an SUV. I also think that allowing any vehicle that produces emissions into this arrangement is counter productive to encouraging clean energy. My gas vehicle has a 12v battery to start the car. This doesn't make it electric. Hybrids aren't much different and are not a stepping stone on the way. Kind Regards, Jesse Munyard
Manuel Schiestl	1/3/2023 19:56	I am writing to express my strong dissatisfaction with the Inflation Reduction Act. It is unacceptable that hybrid vehicles with 20 miles of range receive the full 7500$ amount! Hybrid vehicles combine the worst of both worlds, they are more harmful than a pure petrol car. I don’t want tax payers money to go towards bailing out OEMs with ridiculous incentives for hybrid vehicles! Furthermore the classification of SUVs is outdated, you should accept the classification of the EPA. Kind Regards, Manuel
Shannon Counihan	1/3/2023 19:56	In my opinion, I think the Tesla Model Y 5 seater should be included. Please adjust accordingly. Thank you.
CHRISTOPHER FACCIOL	1/3/2023 19:56	To whom it may concern , The TESLA model Y 5 seat SUV not included in the EV tax credit MUST BE FIXED .. This is outright CORRUPTION to exclude this vehicle Christopher facciol Sent from my iPhone
Tiffany To	1/3/2023 19:56	Hello, I am writing in because I feel that it’s unfair to disqualify the Ford Mustang Mach-E and Tesla Model Y from the federal $7,500 tax incentive simply because they don’t fit into some outdated qualifications while hybrid cars with small electric engines do get the incentive. The main purpose of the bill was to incentivize consumers to purchase cars that do not use fossil-fuels and the fact that these two very popular fully electric suvs are not included will sway from people away from purchasing these cars as 7,500 is a lot of money for most people. Sent from my iPhone
Frank Hurst	1/3/2023 19:56	someone justify this decision? It's as if people serving American citizens are biased and wants Tesla (an American company) to not participate on a level playing field. I don't feel the need to point out all of the discrepancies comparing hybrid foreign vehicles that do qualify. Just be fair and do the right thing and include the Model Y ... also identified as the most american-made car in the world. The optics of this are glaringly suspicious. Frank Hurst
Jacob Lana	1/3/2023 19:56	Hello - Please reconsider the method used for considering a vehicle an SUV in the IRA with respect to electric vehicle tax credits, or eliminating the difference in the price limit for SUV’s and other passenger cars. As it stand the regulation incentivizes the production of less less efficient vehicles. Reducing energy costs is de facto deflationary. Thank you.

Name	DateTimeReceived	Body.TextBody
Shawn	1/3/2023 19:56	Dear to whom it may concern, I am writing to you to strongly consider Model Y classified as SUV to qualify for $7500 credit capped at $80K. Model Y is a clearly fully electrified SUVs and Tesla is the most American made car manufacturer. Having minimum weight and height as criteria to be evaluated as an EV SUV does not help consumers as these would make the EV SUVs inefficient which increases energy usages which does not reduce inflation. Thank you for your consideration in reading this email. Best, Shawn
patelmanhar870@gmail.com	1/3/2023 19:56	Hello why is Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit? Regards Manhar
Jennifer Witt	1/3/2023 19:56	The Model Y 5-seater should be included in the EV tax credit. It's completely asinine that it's not. Sent from my iPhone
Arun Baliga	1/3/2023 19:56	To the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, -Arun
Matt Weisz	1/3/2023 19:56	Hello All versions of the Tesla Model Y and 3 should be included in the EV tax credit. I'm not sure why they're not both in it now. Also, hybrid vehicles with tiny batteries should NOT be included. Thirdly, foreign made vehicles that are leased should NOT get a tax credit. All of the above go AGAINST the spirit of the EV Tax credit. Thank you! Matt Weisz Iowa
Doug Rosenfeld	1/3/2023 19:56	The tax credit should be a level playing field and allow all EVs to qualify for the 7500. It makes no sense to omit some based on being too light, like that Tesla Model Y with 5 seats or the Hyundai Ioniq 5 since it's made in South Korea. This will choke the EV adoption in the US and will also also the few that qualify for the credit, to gouge consumers. Today, Chevrolet already raised the price of the Bolt $900, without adding equipment or citing any reason. On 12/31, the same model year car had a lower MSRP. Now that demand is skyrocketing, they raised the price. We will continue to see this happen, just like Ford, raising the price of the Mache E and F150 Lightning by 10s of thousands. We should also eliminate the income limit, as if the goal is truly ev adoption, what does income have to do with it? If someone makes more than the income limit, it does not mean they can afford an EV. I thought the point of adopting EVs was to help reduce emissions? So why is that tied to income? If anything, people that earn more have more choices, meaning they would be even less inclined to buy an EV, since they know they're paying $7500 more than someone that makes less than them. thanks,
Daniel Nash	1/3/2023 19:56	Tesla Model Y 5 seater should be included and silly that it's not from the beginning. Fix the EV credit system. Fully electric vehicles shouldn't be excluded while vehicles that are far more ICE vehicles then EV get the tax credit. It's borderline fraud.

Name	DateTimeReceived	Body.TextBody
Teresa Schaefer	1/3/2023 19:56	To Whom It May Concern; I am writing in regards to the EV consumer tax credit qualifications. The inflation reduction tax is not being applied uniformly for full EV cars that exceed requirements, specifically Tesla Model Y. I don't understand how plug in cars are getting the incentives while full model EV's (Tesla Model Y) are not. What is your criteria? Please review your requirements on EV car qualifications. Consumers need the incentive assistance! Sincerely, Teresa Schaefer Sent from my iPhone
Christian Trieu	1/3/2023 19:56	as an SUV.
Jon Harahan	1/3/2023 19:57	seven seats feels like silly nonsense on which qualifies. Call is an suv or a crossover or whatever. It ain't a civic. It should qualify for the $80,000 cap for the credit. The world is on fire. It's 67F (where we live) right now. It's January and the sun has been down for a few hours. Let's get more electric vehicles on the road. The Model Y is no sedan. Best, Jonathan Harahan Sent from my iPhone
John Thorp	1/3/2023 19:57	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. And it is shocking to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I hope the IRS will reconsider these rules and reevaluate the eligibility for credits.
Emi Fish	1/3/2023 19:57	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Thanks Emmanuel Fischman
Jack Ying	1/3/2023 19:57	This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law.

Name	DateTimeReceived	Body.TextBody
John Alford	1/3/2023 19:57	Dear IRS Representatives, Thank you for including a comment period in your recent release of information pertaining to tax rebates for electric vehicles as part of the Inflation Reduction Act. I don't agree with the Tesla Model Y being considered an SUV only if it has seven seats. It's a ridiculous notion that adding two additional seats to a vehicle makes it an SUV. Furthermore, it is not logical that a plug in hybrid Jeep Cherokee 4xe qualifies for the full rebate, but the larger, more efficient, pure EV Tesla Model Y does not. This is a fine example of government regulation not making sense and distorting the marketplace with nonsensical rules. Sincerely, John Alford
Davis Cooper	1/3/2023 19:57	To whom it may concern: As a tax paying citizen, I would like my tax dollars to be spent on electric vehicle incentives that reward innovation and the acceleration of renewable energy and efficiency. We are a country that is founded on capitalism, not corruption. The companies that push our country to be better and inspire an entire generation should be rewarded, not handicapped. The EPA classifies the 5 seater Tesla Model Y as an SUV. Please revise the incentive structure to make the 5 seater Tesla Model Y eligible for the $7500 credit to the $80,000 purchase limit. Thank you Regards, Davis Cooper, MBA Tulsa, OK dcooper6789@gmail.com
Ken Doughman	1/3/2023 19:57	Dear Sir/Madam, Please categorize the Tesla Model Y as an SUV and allow the full $7,500 income tax refund. This vehicle should certainly qualify as it is the most American made car currently in production and is a great incentive to help push this country towards sustainable energy and transportation. Thank you for your attention to this matter. -- ---------- Ken Doughman ken.doughman@gmail.com<mailto:ken.doughman@gmail.com>
Frank Todd	1/3/2023 19:57	Hello, Why is the Tesla Model Y 5 seater not included on the $7500 discount list. Seems a little crooked to me. Is there a decent answer? Thank you, Frank Todd Orlando, Fl
Arthur Lee	1/3/2023 19:57	I wanted to comment on the exclusion of the Tesla Model Y from the IRA tax credit. This vehicle is being penalized for being lighter than the cutoff weight. The lower weight allows it more efficiency and that is what the las is trying to encourage…energy efficiency..meanwhile, much less efficient vehicles like the hybrids are getting full consideration. I hope my comments and others are taken into consideration. Thank you Arthur Lee
David Dominiak	1/3/2023 19:57	To whom it may concern, Please reconsider Tesla, specifically the Model Y, as a qualifier for the EV tax credit of $7,500. I believe it is critical to show fairness, as it relates to tax credits, to ensure competition continues to lead innovation & success in this growing market - as the U.S has always done, and a key reason why we are the economic leaders of the world as we’re known today. Tesla should not be punished for having efficient weight/construction or being 100% electric, unlike various counter-parts (such as Audi, a non-US producer) with only partial EV range, made outside the US. Why would you want to incentivize the American public to buy a car made outside the US from a non-US manufacturer? None of these companies would even have the capabilities to construct EVs as they do today, if not for Tesla releasing the blueprint. I, as well as many other Americans I am sure, ask you reconsider this qualification, to allow EV buyers to benefit from the same $7,500 EV tax-credit when buying a Tesla, Chevy, Ford, GM, Audi, etc. Thank you for your consideration. Best, DD

Yugandhar	1/3/2023 19:57	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Please consider Tesla Model Y five seater for full 7500 tax credit as it's a SUV and 100% EV. The car on the left has a gas engine and gets 20 MPG. It has 21 miles of electric range. It gets a $7,500 EV Tax Credit. The car on the right is ELECTRIC ONLY and gets 113 MPEe. It has 330 miles of range. IT DOES NOT GET A $7,500 EV TAX CREDIT. <https://twitter.com/farzyness/status/1609651117356351488/photo/1?ref_src=twsrc%5Etfw%7Ctwcamp%5Etweetembed%7Ctwterm%5E1610311411137384449%7Ctwgr%5E2679d89b9bb56eac70afff692b800e1bedee11a3%7Ctwcon%5Es2_&ref_url=https%3A%2F%2Fwww.teslarati.com%2Firs-invites-consumers-to-comment-on-ev-tax-credit-qualifications%2F> [Image] <https://twitter.com/farzyness/status/1609651117356351488/photo/1?ref_src=twsrc%5Etfw%7Ctwcamp%5Etweetembed%7Ctwterm%5E1610311411137384449%7Ctwgr%5E2679d89b9bb56eac70afff692b800e1bedee11a3%7Ctwcon%5Es2_&ref_url=https%3A%2F%2Fwww.teslarati.com%2Firs-invites-consumers-to-comment-on-ev-tax-credit-qualifications%2F> [Image] The Tesla Model Y 5 seat configuration will be the best selling EV in America in 2023 - by far. It is the most American-made car you can buy. The US says it's NOT eligible for the $7,500 EV Tax Credit. Thanks, Yugandhar
James Thomas	1/3/2023 19:57	To Whom it May Concern, I have been anticipating on purchasing an EV for some time now and saving up funds to do so. However, after seeing the IRS report on EV tax credits, I am reconsidering my purchase. It is very strange a 5-seat Wrangler which gets 21 electric miles gets a $7,500 tax rebate while the Tesla Model Y does not. I will likely not be purchasing an EV at all due to this strange precision. Respectfully, James Thomas
Asif	1/3/2023 19:58	Hi IRS I don't usually write to IRS since there is common understanding that writing will not lead to anything. But I am still writing hoping our voice changes your mind. I haven't read the complete bill of Inflation reduction act but reading a gist on news media, my impression was all Tesla will qualify for this. Discarding it based on weight is completely wrong. Where EPA classifies it as SUV. The purpose of the act is to promote EVs but the best EV that an American company makes is getting penalized. I hope IRS comes to senses and do the right thing. Regards
Kai Zhang	1/3/2023 19:58	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery(21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules.The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease.It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
Jonah Liu	1/3/2023 19:58	You need to fix the current tax credit for EV. It's ridiculous that the real EV like Tesla Model Y 5 seat variant is NOT categorized as SUV but in fact it IS a pure EV SUV, whereas some hybrid cars with gas engines get tax credit. Your negligence is hurting our leading position in EV global market and hurting the US consumers. Tesla Model Y 5-seat variant should be considered SUV and should get the $7500 tax credit. You should protect the integrity of industry and protect US consumer rights. Best regards

Name	DateTimeReceived	Body.TextBody
scott	1/3/2023 19:58	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Scott
Daniella Souza	1/3/2023 19:58	I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, Daniella Souza
eric kollauf	1/3/2023 19:58	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This is not aligned with values of an America that I want to support. Correct me if I'm wrong, but my understanding is the spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not seem to support American-made EVs and does not help incentivize consumers to purchase domestic products. Please provide me more details on this decision. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. I believe It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future for our Legecy and support the growth of a healthy American economy. Sincerely, Eric Kollauf
Scott Kelley	1/3/2023 19:58	Please do not bow down to politics, do the right thing. Fix the EV tax credit and make it something we can all be proud of. Giving legacy gasoline car makers free money only delays the inevitable, and it's a waste of taxpayer dollars. Let capitalism run its course. To accelerate the transition to sustainable energy, only pure electric cars should receive the credit. The high-efficiency Tesla model Y, 5 seat automobile should be on the list for the credit. Thanks for your consideration, Scott Kelley Sent from my iPhone

Sincerely,
Joshua kessler	1/3/2023 19:58	The EV tax credit guidelines are inconsistent to say the least. All long range EVs should get the credit that cost under 80k. Why are hybrid SUVs getting the tax credit that have basically no battery, while that Tesla model Y does not? Why are LFP batteries excluded? They do much more to prevent climate change than a hybrid with tiny battery range. Please simply the tax credit to apply to all EVs under 80k.
christian quezada	1/3/2023 19:58	I would like to see a fair tax break for fully electric vehicles like The Model Y is not fair other brands like jeep with lower renewable energy consumption are getting the tax break, is so obvious let be fair with Tesla! Sent from my iPhone
Michael Fruth	1/3/2023 19:58	OMB Control No. 1545-2137 Dear IRS, Tesla Model Y with 5 seats should qualify for the higher $80,000 price cap under IRA, instead of the lower $55,000 price cap. Michael Fruth
Navin Nagrani	1/3/2023 19:58	Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Navin
Shamik Shukla	1/3/2023 19:58	Hi IRS, I see that the Tesla Model Y 5 seater doesn't qualify for the credit. This makes no sense based on what other vehicles get the credit. Please open up the credit for this vehicle as these are true EV's which are efficient and actually helping the environment versus some of these lower range hybrids. It is the fair thing to do with our tax payer dollars. Regards, Shamik Shukla M+1 908 227 2433<tel:908%20227%202433>
Bhargav Tangirala	1/3/2023 19:58	This is Bhargav Tangirala from Lynnwood WA. I'm writing to give feedback on IRS implementation of EV tax credits in IRA bill. I was looking forward to buying an EV SUV after Jan 1, but because of archaic rules, all the SUVs I was looking for all not classified as SUVs for some reason and they end up not getting rebate and being pricier, which is the exact opposite of the point of this bill. The cars include Tesla Model Y and Mustang mach e. Please update the definition of SUV to include all of the SUVs. Sincerely Bhargav Tangirala.

Name	DateTimeReceived	Body.TextBody
Steven Shaw	1/3/2023 19:58	Hello, I am submitting comment on the EV tax credit. I would like to propose the stipulations recently released by the IRS for what qualifies as an SUV and therefore the higher $80k purchase price cap should be revised. As an example, some trim versions of the Ford Mach-e and Tesla Model Y are classified as a sedan under the recently released IRS guidelines. This consequently sets their price cap at $55k (which disqualifies them as they both sell for higher than this cap) It has been shown that if the 5 seat (two row) Model Y increases its gross weight by about 200lbs it would then be classified under IRS guidelines as an SUV. The current stipulations will incentive manufactures to make arbitrary changes such as increasing weight, or ride height, or approach angles etc. leading to purposefully decreasing the efficiency of these vehicles. It is my opinion the IRS such just use the EPA classifications for which models and trims are SUVs or not. As it currently stands, many light hybrids with tiny battery packs and inefficient gas engines will receive the EV tax credit and pure BEVs, such as the Tesla Model Y - which is the best selling EV in in the most parts of world and shown to be the most American made model on sale in America of any vehicle, would not receive the EV tax credit. This seems to be directly opposed to the intended purpose of this tax credit, which is to incentivize the adoption of new technology EVs, and incentivize the domestic production of EVs and materials. Once again, please either adjust the current stipulations to include these popular SUV currently mis-classified, or just simply use the pre-existing EPA classifications.
Patrick Tognozzi	1/3/2023 19:58	The fact that some ICE vehicles qualify for federal funding, example Jeep Grand Cherokee 4xe, but the best selling BEVs (model y and Mach E) don't is an embarrassment to the goal of the incentive program itself. It makes no sense and puts the most American made vehicles at a disadvantage. Patrick Tognozzi
Andrew Guastella	1/3/2023 19:58	Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, I would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. Carlos Del Rosario	1/3/2023 19:58	Dear IRS, I am writing to express my concern about the credit for new clean vehicles purchased in 2023 or after. I believe it is unfair that hybrid vehicles are eligible for the full credit, while full electric vehicles are not eligible because they are lighter and not considered a SUV. As you may know, full electric vehicles have significantly lower emissions than hybrid vehicles and are a more environmentally-friendly choice. However, the current credit structure does not adequately recognize or incentivize the purchase of these vehicles. This is a missed opportunity to encourage the adoption of zero-emission transportation and reduce our overall carbon footprint. I urge you to reconsider the eligibility requirements for the clean vehicle credit and give full electric vehicles the same consideration as hybrid vehicles. This will help to level the playing field and encourage the transition to more sustainable forms of transportation. Thank you for your attention to this matter. Sincerely, C.D Best, Carlos Del Rosario Software Engineer, SportsRecruits p: 347-447-4506 w: https://sportsrecruits.com/ [Github]<https://github.com/carlosdelros>[LinkedIn]<https://www.linkedin.com/in/carlosdelros>

Scott B	1/3/2023 19:58	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Scaught
John Pellicci	1/3/2023 19:58	Tesla Model Y 5 seater should be included in IRA rebate. John Pellicci
James Rericha	1/3/2023 19:58	Tesla model y and model 3 should be included. Hybrids should be excluded entirely Sent from my iPhone
Jeff Knipe	1/3/2023 19:59	Please see below, which is an excusable to not have the Tesla model Y for the EV credit of $7500. This shows an obvious bias against Tesla by the government. [cid:3a227151-758e-4501-8344-6da5f5bcd8f3@namprd09.prod.outlook.com] Jeffrey D. Knipe 407-257-3438
Jordan Parr	1/3/2023 19:59	purely semantics to have a mid size car that is under the suv weight and over the sedan price ruled out of a tax credit. This is the bureaucracy that ruins our faith in government. Thanks, Jordan Parr
Paul Berick	1/3/2023 19:59	Hello, Please properly categorize the Tesla Model Y -the most American-made vehicle eligible- as an SUV and allow the full $7,500 income tax credit. This is such boldface corruption and cronyism, the whole of America can see that you are bought and paid for by interest groups, the win for your pockets and a loss for America and liberty. Please correct and apologize, it would go far for what's left of your reputation. -Paul Berick, Tax Paying American from Ohio
Sveinn Thorarinsson	1/3/2023 19:59	I am writing to express dismay with the following * The IRS does not categorize the Tesla Model Y as an SUV, even though the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit Please reconsider this classification. As it stands this misses the great opportunity of transitioning more quickly away from fossil fuel vehicles toward sustainability. This would tragically increase the odds of a total climate disaster. We have an opportunity to act now for the future of our ancestors. Every act matters. I believe you have the power and courage necessary to do the right thing. We put a man on the moon. We can lead the world in saving our planet. Thank you for your consideration. Respectfully, Sveinn Thorarinsson

Randy Faidley	1/3/2023 19:59	I support that all fully electric vehicles to be qualified for the Electric vehicle (EV) tax credit. For Example, the Tesla Model Y and the Ford Mustang Mach-E are two completely electric vehicles that have been excluded. This is an error and needs correction. Furthermore No hybrid or Petrol fueled, fully or partially fueled vehicle should receive an EV tax credit. Respectfully, Randall Faidley Sent from my iPhone
Andrew Todd	1/3/2023 19:59	To whom it may concern: The way in which the IRS has arbitrarily determined which vehicles are SUVs and which are Sedans/Cars has a massive negative impact on the consumer. Take for example the Tesla Model Y. Consumers consider this vehicle whether a 5 seat or a 7 seater to be an SUV. It is marketed and utilized as such. To not allow for this vehicle and many others to not be classified as an SUV only owing to the weight of the vehicle is detrimental to the consumer, environment and spirit of this tax incentive. Thanks for considering my comments. Andrew Todd
Wayne Collier	1/3/2023 19:59	To whom it may concern: I am concerned that five-seat variants of the Tesla Model Y have been deemed to not qualify for the $7,500 EV purchase tax credit. The Model Y has a larger cargo capacity and longer range than most or all of the vehicles that will receive this credit. And many other qualifying vehicles have just five seats as well. The Tesla Model Y should qualify as an SUV, and receive the same credit as other qualifying vehicles. Best regards, Wayne Collier
Armughan Javaid	1/3/2023 19:59	Dear sir / madam, I Am writing with respect to the EV credit for SUVs under President Biden's Inflation Reduction Act (IRA). I was dismayed to find out that several gas guzzling hybrid SUVs with small batteries and 25 mile electric range qualify as SUV limit of $80,000 whereas the Tesla Model Y 5 seater does not just because it is a couple hundred pounds lighter. Please rectify this. Tesla is the US innovator of EVs and a global leader. Thank you Armughan Javaid Clifton, VA
HÄNS swipe	1/3/2023 19:59	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Erik Schelbert	1/3/2023 19:59	To the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, I would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. I urge you to rectify the situation. Your consideration of this matter is highly valued. Yours sincerely, Erik Schelbert, MD, MS
Joe B	1/3/2023 19:59	Dear Andres, I'm writing to you to request that the IRS revise the EV tax credit qualifications so that the Tesla model y seven seat variant qualifies. Also a jeep with only 20 miles of battery should not qualify. Thank you for your attention to this matter. Best regards, Joseph Burwinkel
Steve Pantalone	1/3/2023 19:59	Hybrid electric vehicles should not qualify for the credit. This has been an affordable proven technology since the Prius in 1998. These incentives are to bring the cost of new BEV technologies down. There should not be a weight minimum for a vehicle to qualify. This penalizes the vehicle for being efficient, which I thought was the whole idea behind the incentives... Making carbon free efficiency adorable. Caps to avoid the credit being used on luxury vehicles makes sense, but the caps should be adjusted to a higher level. Right now they are effectively penalizing longer range BEVs which will be necessary to successfully complete the transition. Please remove most of the exclusions, make simple rules and use only those. (150 mile battery range, 4 seat minimum, 70k cap for cars, 90k cap for trucks/SUVs) As it currently stands, it's obvious that choices were carefully make to include and exclude certain makes and models. Governments aren't supposed to pick winners. I have no expectations of being heard or having any impact, but maybe you'll surprise me. If you need data, physics explanations, or any further clarification email or call. Steve Pantalone
Blago Taskov	1/3/2023 19:59	Please reconsider your definition of SUV. Currently it seems to me like it is not very well thought and borderline random. Best, Blago
Christian Reynolds	1/3/2023 19:59	I don't like the fact an ev tax credit is given to hybrids they still have the very thing it's supposed to offset. I don't like that it was passed last year and Only goes into effect for 2023 models. The weight limit for suvs is silly and stifles competition of what's it's supposed to offset. Sent via the Samsung Galaxy S21 Ultra 5G, an AT&T 5G smartphone Get Outlook for Android<https://aka.ms/AAb9ysg>
Tyler Leedom	1/3/2023 20:00	117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit when other extremely less efficient and heavier vehicles are. This is not the way to promote reduction of oil usage nor promotion of sustainable transportation. Please fix this and allow all model Y's to qualify for the 7,500 tax credit. Thank you Tyler Sent from my iPhone
Bradley Fishel	1/3/2023 20:00	Tesla model y should totally qualify for all ev tex credits… obviously! Sent from my iPhone
Jain Lee	1/3/2023 20:00	Hi This is Jain Lee and I am a potential Tesla Y customer. I just want to tell you that Tesla Model Y needs to be included in the Tax credit. Lots people think that It doesnt make sense that your current standard which is excluding Model Y. It is unfair. Please reconsider it so people can get the fair benefit. Thanks Jain

Name	DateTimeReceived	Body.TextBody
peter tran	1/3/2023 20:00	To whom it may concern, As a taxpayer and as a environmental concern person, I find it is very discouraging and it is a major mistake to exclude the Tesla Model Y 5-searters from the tax rebate where there are quite a few much less gas efficient hybrid qualifies for the $7500 tax rebate. Please revise the rules and include the Tesla Model Y 5 seaters. Also, we should be incentivised based on gas mileage instead of the current vehicle types. It doesn't make sense to give rebate to a less-than-30 mpg vehicles, regardless whether it is an ICE or a hybrid vehicle. Thank you Peter
Vic Banta	1/3/2023 20:00	Reference: 2023 EV tax credit The $55,000 threshold MSRP set by the IRS need to be raised to include the Tesla Model Y all-wheel drive and long-range and performance five-seat vehicles. This change is likely to result in reducing the number purchases of vehicles in the same price range that have a larger carbon foot prints. Victor Banta Banta Expedited Trucking (515) 992-0094 http://www.bantatrucking.com
Leon Yu	1/3/2023 20:00	To the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. Jeffrey Vega	1/3/2023 20:00	Government officials reading this, Thank you for the opportunity to have a voice in this matter. I'm sure folks are giving you a hard time. So thanks for enduring the stress. Please kindly register my comment below - phase out any vehicle with an on board internal combustion engine. - change policy to include all Tesla model y variants as fully qualified for the suv classification as soon an possible. The weight metric is counter to the goal of efficient suv ev models. Thank you! Jeff vega
Austin Brown	1/3/2023 20:00	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as an SUV, and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
Jack ying	1/3/2023 20:00	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. Arthur Lee	1/3/2023 20:00	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. The goal of this credit is to promote clean energy and efficiency. Your consideration of this matter is highly valued. Yours sincerely, Arthur Lee
Nitesh Mehta	1/3/2023 20:00	I'm a taxpayer who was sadden to hear that the model Y Tesla 5 seater is not included in IRA benefit as an SUV. When I saw the list of other cars eligible for the discount I thought to myself - this isn't the future we want for our children! Please reconsider adding model Y to the SUV cap so we can say we left this land better than how we entered.
Dipesh Maini	1/3/2023 20:00	Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. Here are the primary qualifications for the EV tax credit: However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Here's an example of the broken nature of this incentive in its current form: Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto
qi wang	1/3/2023 20:00	does. It obviously does not follow Inflation Reduction Act. Please give tax credit based on pure ev miles range. Min($7500, $7500 x pure ev miles range / 300) where 300 is expected regular car miles range. Refer to OMB Control No. 1545-2137 Qi Wang Sent from my iPhone
scott Fryling	1/3/2023 20:00	The Model Y , 5 seater should be included and is silly that it isn't from the beginning! Sincerely, Scott Fryling

Walcher, Kyler	1/3/2023 20:01	I am writing to express my concern about the classification of the Tesla Model Y(5 seat) under the Inflation Reduction Act. Specifically, I believe that the Model Y should be classified as an SUV, rather than as a passenger vehicle. I understand that the purpose of the Act is to provide tax incentives for the adoption of fuel-efficient vehicles, and I fully support this goal. However, I believe that the focus on hybrid vehicles as a means of achieving this goal is misguided. Hybrid vehicles may be more fuel efficient than traditional gasoline-powered vehicles, but they still rely on fossil fuels and do not offer the same level of environmental benefits as fully electric vehicles. In contrast, the Tesla Model Y is a fully electric vehicle that has the potential to significantly reduce our reliance on fossil fuels and help create a cleaner, more sustainable America. I believe that it is in the best interests of both the environment and the nation to prioritize the adoption of electric vehicles like the Model Y over hybrid vehicles. I urge the IRS to reconsider the classification of the Tesla Model Y under the Inflation Reduction Act and to give greater priority to electric vehicles in its incentives and tax credits. Thank you for considering my concerns. Sincerely, Kyler Walcher
Prakash Dugar	1/3/2023 20:01	I have been waiting for this rebate to buy 2 Electric vehicles (Model Y or Ford Mach E) for my daughter and wife, instead of another PHEV. I already have Honda clarity PHEV, which is essentially ICE vehicle due to short EV range of 45 miles only. Please change criteria so make it reasonable to safe cars like Tesla (https://t.co/uTL3m4WOUn) hope this accident article will help you make decision to include Tesla. Thanks a lot!! -Prakash Dugar Cypress ca (cell 7148750961) My email is camprakashdugar@gmail.com
Ashwin K Kumar	1/3/2023 20:01	Hi IRS, Please include Tesla Model Y 5 seater as a SUV. I'm deeply saddened to see that hybrids are getting all the incentives and true electric vehicles aren't! Model Y is a true American car that is being applauded by everyone across the planet. This is a true milestone that has been impossible for other American auto companies to achieve. Please make this wonderful car more affordable to millions of Americans Thanks, Ashwin
BEACH BUNNY	1/3/2023 20:01	Dear IRS, The 2023 EV tax credit of $7500 should apply to all models of the Tesla model y; 5 and 7 seats. To apply this to gas hybrid vehicles and not a pure EV made in america is outright corruption and completely negates the point of this tax credit. Please update the EV tax credit to include the model y 5 seat Tesla vehicle that is an american made fully electric suv. Sincerely Nikki Marciano

2nd Oldest	1/3/2023 20:01	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, the 2nd oldest hominid
Adrian Avolio	1/3/2023 20:01	To whom it may concern, I am writing to express my support for the inclusion of the Tesla Model Y in the eligible incentive list for electric vehicles. First and foremost, the Model Y is a highly efficient and environmentally friendly vehicle. It has a range of up to 326 miles on a single charge, making it a practical choice for long distance travel. In addition, the Model Y has a 5-star safety rating, making it a safe choice for families and individuals alike. Furthermore, the Model Y is a popular and in-demand vehicle made in the USA. Its inclusion on the eligible incentive list would encourage more individuals to make the switch to electric vehicles, which would not only reduce emissions, but also help to reduce our dependence on fossil fuels. In summary, the Tesla Model Y is a safe, efficient, and popular vehicle that would make a valuable addition to the eligible incentive list for electric vehicles. I strongly urge the IRS to consider including it on the list. Sincerely, Adrian Avolio
Jatinder Singh	1/3/2023 20:01	Hi, It seems strange to me as an electric vehicle enthusiast and owner that some versions of the Ford Mustang Mach-E and Tesla Model Y are not considered SUVs for the purpose of qualifying for the IRA tax credit. From my personal experience with the Model Y, as well as talking with friends who own them, and having sat in a Mach-E, I believe that the 5-seat version of the Model Y is not significantly different from other SUVs, and both the Model Y 5-seater and the Mach-E should be reclassified as SUVs. These electric vehicles are more energy efficient than many gas and hybrid SUVs and I believe they should be recognized as such Regards Jatinder
dan	1/3/2023 20:01	To whom it may concern, As a long time, climate activist, follower of science and concerned citizen I was shocked to see that the Tesla Model Y, the most advanced electric car at its price point (and 100% made in the USA), was denied the new subsidy whereas some foreign made gasoline burning cars qualified. Either the rule or the interpretation need to change. This is silly. Regards, Dan Walmsley Grass Valley, California
Troy Lawrence, D.C.	1/3/2023 20:02	Please include Tesla model Y five seat version into the $7,500 tax credit for SUV. It is considered an SUV by EPA and NITSHA and Tesla. It has never been coded as a sedan. I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Allowing the jeep with an engine that gets 20mpg and 21 miles of battery range is ridiculous. Sincerely, Dr. Troy Lawrence Sent from Yahoo Mail on Android<https://go.onelink.me/107872968?pid=InProduct&c=Global_Internal_YGrowth_AndroidEmailSig__AndroidUsers&af_wl=ym&af_sub1=Internal&af_sub2=Global_YGrowth&af_sub3=EmailSignature>

Rahul G	1/3/2023 20:02	Please review the petition started as the EV tax credit is limit to a few of pure EV automobiles. https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit?recruiter=1290758235&recruited_by_id=073c0570-8a0f-11ed-8a45-67f4de4114d4&utm_source=share_petition&utm_campaign=share_petition&utm_term=share_for_starters_page&utm_medium=copylink&utm_content=cl_sharecopy_35382588_en-US%3A8 Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Ideal fix: * Remove incentives for all hybrid vehicles and only have them apply to pure EVs. * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Next best fix:
Kyle Malfatti	1/3/2023 20:02	Hello, The goal is to get consumers to switch to electric vehicles. Please either: Remove the price caps for all electric vehicles and let consumers decide which electric vehicle is right for them. OR At least classify all vehicles of similar type and functionality for the same price cap. It's silly to think a 7 seat model Y is eligible for the 80k limit yet the 5 seat model Y is not. Is also silly to have other 5 seat hybrids that are eligible while a pure electric 5 seat model Y is not. Thank you, A concerned taxpayer

abrown@conserveengineering.com	1/3/2023 20:02	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as an SUV, and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Austin Brown [cid:image002.jpg@01D91F95.1528E4D0] Austin Brown, P.E.
Tyler Phillips	1/3/2023 20:02	well please. Tyler
Mallikh	1/3/2023 20:02	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. Your consideration of this matter is highly valued. Yours sincerely, Mallikh
Matthew Bruening	1/3/2023 20:02	The Tesla Model Y 5 seater should be included in the tax credit. It gets 113 MPEe and has 330 mi of range. Not including this is nonsensical. Be definition is it is fully electric and as such, should be included in the EV Tax Credit. Anything short of that is purely political positioning. Matt
James Porting	1/3/2023 20:02	The Tesla Model Y 5 seater should be included in and should've been from the beginning! James Porting
Joe Magoonaugh	1/3/2023 20:02	Writing in regards to the EV tax credit. How can one take seriously a bill that provides a tax credit for a Jeep Wrangler 4xe with a gas engine and plug in battery that gets 20 miles, but not providing a tax credit for a Tesla model Y that is full electric and gets like 300 miles off a charge? Why punish Tesla for making a better and lighter SUV? Why not determine an suv by size or seating capacity and not weight? The Jeep Wrangler is a great car. I've driven both the 4xe and the model Y. The model Y is far superior on every level for the environment. Tesla has done more to promote the advancement of electric cars than any other car company in the world. If not for them producing 1m cars in 2022 the rest of the auto industry would still be sitting on their hands producing gas guzzlers as they'd have no competition. If this bill is really about promoting EV sales you should consider including the top EV SUV on the market. Thanks, Joe Sent from my iPhone
Taylor Raeburn-Gibson	1/3/2023 20:02	Regarding the EV tax credit qualifications, please reconsider how the EVs are being selected. In some cases hybrid EVs with terrible efficiency are getting the credit where full EVs (such as Tesla model Y) are not receiving it. All Tesla models that meet the cost thresholds should qualify since they are pure EVs. Thank you for your consideration, Taylor

CHSDA Video Game Design	1/3/2023 20:02	Hi, I just wanted to leave the comments that I certainly believe that any Tesla Model Y, with five seats that would be eligible with seven seats, should be included on the list of vehicles for the tax benefit… I know it's a new program and hopefully this oversight will be fixed soon… There are some other vehicles that similarly should probably be on the list to provide clarity for consumers, but I know some people who are planning and budgeting for this, and with its cargo and other capacity it is definitely an SUV; certainly a crossover SUV at the very least… Again, the same car configurations with just two other seats qualify; this looks very concerning/inconsistent and suspicious that two seats make a difference (and if somebody got the two-seated option and lost cargo capacity, they would end up paying about $3000 more for the vehicle to get some of the benefit- while also using more resources for something they don't need and limiting the capacity of a can be carried via an electric vehicle)… I hope any eligible plug-in electric hybrids have at least some electric range where they would not have to use some gas… A vehicle that needs to use gas to get anywhere would be a bit concerning in terms of getting this benefit, especially compared to vehicles that are zero emissions… Thank you for your time and consideration in looking into this oversight, -Daniel M. "Even though we can't expect to defeat the absurdity of the world, you must make that attempt. That's morality, that's religion. That's art. That's life." -Phil Ochs -Daniel
Keith Janson	1/3/2023 20:02	Please include Tesla 5-seat Model Y. Thank you. Keith W. Janson
Heather Pyne	1/3/2023 20:02	Purchasing an electric vehicle, such as a Tesla Model Y, is one of the best decisions one could do for our environment as it uses no fossil fuels. Not receiving an EV credit due to ridiculous perimeters is actually mind boggling. It's also been voted one of the safest vehicles. This is one of the most well made vehicles of our time and has up to 330 miles of range. Why would I pay for something that only gets 20 miles of range and still needs gas?? This is literally stupid. If America is truly "going electric" they need to look at the impact the car has on the environment, the range & the overall safety & reward the buyer based on that. If a consumer is buying an electric vehicle, they should be rewarded, as this is incentive to do better for our environment for the next generations to come. Not receiving an EV credit for a car that speaks volumes to what our world needs, doesn't make any sense at all. I'm disappointed in the
amerz1966@gmail.com	1/3/2023 20:02	To the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicle for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. Telmo Pina	1/3/2023 20:02	I am writing to express my disappointment that the Tesla Model Y is not classified as a SUV and therefore cannot qualify for the tax credit provided by the reduction act. As a potential buyer of the Model Y, I was attracted to the vehicle in part because of the financial incentives provided by the reduction act for electric SUVs. However, upon further research, I learned that the Model Y is not considered a SUV by the IRS and is therefore not eligible for the credit. I understand that the classification of vehicles is based on specific criteria, but I strongly believe that the Model Y should be classified as a SUV. It has many of the same features and capabilities as traditional SUVs, and I believe it should be eligible for the same financial incentives. Its unfair certain gas engine vehicles are elegible and not model Y. I urge the IRS to reconsider the classification of the Model Y as a SUV and make it eligible for the tax credit provided by the reduction act. Thank you for your attention to this matter. Sincerely, Telmo Pina

Brett L.	1/3/2023 20:03	To whom it may concern, The IRS's implementation of the electric vehicle (EV) tax credit provisions will lead to unintended consequences and changes need to be made. As they currently stand, it will needlessly limit consumer choices and will increase the adoption of less efficient models directly contradicting the intent of the Inflation Reduction Act (IRA). 1. The IRS should adopt more liberal rules defining an SUV. Perhaps using rules outlined by the NHTSA and the EPA for instance. The Ford Mach E for example is considered an SUV by the NHTSA and the EPA but it is not by the IRS. Furthermore, the Tesla Model Y 5-seater is not considered an SUV but the 7-seater is. These are two of the most popular and compelling models in the market and the IRS has put them both at a major disadvantage relative to very similar models from Volkswagon and Audi. Adjusting weight, clearance, and seating capacity slightly or adopting other agencies' criteria would be recommended. 2. The IRS's approach is rewarding inefficient models far too much. For instance, in the case of the aforementioned Model Y. The only difference between the two models (5-seat and 7-seat) is the weight. Car companies will be compelled to build heavier and less efficient models in order to qualify as an SUV. The same goes for plug-in-electric hybrids as they are getting the same benefit as fully electric models. In fact, since their drivetrain is so much heavier they easily meet the weight requirements to meet the SUV threshold. Please adjust your SUV requirements so the Telsa Model Y 5-seat variant and the Ford Mach E qualify. Also, adjust requirements so fully electric and highly efficient models are not put at a disadvantage relative to heavier, less efficient gas-powered models. The ultimate goal of the IRA with respect to the EV provisions is the further establishment and buildout of an EV production ecosystem to protect the country's long-term national economic interests. The IRS's approaches are significantly undermining this strategy. Thank you for your consideration of my input.
Jay Molteni	1/3/2023 20:03	The definition of SUV is incredibly inconsistent. I'm lost as to why a Tesla Model Y with 5 seats is not an SUV, but 7 seats is. This also applies to other models and makes. Please start over and make the model designation (SUV) consistent. Sincerely, Frank H. Molteni
Melissa Aniston	1/3/2023 20:03	I don't believe any tax credit should be given for any product ever, but, since they are being given, all EVs regardless if they are hybrid or full electric should receive credits and the most efficient should receive the highest credit if reducing pollution is the goal of the program. As it stands the Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. It far exceeds all competitors and I would buy one if a credit was offered. I may buy one anyway as its range and size is fantastic but the credit would make it easier to afford. If the goal of the tax credits is to reduce pollution by moving to renewable energy then this makes sense. If that is not the agenda of the tax credits please let the American people know what the agenda is. -- Sent with https://mailfence.com Secure and private email
Michael Liebow	1/3/2023 20:03	To whom it may concern: This is an absolute disgrace. Please include the Tesla Model Y. [cid:7327e161-da95-4237-a99b-4a91a68ca7fd@namprd09.prod.outlook.com] And while you're at it, PHEVs are not good for the environment and should be removed. Only made in America EVs should receive the incentive. Regards, Michael ---------- Michael S. Liebow Weston CT
Joel Lisenby	1/3/2023 20:03	Hello, I wanted to comment on the requirements for the $7500 clean vehicle credit to qualify at the $85,000 SUV price point. For the Tesla Model Y, from what I understand the qualification is granted to the heavier 7 seat model, however due to the high tech materials and design of the Model Y, the 5 seat model weighs in just slightly under the 6000 weight limit to qualify as an SUV. I believe that weight should not be a factor in deciding if a vehicle is an SUV or not. Instead SUV status should be granted by internal square footage, and the Model Y should qualify in any form (5 seat or 7 seat) as an SUV as it is a very large interior space. Setting a minimum weight is actually counter-productive to a clean electric vehicle credit because it discourages reduction of weight and thus higher efficiency vehicles that use less energy, and therefore produce less emissions from charging. Thank you for considering my thoughts on the matter, -- Joel Lisenby Escondido, CA 92029

Daniel Vitiello	1/3/2023 20:03	Hello, As a taxpayer, and proponent of our shift to a sustainable future, I strongly disagree with some of the current criteria for vehicles to receive the IRA EV tax credit. The fully electric, American made, Tesla Model Y and Ford Mach E are excluded from receiving the credit. I've read it's due to being too light weight, which seems odd we would want to incentivize manufactures to make heavier, less efficient vehicles. Additionally it seems absurd that "hybrid" vehicles with a gas engine, that get 20mpg, and only 21 miles of electric range (like a Jeep Wrangler) are eligible for an EV tax credit. Please reconsider the criteria for which vehicles are included so we can incentivize purchases of vehicles that our future depends on. Thank you for your time, Daniel Vitiello
Mike Howe	1/3/2023 20:03	The Tesla model Y regular 5 seat version should be eligible for the full rebate. It that means getting it considered an SUV, fine. There is no reason for the unbalanced treatment of Tesla like this. 5 seat, 7 seat. All the same car. Mike Howe Director Integrated Services Youngblood Automation 616-862-8061<tel:616-862-8061> www.youngbloodautomation.com<http://www.youngbloodautomation.com/>
Pixelsmiths	1/3/2023 20:03	Regarding EV Tax credits 1) Only all electric cars should be eligible for the tax Credit 2) Only cars made in America should be eligible for the tax credits 3) The IRS is not qualified to determine the classification of vehicles and should not be making random or political changes to benefit unions or politicians. Example, a Tesla Mod Y 5 seat is not an SUV but a 7 seat is an SUV. Both cars are SUV's in every state. This error makes the IRS look out of touch, political or incompetent. Leave it to the automotive experts. Ken Stickney
Mike Ton	1/3/2023 20:03	be a mistake Please fix that for the benefit of the efforts of setting up the US for an energy independent future! Thank you for your time and consideration - Mike
chris fleck	1/3/2023 20:03	Please do what the IRA was intended to do to reduce fossil fuel use. Add the Tesla Model Y 5 seat. The most efficient all electric SUV and most American made. And drop the Hybrid cars that are gaming the system. Thank you Chris Fleck
Jakob Berg	1/3/2023 20:04	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater and all Models of the Ford Mustang Mach-E in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. Your consideration of this matter is highly valued. Yours sincerely, Jakob Berg

Name	DateTimeReceived	Body.TextBody
E D	1/3/2023 20:04	To Garcia: The Qualified Plug-in Electric Vehicle Credit has a few flaws that we all can see. The bias that is being demonstrated by the IRS/ Federal government against Tesla is confusing and frustrating. We , the American public, can see what the bureaucrats in the IRS are doing and are punishing Tesla for political purposes. Be very careful how you proceed if you continue down this path as the next set of elected officials might start reviewing internal UNELECTED officials and how they may or may not benefit from their actions take in a federal position. The way this looks , it looks to favor companies that build using a certain type of labor vs just American made. This new IRS rule makes the 7 seater the only Model Y eligible for the tax credit while there are other "SUVs" that do not meet that criteria. Your rules vary based upon manufacturer vs the size and cost of a vehicle. The later would be the FAIR approach but this was not the approach that was taken. Tesla has multiple cars that meet the spirit of the intended regulation but it seems that politics has again been inserted where it should not have been, Eric Detwiler
Parag K	1/3/2023 20:04	To: Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224 Respected IRS Department, I am writing as an appeal to you to allow Tesla Model Y for full EV tax credit. My reasoning for this appeal is simple viz. Tesla Model Y is going have the biggest positive impact that the Tax Credit originally intends to achieve. Tesla Model Y has and will continue to have largest market share which makes the positive impact bigger. I am already owner of Tesla Model Y and not going to benefit by any tax credit but I still appeal to you for the good cause. Sincerely, Parag Kutarekar Newark, Delaware 19702
Michael	1/3/2023 20:04	Dear IRS, As a citizen of the United States of America and as a proud EV early adopter I strongly recommend the IRS rethinks their EV tax credit strategy. It is not possible that the most made in America EV, the Tesla model y which is by all accounts one of the most efficient EVs produced (looking at mpgE) gets no tax credit whereas the jeep Wrangler 4xe, a hybrid with only 21 miles of electric range and 20mpg on it's combustion engine gets $7500. The decision only being due to the fact that the model y does not classify as a SUV due to its light weight. I strongly recommend you determine eligibility based on the government's goals and clear incentives for manufactures. These incentives should try to improve electric efficiency (mpgE), range, among other useful metrics. If hybrid is allowed a credit, which I'm fine with one ought to also ensure the mpg of the combustion engine is striving toward less CO2 emissions (I'm sorry but the jeep Wrangler's 4xe 20mpg does not fit that definition by any mean). A Prius with > 40mpg + short electric only range makes more sense. We should be rewarding automakers that truly innovate in the EV space and help us in the transition away from ICE like Tesla. Rewarding these gas guzzling combustion cars with a small battery just for the sake of getting the credit is not helping us in any way transition to EVs. Thank you, Michael Bazzoli
Steven Miller	1/3/2023 20:04	Thank you for requesting public feedback. I am disappointed that we are subsidizing plug in hybrid vehicles. It does not properly incentivize car companies to invest in zero emission vehicles. Even some cars with poor efficiency are being qualified. Giving this incentive the same for hybrids (even inefficient ones) and EVs may have reverse intention by removing some buyers from EVs in favor of hybrids. Also, in my opinion the Ford Mach E and Tesla model Y are SUVs. Steven Miller -- Sent from mobile device
Steven Abramson	1/3/2023 20:04	Dear IRS, As a follow-up to my previous message, just to be clear, the Tesla Model Y (5 seat variants) and Ford Mustang Mach-E should qualify for tax credits for the $80,000 price cap even as SUV's as classified by the EPA. Thanks, Steve On Tuesday, January 3, 2023 at 04:55:47 PM PST, Steven Abramson <abramsos2004@yahoo.com> wrote: Dear IRS, I am writing in regards to the Inflation Reduction Act. It has come to my attention that pure EV's such as the Tesla Model Y (5 seat variants) and Ford Mustang Mach-E do not currently quality for tax credits for the $80,000 price cap even though they are classified as SUV's by the EPA. Meanwhile, vehicles like the Jeep Grand Cherokee with a gas engine and much lower miles per gallon and significantly less electric range are scheduled to receive the tax credit. This does not meet the intention of this bill, and should be corrected immediately. Please let me know if you have any questions. Sincerely, Steven Abramson

Brendon Lock	1/3/2023 20:04	Hello, I just want to voice my opinion to reconsider how certain Tesla and Ford (and possibly others) electric cars are classified under the new Inflation reduction act. The 5 seat Model Y and certain Mach E's should be under the $80k limit like other SUVs. Thanks Brendon
Justin Matos	1/3/2023 20:04	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. Your consideration of this matter is highly valued. Yours sincerely, Justin Matos
Bianca Van Damme	1/3/2023 20:05	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, the BB staff
Cac Mai	1/3/2023 20:05	To whom it might concern, I have reviewed a list of qualified cars for EV incentives and very concern that model y 5 seaters is not qualify. Teslas is the most American made cars and seeing it not quality is very disappointed. I would like you to further review and consider Model Y 5 seaters for the incentive. Thank you, Cac Mai
Rick Davis	1/3/2023 20:05	Hello, I am writing to express my concern that the Tesla Model Y and the Ford Mach E are not included in the $7,500 EV tax credit the IRA unlocked. In the name of customer protection the government should be offering a level playing field so consumers can buy the best products. By excluding 2 of the most high quality EVs from the incentives you are pushing people to buy worse products. Additionally, I think plug in hybrids should be limited or excluded under a certain MPG (I.e. 50 mpg+). For our country to become energy independent we need to take giant leaps forward and consumers buying plug in hybrids with low MPG will realize in just a few years they made the wrong choice. Thank you for considering a policy change. Sincerely, Rick Davis 32 Scenic Dr, Orinda, CA 94563 -- Rick Davis M: 415.623.6263

Stefano Milici	1/3/2023 20:05	Dear IRS, I am writing to request to extend the $7,500 Federal Tax Credit of the Inflation Reduction Act to all Pure Electric Vehicles like TESLA. As you may know, the goal of the Act is to allow the US to become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. I believe that it is absurd and fundamentally wrong that right now the credit would benefit some hybrid cars which are still mostly fueled by gasoline and have very inefficient MPGs and excluding Pure electric vehicles like the Tesla Model Y 5 seater. By doing this, tax payers would be funding old technology in large, inefficient gas vehicle auto makers instead of funding the next generation of the American economy. This is a gross miss use of taxpayer dollars. Offering Federal Tax Credits to all Pure Electric Vehicles would be an effective way to encourage the adoption of these vehicles, which will not only help the US to meet its clean energy goals, but also create jobs and stimulate economic growth. I hope that you will consider this request and work to implement these changes. Sincerely,
sneidig	1/3/2023 20:05	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. Your consideration of this matter is highly valued. Yours sincerely, Shawn Neidig
Paul Erwin	1/3/2023 20:05	to the 5 seat AWD Tesla Model Y classification as a sedan rather than an SUV. I have already purchased two Model Ys with these specs so not pointing out the oversight for my own benefit but rather as a person who is deeply interested that the SUV designation apply to the Model Y AWD to reflect the correct intent of Congress and The Executive Branch incentivizing climate change legislation. As a consumer of the Model Y, we purchase both vehicles to achieve the same functional capability of a compact SUV without adverse fossil fuel consumption. I would expect the 7,500 incentive apply for prospective purchasers of the Model Y so that a superior SUV with highest efficiency is purchased vs. the less efficient competitors of the same SUV designation … clearly the intent of the IRA. Thank you for your consideration, Paul Erwin 45 Cord Grass Ct. Fernandina Beach, FL, 32034 630-605-7764
Matt Rorech	1/3/2023 20:05	It is arbitrary and utterly absurd that the Tesla (American company) Model Y 5 seater does not qualify for tax credit. But somehow a Jeep gas engine that gets 20 MPG and has 21 miles of electric range gets the $7,500 EV Tax Credit? The Tesla model Y is ELECTRIC ONLY! It's gets 113 MPEe and has 330 miles of range. What are we doing! Are trying to fix environmental or not??? Please fix this now! Thank you, Matt Rorech
Bob Chiverton	1/3/2023 20:05	I believe the Tesla Model Y long range 5 seater should be classified as an SUV and get the $7500 tax credit. Robert Chiverton West Orange, NJ
Calvin Klesmith	1/3/2023 20:05	Hello, As an EV owner and advocate I question how a hybrid vehicle can get the full $7,500 EV Tax incentive when there are similar fully electric vehicles that are not qualifying. Vehicles that I believe should qualify for the EV Tax incentive: 5 seat Tesla Model Y, and Ford Mach-E which currently do not have SUV status. As a government agency please strive to be as unbiased as possible when selecting incentive availability. It's not right to be putting some American companies at a disadvantage with this selection. Regards, Calvin Klesmith

Ryan G	1/3/2023 20:05	Hello Andres Garcia or whom it may concern, I am writing here to voice my concern regarding how the IRS is deciding on which vehicles have 55k ceiling the EV tax credit vs 80k. There are many official documents which describe that the 80k limit is for SUV and Trucks. There are multiple SUV type vehicles that are showing 55k as the limit on the price to be eligible for the credit. Ford, Tesla are just two of the large examples. This really hurts adoption of EVs and the main reason for the creation of the bill. Hope you guys can re-evaluate this portion of the requirements and make updates to correct this mistake. -- Ryan Garoogian
Hasan Unlu	1/3/2023 20:05	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. Your consideration of this matter is highly valued. Yours sincerely,
Graham Cohen	1/3/2023 20:05	All, Please consider the model Y 5 seater SUV as an SUV under the $80k cap rule. We shouldn't be proactively (and unfairly) hurting companies who are leading the charge on electrification - particularly based on what other SUVs were considered for the $80k cap. Looks very unfair at the moment which I know is not the point. Kind regards, Graham
Srinath Kattula	1/3/2023 20:05	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. The Tesla Model Y is also one of the most American-made EV and would also benefit the American economy. Your consideration of this matter is highly valued. Yours sincerely, Srinath Kattula
Bren Dietrich	1/3/2023 20:06	Please change rule so that all Tesla Model Ys qualify for EV tax credit instead of the current plan for just the 7-seat version. 5-seat version should have an $80,000 cap (instead of $55,000).
Abe Zuckerman	1/3/2023 20:06	I am writing with regard to the IRS guidance on which EVs will be eligible for the new $7,500 tax credit. I was waiting for the new IRA law to come into effect to order a Tesla Model Y, as the tax credit was essential to that car being affordable to my family. I have just learned that only the 7 seat Model Y qualifies as an "SUV" but the 5 seat Model Y (which is the same vehicle, essentially, and was the cheaper model that I was planning on ordering) is not eligible. This is completely illogical and does not seem to comport with the (at least as I understand it) IRA. Please consider revising this guidance so that this tax credit makes the more affordable Model Y available to me and other consumers at a "discount" and also so that the IRS doesn't distort the vehicle market and cause Tesla to do something weird like only making the 7 seat option available in the U.S. Thanks. -Abe Zuckerman CA resident

Mountain Movers LLC	1/3/2023 20:06	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future.
Ron Dorazio	1/3/2023 20:06	Treat Tesla fairly! An accomplished American company to be proud of. Qualify all models of the Tesla model Y as SUVs. Do not qualify hybrids. Ronald Dorazio Hopkinton, MA
Jim Parker	1/3/2023 20:06	Leaving Tesla Model Y (5 seater) out of the SUV category is absurd, as well as arbitrary and capricious which is clearly illegal. The government cannot stand by and say that other brand cars (cars made by unions - or electric cars made in Mexico as examples) that are geometrically smaller and have the same number of seats as the Model Y (5 seater) are suvs but the 5 seat model y is not. Minimizing vehicle weight should be a goal of the administration as it improves efficiency which is what this law was intended to do. To say it doesn't qualify as the model Y is 200 lbs lighter than its competitors but is bigger, goes further and has the same seating capacity as other suvs is not logical. Also, the government should not treat the same vehicles differently depending on the agency - the EPA, which regulates cars, says the model Y (all seat configurations and weight configurations) are an SUV so why does the IRS think that it can justify classifying the same car a SUV when the bill language makes no separate weight classification? Two agencies under the same executive branch administration classifying the car differently on the same category is the sheer definition of arbitrary and capricious and needs to immediately be reversed. Also, the IRS determination to deem leased personal vehicles as commercial vehicles which are exempt from the domestic sourcing requirement is also crazy and shouldn't be permitted. Ownership structure does not change the nature of a car - just like how the agency making a determination (EPA vs IRS) does not change the nature of a car (it's still an SUV). The bill was intended to promote domestically made cars - don't cave to lobbyist of non domestic manufacturers so they can get US government hand outs. Leased personal cars are still personal cars - don't treat them as commercial vehicles as they clearly are not. -- Jim Parker
Dan Ecclestone	1/3/2023 20:06	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. Jason Jones	1/3/2023 20:06	To Whom It May Concern, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the #1 "American Made"vehicle, the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. The EPA clearly classifies the Tesla Model Y as a SUV. I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Jason Jones
Pavel Bendov	1/3/2023 20:06	Hello, Based on all specifications of the car, I believe that the Tesla Model Y, 5-seaters, should be included for a full EV tax credit. It is shocking to me that I can receive a full EV tax credit when I buy a Jeep which is 90% gas car and 0 EV Tax credit if I buy a fully electric Tesla Model Y. Please consider the consumer's opinion.
nir hoftman	1/3/2023 20:06	To whom it may concern: I am writing to protest the incredibly deleterious definitions that the IRA has used to define SUV for qualification for the federal tax credit for EVs. How can a Tesla model Y or a Mustang Mach E not qualify as an SUV, while a Jeep plug in hybrid with 20mpg and a 20 mile EV range does? If the federal government's goal is to develop sustainable transport, it needs to start by getting a clue! With disdain, Nir Hoftman MD

Name	DateTimeReceived	Body.TextBody
James Hancock	1/3/2023 20:06	To whom it may concern: Your regulations are random, capricious and clearly biased. It smacks of favoritism and cronyism. And you're generating a bizarre incentive for less efficiency by inducing people to buy 7 seat SUVs instead of 5 seaters. You should be reevaluating and ensuring that the most popular and capable EV made qualifies. Tesla Model 3 5 seater. James Hancock 603.289.7972
Lucas Gogert	1/3/2023 20:06	To Whom it may Concern, Firstly I think that the IRA Act is an overly positive move to help expedite our transition to clean energy and consequently a healthier planet. However 1 glaring shortcoming in this Act is the misclassification of the Tesla Model Y 5 seat variants, limiting the price cap to $55,000 vs the $80,000 cap they should fall under. I understand that it technically does not meet the current IRS requirements (barely) resulting in classified as an non-SUV however, considering that this is one of the best (if not the best) selling full electric vehicle in the world that also happens to be the most American made and best embodiment of what this Act was intended to promote I feel it would be an aggrevious mistake to allow this situation to stand. Please consider adjusting the IRS SUV parameter requirements to allow the Tesla Model Y 5 seat configurations to meet the minimum SUV requirements. This would be in the best interests of the American people and the planet as a whole. Sincerely, Lucas Gogert Sent from my iPhone
Edward Clark	1/3/2023 20:06	Tesla is being unfairly treated by this action. A Model Y is an SUV whether it has 5 seats or 7. How can you be giving $7500 tax credits for gas powered (hybrid) vehicles? How is this an incentive to buy an EV? Fix this. Sincerely, Edward Clark 1215 Tanglewood Dr Mount Vernon, IN 47620
Ian Spence	1/3/2023 20:07	Reevaluate your SUV classifications or explain why a pure EV with 330 miles of range doesn't get an EV credit but a hybrid jeep with 20 miles of range does.
Alex Kalemkeris	1/3/2023 20:07	the industry and popularize EV's. Tesla is the only EV company that has built the infrastructure needed to make EV work. No other company is advanced as Tesla nor wants to compete with Tesla unless they get favor from the government. And it's only proven by this implementation. [image.png] Thanks, Alex Sent from my iPhone Please excuse the brevity and any typos
Liyun Kaberlein	1/3/2023 20:07	Dear Sir or Madam, I am writing to express my strong opposition to how the Inflation Reduction Act or IRA rules classify vehicles specifically how the Tesla Model Y (5 seat version) is classified. It doesn't seem fair this vehicle is not eligible to receive a $7,500 credit while less environmentally friendly vehicles such as hybrids are. For the benefits of a better environment and for the benefits of consumers, please correct this bias and allow the Tesla model Y (5 seater) to be eligible for the $7,500 credit. Thank you. Sincerely A concerned citizen

Kevin Dooley	1/3/2023 20:07	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. The Tesla Model Y is also one of the most American-made EV and would also benefit the American economy. Your consideration of this matter is highly valued. Yours sincerely, Kevin Dooley
Bud Cribar	1/3/2023 20:07	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the law.
Jose Gonzalez	1/3/2023 20:07	To whom it may concern, Tesla and Ford Electric vehicles that are classified by the EPA as being SUV should be given the $7500 tax credit regardless of seat arrangement and price. The whole point of this incentive is to help people transition away from fossil fuels. Giving hybrids the same tax credit as all electric vehicles will slow down the transition and continue the polluting of our air. Thank you, Jose E. Gonzalez
Ben Cather	1/3/2023 20:07	Dear IRS, I am writing to express my support for the inclusion of the 5 seat variant of the Tesla Model Y on the list of vehicles eligible for the $7,500 tax credit. As a Tesla Model Y owner, I can attest to the high quality and performance of this vehicle. However, I am writing not to seek personal benefit, but rather to advocate for fairness and equality in the application of the tax credit. I understand that the IRS has its own criteria for determining which vehicles are eligible for the tax credit, and I respect the agency's discretion in making these decisions. However, in this case, I believe that the exclusion of the Model Y from the list of eligible vehicles is unfair and puts Tesla at a disadvantage compared to other manufacturers. The Model Y is a 5 seat SUV with a base price below the $80,000 threshold, and it should therefore qualify for the tax credit under the same rules as other 5 seat SUVs from other manufacturers. I urge the IRS to reconsider its decision and to include the Model Y on the list of eligible vehicles in the interest of fairness and equality. Thank you for considering my perspective.
Pranay Patel	1/3/2023 20:07	7 seater. Please remove this distinction for the Model Y, it clearly is a SUV in almost all the definitions. Thanks -- Thanks Pranay Patel

Irene Christina_W	1/3/2023 20:07	Subject line “OMB Control No. 1545-2137” For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers’ interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. The Tesla Model Y is also one of the most American-made EV and would also benefit the American economy. Your consideration of this matter is highly valued. Yours sincerely,
Nicola Gaballo	1/3/2023 20:07	Good evening, I m a great supporter of the ev tax incentive. Nonotheless there are some variants of the Tesla Model Y and the Ford Mustang Mach-E that will NOT receive any incentives at all, yet some vehicles that use fossil fuels will. I find it unreasonable and counterproductive since it actually incentivices, in some instances, the purchases of gas fueled vehicle (plug in hybrid) over a fully electic one. Regards, Nicola Gaballo
ACABylon Bee	1/3/2023 20:07	I'm really a big fan of excluding the Tesla Model Y from the $7500 IRA credit! Love what you guys are doing, keep it up!
Jorge Gonzalez Zamora	1/3/2023 20:07	This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Including hybrids with 21 miles of electric range is also misguided. A minimum range should be included to promote greater batteries in hybrids.
Faisal	1/3/2023 20:07	RE: Price cap for Tesla Model Y with 5 Seats Dear IRS, Tesla Model Y with 5 seat variant should qualify for the higher $80,000 price cap under Inflation Reduction Act, instead of the lower $55,000 price cap. This unfairly excludes an all electric vehicle that is made in America from being eligible for the $7,500 tax rebate. This may unfairly force many consumers to buy an unpopular, 7 seat version that qualifies for the $80,000 price cap but weighs 240 lbs more and also costs $3,000 more. The extra seats are useless for most buyers of this car and reduce the total EV range. Vehicles of similar size such as the VW ID 4 qualify for the $80,000 price cap. Many hybrid vehicles with far less full efficiency are qualifying while an all electric model does not. This is opposite of the intent of this law. Please address this problem as fast as possible. -- Thanks and Regards, Faisal Zafar.
Sebastien Lariviere	1/3/2023 20:08	Hi, I consider it absurd that the Tesla Model Y SUV is not considered an SUV. It should have an MSRP limit of $80,000 Sebastien Lariviere
Greg Schmitz	1/3/2023 20:08	The SUV definition is terrible and makes no sense. It should just follow the EPAs definition. All Tesla model Ys are SUVs, All VW ID 4's are SUVs. Hybrids should not qualify. At a minium they should have to be plug-in hybrids with more than 30 miles of range.

Uday Naik	1/3/2023 20:08	Hello: The Tesla Model Y 5 seater should be included in the EV tax credit qualifications. It is made by US workers and good for the environment. Regards, Uday Naik
Br Mc	1/3/2023 20:08	I am in the market for an EV and am disappointed on how we are allocating our tax credit funds. If anything, the irs should follow logical rules. I believe the way the IRS has landed on the implementation of the EV tax credit is likely from faulty logic (at worst from corruption). My logic. Credit should apply to only pure EVs. Consider seats+cargo space if it is a suv or car. Do not consider weight Do not use seats only as consideration. Not use ground clearance as a metric Use range as a metric Credit should apply to only pure EVs. It is a huge disappointment that hybrids are receiving the credit. What a large step backwards. If not an EV but a hybrid, that hybrid should have a better MPG than any other vehicle in that class with a traditional gas engine. Those vehicles should also not qualify for 7500 off. Maybe 2500 if they are over 40mpg but not the 7500. Let the program run longer or give pure EVs an even larger amount. Weight shouldn't matter if something is a car or SUV. The term SUV is outdated. Go purely by seats+ cargo space. I am shopping for an EV with plenty of cargo room, van, suv, or truck.A 5 seat SUV with Sedan level cargo space is a glorified Sedan with a weird shaped body and isn't in my decision matrix. There is zero reason a 5 vs 7 seat variant should change if a vehicle magically becomes a car or an SUV, especially if removing those two seats increases the cargo space. Likewise suspension, I need a car that fits my family of five (I am 6'5")+dog and all of our stuff. I could care less if it is an SUV or a car but I don't fit in most cars Weight should not matter. But what should also matter is range. A 200 mile range sports car under 50k should not get a credit if a 51k 300+ mile range does not. Range matters. Please rework the logic.
Andrew Tyrholm	1/3/2023 20:09	make any sense. Sent from Yahoo Mail for iPhone<https://overview.mail.yahoo.com/?.src=iOS>
Shelly Tschupp	1/3/2023 20:09	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Inflation has ruined the value of what dollars I have left. I may never be able to afford an electric car as I'll be too busy working two jobs to pay off the $1.7 Trillion debt and inflation costs on food, housing and every day essentials, you've placed an extreme burden on our families so the least you can do is forgo planting trees in parks and all of the other unnecessary pork in that ridiculous bill and give us the rebates on all EVs!
Manish Maheshwari	1/3/2023 20:09	Hi ! Please include Tesla Model Y 5 seater configuration as an SUV eligible till 80,000 price. thanks Manish Maheshwari
Toan Trang	1/3/2023 20:09	Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. The Tesla Model Y is also one of the most American-made EV and would also benefit the American economy. Your consideration of this matter is highly valued. Yours sincerely, Toan Trang
tom tharp	1/3/2023 20:09	Hi there, My name is Tom from Knoxville, Tennessee and I believe that the classifications for some vehicles in this vehicle credit are incorrect. With the average family consumer in mind, a 5 seat all-electric SUV with lots of storage space should be applicable. This is exactly the size of electric vehicle that I plan on purchasing for my family and I was very disappointed that both vehicles I was considering (Tesla Model Y 5-seater and Ford Mach E 5-seater) were both capped at $55k when they can't be purchased at that price. Please amend this price cap to reflect what these cars actually sell for in the car market. Thank you for your consideration and for accepting comments concerning the plug-in electric vehicle credit and Revenue Procedure 2022-42, I appreciate it very much.

Kay Bechel	1/3/2023 20:09	IRS Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224 To Andres Garcia I just read that the tax credit for EV vehicles is not based on whether or not the vehicle is a preforming EV. I thought the whole idea was to incentivize people into buying cars that use less fossil fuels to operate. I have read the Tesla model Y not getting same level of tax credit as other large vehicles. I would hope the IRS, Congress and President would re- evaluate this tax credit program. Respectfully request information/ explanation PS I do not own a Tesla yet K. Bechel Kbechel@gmail.com<mailto:Kbechel@gmail.com>
Kendra	1/3/2023 20:09	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as an SUV, and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future.
Victor Cognato	1/3/2023 20:09	OMB Control No. 1545-2137 I am writing to air my concerns for the way the electric vehicle tax credit qualifications are being decided. They should be given in accordance with the spirit of the law when the determination is not clearly stipulated. Why the Tesla model Y is not considered a SUV by the IRS but is for is for other federal agencies seem like an arbitrary decision. Also to give full credit to hybrids with minimal electric ability seems to counter what the law is intending to do. Please reconsider your decision and publish your specifications in determining what vehicle fall into what categories. Victor Cognato
Ron Kim	1/3/2023 20:09	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. The Tesla Model Y is also one of the most American-made EV and so the tax credit would also benefit the American economy the most. Your consideration of this matter is highly valued. Yours sincerely, Ron Kim
Christopher Levdahl	1/3/2023 20:09	To whom it may concern, As I'm sure you are aware, there has been widespread concern about the new EV tax credits and why certain vehicles are given tax credits over others. Primarily, there are multiple gasoline powered vehicles which are hybrid electric with <50 miles of electric range qualifying for said tax credits. Meanwhile, the Ford Mustang Mach-E BEV (100% electric) and Tesla Model Y BEV (100% electric) both somehow do not qualify at all for any tax credits despite being completely electric.

Name	DateTimeReceived	Body.TextBody
Corey Aronson	1/3/2023 20:09	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as a 20 mpg PHEV Jeep Wrangler, while excluding the most popular PURE electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Concerned US Taxpayer
Ryan Gledhill	1/3/2023 20:09	Hi, Tesla Model Y long range awd should be included as an suv and should qualify for the $7,500 credit for evs under $80,000. ALSO, the phev vehicles should NOT be receiving this credit at all! Thank you, Ryan gledhill
Veshnu Ramakrishnan	1/3/2023 20:10	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. The Tesla Model Y is also one of the most American-made EV and would also benefit the American economy. Your consideration of this matter is highly valued. Yours sincerely, Veshnu Ramakrishnan
Eric Chan	1/3/2023 20:10	Hi, Please reconsider the Tesla Model Y (5 seater) to qualify for the $7.5k tax credit. It should not be penalized for being lighter than other cars. Some of the other cars are not even full EVs! Thank you -Eric
Matthew Ward	1/3/2023 20:10	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as an SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as an SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Matt Ward
Andy Haenszel	1/3/2023 20:10	Hybrid cars with only small 30-40 miles of EV range should not receive any rebate. There should be a minimum threshold of 50% miles from EV range for any rebate. Get Outlook for iOS<https://aka.ms/o0ukef>

Name	DateTimeReceived	Body.TextBody
Sauvik Sarkar	1/3/2023 20:10	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Thanks,
Eve Astraea	1/3/2023 20:10	I am deeply disturbed to learn that there are variants of electric vehicles that have been subject to seemingly arbitrary standards and thus do not qualify for the EV tax credit under the Inflation Reduction Act. Moreso, I find it a travesty that there are SUVs still running on fossil fuels that will qualify. Perhaps this is an oversight, perhaps not. In any case it is a loophole that should be remedied and quickly as we transition our world and economy to a more sustainable model for the future of our children and the planet. Thank you for your time and I sincerely hope that those in charge will do the right thing. Best Regards, Eve Dulce Astraea (623) 268-6059
Brian Hewitt	1/3/2023 20:11	Mr. Andres Garcia, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. The Tesla Model Y is also one of the most American-made EV and so the tax credit would also benefit the American economy the most. Your consideration of this matter is highly valued. Thank you, Brian Hewitt (760) 815-7100
C. Corbin	1/3/2023 20:11	To whom it may concern: The Tesla Model Y 5 seat SUV should most definitely be included for the $7500 subsidy. This is actually crazy that we need to tell you this. Especially considering you're offering the tax subsidies to hybrids. Wow, that makes no sense once so ever. Chris Corbin Las Vegas, NV Sent from my iPhone
Daniel Winterbottom	1/3/2023 20:11	To whom it may concern, Tesla's Model Y is not included in the Tax credit program for EVs as an SUV, even though it clearly inhabits that market segment as a crossover vehicle. There is a weight cutoff which excludes the Model Y, which is clearly in the crossover segment. I implore you, demonstrate an even hand and impartial governance. Be worthy of trust. Thanks, Daniel
Timothy Clark	1/3/2023 20:11	Hello This plug-in bill is very badly implemented. You penalize SUVs like the Tesla Model Y for being too light in the standard trim, saying it does not qualify for the 80k limit, whereas other trims of the Model Y do qualify as SUVs. Very inconsistent and confusing. I understand you do this on weight. Incentivising for heavier vehicles goes against the intention of the bill to have better fuel efficiency for SUVs. Tesla and the Ford Mach E are discriminated against as SUVs for being more efficient and engineered to be lighter. Your classification of SUVs should align with the EPA and NHTSA. The provision for subsidising polluting hybrids with tiny batteries is shockingly bad too, though I guess this is out of the IRS's mandate. Giving a 7500 subsidy to a hybrid Jeep with a MPGe of 20ish is criminal. Thanks Tim

Rick Green	1/3/2023 20:11	Subject: EV tax credit rules Please re-evaluate the recently released rules regarding the EV tax credit. It appears that the rules for SUV's have not been updated to accommodate new lighter and more efficient vehicles that are clearly SUV's. The weight requirements actually incentivize the manufacturers to increase the weight of the vehicles to comply with the outdated rules which countermands the intent of the legislation to promote cleaner more efficient transportation. Thank you for looking into this matter. Rick Green Green Electric
Dean Rauchfuss	1/3/2023 20:11	Hello, I wanted to reach out regarding the restrictions on SUVs for this act. I'm not the most informed in the space, but based on some research by individuals I follow, it appears that Tesla and Ford are being slighted by the limitations on weight limits. This restriction for Tesla, specifically on five seat versus seven seat model, is difficult for me to understand, as a nearly identical vehicle is receiving a $25,000 price difference based on two seats. This is my first time ever emailing regarding an issue like this and I hope it will be noticed and fixed accordingly. Thank you for your time and consideration, Dean Rauchfuss
Russell Hernandez, Nicole	1/3/2023 20:11	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version).
Drew Weinberger	1/3/2023 20:11	The Tesla Model Y being excluded from EV tax credits under the new IRA is completely insane given the intent of the Act. It's too light and therefore is being denied the subsidy, while other hybrid cars that use fossil fuels will receive it? If you are truly trying to decarbonize, drop the political theater and apply common sense.
Chris Boston	1/3/2023 20:11	The 7-seat edition qualifies, but the vastly more popular 5-seater does not. How in the world did hybrid models qualify (some with only 10 miles of range) when a 100% electric with 330 miles of range and 100% Made in America does not qualify?!! What are you trying to achieve with the tax rebate? If you are trying to save a dying fossil fuel industry, please stop. Let consumers decide. If you are investing in the future and helping consumers switch to electric vehicles, then stop letting hybrids qualify and offer the rebate to ALL 100% electric vehicles. Sincerely, Chris Boston Bend, OR -- Chris Boston Boston Design & Renovation LLC 541.508.9508
Bryan Cook	1/3/2023 20:11	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version) and certain models of the Ford Mach-E. I'm interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Please amend the qualifications as soon as possible. They go against the very spirit of the Act.
Jeff Daggs	1/3/2023 20:11	I think tesla Model Y 5 seater should be included and silly that it's not from the beginning. , Jeff daggs.
Joint Account	1/3/2023 20:11	manufacturers. How can the Model Y not be considered a SUV but the Jeep is? It also makes no sense that a hybrid with 21 miles of electric range is considered an EV.... do better with out tax dollars. Making a fossil fuel ICE that has a battery to last 30 minutes is obsurd. Brian Bapties

Randell Hynes	1/3/2023 20:12	The Internal Revenue Service (IRS) is inviting consumers<https://www.federalregister.gov/documents/2022/12/30/2022-28402/proposed-collection-requesting-comments-on-form-8936-qualified-plug-in-electric-drive-motor-vehicle#addresses> to share comments on the electric vehicle tax credit qualifications. Tesla and electric vehicle supporters have been vocal about the Inflation Reduction Act's qualified cars for the EV incentive. Some variants of the Tesla Model Y and the Ford Mustang Mach-E will not receive any incentives<https://www.teslarati.com/tesla-protest-ira-incentives-evs-vs-hybrids/> from the IRA at all, yet some vehicles that use fossil fuels will. Those vehicles are classified as electric vehicles because they are plug-in hybrid EVs. The IRS gives specific instructions on how to submit the comments. Comments can be submitted by mail or email. For those submitting by email, you need to include OMB Control No. 1545-2137 in the subject line and send it to pra.comments@irs.gov<mailto:pra.comments@irs.gov>. For those wanting to mail in comments, comments should be addressed to Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224. Teslarati reached out to Garcia and the IRS for a comment. We'll update you if/when we receive one. In December, the IRS announced the vehicles<https://www.teslarati.com/tesla-vw-evs-2023-ev-tax-credit/> that qualified for the 2023 EV tax credit. Some of these vehicles include plug-in hybrid EVs that use gas and batteries. Although there were several Tesla Model Ys on the list, the only ones that qualified as an SUV with an $80,000 MSRP limit were the seven-seat varieties. The Model Y all-wheel drive, long-range, and performance five-seat variants do not qualify for the tax rebate because their MSRP exceeds the IRS $55,000 threshold. The graph below shows which Tesla vehicles qualify for the EV tax credit. [https://www.teslarati.com/wp-content/uploads/2023/01/Screen-Shot-2023-01-03-at-1.50.05-PM.png]<https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after> Randell Hynes
J G Z	1/3/2023 20:12	This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Including hybrids with 21 miles of electric range is also misguided. A minimum range should be included to promote greater batteries in hybrids.
Toan Nguyen	1/3/2023 20:12	Please reconsider classifying the these cars: 1- Ford Mustang Mach-E 2- Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) as an SUV for the IRA tax credit cap of $80,000. These cars is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves. Regards, Toan

Name	DateTimeReceived	Body.TextBody
Theodore Summe	1/3/2023 20:12	Hello, I would like you to reconsider your classification requirements for SUV. With current guidance, vehicles with largely the specs from the customer's perspective get different classification, notably the model Y. I'm not an expert but it's lower weight seems be what is disqualifying it but this should be celebrated rather than punished. The car is safe and has great fuel efficiency, ultimately enabling more environmentally friendly transit. Please do the right thing for our planet and not serve other political agendas. Regards , Theodore Summe
Sean Blood	1/3/2023 20:12	Hello, I believe that the EV credit rules are unfairly excluding some Tesla and Ford vehicles. I am a Tesla shareholder, but I have also considered buying other electric vehicles from other manufacturers. Tesla is one of the main innovators in this space - excluding any of their vehicles seems like a misstep, especially when some gas-powered hybrids are included. The way the IRS is deciding what is and isn't an SUV for the purposes of this credit appears to be flawed. Thank you for your time
Tony C	1/3/2023 20:12	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of the inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. The Tesla Model Y is also one of the most American-made EV and so the tax credit would also benefit the American economy. Your consideration of this matter is highly valued. Yours sincerely, Tony Cheng
Paolo Benzan	1/3/2023 20:13	My understanding of the EV credit from the IRA act is that SUVs that meet the requirements laid out by congress are eligible for the credit. It appears that you have mis-classified the Tesla Model Y 5 seat configuration as a non-SUV, and are thereby limiting it to the $55,000 max purchase price. This is incorrect. It is classified as an SUV by the NHTSA and by the Department of energy (see attached). In the highlighted section below from the IRA related to the classification of vehicles, congress specifically said to use the similar criteria as the EPA and the Dept. of Energy. Please amend your guidelines to show that all Telsa Model Y configurations with a purchase price below $80,000 are eligible for the credit. Thank you. -Paolo Benzan '(A) IN GENERAL.—No credit shall be allowed under subsection (a) for a vehicle with a manufacturer's suggested retail price in excess of the applicable limitation. ''(B) APPLICABLE LIMITATION.—For purposes of subpara graph (A), the applicable limitation for each vehicle classi fication is as follows: ''(i) VANS.—In the case of a van, $80,000. ''(ii) SPORT UTILITY VEHICLES.—In the case of a sport utility vehicle, $80,000. ''(iii) PICKUP TRUCKS.—In the case of a pickup truck, $80,000. ''(iv) OTHER.—In the case of any other vehicle, $55,000. ''(C) REGULATIONS AND GUIDANCE.—For purposes of this paragraph, the Secretary shall prescribe such regula tions or other guidance as the Secretary determines nec essary for determining vehicle classifications using criteria similar to that employed by the Environmental Protection Agency and the Department of the Energy to determine size and class of vehicles.
Brad Howells	1/3/2023 20:13	Per your request for comments, the Tesla Model Y 5 seater should be made eligible for the tax credit. Seems counter intuitive that it is not based on the rational for this EV tax credit. Regards, Brad Howells Sent from my iPhone

Name	DateTimeReceived	Body.TextBody
Ondrej Riegl	1/3/2023 20:13	Dear IRS, Tesla Y 5 seater is #1 sold CAR EVER in climate-pioneering Norway and #1 sold EV in Germany in November. The German WV ID4 5seater is considered an SUV with a $7,500 EV. Why not Tesla Y? Even the gas guzzler Jeep gets $7,500. Why not Tesla Y? Tesla 5 seater is an identical car to the 7 seater with 2 tiny seats. It's the same car. Please correct this alarming inconsistency so I don't have to think the oil lobby wrote this bill. Thank you, Your almost neighbor from Charlottesville, VA Ondrej Riegl
Russ TAVROFF	1/3/2023 20:13	Hello. I find it ludicrous and politically and poetically motivated that a 5-seat Tesla Y gets no credit while a gas guzzling “hybrid” does, specifically: •The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. •On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Please Fix this IRS! Thank you Russ Tavroff Sent from Russ's iPhone
Sandeep Reddy Anugu	1/3/2023 20:13	Hello, The EV tax credit not being applicable to the most US made vehicle which is a pure battery EV is disgraceful to US tax payers. Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Regards, Sandeep
Angel Herrera	1/3/2023 20:14	OMB Control No. 1545-2137 Hello. I thank you for your public service. I reach out to share my disappointment with the IRA rules for classifying cars as eligible or not for the $7,500 tax credit. It makes little sense that a Tesla Model Y (5 seats) does not qualify for this, but Jeeps, BMWs, and others with nearly 10% of the EV range do indeed qualify, and are the same size. All Tesla vehicles should qualify. For more info, see here<https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit?recruiter=1290758235&recruited_by_id=073c0570-8a0f-11ed-8a45-67f4de4114d4&utm_source=share_petition&utm_campaign=share_petition&utm_term=share_for_starters_page&utm_medium=copylink&utm_content=cl_sharecopy_35382588_en-US%3A8>. Thank you kindly!

April Poer	1/3/2023 20:14	Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. The Tesla Model Y is also one of the most American-made EV and so the tax credit would also benefit the American economy. Your consideration of this matter is highly valued. Sincerely, April and Shane Poer Yours sincerely,
Michael Williams	1/3/2023 20:14	I'm writing regarding the tax credit for electric vehicles. The assumption is that there is a desire to incentivize the public to purchase vehicles that will reduce the amount of emissions we emit into our atmosphere due to driving. In reviewing the list of vehicles and their criteria leaves me baffled as to what you are trying to accomplish. First of all I recommend not qualifying vehicles that still burn our finite resource of fossil fuels. Just really commit to the cause. Another concern is that you stray from the already established guidelines for SUV standards and qualifications. It seems that you are going to disadvantage vehicles that are doing a great job of being great EV's and then rewarding sub par vehicles for poor performance. Please solidify your goals and start by getting rid of hybrid incentives. It is not the goal to burn gas. Thank you for taking these comments. Michael Williams Richfield, Utah Sent from Yahoo Mail for iPhone<https://overview.mail.yahoo.com/?.src=iOS>
david funk	1/3/2023 20:14	The Tesla Model Y 5 passenger SUV should qualify for the $7500 tax credit. This vehicle does not have a gasoline engine and meets all of the requirements for the credit as an SUV. The US government EPA categorizes the Model Y as an SUV. Furthermore the government should not incentivize the sale of fossil fuel powered vehicles. All plug-in hybrid vehicles have gasoline engines which pollute and should not receive a $7500 tax credit. Respectfully submitted, David Funk Santa Fe, NM
Brian Yeoman	1/3/2023 20:14	In reference to this standard, I would recommend following changes: Hybrids credit should be reduced by at least 1/2 Car type should be based on volume solely. Car weight should NOT be a factor, as lower weight EVs actually get better mileage. Car body height off ground, should NOT be a factor in car type selection (sedan, SUV, truck). Car bodies lower to ground get better EV mileage. Tesla Model Y 5-seat should be included in SUV credit. Brian Yeoman 1533 Hempel Ave Windermere, FL 34786 Sent from my iPhone
John blaire	1/3/2023 20:14	Hello. I find it ludicrous and politically and poetically motivated that a 5-seat Tesla Y gets no credit while a gas-guzzling "hybrid" does, specifically: • The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. • On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. Name	DateTimeReceived	Body.TextBody
Zheng	1/3/2023 20:14	Your ruling on the Tesla Model Y SUV not being an SUV is misguided. The Tesla Model Y 5 seater should be included in the SUV EV credit. Including hybrids with 21 miles of electric range is also misguided. TAX PAYER
Todd Kennedy	1/3/2023 20:15	In my opinion, the Tesla Model Y s-seater EV should be included in the tax credit. I don't understand the thinking as to why a mainline model of the national leader of EV wouldn't be included; unless there is some sort of political bias. Please correct this. Regards, Todd Kennedy 608 W. 7th Ave. Lenoir City, TN 37771
Morgan Williams	1/3/2023 20:15	Hello, This email is to comment on the proposed and passed Inflation Reduction Act EV tax credit of $7,500. As with all good legislation, I understand that many revisions will need to be made and I believe that the current state of this law/incentive is inadequate to handle the unique nature of subsidizing electric vehicles. The current wording allows for many plug in hybrid “EV’s” to receive far more incentive than various full battery EV’s. The reason for this tax credit is to help transition towards more affordable green vehicles because of batteries being far more expensive than engines and the result does the exact opposite. There are many “qualifying vehicles that contain a battery size of less than 15kWh and are excluding others that use 70+kWh. The American taxpayer should not have to fund these companies that don’t take EV’s seriously and are including the bare minimum in battery size. We should reward those who are going all-in on electric vehicle by making pure battery EV’s. Please adjust the vehicle eligibility list to include all models of the Ford Mach-E and Tesla model Y and remove the plug in hybrids. Thanks,
Thomas Dowell	1/3/2023 20:15	Not including the Tesla Model Y 5 passenger vehicle in the SUV status for tax credit, seems exactly like partisanship. Several other vehicles who are less American made, are less efficient, and are smaller, are classified as such. Very disappointed on the IRS decision over this. Sent from my iPhone
Smoothsailing	1/3/2023 20:15	Dear Sir/Madam, Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Best regards, A tax payor
Steve Wehr	1/3/2023 20:15	I am an electric vehicle owner. One glaring problem with the new rules on this web page (https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after) … is that the Tesla Model Y with a third row seat is considered an SUV, while the same car without the third row seat is not. What? Both are the same car. A car model is either an SUV or not, regardless of its interior equipment. —————— Steve Wehr
Haik Novshadian	1/3/2023 20:15	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers’ interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. The Tesla Model Y is also one of the most American-made EV and so the tax credit would also benefit the American economy. Your consideration of this matter is highly valued. Yours sincerely, Noah Novshadian

Name	DateTimeReceived	Body.TextBody
ytube user	1/3/2023 20:15	Dear Sir / Madam IRS classification of an SUV was based on GVWR of 6000 pounds or more as I read. I think weight consideration is the wrong metric primarily for electric vehicles as it reduces range and usable cargo space. I own a Tesla Model Y Performance and I can tell from my experience it has the most cargo space of any comparable SUV (gas / electric) and the longest range resulting in lowest cost of ownership thanks to less weight and clean design. So in my humble opinion please reconsider the SUV criteria and make Tesla Model Y Long Range and Tesla Model Y Performance SUVs eligible for the full $80000 limit. This small change will allow millions of people to afford USA made Tesla vehicles for safety and technology. Thanks Senthil
Patrick Lucas	1/3/2023 20:15	My name is Patrick Lucas and I live outside Boston MA. I was a big supporter of the EV tax credits outlined by the IRA. However the recently released IRS interpretation of those requirements is wildly inconsistent and does not appear to incentivize consumers to purchase the most efficient vehicles. My suggestions: 1) The IRS should use the EPA classification standards for Trucks/SUVs vs. compact/sedans as those classifications have been in place and scrutinized much longer than the published IRS classifications. 2) Since the legislation is meant to reduce pollution and emissions, manufacturers should be incentivized to design efficient vehicles. Therefore high weight should absolutely not be a requirement to be classified as an SUV. Interior volume could be used instead. More volume = more utility, (SUV is sport UTILITY vehicle). Added weight typically means less utility. Towing or payload rating could be used as well. As the standards are currently set, consumers receive tax breaks for buying a 5 seat Jeep with a gas engine priced at $60k, but not a 5 seat all electric Tesla Model Y at $60k. Model Y is more efficient, has more cargo room and the same payload and towing ratings as the Jeep (Which uses gas!). This does not align with the intention of the law. Please correct this glaring error. Patrick 781-507-1550
Shane Appleton	1/3/2023 20:15	I am writing to share mine, and others, concern regarding the vehicles that are qualifying and are not qualifying for the Electric Vehicle Credit. Firstly, that plug-in hybrid vehicles qualify for any credit is not incentivising optimal behaviours from Auto Manufacturers to commit to an invest in the Electric Vehicle transition. These vehicles by design are required to carry both Electric and Combustion Engine power trains. This requirement increase the complexity (and cost) to design and produce these vehicles, and actively works towards slowing the transition. To transition to Electric Vehicles, Auto Manufacturers must design and deliver vehicles as, if not more, compelling than their current Combustion Engine counterparts. If the plug-in hybrid were a compelling alternative the Toyota Prius would have spawned the Electric Vehicle transition in 1997 when it was initially produced. Instead, it was the Tesla Roadster followed by the Tesla Model S that truly kickstarted the transition, as both were compelling and desirable automobiles. Secondly, that the minimum requirement for battery capacity of 7kWh further enables the behaviour for Auto Manufacturs to produce plug-in hybrid vehicles with minimal battery and electric range capacity, meaning these vehicles will continue to require a combustion engine and utilise this as the primary drive train. The minimum requirement for battery capacity should be increased, to a point which promotes Auto Manufacturer behaviour to truly commit to and develop solely Battery Electric Vehicles. At the minimum, the requirement should be increased to at least compel Auto Manufacturers to create plug-in hybrids that are by default utilising their Electric Powertrains and only rely on Combustion secondarily and minimally, the opposite of the status quo currently. Thirdly, that the definitions of SUV preclude the Tesla Model Y from qualifying. The weight requirement to be defined as an SUV promotes Auto Manufacturers to not optimise for mass efficiency, a behaviour that is requirement to support the transition by ensuring vehicles have optimised range compared to required battery capacity. To achieve the transition to sustainable transport, battery development and manufacturing capacity has proven to be a significant constraint. Auto Manufacturers should be compelled to promote the development and manufacturing ramp of battery cells, to do this they must require a significant volume to compel downstream companies to increase their investments and output. Putting rules in place that promote plug-in hybrids and miniscule battery packs does not drive downstream industry to make rapid development and the change needed to successfully effect the transition to Electric Vehicles. To view others concerns, see this Change.org submission with 21K signatures (at time of writing this email): https://www.change.org/p/fix-the-

Faisal	1/3/2023 20:16	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Tesla Model Y with 5 seat variant should qualify for the higher $80,000 price cap under Inflation Reduction Act, instead of the lower $55,000 price cap. This unfairly excludes an all electric vehicle that is made in America from being eligible for the $7,500 tax rebate. This may unfairly force many consumers to buy an unpopular, 7 seat version that qualifies for the $80,000 price cap but weighs 240 lbs more and also costs $3,000 more. The extra seats are useless for most buyers of this car and reduce the total EV range. Vehicles of similar size such as the VW ID 4 qualify for the $80,000 price cap. Many hybrid vehicles with far less full efficiency are qualifying while an all electric car like the Model Y does not. This is opposite of the intent of this law. Please address this problem as fast as possible. -- Thanks and Regards, Faisal Zafar.
Rian Noble	1/3/2023 20:16	Hey Andres, I'd like to voice my concerns over the EV tax credit's application to Tesla Model Y (5 Seat Variant). To the best of my knowledge the only quantifiable difference between this variant and the 7 seat variant is their mass. I am of the opinion that making a vehicle lighter, and therefore more efficient is in the spirit of the tax credit, and no manufacturer should be penalized for making a technologically superior vehicle. As an EV owner myself I see first hand how much mass plays a role in a vehicle's range and it would be extremely disappointing to see the government encourage the addition of 250lb weights to be included with every vehicle purchase. One last note, while I can understand wishing to exclude vehicles in extreme price ranges from the credit, it doesn't make a ton of sense. This will only cause the software locking of basic features such as acceleration, heated seats, speakers ect. even more than already occurs in the industry. If I were tesla, looking at the Model 3 Performance, I would price the car at $51990, and charge $12,000 to unlock acceleration boost (6 sec 0-60 without boost, 3.1 sec with boost) to circumvent the tax credit issue (same thing for all other companies with this issue on their "pro models"). Thanks again for considering changes to the tax credit policy. -Rian Noble
langerd	1/3/2023 20:16	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). thanks, Lang
Mike Stokes	1/3/2023 20:16	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. The Tesla Model Y is also one of the most American-made EV and so the tax credit would also benefit the American economy. Your consideration of this matter is highly valued. Yours sincerely, Mike Stokes 6770 Akron Peninsula Rd.

Name	DateTimeReceived	Body.TextBody
TRAVIS SITTER	1/3/2023 20:16	Dear IRS, I am writing you to comment on the omission and misclassification of certain vehicles listed as eligible for the clean vehicle tax credit on your IRS website. The IRS should use the industry standards for classifying vehicles. For example, the NTHSA classifies the Tesla Model Y and the Ford Mustang Mach-E as an SUV. I notice that you have decided to distinguish the Tesla Model Y by the number of seats/rows, on whether or not the vehicle is an SUV or an “other vehicle.” The number of seats/rows is an inconsistent means to classify a vehicle as either a van, sport utility vehicle and pickup truck, or as other vehicle. For example, you classify the Audi Q5 TFSI e Quattro (PHEV) as a SUV even though it only has seating for five and two rows. Both the Tesla Model Y with two rows and also the Ford Mustang Mach-E, yet do not share the same classification of an Audi Q5 TFSI e Quattro as an SUV. Why is the Audi classified as an SUV, but the Ford Mustang Mach-E and Tesla Model Y with two row seating do not? Please review your vehicle classifications and ensure there is a consistency. There are clearly significant errors in your classification of vehicles that qualify for the clean vehicle gas credit. Thank you. Travis Sitter
Samuel Fitzsimmons	1/3/2023 20:17	Dear IRS, Hope all is well! I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future!
Kevin Szymczak	1/3/2023 20:17	model Y regardless of 5 or 7 seats. That’s should be totally irrelevant. Makes no sense to anyone. Make it make sense . -- Regards, Kevin Szymczak Realtor, Keller Williams Chairman, The Open Door Ministry Board of Directors C 419.290.6101 kevinsellstoledo@gmail.com<mailto:kevinsellstoledo@gmail.com> For latest listings click here<http://kevin.toledohomesellers.com/> [https://drive.google.com/open?id=0B_Uk6LrUgoQsNUJRZFFTX1M4T3M][https://drive.google.com/open?id=0B_Uk6LrUgoQsNUJRZFFTX1M4T3M]"The content of this message may not be deemed an offer, counteroffer or acceptance until paper documents are mutually executed between the parties."
Jonathan Rosenhan	1/3/2023 20:17	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Nonsensical that hybrids that get 20mpg qualify for the 80k threshold, whereas the model Y does not. Thank you!

Brian Bapties	1/3/2023 20:17	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
Tom Villars	1/3/2023 20:18	IRS: Regarding Title 49/Subtitle B/Chapter V/Part 523/§ 523.5<https://www.ecfr.gov/current/title-49/subtitle-B/chapter-V/part-523/section-523.5> which are the rules used to define if a vehicle is or is not an SUV, the fact the Tesla Model Y 5-seater (the most American made car) fails to meet the criteria is not an appropriate interpretation of the Inflation Reduction Act (IRA). As the EPA defines the Model Y as an SUV and the EPA is the agency most impacted by the IRA, it makes no sense to use the IRS's rules instead of the EPA's. I respectfully request the EPA be the governing agency for interrupting the IRA. Tom Villars 202-643-8668
Kevin T	1/3/2023 20:18	[illegible] criteria used to determine what vehicles receive a larger tax credit. Possibly related to Notice 2009-54 However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Here's an example of the broken nature of this incentive in its current form: [https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/7030a68c-9d90-499b-a4b7-b6aa8ca7e046.jpeg] Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Ideal fix:
michael johnson	1/3/2023 20:18	What are you smoking? Your choices show to the world how corrupt the United States really is. You cherry pick your definitions to bend to foreign companies and pay off your friends. You have clearly shown that the IRS is either corrupt or inept. The world is waking up. I'm sure others will point out to you what an SUV is and what an electric car is. To leave all of the Tesla Model Y models out of the SUV category is ridiculous. Sincerely, Mike Johnson

Name	DateTimeReceived	Body.TextBody
Josh Bergman	1/3/2023 20:18	Hello, I am writing in regard to the $7500 EV tax credit. The tax credit is unfair to certain vehicles and companies and the MSRP limits seem to not make any sense. For instance, while HYBRID SUVs qualify for an $80,000, the conpletely electric Tesla Model Y 5 seaters have a cap of only $55,000, which prevents them from qualifying. Similarly, other electric SUVs qualify, but for some reason, the Model Y 5 seat is not qualifying despite it being the same size. This arbitrary picking and choosing favorites is unfair and ultimately hurts the consumer. Taxpayer dollars should not be spent on picking and choosing favorites. If the purpose of the credit is to increase EV adoption, it should at least be fair to all companies. Please consider changing these MSRP limits for EV models to make it an even playing field for all companies. Thank you.
Dylan Hauer	1/3/2023 20:18	Why is the 5 seater model y from Tesla not included in this incentive package. A vehicle made in the US. Please re consider Dylan Hauer
K.P.	1/3/2023 20:18	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). I don’t believe hybrids should be included in the EV tax credit with cap at $80K but BEV like Tesla model Y(5 seat version) only qualified for $55K. Isn't IRA trying to fight against climate change?
Bill Hastings	1/3/2023 20:18	I am disappointed by the seemingly arbitrary classification of vehicles with regard to qualification for the EV tax credit included in the Inflation Reduction Act. It was not the intent of the law to credit hybrid SUVs with 21 miles of range (and drive mostly on gasoline) and not credit the most common fully electric SUV on the planet, the Telsa Model Y 5-seat variant. This Model Y is classified as an SUV by the EPA as well as NHTSA. If the Model Y was excluded from the SUV category by the IRS for it's light weight, the credit is rewarding inefficient vehicles, which of course is the opposite of the intent of the law. This classification system must be reconsidered. Thank you, William Hastings
Shane Moloney	1/3/2023 20:18	Do not create arbitrary definitions of SUV for purposes of implementing EV tax credits. The incentive of tax credits should be construed to maximize both affordability and reduction of reliance upon polluting fuels. Do not incentivise the added weight and inefficiency of largely unused third row of seats for a Tesla Model Y SUV/crossover to qualify. If you need to distinguish what makes an SUV, look at headroom or ride/height position, hatch, or a combination of cargo space with those things.
sam wilson	1/3/2023 20:19	subsidy despite only having between 18-31 miles of electric range. Meanwhile, fully electric vehicles- specifically SUVs such as the Ford Mach-E and variants of the Tesla Model Y do not qualify at all. The EPA has classified both of these fully electric vehicles from AMERICAN carmakers as SUVs since both hit the market. The Inflation Recovery Act was sold to the American people as a green energy bill, but in practice it appears that the administration appears far more concerned about oil company profits than a greener future. I am one of many conservation-minded voters disgusted by the way the IRS and Treasury Department are acting to preserve cars that use gasoline at the expense of carmakers such as Ford and Tesla that are courageously making fully electric vehicles. Please stop incentivizing a dirtier future. Thank you, Sam Wilson
Bobby Farrell	1/3/2023 20:19	Qualified Plug-in Electric Vehicle Credit and Rev. Proc 2022-46 is excluding some SUVs that are clearly SUVs. For example it is excluding the most energy efficient SUV in the 5 seater Tesla model Y. This does not make any logical sense. Defeats the whole purpose of this tax credit if you are crediting hybrids over full EV vehicles. Making me lose faith that the government can get anything right. Please adjust your criteria to qualify the tesla model Y as an SUV. Do the right thing. Don't penalize the most energy efficient SUV on the market with pointless red tape that the public doesn't agree with. Get this right.
Emre Switzer	1/3/2023 20:19	I am writing to express my concern over the fact that the Tesla Model Y is not eligible for the electric vehicle (EV) tax credit, while other hybrid vehicles are. I believe this is unfair and would like to bring this issue to your attention. As you may know, the EV tax credit is intended to encourage the adoption of electric vehicles and reduce reliance on fossil fuels. The Tesla Model Y is a fully electric vehicle, with no internal combustion engine or hybrid components. However, it is not eligible for the full tax credit, while other hybrid vehicles that still rely on fossil fuels for some of their power are able to qualify for the full deduction. I understand that the tax code can be complex and that there may be valid reasons for this discrepancy. However, I strongly believe that the Tesla Model Y should be eligible for the full EV tax credit, given its status as a fully electric vehicle. I urge you to consider this issue and take steps to ensure that all fully electric vehicles, including the Tesla Model Y, are eligible for the full EV tax credit. Thank you for considering my concerns. Sincerely,

Name	DateTimeReceived	Body.TextBody
Amit Ahuja	1/3/2023 20:19	To whom this may regard, The newly legislated IRA has incorrectly identified the Tesla Model Y (AWD 5 Seater) trim as a sedan. Unequivocally, this is a mistake and under no circumstance should this be the case; in fact the EPA designates this same trim as a (small) SUV. As I understand, this is due to the weight of this model, which is an incorrect view. We should not be discriminating against a specific trim because of technological advancements Tesla has gained versus competitors. As currently constructed, the IRA is benefitting similar hybrid electric vehicles that offer 20-40km, which is against the mission of this bill. Please consider reclassifying the Tesla Model Y correctly as a SUV to serve the purpose of this legislation. Thank you
M C	1/3/2023 20:19	Hello, I would greatly appreciate it you would designate all Tesla Model Y trims and all Ford Mustang Mach E trims as SUVs allowing them to qualify for the $7500 tax credit for pricing up to $80,000. Thank you, Matthew Carbone
Joe Knowles	1/3/2023 20:19	It doesn’t make sense how Audi and Jeep can get the EV credit, but not the fully electric 5 passenger Tesla Model Y, which has far greater MPGe. To be fair, the IRS needs to give the $7,500 credit to Tesla for the Model Y. Sent from my iPhone
suresh thota	1/3/2023 20:19	the current list of ev are not designed to meet the intent of the bill. pure electric vehicles that are designed more efficiently with better trunk space and less weight are not included/classified not as suv limiting their max price for incentives. heavy cars that do not give good mileage are incentivized. this promotes heavy mild hybrids that cause more road wear and tear, increase maintenance costs (maintain both electric motor/battery and gas engine) for customers and give less miles per kwh. costing more for tax payers and consumers. Please reconsider the list to support more efficient electric vehicles. Regards, Suresh Thota
Alnawaz Rehemtulla	1/3/2023 20:19	I would like to comment on the fact that the Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. This is an obvious oversight and misguided decision. Get Outlook for iOS<https://aka.ms/o0ukef>
Tony Yaklin	1/3/2023 20:19	classification of the fully electric Tesla Model Y (5 seat version). This vehicle should qualify for the tax credit before any hybrid ICE vehicle with extremely limited electric driving range. Tony Yaklin
Randy Dunton	1/3/2023 20:20	Hello IRS, I find it ludicrous that a 5-seat Tesla Y gets no credit while a gas guzzling “hybrid” does, specifically: •The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. •On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. The climate crisis needs immediate and correct attention, no more oil burning. Fix this IRS!
Tal Bader	1/3/2023 20:20	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers’ interests. Your consideration of this matter is highly valued. Yours sincerely, Mr. Tal Bader Sent from my iPhone
William Chappell	1/3/2023 20:20	I am commenting about the inflation reduction act. All Tesla Model Y variants should qualify for the tax credit. Do not use this as some sneaky way to bail out old technology. That’s what it looks like. -Ryan

Name	DateTimeReceived	Body.TextBody
davidbgray@earthlink.net	1/3/2023 20:20	I'm writing to comment on the 2023 EV Tax Credit Rules. I don't understand how the objective of speeding the transition to EV's is helped when the rules are drafted in such a way that certain Tesla models are ineligible. The particular Tesla Model Y that I'm interested in does not appear to qualify for the $7,500 credit. Because I live in a rural area, the SUV nature of this model is attractive to me, but I have no need to spend the additional amount for a 7-seat version that costs over $80k. If there is an opportunity for revision to the rules, I would greatly appreciate you reconsidering how the rules are structured so that all 100% EV's are eligible. This will encourage maximum consumer uptake and speed conversion to a greener economy. Best regards, David Gray Palestine, Texas
Jason Couch	1/3/2023 20:20	to $80,000.00. Each of these vehicles qualifies as an SUV. Please check with your other Federal Agencies that state this as fact. This tax credit will facilitate EV adoption and help reach Climate Change goals faster. This type of political misstep is the reason people do not like Government. This is such a bad oversight, it seems intentional. Hybrid Vehicles are great vehicles, but are not Fully, Electric Vehicle. Therefore, Hybrid Vehicles should not qualify for a Fullly, Electric Vehicle rebate. Hybrid Vehicles should be reconsidered for a reduced rebate. If you keep the rebate for a Hybrid Vehicle at $7,500.00, then all trim levels of the above mentioned Fully, Electric Vehicles sholud receive the same $7,500.00 Rebate. This isn't Rocket Science. Do better. Sincerely, A Concerned Citizen
Charles Smith	1/3/2023 20:20	I am writing in regard to the proposed changes to the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure matter. As an owner of a fully electric vehicle, I am disheartened to have learned that variations of the Tesla Model Y and Ford Mach-E are not eligible for the tax credit. While many hybrid vehicles were considered for this tax credit, many fully electric vehicles including Tesla and the Ford Mustang Mach-E were not included. Please reconsider this by allowing a broader collection of vehicles, including the Model Y (5-Seat) and Ford Mustang Mach-E, to take advantage of the
Barbados 1969	1/3/2023 20:20	Please put all Electric Vehicles that are classified by a federal agency such as the EPA as an SUV with an MSRP of less than $80,000 should be on the list for the Electric Vehicle Tax Credit, which includes All Tesla Model Ys, and All Ford Mach Es, also please removed all (Hybrid Vehicles) from the list they are not ELECTRIC VEHICLES. Please modify your parameters on how you decide what are SUVs to match the EPA. Thank you. Very Respectfully, Vincent Holder.
Shaw X. Tan	1/3/2023 20:21	Dear IRS, I was stunned when saw the qualified EV list online. Let me be clear, I'm a Jeep fan and owned a Cherokee for 7 years, I don't own a Tesla and not planning to buy a Model Y, but subsidy a hybrid Wrangler with a gasoline engine, not a full electric Model Y? I can't believe my eyes. The program is supposed to help to mitigate the climate change, isn't it? Besides, it's punishment to the American workers who are doing a better job. Why would the government do this? Tesla is the only American company leading the EV technology in the world, if naming one company in the country deserves the credits, it's them. Please, make the program fair enough for all the hard working people. Thanks, Shaw X. Tan Crystal Lake, IL.
Tom Bland	1/3/2023 20:21	As a supporter of electric vehicles I am simply stunned at the incompetence demonstrated by the list of vehicles that are current excluded (and included) from being eligible for an ev tax credit. For gas-powered hybrid SUVs to be eligible for the full $7500, yet the most American-made car available in the US (the all-electric Tesla Model Y) to not be eligible (the 5-seater variant) is astonishing. An all-electric US-made car is seemingly ineligible for the credit on the basis that it is too light to qualify as an SUV – and efficiency, something that all vehicles are constantly striving for, is therefore being punished. It's shameful, and it presents the whole incentive as potentially being a bail-out for 'Legacy Auto' in America. This has to be rectified urgently, curb weight and efficiency shouldn't be a factor in deciding how a vehicle is classified. Regards Tom Bland NJ

Name	DateTimeReceived	Body.TextBody
Brian Aalbers	1/3/2023 20:21	Andres Garcia, Internal Revenue Service, Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Thank you for your valuable time The purpose of the inflation reduction act was to help the transition from internal combustible engines to newer technology, including electric vehicles I and many other consumers been waiting for two years for is for in affordable means well to transition to electrical who goes - Thereby supporting industry investments to transition to cleaner energy- reducing dependence on foreign oil in revitalizing American manufacturing. At the 11th hour, I'm learning the tax incentives are favoring larger vehicle and hybrids while excluding companies that have made investments in American manufacturing and clean energy - Hybrids which have both low fuel efficiency for gas asubstandard technology for ev with minimal benefits of the environment well simultaneously taxing the consumer with the disadvantages of internal combustion a vehicle with disadvantages an ev - the way the code is currently written in giving advantages to these vehicles based on ridiculous technicalities - technicalities do not fit in with the premise, or even the point of a tax incentive with my tax dollars.
Adam Heeger	1/3/2023 20:21	The latest rulings on EVs does make not sense. Punishing the Tesla Model Y, clearly an SUV by the standard of any reasonable taxpayer, by excluding it from the tax credit while allowing vehicles from other manufactures that are clearly less prone to the spirit of the law (an electric vehicle rebate) is asinine and needs to be reconsidered. Adam Heeger, Former CPA, California
Enio Padilla	1/3/2023 20:21	The Inflation Reduction Act has a stipulation where Pure Electric Vehicles and Hybrid Electric Vehicles are able to take advantage of up to $7,500 as Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. However, the way the primary qualifications for the EV tax credit are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Ideal fix:
Stella Kwon	1/3/2023 20:21	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future.

Alexandre Makarian	1/3/2023 20:21	Hi there, I think Tesla Model Y 5 seater should be included. Best regards, Alexandre Makarian Sent from my iPhone
George Ginsburg	1/3/2023 20:21	To maximize a key purpose of the IRA, i.e., to reduce the use of fossil fuels by promoting the use of Electric Vehicles (EVs), some fixes need to be made to the IRA specifications so that more EVs can/will be purchased. For example, the Tesla Model Y is an EV SUV. It's priced under the IRA qualifying limit of $80,000 for an SUV. Therefore, the Tesla 7-seat Model Y rightfully qualifies for the $7500 tax credit. The Tesla 5-seat Model Y is also an EV SUV priced under $80,000. However, the IRA lists the 5-seat version of the same Model Y as qualifying for the tax credit only if it's priced under $55,000, which is the price limit for a sedan like the Tesla Model 3. But the 5-seat version is naturally priced over $55,000 since it is an SUV just like the 7-seat Model Y. Hence, it would be impossible for the 5-seat Model Y to qualify for the IRA tax credit! That needs to be fixed so that Tesla 5-seat Model Y, the most popular EV SUV in the world, also qualifies for the $7500 tax credit. This way many more EVs can/will be purchased.
thiem cao	1/3/2023 20:21	Looking to buy a car. Model Y 5 seaters should be included Sent from my iPhone
Sanjay Sharma Timilsina	1/3/2023 20:21	It does not make sense that Some variants of the Tesla Model Y and the Ford Mustang Mach-E will not receive any incentives<https://www.teslarati.com/tesla-protest-ira-incentives-evs-vs-hybrids/> from the IRA at all, yet some vehicles that use fossil fuels will. Kind regards,
gregg hansen	1/3/2023 20:21	tesla knows it. No one buying a $70,000 minivan needs an incentive. [Image.png] :: gregg
ThomasSchwalbenbach96@gmx.de	1/3/2023 20:21	I think tesla Model Y 5 seater should be included and it's silly that it hasn't been from the beginning Gesendet mit der GMX iPhone App
Roberta Paradise	1/3/2023 20:21	The Inflation Reduction Act's qualified cars for the EV incentive should include all variants of the Tesla Model Y and the Ford Mustang Mach-E Sent from my iPhone
Brandon Hughes	1/3/2023 20:22	I, as a US taxpayer, would like to add my comment that the control in the subject line, should be amended to resolve the currently present error in not allowing the full $7500 tax benefit for a 5 seat Model Y built by US car manufacturer Tesla. This is clearly incorrect in that other vehicles on the list such as the VW ID4, are qualifying for the full credit and the Model Y is not fully across the range and the 7 seat requirement has no bearing on the applicability. Thank you, Brandon Hughes
Meladee Noble	1/3/2023 20:22	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely, Meladee Noble-Carbajal Sent from Meladee's iPhone

Corey Wunsch	1/3/2023 20:22	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Thank you, Corey Wunsch
Jerry Xu	1/3/2023 20:22	Hi, Dear IRS The EV credit list does not include Tesla Model Y is simply not comprehensible when other much less EV (more gasoline) cars can get the credit , please be logical and revise your list . Thanks Jerry Sent from my iPhone
C. Ming Zhao	1/3/2023 20:22	I think the recent EV credit is not reasonable. It includes a number of cars that still have gas tanks. Tesla Model Y seater should be included to enjoy the EV tax credit. Thank you Ming Zhao
Dave Merk	1/3/2023 20:22	Please include the Tesla Model Y in this tax credit. I'm not sure why anyone who cares about the environment would skip over the company that produces the most innovative and efficient electric cars on this planet. Please set the politics aside and do the right thing. Thanks for your help, Dave Merk
Arby Abraamyan	1/3/2023 20:23	Hello, In my opinion, The Inflation Reduction Act clean-vehicle qualifications (SUV/Sedan/etc) are entirely against the spirit of the law. The IRA was not passed to encourage inefficient cars. The Tesla Model Y (5-seat variant) is classified by the EPA as an SUV. However, the IRS has given the 5-seat variant a $55,000 price cap, making it ineligible for the IRA tax-credit. Ironically, if Tesla makes the car more inefficient (heavier) they will qualify for the $80,000 SUV price cap. This makes no logical sense. Don't we want to provide incentives to make more efficient cars that are better for the environment? I sincerely hope that the IRA goes back and matches the EPA classifications. Thank you. Best Regards, Arby Abraamyan
Houston Treasurer	1/3/2023 20:23	This email is to voice my disagreement with the classification of several gas powered/hybrid vehicles as being eligible for the federal tax credit of $7,500 while the Tesla Model Y 5 seat variant (being 100% electric and using no fossil fuels) isn't eligible for the same credit. The credit is supposed to benefit the movement to electric vehicles for environment sustainability. Why fully electric vehicles aren't qualifying for the exact reason the credits were passed into law is something just doesn't make any sense and is penalizing innovative companies like Tesla while benefiting legacy auto manufacturers. Please level the playing field on the credits or simply disallow all credits entirely which will equalize everyone as well. Thanks. Sincerely, Federico Garza IV 2911 Ravensport Dr. Pearland, TX 77584 Sent from my iPhone 13 Pro
Ehrin Business GMail	1/3/2023 20:23	I am requesting that this governing body consider EPA categories and to thoughtfully apply common knowledge regarding what vehicles are able to get the EV incentive and which ones do not. Making Tesla's more accessible will accelerate transition to EVs due to the safety, reliability and access to a reliable nationwide network of fast chargers that is unique to the manufacturer. The most commonly purchased Tesla is the 5 seater Model Y, which does not get the incentive. Having a model like this more accessible will get people out on the road and advertise that we can let go of gasoline powered vehicles. Awarding full EV credits to a hybrid and not to the highest selling SUV that's fully electric is also bad optics and makes the public wonder whats the real point of this program: to placate the automotive sector, or to really incentivize the american public to go electric. Thank you for hearing me out. Ehrin Saladino
Eric Ki	1/3/2023 20:23	Dear IRS, All models of the Tesla Model Y and the Ford Mustang Mach E should be included for the $7500 EV tax credit. The definition of an SUV is simply too elusive and should be updated. Also, the inflation reduction act is meant to encourage the adoption of very efficient EVs and excluding America's best selling EVs are in contrary to the spirit of the law. Thanks, Eric Ki

Yuriy Breygin	1/3/2023 20:23	I am a proud owner of a Tesla Model Y, which I purchased in 2021. It is my first EV, but certainly not my last. With that said, however, because of lack of incentives on Tesla's I'm now forced to replace a second vehicle (multiple daily commuters in our house) with a non-EV. I can imagine by which process and thought Tesla's are excluded from the incentive program, given the climate challenges we face. It makes no sense that they are excluded because of their success! That should be the catalyst for greater incentives. By the way, the main reason I will not be purchasing other EV's is because of Tesla's amazing network of superchargers which allow me to drive cross country with full confidence. I hope administrative minds are changed and Tesla is included in the incentive program. Best, Yuriy
Robert Hammer	1/3/2023 20:23	I think it's an absolute travesty that the Model Y from Tesla is excluded from the full $7500 credit. This rule needs to be amended immediately to support the administrations desire of supporting EV adoption.
Simon Thompson	1/3/2023 20:23	The subsidies for promoting electric vehicles appears to be flawed. Rather than giving tax incentives for the most efficient and cleanest vehicles, it would appear that heavier and less efficient vehicles like hybrids are the big winners here. These vehicles have limited battery capacity and are therefore essentially just inefficient gas cars with a battery to green wash it. I was shocked to hear the Tesla model Y Was excluded from the incentive as it wasn't heavy enough or didn't have seven seats. This model is the most American made vehicle in the United States, it is the most efficient in its class (It doesn't carry around a redundant internal combustion engine under the hood) and it has a range that matches or beats many less American or all out foreign vehicles that do qualify for the incentives. To qualify, Tesla seems to need to install weights to their car. This is either a rookie error or lobbyist pressure has blinded the decision-making process to such a degree that the green credentials of this bill are in question or downright laughable. Kind regards Simon Thompson Get Outlook for iOS<https://aka.ms/o0ukef> ---------- The information in this email together with any attachments is intended only for the person or entity to which it is addressed and may contain confidential and/or privileged material. Jake Thomas	1/3/2023 20:23	Hello, The ev tax credit should not allow plug in hybrid vehicles to receive more credit than a fully battery electric vehicle. Maybe half credit for plug in hybrids. It only makes sense. Plug in hybrids are 90% + gasoline powered still. All variants of the Tesla model Y should qualify under the $80,000 cap for suvs because it is a suv. Please change the suv qualifications to allow all suv/crossovers to qualify for full tax credit. This electric vehicle incentive program will 100% improve ev adoption. Keeping plug in hybrids at the same tax credit as full battery electrics will only incentivize another 10-15 years of predominant fossil fuel use. Please consider a change. Thanks -- Jake Thomas PT, DPT j<mailto:dptjakethomas@gmail.com>akethomasdpt@gmail.com<mailto:akethomasdpt@gmail.com> (972) 841-9295
andy vilay	1/3/2023 20:23	To Whom it may concern, I believe the Tesla Model Y 5 seater should be included in the Inflation Reduction Act. I was looking forward to buying this SUV for my family because of its safety rating and it is a 100% electric SUV. I think it is silly that this SUV is not included from the beginning. Sincerely, Andy Vilay

sf2noz@gmail.com	1/3/2023 20:23	Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, Please consider the inclusion of the Tesla Model Y 5-seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Far less efficient vehicles that doesn't even have 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Best regards, Ching C
Kelly Siler	1/3/2023 20:23	The Tesla Model Y 5 seater EV should be included with the 7500 tax credit at its current price and gasoline vehicles should not be included. Thank you Kelly Siler Sent from my iPhone
Alexandr Nidetch	1/3/2023 20:23	Hello, Please do not bow down to politics; do the right thing and fix the EV Tax Credit. Giving legacy gasoline car makers free money only delays the inevitable and it's a waste of taxpayer dollars. To accelerate the transition to sustainable energy only pure electric cars should receive the credit. The high-efficiency Tesla Model Y 5-Seat automobile should qualify for the tax credit. Thanks, Alexandr Nidetch
Keith Anderson	1/3/2023 20:24	To whom it may concern, The spirit of the EV provision in the IRA was ostensibly about accelerating the U.S. transition to electric vehicles. This is critical to stem climate change. In light of that, I'm surprised to hear the 5-Seat Tesla Model Y is not included as an SUV, while several similar sized hybrid vehicles are. This is absurd, and quite frankly doesn't pass the smell test. To leave out the #1 selling EV in the world? Please correct this egregious policy error so we can get on with the transition to electric vehicles. Sincerely, Keith Anderson
Nick Taylor	1/3/2023 20:24	To the IRS Please reconsider classifying the Tesla Model Y 5 seat option as an SUV tax credit if $80,000. This vehicle is categorized as an SUV by NHTSA and other that the seating arrangements it identical to the Model Y 7 seat option which qualifies for the credit and deserved the the full credit in the spirit of the law. Nick Taylor Arizona [cid:DB5780C9-0315-4738-98A6-62FC4A5CC1BB]
Gregory Allen	1/3/2023 20:24	Question 2 - Is there a bias against this American made car company who has single handedly ignited the EV market, and also built its own charging network? I want people who purchase the American made Tesla to also have an opportunity for the $7500 tax credit. Thank you

Name	DateTimeReceived	Body.TextBody
Paul Tompkins	1/3/2023 20:24	To whom it may concern, Please prioritize EV capabilities, not arbitrary considerations, when evaluating qualifications for the EV Tax credit. Specifically, please re-evaluate the IRS's stance on the Ford Mustang Mach-E and the Tesla Model Y. Thank you, Paul
Bikash Agarwal	1/3/2023 20:24	Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued.
Arjun	1/3/2023 20:24	$7,500 tax credit Pl help promote pure EVs than Hybrid or Plug-in Hybrid. Thanks
Thanh Phan	1/3/2023 20:24	To whom this may concern, As you've probably seen from other emails, we must consider addressing the issues present in the current ev tax credit in the ira bill. It's understandable that any generic set of specifications to promote ev purchases can lead to certain manufacturers with fringe cases where a specific trim of a specific vehicle may have drawn the short straw. However, this is not fringe. The model Y, in all trims deserves this credit, (as do other evs such as the mustang mach e). And it would be great to update this. It is strange to see a model y not labeled as an suv. As a consumer and tax payer, i believe this would be one of the first choices for many families shopping for competing gas suv vehicles to transition to. The purpose of this bill should help transition to full ev where possible. Do not wait for tesla/ford/etc to respond with workarounds. Please update the rules to be more reasonable. Thanks,
Eve. .	1/3/2023 20:24	I completely oppose any government incentive, unless Tesla, the biggest, all American EV only car maker is finally recognized as such by the Biden administration. I'm a Democrat. Voted for Biden but profoundly disapprove the treatment he's given Tesla. The model Y 5 seater MUST receive the full $7,500.00 incentive you're giving to cars that use fossil fuel. It's appalling if you don't and will clearly show bias and a level of corruption we cant afford. Tesla deserves the government gratitude and recognition. I will not vote democrat again until that happens because not doing so shows the government isn't serious about climate change and it's catalysts. Thank you Get Outlook for Android<https://aka.ms/AAb9ysg>
Tony McIvery	1/3/2023 20:24	The fact that plug-in hybrid vehicles that are really just gas cars with a small battery are eligible for the tax credit and a Tesla Model Y (5 seater) does not qualify makes zero sense. If you are trying to incentivize electric vehicles how are you going to disqualify the best selling electric vehicle in the country? I also understand that some Ford Mustang Mach-E's don't qualify either. Whatever rule sets you all are using don't make sense if these two cars aren't qualifying while many gas burning cars are. I understand part of the criteria is related to the weight of the vehicle. Something to the effect of the Model Y 5 seater needing to weigh a couple hundred pounds more to qualify as a SUV? If this is real, you should remove this requirement. How are you going to penalize a company for making an SUV that is light weight and therefore more efficient!? We should not be incentivizing companies to build heavy, low efficiency cars, ever! Especially for electric vehicles. This almost comes off as a political hit job. Please rewrite these requirements to make more sense. I do not want my tax dollars going to gas hybrid cars while we penalize the companies actually making great electric vehicles. Thanks, Tony McIvery
Min Lee	1/3/2023 20:24	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as an SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as an SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future.

mstanitzek	1/3/2023 20:25	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery(21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules.
Robert Baumann	1/3/2023 20:25	are thus limited to a lower MSRP for tax credit than hybrid and other vehicles which are less efficient such as the VW ID.4 or the Jeep Wrangler 4xe. Since the IRS published a list of vehicles but did not publish standards for what is an SUV and why certain models were excluded, one can only guess as it defies conventional wisdom. Why does the Tesla Model Y qualify as a 7 seat variant but not 5 seat, while other vehicles are apparently not held to the same criteria and can take advantage of the full credit? If classifying based on weight, why are heavier vehicles allowed for the subsidy? Should Tesla and Ford include removable ballast in the vehicle to work around this classification? Regards, Robert Baumann
Avi Agrawaal	1/3/2023 20:25	Dear IRS Please make the Tesla Model Y eligible for the EV tax credit. The Tesla Model Y 5 seat configuration is the most American-made car and safest car you can buy. The US govt says it's NOT eligible for the $7,500 EV Tax Credit. -- Avi Agrawaal, Security Compliance Analyst aagrawaal@flexport.com<mailto:aagrawaal@flexport.com> [https://lh5.googleusercontent.com/gtalg7QxQDJrnW-kF0Dik51mC71MeJMqgTOMRuM6VTMP227VOtvsbE-2nvv7u5SbJKe7R3rFjXEgL8_eb12mswvxy3Q52EnEUBGVto5GOVn78_JCr3-Jp2bXzXxm2qCBnv-TXRII] 760 Market Street, 8th Floor, San Francisco, CA 94102 flexport.com<http://flexport.com/> Any content above that involves tariffs, valuation, or technical advice is being tendered to you based on the information provided to us in our discussion or in your correspondence. Sean Xiaowen Zhang	1/3/2023 20:25	I am writing to request that Tesla's Model Y (5-seat version) be qualified for the electric vehicle (EV) tax credit provided by the Inflation Reduction Act. As the rule<https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after> stands today, Model Y (5 seat) is not regarded as an SUV. The Model Y is a highly efficient and environmentally friendly vehicle, with a range of over 300 miles on a single charge and a top speed of 150 mph. It also has a 5-star safety rating, making it a practical choice for reducing carbon emissions and a safe and reliable option for families and individuals. The fact that it doesn't qualify for the EV credits despite the fact that EPA categorizes Model Y as SUV<https://www.epa.gov/system/files/documents/2022-06/my2022-low-ghg-emit-eisa-veh-list-2022-06-23.xlsx>(see attached screenshot) baffles individual consumers like me. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing PHEVs, which still produce carbon emissions, while disqualifying pure Electric Vehicles such as Model Y goes against this goal in my humble opinion. In light of these factors, I respectfully request that the IRS consider qualifying the Model Y (5 seat version) for the EV tax credit. This would not only incentivize the purchase of this highly capable and responsible vehicle but also support the broader goal of reducing greenhouse gas emissions and promoting a cleaner and healthier environment. Thank you very much for considering my request. Sincerely, -- Sean Xiaowen Zhang [da4d1202-06d3-4161-812f-f1087b818ba1.png]

Mike	1/3/2023 20:25	(1) The Tesla Model Y is the same SUV regardless of the seat options. All versions of the Model Y are clearly not sedans and are SUVs. EPA and NHSTA agree they are SUVs. All versions of Model Y should be an SUV for the IRA tax credit. (2) Gasoline burning vehicles that get less than 100 or even 50 electric miles on their little hybrid batteries should not be given $7500 of my tax payer money for being an EV. The little battery costs manufacturers less than $1000 to be installed. We don't want to start a tax game of incentivizing all gas cars to cary a compliance battery in the trunk! Thanks Mike Galdos
Hugh Fitzpatrick	1/3/2023 20:25	Folks, I am writing to offer opinion and complaint at inconsistencies in the "Applicable MSRP Limit' applied to fully electric vehicles, in particular to my 2022 Tesla Model Y SUV which I bought 11/2021. The cap "Applicable MSRP Limit" for the * Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) ... $80,000 * Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) ... $55,000 These are the same Model ... with a collapsible back seat option. The logic in the differing classifications is perplexing. Additionally, the overall objective should be to promote cleaner more efficient vehicles. The IRA seems to be overly generous to Hybrid vehicles - which mearly have a battery to avail of the classification "hybrid". Among the PHEV's eligible are a Jeep that has a gas engine and gets 20 MPG. It has 21 miles of electric range. By comparison, my Model Y Long Range, fully electric, can get 113 MPEe. It has 330 miles of range. For the sake of emmisions, efficiency, clenliness, and our community health and clearn air - should the Government not seek to improve these things... ... instead of generous, suspiciously facilitating the current Internal Combustion Engine and Big Oil status quo.
A. Stinson	1/3/2023 20:25	Please add the Tesla Model Y 5 seater to the EV tax credit. Sent from my iPhone
James Graham	1/3/2023 20:25	The Telsa Model Y 5 seater is unfairly excluded from the IRA tax credit. Needs to be included.
Jensen Carbajal	1/3/2023 20:25	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely, Jensen Carbajal
Eitan Schwartz	1/3/2023 20:26	Ordered a Ford Mach-E in May 2022 with the tax credit in mind and after multiple delays was supposed to receive it last year (Dec). The ordering options took the car MSRP to slightly over $55K but understood this wasn't an issue because SUVs qualified if under $80K. It was further delayed and now should reach the dealer by January 19. If I had received it in Dec I would get the $7,500 tax credit, but now I lose it and am encouraged to rather get a much cheaper hybrid (e.g. Ford Escape) that is far less fuel efficient because it's battery only supports 38 miles, but is nevertheless a much better deal because with the cheaper cost and tax credit I save about $30K. I am providing this comment in the hope that the IRS updates what cars are eligible to indeed make the tax dollars spent on credits more effective for a greener environment. Thanks

Sameer Syed	1/3/2023 20:26	For the attention of: Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We are writing to express our strong dissatisfaction and disappointment with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version) as a non-SUV even though it clearly is a SUV. As a consumer interested in purchasing a clean energy vehicle, it is disappointing that Tesla's Model Y 5 seater vehicle is not classified as a SUV and hence not eligible for the $80k limit. At the same time, we are shocked that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the SUV treatment and get the full $7.5k credit. We believe the spirit of the IRA law is meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. So, it is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. We would greatly appreciate IRS's consideration to include Tesla Model Y's 5-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit of $7500 with a maximum limit of $80,000. Thank you, Sincerely, Sameer Syed 1-847-321-8812
Eric Parshall	1/3/2023 20:26	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. --- Thanks, Eric Parshall
Lance Lobo	1/3/2023 20:26	Two main issues: 1. The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. 2. On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. How to fix this: * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Lance Lobo Bangor, ME LCL@USPhoto.org<mailto:LCL@USPhoto.org> 1-813-468-1534<tel:1-813-468-1534> -- Lance Lobo
Adam Wasilewski	1/3/2023 20:26	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves Thank you Adam
Yanira Koester	1/3/2023 20:26	Please include Tesla model Y and model S vehicles in the tax credit. Makes more sense that hybrids Yanira Koester

Name	DateTimeReceived	Body.TextBody
Rob	1/3/2023 20:26	and many others qualify at 80k. Plenty of tweets on twitter about the crazy comparisons that make zero sense. Plug in hybrids 80k cap but not a 5 seater model Y??? Feels like a bailout for legacy auto makers to be honest…. The EPA classifies the model Y as a SUV, no matter how many seats but not the IRS?? Typical govt messing up something that should be so easy. Sent from my iPhone
Richard Matthews	1/3/2023 20:26	Please make the EV tax credit so that it only covers pure EV's, not hybrids that aren't EV's because they burn gasoline too. The way that the EV tax credit is written makes no sense. Any vehicle that is an EV, as in "does not burn any gasoline or diesel, and is entirely powered by electricity", should take precedence over hybrid vehicles. It's called an EV tax credit, not a hybrid tax credit. Hybrids, that still burn gasoline but include a small battery to qualify for EV credits, are not EV's. The fact that a Jeep with a puny 7kw battery would qualify, and a Tesla Model Y would not, is just absolutely ridiculous. best, Dr. Richard Matthews
KENNETH SARNO	1/3/2023 20:26	I am a 75-year-old U.S. natural-born citizen residing in the Los Angeles, CA area (Hermosa Beach, CA). Southern California is the driving capitol of the U.S. Literally millions of people in Los Angeles and Orange Counties commute to work in private passenger vehicles. As a result, we have terrible air quality, especially near the seaports at the southwest tip of Los Angeles county, not far from where I have lived for the last 46 years. The government at all levels should be acting with a sense of urgency to reduce and eventually eliminate pollution from gasoline and diesel-powered individual vehicles, even if it will take decades, because that pollution costs lives. This means that taxpayer dollars should be used to incentivize electrification of the utility grid and transport sectors as quickly as possible. Presumably this is part of the motivation of the IRA. I am the owner of 2 Tesla's including a 2020 Model Y, so I will derive no financial benefit from the IRA. In previous years I have stupidly driven cars like the Jeep Grand Cherokee, which claimed an advertised EPA 18 MPG but actually got 10-12 MPG in city driving. The principal difference between the Jeep and the Tesla is that the Tesla can't tow a 5,000lb. trailer up a muddy hill, and the Tesla doesn't emit copious greenhouse gasses and toxic particulates. The Model Y is an SUV just like the Jeep was. It has five seats. It would be no more nor less of an SUV if it had seven seats. I am writing to request that the government make crystal clear the parameters that lead it to conclude that a 7-seat Tesla Model Y qualifies as an SUV for tax benefits under the IRA, while a 5-seat Tesla Model Y does not qualify, since those two cars are exactly the same except for the 2 seats that reduce the amount of usable SUV cargo space in the vehicle. I would like to see the parameters mostly because they can't possibly make any sense. There is no set of parameters that could rationally justify separate classification of the 5- and 7-seat Tesla Model Y for IRA purposes. Both should be eligible for tax treatment as SUV's, which they are. Please do the right thing and classify all variants of the Tesla Model Y as SUV's eligible for the full $7500 and any other applicable tax credits under the IRA. Thank you. Kenneth M. Sarno 1040 10th St.
Audrey White Stewart	1/3/2023 20:27	Hello there, Mr Andres Garcia, I am writing to express my strong dissatisfaction with the Inflation Reduction Act's rules on how vehicles are classified, specifically the Tesla Model Y. My name is Audrey Stewart and I am writing you on behalf of Tesla. As a Tesla shareholder I do not think that it is fair to not include Tesla cars in the EV incentive program. Sincerely, Audrey W Stewart
Sahaj Gandhi	1/3/2023 20:27	I'm writing to request a review of the Model Y 5 seat configuration to be evaluated as an SUV the same as the 7 seat version to be eligible for the $7500 credit. Having minimum criteria for an electric SUV based on the weight and ride height of the vehicle is the opposite of an optimized fully electric vehicle. Reducing the ride height and lowering the weight of a vehicle increases the range, especially at highway speeds. Range is a key metric for purchasing an EV. More EV's can be produced using the same quantity of battery cells if they are lower to the ground and weigh less. Currently and for the transition period to 100% EV's, the limiting factor on their production is the availability of battery cells. The intention of this bill is to support the EV transition and in that spirit I ask that for fully electric vehicles for the ride height and weight limits be removed for the criteria of determining an SUV with respect to this credit. Thank you.

Name	DateTimeReceived	Body.TextBody
Erik Hehrmann	1/3/2023 20:27	Dear Sir or Madam receiving this at the IRS, I am puzzled by how the Inflation Reduction Act rules are being applied on vehicle purchases, specifically the classification of the Tesla Model Y (5 seat version). I'm considering buying that car an don't understand how it is not classified as a SUV in these rules, and therefore not eligible for the $80k limit to have the $7,500 tax credit applied. At the same time, to me it makes no sense that hybrid cars with tiny batteries and laughable electric (= clean, emission free) range are eligible for the full $7,500 credit; e.g. the hybrid Ford Escape PHEV and Jeep PHEV. To me this reeks of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. Why not go a step further and limit tax credits to only fully electric vehicles? Yes, those are more expensive than gas powered or hybrid cars, but because only full EVs accelerate the transition away from fossil fuels is exactly the reason why the government should incentivize their purchase, and NOT that of gas burning cars.
Hani Safi	1/3/2023 20:27	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21 miles electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV to increase its MSRP limit to $80k, especially since it is the most "American made" car on the market as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Hani Safi
Marcus Pitts	1/3/2023 20:27	RE: Public Comment Request Hello - I'm disappointed in the IRS, and I'm struggling not to judge the IRS's intent regarding their SUV definition, which excludes certain "SUV's", as previously defined by other agencies, from the federal tax credit. I won't bother with specifics; I'm sure other comments have included details - but the bias results are noticeable and seem to go against the stated objective. I hope there is enough pressure that you reconsider and change your program. Meanwhile, I'll continue to do my part on a personal and professional level to advance environmental progress and I ask that you do yours. Thank you, Marcus Pitts (503) 616-8785
Mario Raposo	1/3/2023 20:28	Tesla Model Y only qualified with a seven-seat configuration. That's despite the VW ID.4, which has about the same size as the Model Y and Mach-E, being considered a SUV and getting access to the tax credit for a price of up to $80,000. It goes against the purpose of the program, which is to encourage sales of more efficient vehicles. Vehicles with lighter weights are more efficient. There are several SUVs that have less cargo space than the Tesla Model Y and Ford Mustang Mach-E that are considered SUVs in the program, like the BMW X5 plug-in and Jeep Wrangler plug-in. it's inexcusable that the new tax credit gives $7,500 for a vehicle like the Jeep Cherokee 4xe and not the Tesla Model Y. the cargo space inside is a big deal when defining a SUV and the Model Y actually has 100 liters more cargo space than the Cherokee 4xe Model Y also has an efficiency of 115 MPGe versus 56 MPGe for the Cherokee 4xe. What are your criteria to keep the Model Y 5-seats out of the tax credit? PLEASE CHANGE IT TO INCLUDE THE MODEL Y FIVE SEATS TO THE TAX CREDIT ELIGIBLE CARS LIST. Thank you, Mario Raposo

Name	DateTimeReceived	Body.TextBody
Andy Woerpel	1/3/2023 20:28	I am writing to voice my concern regarding what I see as a misclassification of the Tesla Model Y (5-seat variant) SUV as a part of the " Qualified Plug-in Electric Vehicle Credit and Rev. Proc 2022-46." (OMB Number: 1545-2137). The Model Y is classified by the EPA in all of its variants as an SUV but this bill makes a distinction between the Model Y's classification based on the trim option for number of seats (7 seater is an SUV, 5 seater is not). I feel this type of classification based on number of seats is not warranted and should be corrected. And looking at this from a common sense perspective, if I have an SUV with 7 seats, and remove 2 of them, I still have an SUV. As it stands now, it seems like this differentiation is some sort of technicality that was designed to exclude Tesla vehicles from receiving benefits from the IRA. Regards, Andy Woerpel
Bauer, Erhardt	1/3/2023 20:28	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely, Erhardt Bauer/Zhi Hu Northville, MI 48168
Yogesh Persaud	1/3/2023 20:28	Hello, Tesla Model Y 5 seater should be included, it's the exact same vehicle as the 7 seater. It's crazy how this was setup.
Thomas Eckert	1/3/2023 20:28	My assumption is it is a silly oversight that the Tesla Model Y "5 seat" variant is not identified as a qualified SUV variant when it clearly should be. It should be added to the qualified SUV list of EV vehicles. In addition, I am shocked, in this day and age, that any hybrid vehicle made the list at all. These vehicles may have had some relevance in years past, but clearly, they do not today. They should be dropped entirely. Sincerely, Tom Eckert Ridge, NY Sent from my iPad
Muhammad Faris Arditiyanto	1/3/2023 20:28	Dear IRS, I am writing to express my outrage at the current tax credit system for electric vehicles. It is beyond foolish to incentivize the use of hybrid cars, which still rely on fossil fuels and contribute to emissions, while fully electric vehicles are not given the same support. The decision to disqualify the Tesla Model Y from the tax credit simply because it is more mass efficient than other SUVs is ridiculous. If the goal is to encourage the use of more fuel-efficient vehicles, then the Model Y should be at the top of the list for receiving a tax credit. It is a fully electric SUV with zero emissions, and it is available in Standard, Long Range, and Performance versions. This decision by the IRS is not only misguided, but it is also damaging to the future of our planet. The use of fossil fuels is one of the leading causes of climate change, and transitioning to electric vehicles is a crucial step in reducing our carbon footprint. By hindering the adoption of electric vehicles, the IRS is actively working against the goals of combating climate change. I demand that the IRS reconsider this policy and start supporting the widespread adoption of electric vehicles. The future of our planet depends on it. Sincerely, Faris Ardi
Shahram Abyari	1/3/2023 20:29	I'm disappointed with the decision to not consider Tesla Model Y 5 seat as SUV. I understand the criteria is weight but that doesn't make sense. It basically penalizes the company that has more efficient design. Increasing the limit for Model Y 5 seat is only aligned with intent of law makers to increase clean energy vehicles. Please reconsider. Thanks, ~Shahram Abyari

Name	DateTimeReceived	Body.TextBody
Frank DiPietro	1/3/2023 20:29	My understanding is that this is a $7500 non-refundable credit without a carry forward provision. My feeling is that if it is a non-refundable credit a taxpayer should be able to carry forward any unused portion of the credit to following years much like the home energy tax credits. Secondly excluding the Tesla Model Y from the credit because it is not considered by the IRS to be an SUV and its price is above the cap set for non-SUVs does not make sense to me in the context of other much less energy effiicient vehicles does not make any sense. The Tesla Model Y has a rating of 117 MPGe with a range of 330 miles. This is exactly the type of car that we should be incentivizing people to buy using this tax credit. Excluding this vehicle due to its price or saying it is a non-SUV or the combination of both is simply not in the spirit of the behavior the law is trying to get people to exhibit. Respectfully, Francis R. DiPietro
Justin Roeland	1/3/2023 20:29	Hi there I just wanted to comment on the omission of the Model Y models from the tax credit. Clearly, the point of the tax credit is meant to incentivize the purchase of more environmentally friendly vehicles. The model Y are pure electric, unlike some other hybrid versions from other manufacturers. This makes no sense. Please move to correct this oversight. Thanks, Justin Roeland Sent from my iPhone
Ashok Elluswamy	1/3/2023 20:29	Hello, Please include the 5 seater Tesla Model Y in the IRA EV tax credit. The car is a pure EV with 330 miles range and is one of the safest cars. We need to incentivise people to purchase these kinds of cars to actually further climate change action which is the actual motive of the EV tax credit. Thanks, Ashok
Alex Rodriguez	1/3/2023 20:29	Please Consider adding Tesla Model Y to tax credit since it's only off by 250 pounds it deserves to quialfy and it's the most made American ev what more can you ask for?
Jamar Fraction	1/3/2023 20:30	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future and act in the national security interests of our country.
Mark Fritz	1/3/2023 20:30	Tesla model Y wouldn't receive rebates. The sheer number of low mileage hybrids receiving a full rebate is embarrassing. We should attempt, as a country, to have intelligent criteria for EV rebates. Thanks, Mark Fritz
Ruby Lewis	1/3/2023 20:30	Dear IRS, I strongly disagree with Tesla model y and ford mach e not receiving the same ev credits from the IRA as less positively performing ev/hybrids. Please rectify this gross error. Sincerely, Ruby Lewis
Gary Deano	1/3/2023 20:30	Please adjust the IRA credit to include the Tesla Model Y, which is currently just over the $50,000 MSRP limit. It makes a difference for me and as it stands now, I will likely purchase a hybrid rather than full electric vehicle. Sincerely, Gary

Name	DateTimeReceived	Body.TextBody
Joaquin Clay	1/3/2023 20:30	IRS Section Members, The way in which the new electric vehicle tax credit is being applied provides more incentives to buy hybrids that get over 85% of their daily driving range from their internal combustion engines (that are not electric) over actual electric vehicles. If all other government organizations (like the NHTSA) determines a car to be an SUV, then it should be consistent within the IRS. Also, the IRS is incentivizing inefficient EVs by allowing weight to play a role in determining whether or not a vehicle is an SUV; either seating, cargo capacity, or some other metric should be used and explained clearly to the public. The point of the tax credit should be to strengthen American domestic manufacturing of the next generation's mobility platform. Improper implementation of this incentive will result in the loss of American competitiveness and subsequently American jobs and economic growth. One must recognize that the manufacturing similarities between internal combustion engine vehicles (including hybrids) to battery electric vehicles are less than 20% on average. Incentivizing PHEVs and other electrified vehicles more than true EVs is a complete waste of tax payers dollars. This will not help automotive workers learn the skills required for BEV production, it will not push internal combustion engine manufacturers to learn the technology necessary, nor will it solidify American manufacturing of EVs at scale. China and other countries are bringing competitive EVs to our nation (like the Chinese "state sponsored" NIO or XPENG) at a lower price and more value than current American made EVs outside Tesla. Americans can't have another incident like the Japanese automotive take over that cannibalized the sales of domestic automotive manufacturers. Please reconsider which vehicles are allowed to receive the EV tax credit and ensure that BEVs (not just PHEVs) are incentivized above all else; don't waste tax payer dollars on obsolete technology. Lastly, please ensure that American companies like Ford and Tesla (the most American made car manufacturer of any kind according to the US government) receives the maximum tax incentives as they are the shining light that other automotive manufacturers must follow to survive this rapid transition. Joaquin W. Clay Jr. U.S. Army Special Operations Ret.
Matthew Heinrich	1/3/2023 20:30	Hello, I believe the eligibility of the clean vehicle tax credit should be modified to include Tesla Model 3, Tesla Model Y (5-seat), and Ford Mustang Mach-E SUV at up to $80,000 MSRP. It makes no sense to me that the 7-seat version of the Tesla Model Y has a different MSRP limit than the 5-seat version… Feels like an oversight. Even more puzzling is the 5-seat Wrangler 4xe (gas-electric hybrid) somehow qualifies for models with an MSRP up to $80,000. Please reconsider and increase the current proposed MSRP caps on the Tesla Model 3, Tesla Model Y (5-seat), and the Ford Mustang Mach-E SUV. Sincerely, Matthew Heinrich
Sumeet	1/3/2023 20:30	Hello Sir/Madam I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the 1. classification of the certain eligible SUV's for a lower dollar threshold (Tesla Model Y for 55K vs 80k) for EV credit 2. Eligibility of Hybrid call with a minimal battery range (20-30 miles) for 7500 subsidy which is plain ridiculous. As a consumer interested in purchasing a clean energy vehicle, I am frustrated that Tesla Model Y vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for a. credits for foreign-made EVs on lease b. credits for hybrid vehicles with nominal battery range It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. let me know if any questions
Neal East	1/3/2023 20:31	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Thanks, -- Neal East nealeast@gmail.com<mailto:nealeast@gmail.com>

Name	DateTimeReceived	Body.TextBody
Peter Helander	1/3/2023 20:31	For the attention of: Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 REQUEST TO INCLUDE TESLA MODEL Y 5 SEAT MODEL AS SUV AND $80,000.00 LIMITE! Dear Mr. Garcia, We would really and truly appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles are qualifying for the credit inexplicably. The Tesla Model Y is also one of the most American-made EV and so the tax credit would also benefit the American economy. I own a Tesla Model Y 5 seat version and I bought it as SUV. Your consideration of this matter is highly valued. As you surely know by now, there are tons of videos covering this anomaly, here just one, https://www.youtube.com/watch?v=WgYZr9OYRDY, but they all seem to NOT understand WHY Tesla Model Y 5 seat is NOT classified as an SUV, since both NHTSA and EPA, has classified it as an SUV – especially since the 7 seat version is classified as an SUV. 2. https://www.youtube.com/watch?v=K6OIUshTIHI 3. https://www.youtube.com/watch?v=lhEw5To1ftA 4. https://www.youtube.com/watch?v=7yAdviya7Ls&t=15s Yours sincerely, Thanks.
nervkil	1/3/2023 20:31	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Andrejko, George	1/3/2023 20:31	It's crazy that the model y 5 seat is not included in the tax credit.

Name	DateTimeReceived	Body.TextBody
Brad Jackson	1/3/2023 20:31	Please learn the difference between battery electric vehicles and hybrid vehicles. Cars that burn gasoline or other fossil fuels should not qualify for a government subsidy aimed at curbing climate change. The current list of qualifying and non-qualifying vehicles is a travesty and shows a complete lack of understanding and comprehension on the part of the government. Please also learn what is and is not an SUV. Having two rows of seating vs three rows does not and should not change the designation of a given vehicle. Please do better with the resources we painstakingly provide you to allocate. Thank you, Brad Jackson
Joseph Maj	1/3/2023 20:32	Re: Classifying BEVs as Cars, SUV, Trucks, or Other I believe that the IRS should use the classifications assigned by the EPA. In particular, Tesla Y, Ford Mach E, and Cadillac Lyriq by common sense would be assigned to the SUV category. Consider that for an EV to have practical driving range, it has to be extremely efficient because of the limited energy that can be stored by battery. The attributes traditionally pointing to SUV: weight, external dimensions, ground clearance, are detrimental to efficiency. Philosophically, the goal that matters is to transition ground transportation to sustainable energy. Americans prefer by their purchases SUV type platforms for their utility. Every effort should be made to be inclusive into this category rather than exclusive to meet outdated regulations. Thank you for your attention, Joseph J. Maj, Ph.D. Midland, MI
Scott Breckling	1/3/2023 20:32	The Tesla model Y all-wheel drive, long-range, and performance five-seat variants do not qualify for the tax rebate because their MSRP exceeds the IRS $55,000 threshold. I am very close to ordering one. Regards - Scott Breckling
Robstew1	1/3/2023 20:32	Thank you [IMG_7185-80x80.jpg] ByJohnna Crider<https://www.teslarati.com/author/johnna/><https://twitter.com/JohnnaCrider1> Posted on January 3, 2023 The Internal Revenue Service (IRS) is inviting consumers<https://www.federalregister.gov/documents/2022/12/30/2022-28402/proposed-collection-requesting-comments-on-form-8936-qualified-plug-in-electric-drive-motor-vehicle#addresses> to share comments on the electric vehicle tax credit qualifications. Tesla and electric vehicle supporters have been vocal about the Inflation Reduction Act's qualified cars for the EV incentive. Some variants of the Tesla Model Y and the Ford Mustang Mach-E will not receive any incentives<https://www.teslarati.com/tesla-protest-ira-incentives-evs-vs-hybrids/> from the IRA at all, yet some vehicles that use fossil fuels will. Those vehicles are classified as electric vehicles because they are plug-in hybrid EVs.
Brandon Lee	1/3/2023 20:32	Dear IRS, There are a number of vehicles such as Tesla Model Y(5 seater version) and Ford Mach E, are clearly treated as SUV in various government sites like www.fueleconomy.gov. But those vehicles are not qualifying for $80,000 doesn't seem right and it's clearly confusing. They should be included to qualify $80,000 tax credits. Additionally, It doesn't seem right usage of EV tax credits to those hybrid vehicles that are still consuming fuel. Only 100% non-emission vehicles should be included in order to promote EV. Thank you so much,
Sawyer Merritt	1/3/2023 20:32	Please classify every Tesla Model Y variant as an SUV and make all variants eligible for the $80k EV cap (vs $55k Sedan/Other cap). It makes no sense that a Jeep with a gas engine that gets 20 MPG and has 21 miles of electric range gets the $7,500 EV credit, but the Model Y with 330 miles of electric range and a 113 MPEe doesn't. Teslas are literally the most American cars on the road (per cars.com). Including PHEVs with tiny batteries and range into this credit make no sense. This is a flagrant waste of resources, ensures we fall behind in clean vehicles and enables further destruction of our environment. Please fix this. Thank you, Sawyer Merritt
Pat Mohr	1/3/2023 20:32	Hello, I would like to comment on the recent EV tax vehicle qualifications released. There are multiple examples across Tesla (Model Y), General Motors (Cadillac Lyriq), and Ford (Mustang Mach E) of SUVs not qualifying to the applicable SUV MSRP limit and instead being considered sedans for the purposes of the tax credit. These vehicles are all SUVs. In the case of the Tesla Model Y, the vehicle is considered an SUV by the EPA and it should not require 7 seats to be considered an SUV. Furthermore, hybrids with small batteries and poor fuel economies should not qualify for the full EV tax credit. This is counter to the goal of moving to EVs and doesn't follow the definition of an "SUV" used for BEVs. Thank you for considering my feedback. Thank you, Pat

Name	DateTimeReceived	Body.TextBody
Sonny Lloyd	1/3/2023 20:32	Please rejig your incentive program to not penalize weight efficient SUV and all electric vehicles. Tesla needs to be more present on EV incentives list. Thanks, Sonny
Reigneer Destynn	1/3/2023 20:32	weekly was not only hard but took a lot of thinking before converting to a (non plug in) Hybrid, but it was "My" step in the right direction. I'm now once or twice a month to a gas station, and significantly less gas per fill, this is still a change from just a person like me. I imagine there are a lot more like me that won't get to qualify for this rebate even though we should, yet a Jeep that gets 20MPG gets to qualify??? Not fair, not logical. Only because it's a plug in? Mine can't qualify because it's a hybrid, not a plug in Hybrid?? What?! This doesn't even make sense! In December of 2021 I couldn't find a plug-in vehicle anywhere in Las Vegas, Nevada. I was told the manufacturer can't sell one, the state doesn't have enough charge stations so they can't bring in plug in hybrids, blah blah blah. Buy this overpriced vehicle instead because we have a "Chip Shortage" Henderson Hyundai told me there were rules against selling it from either the Manufacturer or the state. As a consumer, I wasn't given a choice. Gas or hybrid or pay 50-80% markup on electric vehicles. Or wait 2 years on an ordering list. Or Pure EV vehicles were priced out of my range. Thanks to the pandemic, no vehicle was cheap, I bought a brand new Hyundai Santa Fe Hybrid In my price range,y wife a Hyundai Ionic car in our price range. It's amazing, and that's come from the group of people that are afraid of stepping all the way into Electric vehicles for numerous reasons, like range anxiety. However, I feel if I never bought a hybrid, I would not be considering an electric vehicle in the near future! There are some ridiculous vehicles on this list, as you will hear from all the complaints. But my vehicle and my wifes Hyundai Ionic make amazing gas mileage for not being plug in (which again we didn't get a choice in our state). My wife's vehicle gets 55 city and 59 highway! That's insane compared to her old Ford SUV that got 20 on highway. Yet our 2022 vehicles bought at the end of 2021 don't qualify for something?! We did our part and the government won't do good on theirs? I understand the push to move everyone to Full Electric but your moving generations of people, old and young who have legitimate concerns, for example range anxiety, size of family vs size of electric vehicle and their cost, heck even just the cost of pure electric cars isn't the same as hybrid, effectively eliminating the average worker family from affording it and even getting an incentive. The availability of Plug In hybrids are just not available everywhere... I truly think the best thing to do is revise the list to include hybrid and plug in hybrids from 2020~ on. Due to the availability of these choices, it wasn't fairly easy after pandemic to afford a new vehicle or find one, making it hard to find something to buy in any configuration. And then ultimately hard to afford due to inflation!
Jake Durkin	1/3/2023 20:32	To who it may concern, In December, the IRS announced the vehicles<https://www.teslarati.com/tesla-vw-evs-2023-ev-tax-credit/> that qualified for the 2023 EV tax credit. Some of these vehicles include plug-in hybrid EVs that use gas and batteries. Although there were several Tesla Model Ys on the list, the only ones that qualified as an SUV with an $80,000 MSRP limit were the seven-seat varieties. Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. This is a HUGE mistake. I urge you to reconsider. Disclosure: I am not a Tesla shareholder, but I have deep confidence in the mission of the company and believe this is a gross oversight. Please also urge President Biden to start representing Tesla as THE company that pioneered the EV market. All the best, John P Durkin JP.durkin12@gmail.com
Aaron James	1/3/2023 20:33	OMB Control No. 1545-2137 To whom it may concern, Please reconsider the Tesla Model Y 5 seat qualification. It is an SUV and American Made! It is also one of the safest cars ever tested. We should support American Made and Safety and encourage the public to buy American with this bill. Thank you, Aaron James Bosque Trails Hospice 303 San Mateo Blvd NE Suite 104 ABQ, NM 87108 office: (505) 808 2870 fax: (505) 322 2709 ajames@bosquetrailshospice.com
Ken Donato	1/3/2023 20:33	Hello, I can't get a Tesla Model Y SUV with the tax credit but I can get a $7500 tax credit on a JEEP WRANGLER??? Why are tax dollars being used to subsidize gas vehicles like a JEEP WRANGLER and not an ALL ELECTRIC SUV (yes all agencies refer to the Tesla Model Y as an SUV). Make this right. Ken Donato
Steve C	1/3/2023 20:33	Tesla Model Y 5 seater should be included in EV tax credit qualifications and should have been from the beginning

Name	DateTimeReceived	Body.TextBody
Arman N	1/3/2023 20:33	I am writing you regarding the EV Tax Credit amd would like you to consider Tesla Model Y with 5 seats included in the group recieving the $7500 credit. The car is pure electric and made in this country. That is the right thing to do. Regards, Arman Noghreh
Wei Yang	1/3/2023 20:33	We would appreciate the consideration of inclusion of the Tesla Model Y Five-seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with Maximum limit of $80,000. The Tesla Model Y is the most popular America-made EV SUV and it's the most efficient and safest car. So the tax credit would be beneficial to the American economy. Your consideration is highly valued in this matter.
Joshua Harrelson	1/3/2023 20:33	to the credit-- Joshua Harrelson
Jennifer wright	1/3/2023 20:33	To Whom It May Concern: I don’t think it’s fair that Tesla cars, trucks, and SUVs are excluded from the tax credit. That’s the most American car company operating today and it, too, deserves the incentive a tax credit provides. Thank you. -Jennifer Wright 915-373-7300 My food is grown, not born. Go vegan and nobody gets hurt.
James O'Connell	1/3/2023 20:33	To whom it may concern, Please reconsider the Inflation Reduction Act EV Tax Credit to include the Tesla Model Y. This SUV is a pure EV with a 330-mile range, 117 MPGe, and is currently not eligible for the $7,500 tax credit. This needs to be rectified as many other SUVs with lesser efficiency (including hybrids) do qualify. It seems TESLA is purposefully being singled out, which is not only unfair, but un-American as their vehicles are proudly made right here in the USA. Thank you, James O'Connell Vice President GenCon Corp.
Sim	1/3/2023 20:34	I think tesla Model Y 5 seater should be included and silly that it’s not from the beginning
Benny Kee	1/3/2023 20:34	There is NO way that the IRS can call the 7 seater Tesla Y a SUV and the 5 seater a sedan. I own a 5 seater Y and my vehicle is a SUV, period. It is the same car between the two with the exception of two more seats. 2 seats less or a slightly lower weighted vehicle does not change the defination of what a SUV is called. This is clearly an attempt to block the 5 seat Tesla Y from getting the full 7500 tax credit. This attempt to screw Tesla is pathetic and not worthy of the IRS. Shame on you and change this ruling immediately! Benny Kee Tesla Owner Olympia, WA
Murat Baykal	1/3/2023 20:34	I invite IRS to achieve consistency in the classification of vehicles. For example, it appears counter intuitive and against the spirit of IRA to classify the 7-seat Tesla Model Y as an SUV but classify the 5-seat version of the same vehicle, which has identical exterior and interior measurements, as a sedan. Thank you for your consideration. Murat Baykal Sent from my iPhone
Erin Kabbash	1/3/2023 20:34	Hello, I would like to submit a formal comment on this matter. The details that require vehicles to qualify for this credit frankly do not make sense and appear to be unfair and one sided favoring certain companies over others. It does not make any sense that any vehicle that takes fossil fuels qualifies for this credit but the Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. Please review which vehicles qualify and which do not. Pure EVs of all kinds should qualify and any vehicle that takes a fossil fuel should not. Anything outside of this does not appear to be in the best interest of this EV tax credit. Best regards, Erin S Kabbash

Name	DateTimeReceived	Body.TextBody
radhamesacosta	1/3/2023 20:34	I'm writing to request a review of the Model Y 5 seat configuration to be evaluated as an SUV the same as the 7 seat version to be eligible for the $7500 credit. Having minimum criteria for an electric SUV based on the weight and ride height of the vehicle is the opposite of an optimized fully electric vehicle. Reducing the ride height and lowering the weight of a vehicle increases the range, especially at highway speeds. Range is a key metric for purchasing an EV. More EV's can be produced using the same quantity of battery cells if they are lower to the ground and weigh less. Currently and for the transition period to 100% EV's, the limiting factor on their production is the availability of battery cells. The intention of this bill is to support the EV transition and in that spirit I ask that for fully electric vehicles for the ride height and weight limits be removed for the criteria of determining an SUV with respect to this credit. And no hybrids please! Thank you. Respectfully sent, Radhames Acosta
Sim	1/3/2023 20:35	I think tesla Model Y 5 seater should be included and silly that it’s not from the beginning
Catherine Coy	1/3/2023 20:35	I’m writing to express my strong dissatisfaction with the rules promulgated by the Inflation Reduction Act on how vehicles are classified; specifically, the classification of the Tesla Model Y (5-seat version). As a consumer interested in purchasing a clean energy vehicle, I’m frustrated that the Model Y isn’t classified as an SUV, thereby making it ineligible for the $80,000 limit. Furthermore, I’m shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it doesn’t support American-made EVs and doesn’t incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5-seat version) as an SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It’s important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
lifewithmiddie@gmail.com	1/3/2023 20:35	In light of the existing selections for which EVs are considered SUV and which are considered Sedans, can you please just use the NHTSA classifications? They seem to have correctly identified vehicles by classification instead of however the IRS is making this determination. Here are some examples: https://www.nhtsa.gov/vehicle/2022/TESLA/MODEL%252520Y%252520%2525205-SEAT/SUV/AWD https://www.nhtsa.gov/vehicle/2022/FORD/MUSTANG%252520MACH-E/SUV/AWD https://www.nhtsa.gov/vehicle/2023/CADILLAC/LYRIQ/SUV/RWD IRS has classified these vehicles as Sedans which is clearly incorrect per NHTSA’s classification. Please consider using NHTSA for determining which EVs are sedans and which ones are SUVs. Sincerely, Douglas Birk EV Owner and Enthusiast
Thomas Kadlec	1/3/2023 20:35	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers’ interests. Not to mention, far less efficient "hybrid" vehicles that burn oil and gas with less than 1/10th the electric range are qualifying for the credit at the $80,000 price point. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Thank you, Thomas Kadlec

Carolina Arauz	1/3/2023 20:36	OMB Control No. 1545-2137 To whom it may concern, Please reconsider the Tesla Model Y 5 seat for qualification as an SUV in the IRA. It is an SUV and American Made! It is also one of the safest cars ever tested. We should support American Made and Safety. We should encourage the public to buy American with this bill. Thanks, Carolina James
Juan-David Quinones	1/3/2023 20:36	Hello Please reconsider eligibility of BEV for tax incentives as part of the Infrastructure bill. Qualifications for eligibility are completely illogical and hurt the desperately needed, rapid adoption of BEV cars in America. This most unfairly impacts American auto manufacturers like Ford and Tesla. The Mach E and Model Y models especially. Cordially Juan-David Quiñones
Michael McKavanagh	1/3/2023 20:37	As the current decisions are corrupt to the core, giving incentives to vehicles with gas engines, and not to fully battery electric vehicles such as Tesla's model Y 5 door variant. How can I express my opinion officially? Thanks, Michael McKavanagh
jim sullivan	1/3/2023 20:37	Hello, "Some variants of the Tesla Model Y and the Ford Mustang Mach-E will not receive any incentives<https://www.teslarati.com/tesla-protest-ira-incentives-evs-vs-hybrids/> from the IRA at all, yet some vehicles that use fossil fuels will. Those vehicles are classified as electric vehicles because they are plug-in hybrid EVs." If the above quote is true I must state my strong disappointment in the qualifying criteria. Our country needs to lead by stepping forward and own a speedy transition to transportation powered by renewal power. Offering incentives to hybrids but not EVs is disingenuous to that step forward. Please move to mitigate this impropriety. Sincerely, James P Sullivan 16 Waldorf Ave, Hurleyville, NY 12747

Name	DateTimeReceived	Body.TextBody
Austin S	1/3/2023 20:37	Hello, I would like to comment on the tax credit not applying to Tesla model Y 5 seat variant. This doesn't make any sense not giving a tax credit on this car. It's an all electric SUV, but yet you are giving them out to inefficient 5 seater Jeep plug in hybrid SUV. Please considering revising your qualifications for the tax credit to include the Tesla Model Y 5 seater. Thank you! Austin Storms Sent from my iPhone
Amirhosein Zare	1/3/2023 20:37	To those whom may consider Tesla Model Y 5 seater needs to be included in $7500 government subsidy and i was surprised when i found out that it wasn't while ford mach E (smaller size) was included Sincerely yours
Hugh Knight	1/3/2023 20:37	Electric Vehicle tax credit discrepancy for Tesla Model Y 5 seater: I am not one of the citizens who has gone to extreme depths of research over this topic. But from the information that I've gathered from online sources, it seems to me that the part of the reduction act bill concerning Electric Vehicle tax credits was extremely overlooked when it comes to actual electric vehicles that deserve tax credits like the model y 5 seater. If there was an actual person overlooking this specific area of the inflation reduction act, I think common sense would have allowed them to see that the model y is clearly amongst the vehicles deserving of this tax credit as it is fully electric and does not run on fossil fuels and is an incredible vehicle to help push our Global effort for green energy and renewable resources.
Derek Joyoprayitno	1/3/2023 20:37	To whom it may concern, I am writing to express my concern that my tax dollars are going towards incentives on EV vehicles unfairly in the Inflation reduction act. I believe the Ford Mach E and Tesla model Y should be considered SUVs in any configuration. They are fully electric and American cars by American companies. Hybrids and cars made by foreign companies should not be getting better benefits. I urge you to re-examine who should be eligible under the spirit of pushing towards renewable energy and supporting American growth in this space. Thanks, Derek -- Derek Joyoprayitno Derekjoyo@gmail.com
rosa girl	1/3/2023 20:38	My name is Rosa Tacilda Goulart da Luz, I'm 43 years old,I'm a lawyer and a teacher, and I come through this email, ask, Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves Obter o Outlook para Android<https://aka.ms/AAb9ysg>
Dominic McCarthy	1/3/2023 20:38	To whom it may concern, it is truly puzzling why the Tesla Model Y 5 seater - a 100% EV - is not eligible for the tax credit. Especially compared to other Hybrid vehicles with ca. 10% the EV battery range and likely a >80-90% usage of fossil fuels. PLEASE reconsider and include the Tesla Model Y 5-seater in the list of eligible vehicles for the 7.500$ tax credit. The tax credits must go to those vehicles which produce the greatest benefit towards the intended purpose of the tax credit - this definitely includes the Model Y 5 seater. Many thanks D. McCarthy Sent from my iPhone
Russ Riediger	1/3/2023 20:38	Please change the rule so Model Y is eligible for tax credits. It makes no sense that hybrids get the credit but not pure EVs. Russell Riediger College Park, GA 30337 404-441-8743 Sent from my iPhone

Name	DateTimeReceived	Body.TextBody
jake estes	1/3/2023 20:39	The differences in threshold defined by 2 foldable seats makes no sense for Tesla and how their trims are structured. It's substantially the same vehicle regardless of seating. I trust that you will adjust these thresholds so more consumers can afford the most American made electric vehicle. Best, Jake Estes
Peyton Schaefer	1/3/2023 20:39	Hello, The Tesla Model Y and Model 3 must be included in thE IRA tax incentives. It seems wrong to include hybrids and ICE vehicles and not the EVs that kickstarted the electric revolution. Thank you for your consideration
Pedro Teixeira	1/3/2023 20:39	To whom it may concern, Transitioning the economy to a more environmentally friendly option for vehicles is a noble goal. The IRA includes many incentives to encourage the adoption of electric vehicles. It doesn't seem to make sense to have larger incentives for less efficient or less safe vehicles. I hope you will reconsider including the Tesla Model Y 5-seater for the full credit. After very careful research I've found that it is a great option for many with its fully electric and highly efficient drivetrain as well as its many safety awards and recommend it to many who express interest in electric vehicles. Thank you, Pedro
Anthony Dufour	1/3/2023 20:39	To Whom It May Concern: Thank you for this opportunity to express my concerns. As I understand it, the EV tax credit was created to incentivize the production and purchase of American made EVs. As such, I feel that hybrids should be removed from the tax credit list, since they have internal combustion engines and that the Model Y 5 seater should be classified as an SUV. This will incentivize the purchase of greener technology and the most American made vehicle on the market. Many Thanks, Anthony Dufour Sent from my iPhone
Barret Hoffstetter	1/3/2023 20:39	Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely,
Roy	1/3/2023 20:39	To Whom It May Concern, The Inflation Reduction Act has provided for up to $7,500 in Federal Tax Credits when people purchase Battery Electric Vehicles and Hybrid Electric Vehicles. However, certain categorization is very confusing and arbitrary. For example, one of The best-selling SUVs is Tesla's Model Y 5 seater. I am surprised that it has to be priced below $55,000 in order to qualify for this EV tax credit. While on the other hand, a Jeep Grand Cherokee 4xe, with a gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, will get a $7,500 tax credit. I don't want this IRA to be a bail-out in disguise for the legacy automakers. I don't want my tax dollars to subsidize legacy automakers who still make gas-engine cars while true innovators like Tesla got penalized/ or dealt with an unfair competitive disadvantage. Please correct your mistake by classifying Tesla Model Y 5 seater as an SUV so that it could get a $7,500 tax credit if its MSRP is below $80,000. Thanks, Shengwen Rong
Robert Carter	1/3/2023 20:39	This is crazy ypu have to include the model y for god sakes help America out. Anything with a gas engine should not be on the list.

Name	DateTimeReceived	Body.TextBody
Daniel Lipetzky	1/3/2023 20:40	Hello, I'm writing to support including additional qualified vehicles under the IRA plug-in credit. The spirit of this portion of the bill is to accelerate adoption of EVs in this country and excluding certain cars based on very arbitrary guidelines is in direct contradiction to that. Specifically, the definition for SUV needs to be altered to allow the most popular and best SUVs on the market including the Ford Mach-E, all variants, and the Tesla Model Y, all variants. Setting limitations that exclude those, among others, fails common sense, fails the smell test, and absolutely fails to meet the law. Thank you, Daniel Lipetzky
Matt Connors	1/3/2023 20:40	Hello, I am emailing about the EV tax credits and how silly it is that plug-in hybrids, that still require gasoline and have horrible MPG performance, will qualify for an EV tax credit; however, the brand new Tesla Model Y that I purchased in 2022 does not qualify. If the EV tax credit is in place, it should include any EV that is 100% electric, regardless of how much it costs. Best, Matthew Connors
Venkat Nagabandi	1/3/2023 20:40	I'm writing to request a review of the Model Y 5 seat configuration to be evaluated as an SUV the same as the 7 seat version to be eligible for the $7500 credit. Thanks, Venkata Nagabandi
Ang Chen	1/3/2023 20:40	Please reconsider the EV tax credit rule. Hard to believe some of the most popular PURE EVs like Tesla Model Y and Mach-E are not qualified. While some gas cars can benefit. These are very messed up "EV" tax credit rules. Please fix them. Thanks,
Ben Alsop	1/3/2023 20:40	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
David Pollack	1/3/2023 20:40	The Jeep has a gas engine and gets 20 MPG. It has 21 miles of electric range. It gets a $7,500 EV Tax Credit. The Model Y 5 seater is ELECTRIC ONLY and gets 113 MPEe. It has 330 miles of range. IT DOES NOT GET A $7,500 EV TAX CREDIT. What gives?! Smells like corruption [image0.jpeg][image1.jpeg]
Lauren R.	1/3/2023 20:40	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Name	DateTimeReceived	Body.TextBody
Rob Harmon	1/3/2023 20:41	Dear IRS, I am writing to express my support for the inclusion of the Tesla Model Y in the $7,500 tax credit for electric vehicles. As you may be aware, the Model Y is a fully electric, highly efficient vehicle that has the potential to make a significant impact on the reduction of carbon emissions. Not only is the Model Y a cost-effective and reliable mode of transportation, it also represents the future of sustainable transportation. Its inclusion in the tax credit program would encourage more individuals and families to make the switch to electric vehicles, helping to reduce our dependence on fossil fuels and combat climate change. In addition, the Model Y has received widespread praise for its safety features and overall performance. Its inclusion in the tax credit program would not only benefit the environment, but it would also provide a valuable incentive for consumers to choose a safer and higher quality vehicle. I urge you to consider the many benefits of the Model Y and to include it in the $7,500 tax credit program. Thank you for your attention to this important matter.
Thomas Bethke	1/3/2023 20:41	correct this. Thank you
rebecca lorenzana	1/3/2023 20:41	Greetings IRS, I would like to comment on the EV Tax Credit that most EVs do not qualify for. I am not sure what good it will do to make it right, but at least I will put in the effort. When I heard the President was going to propose a change in the EV tax credit, I was hoping he would allow Tesla cars to qualify for the tax credit since they were American-made. I decided to buy a tesla with the hopes this tax credit would kick in. I was disappointed to hear that the president only allows SUVs up to 80k to qualify and sedans worth 55k to qualify. Regardless, I decided to buy a Tesla and took my Model 3 Performance delivery in June 2022, and I am thankful for this great car (with less maintenance). I am very confused why the president did not allow Tesla's, M3 and MY, to qualify for the EV tax credit, but Hybrids, including gas-guzzling Jeeps, do. Hybrids should not be included in the tax credit since they are not full EVs. They still require gas and still require oil changes. This is all too confusing and I hope you can make it right with the President to allow the EV credits for full EVs, only. Thank You, Rebecca Lorenzana Email: reb-lor@hotmail.com
Gerry Scully	1/3/2023 20:41	Dear IRS, Thank you for offering the opportunity to comment on this. I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Gerry and Miriam Scully
Joe DeCeglie	1/3/2023 20:41	To whom it may concern, I am very disappointed that a fully electric vehicle made in the USA, the Tesla model Y (5 seat version) will not be eligible for tax credits as an SUV simply because it weighs LESS than other SUVs of same size. Why is the US Government punishing a fully electric vehicle for being MORE efficient than other Hybrid vehicles using gas including the Ford Escape PHEV and Jeep PHEV that are so much less efficient! This is absurd and in un-American. Please include fully electric Tesla vehicles! Thank you Joseph DeCeglie

Name	DateTimeReceived	Body.TextBody
Vincent Maiden	1/3/2023 20:41	To Whom it May Concern: Decisions like calling the 7 seat Tesla Y an SUV while classifying the 5 seater as not an SUV is beyond ridiculous. Lack of common sense in application of criteria like this is why government gets a bad name. Punishing SUVs like Tesla Model Y and Mustang Mach-e for being mass efficient is illogical. Please revise the IRS eligible $7500 tax credit for SUVs to include vehicles like these, defined by EPA, as SUVs. Vincent Maiden 10125 Winston Park Pl Richmond VA 23235 -- Vince Maiden vamaiden@gmail.com<mailto:vamaiden@gmail.com> " Where there is no vision, there is no hope." George Washington Carver
Michael Holt	1/3/2023 20:41	To whom it may concern, I implore you to reconsider the list of qualified cars for the EV incentive under the IRA. It appears that there is a clear bias against Tesla and the classification of the Model Y vehicle. Please review and make all variants of the Model Y eligible for this credit. Thank you, Michael Holt
Suvid Kakkar	1/3/2023 20:41	All electric vehicles should receive equal tax credits to incentivize both consumers on a fixed budget, and those with more disposable income to go electric. Suvid Kakkar
Gray Shannahan	1/3/2023 20:42	Hello, I'm writing to express my concern for the EV tax credit. I simply cannot understand why vehicles are being treated unfairly. Why are true EV SUV crossovers not being counted when a ICE hybrid is being counted? The idea of considering a vehicle based on weight misses the mark because EV's are being designed to reduce weight and size for the purpose of range and efficiency. And a plug in hybrid is carrying the weight of two drivetrains. I ask you to please reconsider the qualifications for tax credits because this is disincentivizing the innovation that this industry needs. Thank you, John G Shannahan 410-310-4047
McDonald Family	1/3/2023 20:42	Greatly disappointed that the irs seems to have been weaponized against the administrations political foes. The Tesla model y deserves to be classified as a suv under the act. Vehicles that are smaller are classified as a suv. Sent from my iPhone
Tyler Spindler	1/3/2023 20:42	It makes no sense why a 5 seat Tesla Model Y will not recieve the $7500 tax incentive, while a Jeep Wrangler 4xe will. One is fully electric and very efficient, while the other is a stunt to get I to the EV market. I own both a wrangler and a tesla, and never would I consider the Jeeep environmentally friendly. Please change the IRS designations of SUV to match the EPA. V/r, LCDR Tyler Spindler
Barbara Miller	1/3/2023 20:42	I think it is ridiculous that the five seat Tesla model Y does not qualify as SUV and $80k rebate when id4 and others do. Sent from my iPad
Daniyal Valizadeh Dehkordi	1/3/2023 20:42	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). 2) As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery 3) (21mi electric range) are eligible for the full $7.5k credit. Kris de Porcel	1/3/2023 20:42	To whom it may concern, Please reconsider how electric vehicles are being categorized in the EV tax credit portion of the inflation reduction act. Automotive class rules should apply fairly across the board so that all vehicles the EPA categorizes as SUVs should receive the $7,500 tax credit up to the $80,000 MSRP. Currently, EVs like the Tesla Model Y and Ford Mach-E are being penalized for being more efficient by having less weight and being lower in ride height; these are features for electric vehicles as they increase range yet are acting as penalties in regards to the tax credit. Please fix the categorization so that vehicle categories are applied fairly across all vehicle types. EV adoption should be incentivized over hybrid vehicles which was the original intent of the bill; not penalized. Sincerely, Kris de Porcel -- Kris de Porcel Kdeporce@gmail.com<mailto:Kdeporce@gmail.com> (925) 570-3968
erupt223341324	1/3/2023 20:42	Dear IRS, This is a gross pandering to legacy auto makers that have done absolutely nothing to get us of the dependence of foreign energy. The irs should be ashamed of such an obvious exclusion of the largest EV employer in the country. I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery 3) (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. Adrian Jaqua
Peyton Schaefer	1/3/2023 20:43	I am writing to express my dissatisfaction with the inflation reduction act's EV tax credit rule. Specifically, I am concerned about the fact that the Tesla Model Y (5 seat) is not eligible for the credit as it is classified as an SUV, and also does not qualify for the $80,000 limit. On the other hand, the Ford Escape PHEV and Jeep PHEV, as well as foreign-made EVs on lease, are qualified for the full $7,500 credit. This seems unfair and contradictory to me, as the Tesla Model Y is also an electric vehicle and should be treated equally under the tax credit rule. I understand that the purpose of the tax credit is to incentivize the use of electric vehicles and reduce our dependence on fossil fuels. However, by disqualifying the Tesla Model Y and other similar vehicles, the credit is not achieving its intended purpose. I urge the IRS to reconsider the eligibility requirements for the EV tax credit, and to ensure that all electric vehicles are treated fairly and equally under the rule. Sincerely, Peyton
John Randazzo	1/3/2023 20:43	Hasn’t the IRS been politicized enough. Follow the EPA. Put my tax dollars to work by incentivizing the best fully electric SUV in the market and not some bucket of crap hybrid Jeep. Sincerely, John Randazzo Sent from my iPad
Tyler Linneweber	1/3/2023 20:43	guidelines you put forth seemed to be very misguided. For example, you included many hybrid SUVs that have a max battery range to travel 20-30 miles while excluding many fully battery electric cars. Second, you excluded the Tesla Model Y that is a fully battery electric SUV and was revelry voted the most American made car. Again, please reconsider your decision. Thank you,

Name	DateTimeReceived	Body.TextBody
Ryan ffrench	1/3/2023 20:43	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in supporting programs that encourage purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and to support American-made clean energy products in order to create a more sustainable future. Sincerely, Ryan ffrench
Corbett Smith	1/3/2023 20:43	Hello, I would like to say that offering a full 7500 credit to SUV's such as certain models of the Ford Mustang Mach E, the Volkswagen ID.4, and Tesla Model Y, among others, because of the weight or amount of seats etc. whatever made that the case, seems a bit out of touch. I can go buy an 80k jeep wrangler plug in that does 20ish miles on a charge and get a full 7500 credit but I can't buy a Tesla model Y with 5 seats that gets 300+ on a charge, and get any tax credit unless it's under 55k. The math doesn't add up on that if the goal was to incentivize EV adoption. I know this is the message you will get time and time again, that's because you have made an odd choice that frankly seems biased against the most popular electric SUV's on the road I.e. the Model Y, ID.4, and Mustang Mach E. I would appreciate some transparency on how this occurred in regards to plug in hybrids being eligible for a higher purchase price than some full EVs. Respectfully,
Diego Osorio	1/3/2023 20:43	Hi IRS, Tesla Model Y Should receive a tax credit like the others EV's. Best regards, Diego Osorio
Kuang Xu	1/3/2023 20:44	I'm extremely disappointed by how the IRS discriminated against Tesla by excluding its 5 seat model Y from the EV tax credit. This is hurting the green EV transformation of this country. Please fix this. Kuang Xu Kuang Xu Associate Professor Stanford Graduate School of Business Twitter<https://twitter.com/ProfKuangXu> | LinkedIn<https://www.linkedin.com/in/kuangxu> | Website<https://web.stanford.edu/~kuangxu/>
Marvin Kravets	1/3/2023 20:44	Hi, Please consider the Tesla Model Y to be included in the tax credit offered for EV SUVs. It's unfair that it's excluded as it's a competitive product amongst other EV vehicles. I believe it should qualify just like the other EV vehicles because it would encourage customers to purchase a vehicle that has a longer range and fully utilized EV tech instead of plug in hybrid that does very little mileage. Also Tesla is an established leader in the EV market and it's only fair that it also be included.
Todd Shaffer, MD, MBA	1/3/2023 20:44	This is an embarrassment to the irs, the epa, and sept of energy. This was sold to the public and to senate and representatives as being originally only assembled in the USA. It needs to go back to this strict language. Should only be if the car or suv is a pure ev-no hybrids. Also need to fix what is an suv as the model y has always been called an suv and everyone buying it knows it is not a sedan. Crazy crap needs fixed! Sent from Todd's iPhone

Name	DateTimeReceived	Body.TextBody
Travis Sawchik	1/3/2023 20:44	To whom it may concern, I'm surprised and disappointed to see the Tesla 5-seat Modely Y not qualify for the $7,500 EV tax credit while much more inefficient hybrid vehicles do. I ask as a concerned, tax-paying citizen that this be changed. For example, there are a number of hybrid vehicles that qualify with batteries that contain only 20 to 30 miles in range. The Model Y battery has 300-plus miles of range. Moreover, the Model Y is one of the most US-build cars on the road. We need to move the country forward to sustainable energy - not more gas-burning engines.
Jeffrey Cooke	1/3/2023 20:44	which should be clearly outlined and transparent - have proven to be contrary to the purpose of the legislation. It is true that congress imposed a now arbitrary and outdated term "SUV", given that the manufacturers had already applied 'cross-over SUVs' and 'midsized SUVs' and other classifications that clearly modify the original term 'SUV' to match the evolved characteristics of the vehicles - based on customer demands. The intent of the legislation was to support the development and sale of affordable vehicles with reduced impact on the environment and climate change. As such the IRS should apply the rules in a way that honors the intent - affordable vehicles and reduced emissions. In this way - vehicles that are solely BEV should be credited with their significantly reduced environmental impact, while also recognizing that the current state of battery development drives the reduced size of the vehicle - which causes some BEV SUVs to be smaller than their ICE counterparts. In particular the application of the rules to the Tesla Model Y, Mustang Mach-E, and GM vehicles such as the Lyric are not consistent with the overall intent of the legislation, and should be reconsidered using criteria - such as outlined above. Dr. Jeff Cooke
Rick Maniktala	1/3/2023 20:44	Plug in Hybrid vehicles do not meet the intent of the tax credit. The gas engine carries extra battery weight all the time, so unless people charge multiple times per day it will consume more carbon when compared to pure hybrid (non plugin). Eliminate all tax credits for plug in hybrids ASAP. This eliminates JEEP and Ford hybrids. Redefine SUVs to include full battery electric options that strive for efficiency at lower vehicle weights. This adds back Model Y and Ford MachE, Chrysler Lyriq, and future made in USA variants that strive to reduce weight maximizing fuel economy in the form of Wh/mile or eMPG for full BEVs. Do this ASAP as it’s costing tax payers money that we didn’t expect to be paying. We simply cannot subsidize plug in hybrids that consume more fuel on average than their non plug-in versions. It adds dead weight after traveling 20-40 miles and so many owners don’t charge multiple times per day. Ugh! Nick White	1/3/2023 20:44	Good Evening, No doubt you have a challenging task. My understanding is your current system rewards and incentives heavy EVs in the SUV category. Even when lighter EVs have more storage and are more efficient. This seems to be working the intent of the legislative, help promote vehicles that reduce environmental impact. Please consider the perverse incentives and adjust. Thank you Nick White 807 Miner Rd Crownsville, MD 21032
chino bo	1/3/2023 20:45	How is the IRS going to give $7500 EV credit to hybrid cars. A 5 seater Tesla Model Y does not qualify but a 7 seater Model Y qualify which is the same car!! The purpose of EV credit is to sway the public to renewable energy. Yet gas cars are being incentivized and lease cars from different country getting credit as well. Fix this, this EV credit is inconsistent with renewable energy Thanks,
Nick van Niekerk	1/3/2023 20:45	Please include Tesla Model Y 5 seat variants in the $80k SUV cap It's ridiculous that the 7 seat variant qualifies, 5 seaters from other manufacturers qualifies, even the Jeep hybrid qualifies, but not the Model Y 5 seat
Jonathan Thivierge	1/3/2023 20:45	Hi, The Tesla Model Y is the most American made, best fully electric SUV on the market, yet it does not qualify for the $7,500 tax credit. Meanwhile, other hybrid cars, who are extremely polluting in comparaison to the M-Y, fully qualify for the credit. This situation is ridiculous and needs to be corrected ASAP. Thank you for your time.
David Van Horn	1/3/2023 20:45	For this credit to be fair to Tesla Motors, all Model Y variants should qualify and not only some. It also does not make sense that PHEVs qualify for this credit. Regards, Dave Van Horn

Name	DateTimeReceived	Body.TextBody
riocole@gmail.com	1/3/2023 20:45	Dear IRS, I think the tesla model y 5 seater long range should be classified as an suv, as it clearly is one. Sincerely, Rio
maomao mao	1/3/2023 20:45	Dear IRS, I pay you my share of tax every year yet it looks to me that you are abusing your power by picking certain brands/models to qualify for the EV incentive. Please explain to me as if I was a 5-year old, why Tesla Model Y, a pure EV SUV, not fuel and not hybrid, does not qualify? Regards, Yao
Longevity	1/3/2023 20:45	Tesla model Y, the 5 seat configuration is the same suv as a 7 seat configuration. It needs to be included in the list of $7500 rebate. It's the cleanest and most American manufacturing as it gets. Please reconsider your requirement and add them to the list of SUVs. Thanks Robert
zma	1/3/2023 20:45	Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, I hope this letter finds you well. I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit. According to the IRS guidelines, the following Tesla Model Y variants are qualified for the 7500 tax credit if their Manufacturer's Suggested Retail Price (MSRP) is under $80000: #1 Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) #2 Tesla Model Y Long Range - 7 seat variant (3-rows) #3 Tesla Model Y Performance - 7 seat variant (3-rows) However, it appears that #1 and #3 do not exist. The following Tesla Model Y variants are also qualified for the $7,500 tax credit if their MSRP is under $55,000: #4 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) #5 Tesla Model Y Long Range - 5 seat variant (2-rows) #6 Tesla Model Y Performance - 5 seat variant (2-rows) However, it appears that #4 does not exist, and #5 and #6 are priced at $65,990 and $69,990, respectively, which may disqualify them from the tax credit. This leaves only #2, the Tesla Model Y Long Range - 7 seat variant (3-rows), as the only qualified variant. We understand that the IRS guidelines currently only allow for the 7 seat variant of the Model Y to qualify for the tax credit. However, we would like
Dana Maniuszko	1/3/2023 20:45	I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The model Y 5 seat option meets all of the criteria to be considered an SUV. It clearly is an SUV as it has the size and functionality of a traditional SUV, and is also categorized as such by the environmental protection agency (EPA). Furthermore, the model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS' goal of promoting the use of cleaner more sustainable transportation options. As such, I believe it deserves the full tax credit available to SUV's. I hope you will take my request into consideration and and reconsider the classification of the Tesla model Y 5 seat option as an SUV. Thank you for your consideration. Sincerely, Dana Chandler, MSN, RN, CWCN 443-930-8965
Kyle Ruth	1/3/2023 20:46	Hey IRS team, We are all very excited for the newly instated EV tax credits. Unfortunately, I believe the IRS got wrong the classification of the Tesla Model Y. I currently own a Model Y and my insurance company classifies it as an SUV, my registration in NY does as well. I even get charged the SUV rate in NYC parking garages. It is clear whatever distinction the IRS is making for the 5 seat to be a car and the 7 to be an SUV is an obvious error. Please update this to reflect an appropriate credit amount for the vehicle it is. Thank you!

Name	DateTimeReceived	Body.TextBody
teng haoxin	1/3/2023 20:46	Dear Sir/Madam, With regards to the vehicles qualified for 2023 EV tax credit, in my humble opinion the Model Y all-wheel drive, long-range and performance five seat variants should be qualified for the tax rebate. Yours Sincerely, HX Teng
Curtiss Miller	1/3/2023 20:46	list that do qualify.
Andres Torres	1/3/2023 20:46	Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224. I would like to see the IRS to change their criteria related to EV SUV. I own a Tesla Model Y, and it replaced a Toyota Highlander. They are made in America and are fantastic cars. To penalize Tesla for having efficient cars and benefit combustion engine cars that happen to be heavy and inefficient, is an aberration to the intent of the law. Please correct that issue immediately. Sincerely, Andres Torres PhD 7870 SW Oak Patch CT Wilsonville OR 97070
Matt Barber	1/3/2023 20:46	Please adjust the ridiculous classification for the world's most American made car and the world's safest car and the world's highest rated electric vehicle the Tesla Model Y. This should qualify for the $7,500 Tax credit. If you don't, then I will be convinced someone along the line is corrupt. Also if you do not adjust this classiciation please inform me of who is holding it up so we know who to put the pressure on and investigate for corruption. Thank you in advance for doing the right thing. Kind regards, Concerned Citizen
B hollar	1/3/2023 20:46	Ladies and Gentlemen, I am writing you to assert that the Tesla Model Y 5-seater SUV, as declared by the EPA should be designated as SUV and thus be allowed to be considered under the $80K price limit for the IRA credit. It not logical that the 7-seater Tesla Model Y and indeed, a Ford Escort, be considered an SUV when the Tesla Model Y 5-seater is the SAME body as the 7-seater and is longer than Ford Escort. Please correct the IRA designation for the Model Y 5-seater to be considered as an SUV(as EPA has) under the $80K price cap. Thank you, William Hollar
joegriffiths@web.de	1/3/2023 20:46	I have been waiting for months to be able to buy / afford a Model Y (5 seater). I am left in sheer disbelief that this variant is apparently not eligible for the 7500$ tax credit. This is a fully powered EV. On the other hand ICE (hybrid) vehicles with limited reach qualify for the credit. This is so wrong. No one I have talked to has been able to explain. This needs to be reconsidered. Is it truly about the environment? One has to question. Regards J. Griffiths Gesendet mit der mobilen Mail App
Jon D	1/3/2023 20:46	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version) As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future.

Name	DateTimeReceived	Body.TextBody
Roshan Raj	1/3/2023 20:47	Dear Sir/Madam, Greetings. I am writing to express my concerns around EV tax credits plan laid out currently. 1. Tesla model Y 5 seater is a pure EV that should receive full credit. 2. Hybrids are not EVs, so they should not receive any credits. 3. All EVs sold in USA should receive credits. Thanks for your help and ensuring that tax dollars are used wisely. Regards.
Cristopher Tokui Lang Valenzuela	1/3/2023 20:47	The classification of the Tesla Model Y 5-seats not as an SUV for the purpose of the IRA EV credits is wrong and feels like a violation of the spirit of the bill. The model Y is clasified as an SUV everywhere else, and to not provide that classification only for the purpose of the tax credit does not favor Americans, nor the enviroment. By doing so, you are creating an incentive for consumers to buy heavier, less efficient, ICE cars. Even more, making the credit available at higher prices for heavier vehicles, creates an incentive for car companies to pollute more and make less efficient, heavier cars, violating the spirit of the bill. This needs to be corrected. It is such a big mistake, that to the eyes of many, is perceived as corruption. I hope this wrong is fixed, and just proves to be an honest mistake, made as government rushed to make such historical bill a reality.
Robert Karaffa	1/3/2023 20:47	I wish to voice my support for the Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) to be classified as an SUV so that it can receive the full tax credit. -Bob K. We are all connected, to each other, biologically, to the Earth, chemically, to the rest of the Universe, atomically". - Neil deGrasse Tyson”
David Grob	1/3/2023 20:47	This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Thank you for your consideration, David Grob
Pavan Atchuta	1/3/2023 20:47	I have read the news about the EV tax credit for Tesla Model Y and it seems to be pretty unfair considering that the base model Y is more than the MSRP defined by IRS. <https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after> [logo_small.jpg] Manufacturers and Models for New Qualified Clean Vehicles Purchased in 2023 or After | Internal Revenue Service<https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after> irs.gov<https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after> The 2023 Model Y should have the $7500 tax credit and it would be really helpful to promote sustainable energy and advocate President Biden’s clean and sustainable energy promotion. I support to provide 2023 model Y tax credit. I am sending this email as a feedback , if it is not requested , kindly ignore. Pavan Please pardon typos
Ana Medina	1/3/2023 20:47	Please reconsider eligibility of BEV for tax incentives as part of the Infrastructure bill. Qualifications for eligibility are completely illogical and hurt the desperately needed, rapid adoption of BEV cars in America. This most unfairly impacts American auto manufacturers like Ford and Tesla. The Mach E and Model Y models especially. Cordially Ana Medina
Ricardo Betancur	1/3/2023 20:47	Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Ideal fix: * Remove incentives for all hybrid vehicles and only have them apply to pure EVs. * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Next best fix: * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. To the IRS and Government officials - please use this chance to prove to the American taxpayer that these categorizations are done in error. Otherwise, it will be yet another reason for the American tax payer to doubt your true intentions. Please Fix it. Thanks

Name	DateTimeReceived	Body.TextBody
Danny Wyatt	1/3/2023 20:48	This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law.
Todd Burch	1/3/2023 20:48	To whom it may concern, One of the goals of the IRA is to stimulate American production and adoption of fuel-efficient vehicles. It was very disappointing to see that a 5-seat Tesla Model Y, among the most American of all vehicles, does not qualify as an "SUV" and therefore does not receive the $80,000 credit like similar vehicles (even though the 7-seat version does qualify). It was also disappointing to see that if the vehicle had different ground clearances or was heavier, it WOULD qualify for the $80,000 credit. This effectively penalizes the vehicle for being lower weight (more efficient) and closer to the ground (less aerodynamic drag). Please allow the 5-seat configured Tesla Model Y to qualify as an SUV for the purposes of the credit, as it is already classified as one by NHTSA. Thank you, Todd Burch
Sid	1/3/2023 20:48	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Thanks Sid Arun
Robert F	1/3/2023 20:48	I'm writing to request a review of the Model Y 5 seat configuration to be evaluated as an SUV the same as the 7 seat version to be eligible for the $7500 credit. Having minimum criteria for an electric SUV based on the weight and ride height of the vehicle is the opposite of an optimized fully electric vehicle. Reducing the ride height and lowering the weight of a vehicle increases the range, especially at highway speeds. Range is a key metric for purchasing an EV. More EV's can be produced using the same quantity of battery cells if they are lower to the ground and weigh less. Currently and for the transition period to 100% EV's, the limiting factor on their production is the availability of battery cells. The intention of this bill is to support the EV transition and in that spirit I ask that for fully electric vehicles for the ride height and weight limits be removed for the criteria of determining an SUV with respect to this credit. Thank you, Dr Robert Fridlind
theuglystick	1/3/2023 20:49	I've read about the IRS request for public feedback on the electric vehicle tax credit. What criteria is the IRS using to make tax credit decisions? I do not under why some variants of the Tesla Model Y and the Ford Mustang Mach-E do not qualify. If the goal is to stop fossil fuels from being used, all EVs should qualify. Honestly, the government would be much better off by being consistent. Sent from Proton Mail
Connie Caston	1/3/2023 20:49	I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as a SUV for the IRA tax credit cap of 80,000. The model 5 seat meets all the criteria to be considered an SUV. It is clearly an SUV and is also categorized as such by the EPA-Environmental Protection Agency. Furthermore, the model Y 5 seat option is highly efficient fully electric vehicle which aligns with the IRS;s goal of promoting the use of cleaner and more sustainable transportations options. As such, I believe it deserves the full tax credit available to SUV's. I hope that you will take my request into consideration and reconsider the classification of the model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, Connie Caston
Mohammad Lodhi	1/3/2023 20:49	Also the cars need to have a better categorization. there no consistency between what's considered a sedan or suv. it should use the same designations the EPA use.
Anjan Kumar Kukkapalli	1/3/2023 20:49	should be incentivized in order to encourage more people to switch to cleaner transportation. The Model Y is a popular and high-quality EV, and I believe it should be eligible for the same tax credits as other EVs on the market. I urge the IRS to reconsider its decision and extend the tax credit to the Tesla Model Y." Regards, Anjan.K
Jeremy Hargrove	1/3/2023 20:49	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). This EV is made in America. It is an SUV! Please change the IRA to include this class of Tesla for the $7,500 EV Tax Credit. Thank you, Jeremy Hargrove
Chang Won Kang	1/3/2023 20:49	To Whom it may concern, Regarding EV Tax credit, 1. Hybrids are not real EVs. They are going to burn gas because their electric range too short to travel around 20 miles. They don't deserve to have full tax credit, maybe $1000 which is more than enough. 2. For Model Y, whatever 5 or 7 seats configuration, they are SUVs and full electric up to 330 miles range. They deserve to have full tax credit $7500 via under $80000 price cap. Thanks.

Name	DateTimeReceived	Body.TextBody
Leslie Linard	1/3/2023 20:50	The list of vehicles and associated MSRPs that qualify do not make sense. For example, half of the Tesla Model Y vehicles qualify with $80,000 MSRP yet the other half only qualify with $55,000? The EPA classifies the Model Y as a SUV whether it has 5 seats or 7 seats, the kind of tires it has, or any other vehicle option(s). This IRA effectively disqualifies half of the Model Y variants entirely since all of them regardless of options have the same $65,000+ base MSRP. This makes absolutely no sense to me since the Model Y is an SUV and ALL variants should qualify with the same MSRP cap regardless of options. It seems that many vehicles from other manufacturers suffer the same treatment which makes absolutely no sense. Additionally, why are plug-in hybrids (PHEVs) qualifying for the full credit when not only do they barely have any battery, they also have a gasoline engine, and studies have shown that the vast majority of people never actually plug them in as intended. The whole point is that you plug them in and charge the battery so that the gasoline engine does not need to run for the vast majority of daily driving. Shocking News! Plug-In Hybrids Are No Damn Good If You Don't Plug Them In!<https://cleantechnica.com/2020/09/18/shocking-news-plug-in-hybrids-are-no-damn-good-if-you-dont-plug-them-in/> While I'm not opposed to providing some credit for PHEVs, it makes no sense to fully incentivize PHEVs if people are not going to use them in such a way as to actually reduce emissions as was intended. I would suggest using the EPA designations as either a Sedan ($55,000) or SUV ($80,000) to determine the MSRP cap. Perhaps the PHEVs might qualify for a smaller incentive or no incentive at all to nudge people towards full Battery Electric Vehicles (BEVs) which will actually make a difference for the climate and our air quality.
Pete Zitelli	1/3/2023 20:50	Hello, I was disappointed to see that the Tesla Model Y 5-seat variant does not qualify for the EV tax credit. My understanding is that the 7-seat variant does qualify simply because it weighs slightly more, classifying it as an SUV in the eyes of the IRS. It doesn't make much sense that I would need to purchase 2 extra seats that would go unused for what is quite literally the same exact vehicle. Please adjust the vehicle classification guidelines so that more EVs from all manufacturers are eligible for the new EV tax credit. Thank you, Peter Zitelli Sent from my iPhone
post.alexander@gmail.com	1/3/2023 20:50	I think tesla Model Y 5 seater should be included. EPA classified as SUV. It's very efficient , American made, and all EV no emissions. Its Always been
Frederick	1/3/2023 20:50	Good evening, I am writing to respectfully request you reconsider classifying the Tesla Model Y 5 Seat variants, Ford Mustang Mach-E, and all trims of the Volkswagen ID.4 as SUV's. All of these electric vehicles are 100% battery electric vehicles. Because of the newer, more efficient technology within them, they are more expensive to manufacture. The MSRP limit for these vehicles to qualify for the maximum tax credit must be INCREASED as they are CLEANER and more efficient than many other vehicles that qualify for this CLEAN vehicle tax credit. The Tesla Model Y was rated the Most-American Made Car. The idea that, under the clean vehicle tax credit, cars with internal combustion engines built in Mexico are eligible for a tax credit paid with American taxpayer dollars but the most-american electric vehicles are not, is absolutely preposterous. https://www.cars.com/american-made-index/ Research has shown plug-in hybrid vehicles consume 42-67% more fuel than EPA labeling suggests. This is because consumers are not always charging their plug-in hybrid batteries when they have an internal combustion engine to fall back on. https://electrek.co/2022/12/22/plug-in-hybrids-use-more-gas-than-estimated-dieselgate-whistleblower-says/ I hope the IRS seriously reconsiders increasing the MSRP limits for clean, all battery electric vehicles, especially those built in the United States of America. Thank you.
Josh T	1/3/2023 20:50	To whom it may concern, The new Inflation Reduction Act is supposedly a law to help support a transition to electric vehicles. However, it seems like gas cars with very small batteries are qualifying for the same, or more, credit than other vehicles that are 100% battery powered. This makes no sense, this law is helping support more gas cars. Under no reasonable interpretation of this law should gas cars with smaller batteries qualify for the same amount of credit as a Tesla Model Y or Ford Mach E. Ford & Tesla spend $10,000 to $15,000 for the batteries to power these vehicles but a similar size gas- hybrid (only 25 miles of electric range) has a battery that cost only $750 - $1000. Why is the American tax payer paying $7,500 for batteries that cost substantially less? This doesn't make fiscal sense, nor does it support the IRA mission to transition to electric transport. Under no circumstances should any gas-hybrid vehicle qualify for the full $7,500 tax credit when a fully electric Tesla Model Y or Ford Mach E not qualify at all. The only logical solution is to either allow all Tesla Model Y & Ford MachE to qualify for the credit up to $80,000 purchase price or cut the subsidy in full or pro rata for any gas hybrid. Sincerely, Joshua Thompson

Name	DateTimeReceived	Body.TextBody
MIRAV RATHOD	1/3/2023 20:50	Instead you should have made it more simpler. The simplest way would be by axles or by horsepower. Other way is to use EPA based miles per gallon. Over a certain miles per gallon you could give the credit. Tesla is a pure electric vehicle and your rule is making 5 seat variant of model y a sedan and 7 seat variant an SUV. Because of price restrictions for sedans being $55,000 and Tesla mode y 5 seat variant price being higher than $55,000; your rule will unintentionally and wrongfully eliminate the $7500 credit for consumers buying that car. Moreover the goal of this rule is to promote purchase of EV vehicles and alternate fuel vehicles and remove dependency on fossil fuel, with your rule so many vehicles that primarily use fossil fuel will get $7500 credit. Your rule needs to be amended so only vehicles that have miles per gallon above 50 miles qualify for $7500 credit. Sent from my iPhone
Stephan Börlin	1/3/2023 20:50	To whom this may concern At this moment it's not understandable, why the Tesla Model Y 5 seater doesn't qualify for the EV tax credit. On the other side, you can buy a hybrid Jeep or Wrangler who are polluting much more and are not even 100% EVs. You should fix this asap. Sincerely, Stephan Börlin stephan.boerlin@gmail.com
Benjamin Jack Crandall	1/3/2023 20:50	Dear IRS rules administrator, I am deeply troubled by the recent IRS determination of which Electric Vehicles qualify for the $7,500 tax credit. Apparently, consumers can purchase a plug-in hybrid Jeep that gets 20mpg and has only 21 miles of electric range, and that vehicle qualifies for $7,500 tax credit. At the same time, a 5-seat Tesla Model Y which has 113 MPGe and 330 miles of electric range gets nothing!! Just because of some bizarre rules around weight and/or vehicle clearance?! Vehicles should not be punished because they are efficient with weight! And cargo/passenger space is a far more relevant metric for most consumers than clearance/approach angle/etc., especially if we want the maximum number of people and cargo carried by EVs. The current determination goes exactly counter to the spirit of the law. This law is supposed to reward shifting our fleet to EVs, but it instead rewards the companies that are dragging their feet while punishing the leader in the EV revolution. This needs a significant change and fast, before too much market damage occurs. Sincerely, Benjamin Crandall 541-515-9185 Co-founder and Lead Software Engineer, Kindista<https://kindista.org/people/benjamin/about> Founder and Board Member, CommonGoods Network<https://commongoods.net> Investor and Social Entrepreneur
M... D....	1/3/2023 20:50	excluding the Tesla model Y unless it has a 3rd seat even though NIST, EPA and tesla categorizes it as an SUV, I need to know, is this politics or incompetence? If you remove seats from an airplane is it still a plane? Sent from Yahoo Mail on Android<https://go.onelink.me/107872968?pid=InProduct&c=Global_Internal_YGrowth_AndroidEmailSig__AndroidUsers&af_wl=ym&af_sub1=Internal&af_sub2=Global_YGrowth&af_sub3=EmailSignature>
Brian Green	1/3/2023 20:51	I'm writing to voice my opinion that the Tesla Model Y and Mustang Mach E, in all variants, should be classified as SUVs. These vehicles are similar in all respects to other SUVs and are functionally equivalent. I'd also like to express support for removing incentives for hybrid electric vehicles entirely. If not removed these hybrid vehicles should be making real improvements to the next generation of electrification. I'd propose that only plug in hybrids qualify, and they should provide at least enough pure electric range to support the US average daily mileage, in all weather conditions, or about about 40 miles. Thank you for your consideration. Brian Green Pelham, NH
Mark Shrall	1/3/2023 20:51	I'm writing to request a review of the Model Y 5 seat configuration to be evaluated as an SUV the same as the 7 seat version to be eligible for the $7500 credit. Having minimum criteria for an electric SUV based on the weight and ride height of the vehicle is the opposite of an optimized fully electric vehicle. Reducing the ride height and lowering the weight of a vehicle increases the range, especially at highway speeds. Range is a key metric for purchasing an EV. More EV's can be produced using the same quantity of battery cells if they are lower to the ground and weigh less. Currently and for the transition period to 100% EV's, the limiting factor on their production is the availability of battery cells. The intention of this bill is to support the EV transition and in that spirit I ask that for fully electric vehicles for the ride height and weight limits be removed for the criteria of determining an SUV with respect to this credit. Thank you.

danielfraser222@gmail.com	1/3/2023 20:51	Hello IRS, Please reconsider your methodology for vehicles that are SUVs in the IRA. It seems the current rules do not incentivize lower weight suvs (more efficient better for the environment) and instead incentivize heavier hybrids. The current rules are a real head scratcher, that makes the American public question whether the rules are set impartially. Specifically a 5 seat tesla model Y is not eligible while a keep wrangler hybrid with only 20 miles of electric range is eligible for 7,500 tax credit. Thank you for you consideration,
gang huang	1/3/2023 20:51	Hi - I am sending this email to request IRS reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. I am an owner of Tesla Model Y 5 seater, it is clearly a SUV based on the size, the shape and the trunk shape/size. Model Y 5 seater is categorized as a SUV by the EPA already (See attached screenshot from their website), and is a highly efficient fully electric vehicle with 330 miles range. As a EV owner, it is just so sad to see that some plug-in hybrid SUV (with only 25 miles electric range) heavily using GAS is qualified with $7500 tax credit, but Model Y is not. This is not the way to promote the EV adoption and save environment, it is actually encourage people to buy GAS car. I really appreciate that IRS can review this super basic / simple / straight forward fact and classify Tesla Model Y 5 seater as SUV. I also attached a few more photos that you can easily tell that Model Y 5 seater is not a sedan car at all. Thank you again. Regards, Gang
Rob Giljum	1/3/2023 20:51	Dear IRS, I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely,
Data Aggregator	1/3/2023 20:51	All models of the TESLA Model Y should be counted by the IRS as electric SUV's the idea that a keep with far less cargo space and interior space is an SUV but the Tesla model Y which is huge is, just because the tesla is more weight efficient is ridiculous. Change the rules and make the Model Y, which is the most American made EV, qualify as an SUV.
jitsingh9@yahoo.com	1/3/2023 20:51	I am writing to comment on the EV tax credits for 2023. Currently, the rules outlined are doing a huge disservice to the goals of the Inflation Reduction Act in promoting zero emission/electric vehicles. While parts of the legislation on US assembly and battery/car parts percentage are great, including plug-in hybrid cars and defining vehicles only with a 3rd row of seats and/or a certain curb weight as SUVs is harmful and decreases the effectiveness of this program. Also, I think the MSRP caps should actually be decreased to 45K for sedans body types and 65K fro SUV and truck body types. This encourages lower prices and investments in more affordable vehicles compared to only luxury vehicles/trims (I know this might not change due to the language in the bill, but adding for comments for future reversions). Thank you, J. Singh
garycruz@gmail.com	1/3/2023 20:51	It makes no sense that hybrids with less range than a pure EV get more tax credit. There should be a minimum of 100mpg minimum and or 90% of the power train comes from battery. All Teslas should meet the tax incentive. IRS should not redefine what an SUV per EPA.
Erik Bombard	1/3/2023 20:51	Why wouldn't every Tesla model Y be included in this tax credit?!! Please reconsider this.
Super Mario	1/3/2023 20:51	administration!!! I'm sorry to say I am losing my belief that government can solve the problem of the American people. Please stop playing politics with the environment, US economy, and IRA. The 5 seat Tesla model Y should be considered an SUV and qualify for the $80k price cap. So should the VW ID4. Congrats on getting it right for the smaller, less eco-friendly Ford Escape. Sincerely, Mario Sent from my iPhone

Name	DateTimeReceived	Body.TextBody
James Dvornicky	1/3/2023 20:52	Hello, Please reconsider some of the classifications for tax qualification. It seems backwards that some hybrid vehicles that barely use any battery qualify while the Tesla Model Y does not. Thanks, James
Ken	1/3/2023 20:52	the Inflation Reduction Act. Additionally, implement the law as written, to disqualify any vehicles that are not manufactured or assembled in the United States, regardless of the procurement method used (lease vs purchase). I am sure the IRS is truly trying to fairly implement the purpose and intent of the Inflation Reduction Act, but it is doing the opposite...the IRS's implementation of the law is destructive to the future of manufacturing in the United States and the stability of the global environment. The IRS implementation is disastrous and must be corrected immediately...it is a clear violation of the law's intent! Congressional discussion and the content of the law itself, clearly demonstrate that the purpose of the law was to incentivize the purchase of electric vehicles which are manufactured or assembled in the United States, to both create jobs and combat climate change. Instead, the IRS is contradicting the intent of the law by favoring hybrids and less efficient EVs, simply because they are heavier or less aerodynamic, even if they are not made in the United States. Defining an SUV based on weight or suspension height alone is flawed. The EPA already designates vehicles by vehicle category and the same categorization used by the EPA should be applied to the Inflation Reduction Act. The Tesla ModelY and Ford MachE are unfairly treated by the IRS implementation because they are more efficient and lighter than the monstrosities being sold by other manufacturers...the idea that Tesla and Ford can qualify their vehicles as SUVs simply adding weight with no function, thereby reducing efficiency and range, incentivizes behavior that undermines the IRA, and should tell you the IRS is wrong! If that doesn't make the flawed IRS approach obvious enough, look at the fact that a Jeep hybrid (20 MPG / 21 miles of electric range / 31.7 cu ft cargo capacity / 3.5K lbs towing capacity) qualifies as an SUV and the Tesla Model Y doesn't (113 MPEe / 330 miles of electric range / 76.2 cu ft cargo capacity / 3.5K lbs towing capacity). Please tell me how the Jeep, which is terribly inefficient with less cargo capacity, the same towing cpacity, and a useless electric range, fits better within the spirit and intent of the law than the Model Y....? - Ken
Stanley Levitt	1/3/2023 20:52	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves Sent from my iPhone. Regards, Stanley Levitt
Dog Buddy	1/3/2023 20:52	Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We are writing to request the inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit, which has a maximum limit of $80,000. The Model Y is a highly popular and efficient family SUV, yet it is currently disqualified from the tax credit based on outdated measures for SUVs. This is not only contrary to the efficiency of the vehicle, but also to the interests of consumers. It is worth noting that less efficient vehicles with far less electric range are currently qualifying for the tax credit. In addition to its impressive efficiency, the Tesla Model Y is also one of the most American-made electric vehicles on the market. Therefore, granting the tax credit for this vehicle would not only benefit consumers, but also support the American economy. We highly value your consideration of this matter and look forward to your response. Sincerely, Mei
Colten Evans	1/3/2023 20:52	I understand there is a issue in regards to the legal definition of SUV according to a stature from 1985. But aside from legal defintion I don't understand the rational how the most popular configuration (Standard 5-Seat) of one best selling electric vehicle in the United States (Tesla Model Y) should be exempted from the Electric Vehicle Tax Credit (with one of the determining factors being whether the purchasing request the extra row of seats in the back). Other federal and regulatory agencies have classified all of the variants of the Tesla Model Y as a compact/small SUV. So when did the legal defintion come into question? People will start ordering with the 7 seat configuration just so they can qualify for the tax credit than shortly after purchasing the vehicle, they will remove the seats which will create more wasted energy and resources on production and disposal cost. Tesla could very easily make certain adjustment to their vehicle, adding extra weight, but that alone could just lead to wasted energy, materials, and potentially affect their safety ratings. There needs to be a common sense approach to this situation. This impacts Tesla by multiple orders of magnitude more than it impacts any other U.S EV companies. Please look into this.

Name	DateTimeReceived	Body.TextBody
James Bruce	1/3/2023 20:52	I think the Tesla Model Y 5 seater and ford Mach E should qualify for this tax credit. Naming something an ev tax credit and applying the credit to a vehicle that has an electric range of 25 miles and an EPA fuel consumption of 20mpg but not giving the credit to the model y and the mach e is laughable and shows blatant corruption. Please fix this error! Thank you, James Bruce
Thomas Nelson	1/3/2023 20:52	Please make the tax credits fair and give everyone an honest opportunity. The Tesla Model Y 5 seat version should be included. This will help bring EVs to the masses faster. Sincerely, Thomas
Valiryon	1/3/2023 20:52	electric-drive-motor-vehicle To whom it may concern: It's unclear to me exactly why similar trims are not treated the same for the EV Tax credit. I heard both it's a weight issue as well as it's a ground clearance issue versus how many rows of seats there are. The attached screenshot demonstrates the example, Model Y 5 seat trims are treated inconsistently with 7 seat trims. The EPA classifies both of these trims as SUV. A number of manufacturers are affected by the inconsistencies and this is confusing for consumers. I'd really appreciate the categories being reviewed again and made consistent, especially if they're in line with other agencies such as EPA. Additionally, passenger hybrids are the least efficient vehicles that qualify and should not get the benefit of the $80,000 msrp limit. Please do not penalize vehicle efficiency. The Farzad Tesla change.org<http://change.org> petition explains further: https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit Thank you kindly for your consideration.
Ramsey Eldib	1/3/2023 20:53	How ridiculous that German hybrid cars getting 21 mpg fuel economy, hurting climate change and using fossil fuel are getting a $7500 tax credit while American cars like the Ford Mach-E and Tesla Model Y five seater get nothing. What a joke. Ramsey Eldib Los Angeles, CA.
Bipal Adhikari	1/3/2023 20:53	Dear Internal Revenue Service, I am writing to express my concern about the exclusion of certain vehicle types, specifically the Tesla Model Y, from the Inflation Reduction Act's definition of a sport utility vehicle (SUV). It is clear that the Model Y is classified as an SUV by other government agencies, such as the Environmental Protection Agency (EPA) and the National Highway Traffic Safety Administration (NHTSA). It appears that this exclusion may be playing favoritism and targeting certain original equipment manufacturers (OEMs). As a consumer and taxpayer, I believe that I should be able to choose the best electric vehicle (EV) for my needs and receive the tax rebate that I deserve. This exclusion does not align with the principles of fairness and equal treatment that are essential to our country's tax system. I urge the IRS to reconsider the exclusion of the Tesla Model Y and other similarly situated vehicle types from the definition of an SUV under the Inflation Reduction Act. Thank you for considering my concerns. Sincerely, Bipal Adhikari
Eric Hochstadt	1/3/2023 20:53	I hope this letter finds you well. I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit. According to the IRS guidelines, the following Tesla Model Y variants are qualified for the 7500 tax credit if their Manufacturer's Suggested Retail Price (MSRP) is under $80000: #1 Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) #2 Tesla Model Y Long Range - 7 seat variant (3-rows) #3 Tesla Model Y Performance - 7 seat variant (3-rows) However, it appears that #1 and #3 do not exist. The following Tesla Model Y variants are also qualified for the $7,500 tax credit if their MSRP is under $55,000: #4 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) #5 Tesla Model Y Long Range - 5 seat variant (2-rows) #6 Tesla Model Y Performance - 5 seat variant (2-rows) However, it appears that #4 does not exist, and #5 and #6 are priced at $65,990 and $69,990, respectively, which may disqualify them from the tax credit.

Name	DateTimeReceived	Body.TextBody
Satish Gannamaneni	1/3/2023 20:53	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely Sent from my iPhone
John Hayes	1/3/2023 20:53	The world is quickly adopting to a world of BEV passenger vehicles, I think the the discount for fully electric vehicles needs to be higher for fully electric BEV's vs hybrid HEV's. Use the money you save hybrid vehicles to include BEV's which currently do not qualify, like the Tesla Model Y, which will be the worlds best selling BEV by volume by the end of 2023. How could you possibly not include the worlds best selling BEV model? It's even manufactured in America, which is more than can be said for Apples products, WAKE-UP people. Signed a relatively intelligent Canadian CA it has no effect on me but COME ON! Sent from my iPhone
Dorin Ciocotisan	1/3/2023 20:53	Hello, I want to say it is absolutely ridiculous that the Tesla Model Y (5 seater) is not considered an SUV but the 7 seater is. The IRS decided to make that distinction themselves? How silly. Also, all these hybrids with tiny batteries are receiving the same $7500 tax credit as compared to pure EVs with significantly larger batteries. It's called an EV tax credit. I know there was massive amounts of lobbying to get here but come on guys, Tesla clearly deserves the full tax credit for the Model Y 5 seater, and anyone with an iota of consciousness knows so. Do the right thing. Sincerely, Dorin C.
Nate Smith	1/3/2023 20:53	Hello- Please don't penalize the US' largest producer of EVs! Let's keep jobs in the US and support all Tesla model y vehicles qualifying for IRA incentive for SUVs! Best, Nate Smith -- ———— Nate Smith UNC MBA '18, 'Nova BS '10 M: (978) 430-8512 "A society grows great when old men plant trees whose shade they know they shall never sit in."
Mark Harris	1/3/2023 20:53	Dear IRS, I would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely, Mark Harris

Name	DateTimeReceived	Body.TextBody
Random Email	1/3/2023 20:54	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease.
Avikar Agrawaal	1/3/2023 20:54	Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Thank you
Jorge Patino	1/3/2023 20:54	Good evening, Happy new year! I would like to offer my most humble suggestions regarding the 2023 EV credits guidance with the goal of providing the greatest benefit to the environment and promoting our nations's energy independence. Highly efficient vehicles such as the Tesla Model Y 5 seater and any other high miles per gallons vehicles should qualify for the $7,500 EV credit regardless of cost. Also, the credit amount should be prorated based on the vehicle's miles per gallons efficiency, regardless of technology. For example, a vehicle with a 300 mph rating should receive the full $7,500 credit. A vehicle with a less than 60 mpg rating should get $0. This is how you effectively incentivize the transition away from fossil fuel. Thank you for your consideration. We truly appreciate the great work your agency does. Happy new year! Jorge
Michael Tan	1/3/2023 20:54	classification of the Tesla Model Y (5 seat version). There is no scientific justification, transparency or consistency to the classification. Particularly disturbing, is how your classification incentivises buyers to buy to polluting vehicles like hybrids rather than much more efficient and green vehicles like Battery EVs. Since the Act is a very powerful one, your classification might affect the future of our environment and promote wasteful manufacturing and consumption. You should do what is right.
Hamza Mustafa	1/3/2023 20:54	To whom it may concern, The new EV Tax Credit eligibility is very concerning. Especially since a Hybrid gas car (Jeep Grand Cherokee) which is more harmful to the environment can qualify for the Tax Credit but pure Electric Vehicles (Tesla Model Y 5-seater) Please reconsider the meteric used to determine eligibility for the tax credit so it makes more sense for the American public and actually helps encourage people to transition to a pure electric vehicle instead of wasting tax dollars on gas cars "hybrid". Thank you, Hamza

Robert Lopez	1/3/2023 20:54	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely, Robert Lopez
Wil Desposorio	1/3/2023 20:54	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future.
Jon Ukman	1/3/2023 20:54	I am writing to express my dissatisfaction with the inflation reduction act's EV tax credit rule. I am concerned about the fact that the Tesla Model Y (5 seat) is not eligible for the credit as an SUV, despite the fact that other vehicles such as the Ford Escape PHEV and Jeep PHEV, as well as foreign-made EVs on lease, are qualified for the full $7.5k credit. I understand that the credit is intended to incentivize the purchase of electric vehicles and encourage the transition to more sustainable forms of transportation. However, it seems unfair that the Model Y, which is a popular and highly rated electric SUV, is not eligible for the credit simply because it has fewer than seven seats. This seems arbitrary and does not take into account the fact that the Model Y is a highly efficient and environmentally friendly vehicle. I urge the IRS to rethink these rules and ensure that the EV tax credit is available to electric vehicles that meet certain efficiency and environmental standards, regardless of seating capacity or price. Thank you for considering my concerns. Sincerely, Jon Ukman

Al Lakhani	1/3/2023 20:55	Dear IRS, I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit. According to the IRS guidelines, the following Tesla Model Y variants are qualified for the 7500 tax credit if their Manufacturer's Suggested Retail Price (MSRP) is under $80000: #1 Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) #2 Tesla Model Y Long Range - 7 seat variant (3-rows) #3 Tesla Model Y Performance - 7 seat variant (3-rows) However, it appears that #1 and #3 do not exist. The following Tesla Model Y variants are also qualified for the $7,500 tax credit if their MSRP is under $55,000: #4 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) #5 Tesla Model Y Long Range - 5 seat variant (2-rows) #6 Tesla Model Y Performance - 5 seat variant (2-rows) However, it appears that #4 does not exist, and #5 and #6 are priced at $65,990 and $69,990, respectively, which may disqualify them from the tax credit. This leaves only #2, the Tesla Model Y Long Range - 7 seat variant (3-rows), as the only qualified variant.
Jerry Voyles	1/3/2023 20:55	IRS, Please explain why a fully electric SUV, made in the USA by hard-working Americans, is receiving zero dollars in EV tax credit. Tesla is one of our nation's most innovative companies (no other company has built an EV with similar efficiency/range), and you are essentially punishing them for that. This EV tax credit is meant to incentivize citizens to buy electric and to lessen the burden of ownership, but by removing Tesla's credit, you are incentivizing the continued reliance on fossil fuel and burdening consumers with unnecessary costs related to outdated ICE technology. It is time for paradigm shift in the automotive industry and a move like this, holding back the most innovative US automotive company and incentivizing clinging to an outdated technology, is bad for US consumers and, ultimately, holding back our nation from leading the global automotive revolution. Do the right thing, provide Tesla's EVs, with the same incentive you are providing others, and encourage REAL innovation across the entire US automotive industry. Very Respectfully, JERRY D. VOYLES JR. [cid:d257832f-fa36-4f54-afd9-aee2c9b3227b@namprd09.prod.outlook.com]
Loren Sands-Ramshaw	1/3/2023 20:55	I believe all configurations of the Tesla Model Y including the 5-seat configurations should be classified as SUVs and put under the 80k MSRP limit. I also believe that fully electric vehicles should get far more incentives than plug-in hybrids.
jadelaney70@yahoo.com	1/3/2023 20:55	Dear IRS, I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, Jamie Delaney Sent from Yahoo Mail for iPhone<https://overview.mail.yahoo.com/?.src=iOS>

Basant Maheshwari	1/3/2023 20:55	Hi, Tesla Model Y 5 seater SHOULD be included and its crazy that it's not there from the beginning With best wishes, Basant Maheshwari Partner Basant Maheshwari Wealth Advisers LLP Sebi Regd. Portfolio Managers www.theequitydesk.com<http://www.theequitydesk.com/> twitter : @BMTheEquityDesk
David Lantz	1/3/2023 20:55	Why do European high end luxury hybrid vehicles get the maximum credit of $7500.00 and the model Y from Tesla which is the highest percentage of being made in America does not? Looking forward to a logical answer. David OMB Control No. 1545-2137
steverdh25@gmail.com	1/3/2023 20:55	Happy New Year. Sending the email for EV credit qualification regarding Tesla Model Y(5 seat). just for curiosity how IRS concluded and thinks that the Model Y is a sedan instead of SUV. I think all the consumers including me want to hear the reasonable answer on this. Thanks Sent from my iPhone
Ben	1/3/2023 20:56	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Don't seem to help the EV as the bill intend it. I'm looking for a new EV on the coming month really hope this will be clear out. So I can get a 5 seat Tesla Model y.
RONNY RODRIGUEZ	1/3/2023 20:56	Dear Andres Garcia, I trust this communication finds you and your staff well. The purpose for my email is to comment on the recent guidance on the IRA EV car tax incentive. I recommend the following so the bill is fair and equitable: -Reconsider the way SUVs are classified in order to be eligible for the $7500 tax credit. Consider making the TESLA Model Y (5 seats) and others with similar specs qualify as an SUV just as the Ford Escape is considered an SUV an is smaller and shorter than the above mentioned vehicles which are much more environmentally friendly(the goal of the bill. -Consider making the car companies make the $7500 credit for leases at point of sale. This way low income individuals can qualify for the full $7500 tax credit without having to worry about whether they'll have enough tax liability or not; make it equitable so lower income folks can adapt EVs. -Consider making EVs higher than $80000 ineligible to receive the $7500 via the lease; if a company or individual can lease an $80,000+ vehicle, a low income folk should be able to qualify for the same amount at point of sale. Thank you for your consideration on the above comments. I am an EV enthusiast and supporter of the IRA bill. Thank you, Ronny Rodriguez DISCLAIMER: This e-mail and any other files transmitted with it may contain legally privileged and/or confidential information and they are solely for the use of individual or entity to whom they are addressed. William Schuknecht	1/3/2023 20:56	Hello - Tesla Model Y 5 seater should be included and it's completely unreasonable and illogical that it's not from the beginning. Please make this change quickly as the policy is in effect now. Bill
Luke Foster	1/3/2023 20:56	I think that the details in the $7,500 tax credit are very much flawed. Why does a Jeep with an ICE that goes 31 miles on electric get the $7,500 and not the Tesla Model Y that goes more than 200 miles and does not have an ICE! (Internal combustion engine) Please add all the Tesla Model Y all variants. It's the safest and car with the best technology and range; the consumer clearly wants this car! Give the $7500 credit to them and you'll have a lot of happy citizens. It's kinda shady what's going on; and it seems the unions may have swayed the details in their favor and against Tesla, the clear leader in EVs. Also, I think the tax credit should be a straight up cash discount instead; simply mail the purchaser a $7,500 check from the IRS. Some young people don't make a lot of money per year; but made a lot of money in long term stock positions; if these young people want to buy a Tesla; but only have $1500 worth of tax liability per year; they're not getting the full $7,500. They're missing out on $5000 in this scenario. So please, make it a discount, not a tax credit. Kind Regards, Luke CA Resident Sent from Yahoo Mail for iPhone<https://overview.mail.yahoo.com/?.src=iOS>
Portfolio Management	1/3/2023 20:56	Hi, Tesla Model Y 5 seater SHOULD be included and its crazy that it's not there from the beginning With best wishes, megha Maheshwari
Roger Todd	1/3/2023 20:56	Here are my suggestions for improving the IRS document, "Manufacturers and Models for New Qualified Clean Vehicles Purchased in 2023 or After": THREE SUGGESTIONS: 1. Create and publish objective criteria that anyone can apply to deterministically distinguish the specifications of any model from any manufacturer as being in the Sedan category OR the SUV category. The IRS cannot continue to make categorization appear inconsistent, arbitrary, and non-sensical. 2. Create and publish a process and schedule for amending/maintaining the above-recommended criteria. 3. If completely objective criteria can't be created, the IRS must also create and publish an appeals process to settle manufacturer challenges over subjective IRS categorization choices. Personally, it is my hope that all current Tesla Model Y variants be categorized as an SUV (NOT a Sedan). Doing so will greatly accelerate removal of gas vehicles from the road. I appreciate the IRS inviting comment. Roger Todd I/T Engineer Murfreesboro, TN
Kirill Polyakov	1/3/2023 20:56	Hi. As an EV fan and owner it seems odd to me that some versions of the Ford Mustang Mach-E and Tesla Model Y don't qualify for SUV status for the IRA tax credit. I know more about the Model Y as I own one. The 5-seat version of the Model Y is not very different from the 7-seater. There are plenty of vehicles considered SUVs that are similar to the Model Y 5-seater and actually smaller in size. Please reclassify the Model Y 5-seater and the Mach-E as SUVs. Both are much more energy efficient than comparable gas and hybrid SUVs and I think that's the intent of the IRA. Thank you KP Sent from Yahoo Mail for iPhone<https://overview.mail.yahoo.com/?.src=iOS>

Eric	1/3/2023 20:56	To whom it may concern, as an American Tax Payer & Business owner I fully support incentives & legislation that promotes EV Adoption, Clean/Renewable Energy & American Manufacturing. I do however have 3 issues with how this legislation is being applied that I do not believe actually achieve these 3 important objectives of the law & incentives. 1. The interpretation of what is considered an SUV is inconsistent & arbitrary at best, and at worst prejudice & biased. The Tesla Model Y, Cadillac Lyriq and Ford Mach E are SUV's as classified by 2 other Government Agencies (EPA & NTHSA) and should thus both be classified this way by the IRS & any other Government agency as well. 2. In addition to this, the Tesla Model Y is the most American made vehicle that is available in today's market & as such should not only be included in any/all incentives this legislation provides, it can be argued it is exactly the poster child for what these incentives are trying to and should be accomplishing. Build American, Buy American. Vehicles assembled in Mexico and/or Canada should not receive full credit/incentives. Full credits should be reserved for vehicles assembled in the United States at both Union & Non-Unionized factories. 3. Mild Hybrid vehicles & PHEV's with limited range and/or poor fuel economy (below 30 mpg) should not receive the full credit/incentives that a full EV receives. Sincerely,
Jose Alanis	1/3/2023 20:56	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Best, Jose Alanis
Basant's Corner	1/3/2023 20:57	Hi, Tesla Model Y 5 seater SHOULD be included and its crazy that it's not there from the beginning With best wishes, Shalu Mehra
ronmtye727@gmail.com	1/3/2023 20:57	It seems unreasonable and inexplicable that under the IRA EV tax credit that the pure EV Ford Mustang Mach-E and pure EV Tesla Model Y do not qualify as SUV's; but the Ford Escape PHEV does qualify. I think your criteria for what constitutes an SUV needs some modification. Regards Ron Tye
Maria Diedrich	1/3/2023 20:57	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). We are a family of 5 with boys, currently driving 4 gas powered vehicles. As a consumer interested in purchasing a clean energy vehicle, I am frustrated that the Tesla Y is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Maria Diedrich
Meghae Naik	1/3/2023 20:57	I would like to voice my concern over the $7,500 EV tax credit to Hybrids. In an era when we have ample electric options available, such as the Tesla models, Hybrid vehicles should not be receiving a tax credit instead. By giving tax credits to Hybrids, we are not helping adoption of electric vehicles, but promoting gas vehicles, which are known to have a wide range of consequences. Additionally, Tesla Model Y 5 seater is an SUV and need to be sure an Electric SUV is not excluded from receiving the Tax credit and thereby help transitioning from Gas to Electric transportation. As a taxpayer, I would like tax money to be utilized and granted appropriately. Sincerely, Megha

ssanyal@frontiernet.net	1/3/2023 20:58	Dear Sir or Madam, Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor should be eligible for the $7,500 tax credit. The Ford Mustang Mach-E, likewise, should also qualify for the $7,500 tax credit. Thanks, Sandeep Sanyal 585-797-3329 Sent from Frontier Yahoo Mail for iPhone<https://overview.mail.yahoo.com/?.src=iOS>
Robert Popcevsk	1/3/2023 20:58	Why is the Model Y not included. NOT FAIR. CORRUPTION!
Shane Adams	1/3/2023 20:58	Hi, I am outraged that a hybrid vehicle that gets 22 mpg would qualify for the tax credit whereas a pure ev like the ford Mach-e or Tesla suv would not. Outrageous!! Thanks, Shane
Charlie McGoogan	1/3/2023 20:58	Hi, The Tesla Model Y is a phenomenal car, as evidence by record sales in numerous states and countries, and it is a fully electric vehicle.! It is important that the 5 seat configuration be eligible for the full $7,500 tax credit for electric vehicles and classified as an SUV, which would allow the credit cap to be $80k. This will encourage more families to go fully electric, learn about alternative fuels, and transition the American fleet off of gasoline. Thanks, Charlie
Ev	1/3/2023 20:58	Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely, Evelyn A Vollmer -- "The Earth is the cradle of humanity, but mankind cannot stay in the cradle forever." - Konstantin Tsiolkovsky
ckm.endo	1/3/2023 20:59	The model Y 5-seater should be included in the tax credit. It makes no sense why it isn't that's one of the most efficient electric vehicles on the market with no gas / carbon emissions. It is the opinion of a green / Earth friendly vehicle and makes no sense why it was excluded from the tax credit. How does a gas guzzling Jeep with only 21 miles electric mileage qualify for the 7,500 tax credit yet the Tesla model y does not. This makes absolutely no sense. Chetan Mehta
johnathan.e.burns@gmail.com	1/3/2023 20:59	I think it's silly that the 5 version of Tesla Model Y would isn't considered an SUV in inflation reduction act when both the EPA and NHSTA consider all Model Y variants an SUV.
Ben	1/3/2023 20:59	Dear IRS, I'm looking for a EV in the coming months, specifically model Y Tesla. I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Don't seem to help the EV as the bill intend it. Sent from my iPhone
Robert Popcevsk	1/3/2023 20:59	Why is the Tesla Model Y not included?? IRS CORRUPTION!!!

Name	DateTimeReceived	Body.TextBody
Scott Weathered	1/3/2023 20:59	Hello Mr. Garcia. I hope you are well. I am writing to give feedback on the proposed tax credits. I've been reviewing the credit breakdown here: https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after I believe these should be revised so that all SUVs get the same $80,000 cap regardless of any other feature of the car. The Ford Mach-e and Tesla Model Y are both considered an SUV by the EPA and by NHTSA (https://www.nhtsa.gov/vehicle/2022/TESLA/MODEL%20Y%20%205-SEAT/SUV/RWD). Why do these vehicles have the $55,000 cap, while other SUVs that are much less efficient get the full $7500 credit? For example the Jeep Grand Cherokee SUV gets a mere 23 MPG and yet it gets the EV tax credit? This is a huge step backwards in regards to energy independence and the move to electric vehicles. I hope that you please consider all EV SUVs to be eligible for the $80,000 cap. Thank you, Scott Weathered
Alex Nasr	1/3/2023 20:59	Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely, Alexi Nasr.
Ryan Crompton	1/3/2023 21:00	I believe that the plug in ev tax credit determinations for SUV vs sedan should be reevaluated as it currently does not seem consistent with what the vehicles class/shape is and also differs from the previous (and correct in my mind) assessment of vehicles like the Ford Mustang Mach E and Tesla Model Y as SUVs. And worse yet, as currently proposed, a very limited electric range plug in hybrid Jeep gets a bigger tax credit than an all electric Mustang Mach E which defeats the purpose of pushing people towards all electric vehicles. Please consider revising this initial assessment to something that better achieves the intent of this tax credit and helps the most people make the transition to EVs. Sincerely, Ryan Crompton
Todd Coyle	1/3/2023 21:00	The car/suv classification should not be determined by number of seats. Furthermore it should not differ in classification from that of other agencies like NHTSA or the EPA. And cars that go less than 100 miles should not receive the full 7500 credit. Thank you
Home	1/3/2023 21:00	The Tesla Model Y should qualify for EV tax credits as it is a zero emissions vehicle! Sent from my iPhone
Trevor Ward	1/3/2023 21:00	Hello, I would like to comment on the new tax incentive for EVs. It is crazy the model Y is not eligible unless it has the 7 seat option. It's the same car! Also crazy that Hybrids are included, I thought we wanted to transition to EVs, this is half way ground. Thanks for fixing this. Trevor Ward Moraga, CA.

zach paul	1/3/2023 21:00	Regard Tesla Model Y SUV classification - Any reasonable consumer would conclude that the Tesla Model Y is without question an SUV. What is the logic to allow a tax credit for elimiating carbon emissions for a vehicle that requires carbon for use, while at the same time disallowing a carbon free vehicle from receiving the same tax credit due to interior configuration preferences that do not impact the necessity for carbon to use?
Sightglass Photography	1/3/2023 21:00	Dear Andres, I feel like the EV tax credit should be reviewed from top to bottom. 1. A car should be in 1 category, not 2 with different variants. Example Tesla model Y and VW ID.4. In the case of the Y the 7 seater is considered an SUV and the 5 seater is considered a “sedan”. And the ID.4 the 2 motor versions are considered SUVs and the single motor versions are considered “sedans”. I feel like you should go with how the EPA classifies them and make all variants SUVs. 2. Plug-in hybrids across the should not qualify, as this is a EV tax credit and not a EV and hybrid tax credit. Plug-in hybrids at the end of the day become gas cars in every situation outside of a short commute or a few errands. As to me the purpose of the tax credit is to promote zero emission and pure electric cars. They are also bandaids for a much bigger problem, and that’s to transition to sustainable energy. And again a hybrid isn’t doing that besides reducing emissions, not elimination. 3. No consistency with the credit. I haven’t read the rules in detail, but it’s obvious that there isn’t a single logic being used, but something that seems completely random and very unfair. Should be EVs only, and a given model should only be in one category. Cheers, Eric
HollieDAlexander	1/3/2023 21:00	I am writing to you to submit an official comment regarding the Inflation Reduction Act rules. After reviewing the classification of Tesla Model Y, there appears to be a mistake or further need for clarification. What metric or use case was implemented in determining the credit given to a 5 seat version versus the 7 seat version of the same model. Are you punishing owners that need space for storage (likely typical families) versus owners that use the vehicle for ride shares (for business or generating income)? It appears to me that you are favoring the large occupancy model with a higher tax incentive for business purposes which may result in more taxes being sent to the IRS. The Tesla Model Y should have the same incentive regardless of the number of passengers. Most buyers will opt for the 7 seat version and then remove the seat. This is wasteful and could be an abuse of power because the IRS benefits from the revenue from the company that makes the unnecessary seats. Do not commit fraud against the American people. We are tired of the government making rules for the government’s benefit to the detriment of the people! Respectfully, Hollie D. Alexander
Mario Stanitzek	1/3/2023 21:00	Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. Here are the primary qualifications for the EV tax credit: [image0.png] However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Here's an example of the broken nature of this incentive in its current form: [image1.png] Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs.

Shaun	1/3/2023 21:00	To Whom It May Concern, I'm writing to express my dissatisfaction with the Tesla Model Y 5 Seat variant failing to be classified as an SUV and therefore not attracting the IRA Tax Credit. This vehicle has all the hallmarks of an SUV, including being suitable for drivers who need the room to move sports gear and kids around. It has the utility needed to do these kinds of tasks, and a 7 seater is often more than people need or want for this purpose. As a family who has been waiting to buy a pure EV, we feel marginalised and excluded by the decision to not classify this vehicle as an SUV. Please update the classification to include the Tesla Model Y 5 seater as an SUV so it qualifies for the tax credit. Thank you and best regards. Shaun H
China Garden	1/3/2023 21:00	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Sent from my iPhone
Ivy Tsai	1/3/2023 21:01	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely, Chia Tsai
Mao Zhao	1/3/2023 21:01	Tesla Model Y 5 seat should be eligible for $7500 tax credit 发自我的 iPhone
Andy Leung	1/3/2023 21:01	Hello, I am writing to request that the Model Y 5 seater be included in the tax credit program currently available for the Model Y 7 seater. As you may be aware, the Model Y 5 seater shares many of the same features and capabilities as the 7 seater model, including high fuel efficiency, advanced safety features, and a fully electric powertrain. In fact, the only difference between the two models is the number of seats, with the 5 seater offering a more streamlined and efficient design. Given the shared features and benefits of the two models, it is our belief that the Model Y 5 seater should qualify for the same tax credit as the 7 seater. This would not only provide a financial incentive for consumers to choose the more efficient 5 seater model, but also encourage the adoption of electric vehicles as a whole. We appreciate your consideration of this request and look forward to your response. Sincerely,
hussainjamel	1/3/2023 21:01	Dear IRS, I am writing to express my concern about the exclusion of the Tesla Model Y 5 seater from the new federal EV tax credit. As a automotive engineer, I can say with confidence that this model is a highly efficient and innovative vehicle that deserves to be included in this program. It is silly that the Model Y was not included from the beginning, as it meets all of the requirements for the tax credit. It has a range of more than 300 miles on a single charge and has received excellent ratings for its energy efficiency. Its inclusion in the program would encourage more consumers to purchase electric vehicles, which would ultimately lead to a reduction in greenhouse gas emissions and a cleaner environment. I urge you to reconsider the exclusion of the Model Y from the EV tax credit and include it in the program. The benefits of electric vehicles are too great to ignore, and the Model Y should be recognized for its contribution to this movement. Thank you for your attention to this matter. Sincerely, Hussain Jamel

Kyle Lapointe	1/3/2023 21:01	Hello - In regards to the Tesla Model Y 5-seat configuration not being recognized as an SUV for the EV tax, here are some arguments for why it should be considered: - The Model Y 5-seat configuration has the same dimensions as other SUVs, including a larger size and higher ground clearance than sedans or hatchbacks. - The Model Y 5-seat configuration is designed for all-weather driving and off-road capability, with features such as all-wheel drive and air suspension. - The Model Y 5-seat configuration has a versatile interior with a spacious cargo area, making it well-suited for outdoor activities and hauling gear. - The Model Y 5-seat configuration meets the common definition of an SUV as a vehicle that combines the attributes of a passenger car with those of a light truck, and is designed for both on-road and off-road use. - The Model Y 5-seat configuration's classification as an SUV would be consistent with the classification of other similar vehicles, such as the Audi Q5 and BMW X3, which are also eligible for the OMB Control No. 1545-2137 EV tax rebate. Overall, the Model Y 5-seat configuration has the characteristics and capabilities of an SUV, and therefore should be recognized as such for the purpose of the OMB Control No. 1545-2137 EV tax rebate.
Jenny Lin	1/3/2023 21:01	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Don't seem to help the EV as the bill intend it. I'm looking for a new EV on the coming month really hope this will be clear out so I can get a 5 seat Tesla Model y.
Erik Stevens	1/3/2023 21:01	I am shocked to see that the Tesla Model Y 5-seater, which is the most popular EV in America, is not included in the new $7500 EV tax credit. I fully plan to buy an EV as soon as I can afford it, but unfortunately I currently cannot afford the full asking price of the Model Y. Every other cheaper model of EV is either completely unavailable, or a poor fit for my family. Please allow the Model Y to qualify for the full rebate so that Middle Class Americans like myself can actually afford to buy an EV that is safe, reliable, and available. Thank you, -- Erik Stevens, Haines, Alaska
Bill N9n	1/3/2023 21:02	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
Zach Paul	1/3/2023 21:03	Dear IRS Any reasonable consumer would conclude that the Tesla Model Y is a SUV. What is the logic to allow a tax credit for elimiating carbon emissions for a vehicle that requires carbon for use, while at the same time disallowing a carbon free vehicle from receiving the same tax credit due to interior configuration preferences that do not impact the necessity for carbon to use?
Bishwas Sharma	1/3/2023 21:03	Hi Please include Tesla Model Y 5 seater for the EV Tax credit as it's the most efficient among SUVs. Thank you -- Bishwas Sharma Brookings SD 57006, USA Phone: +1 605-690-8367
HC Garden	1/3/2023 21:03	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Tesla Unwinding	1/3/2023 21:04	Hello, Please address the elephant in the room by you not classifying all variants of the Tesla Model Y as an SUV and this preventing customers from getting tax credit for a pure electric car. This makes no sense while you approve several gas plug in hybrids that are doing NOTHING to address climate change. This policy is completely disgusting and will cause me a long time democrat to consider voting Republican if you don't address this!! Josh Meador
Cheuk Yam Tam	1/3/2023 21:04	To whom it concerns, It came to my attention that the Tesla Model Y 5-seat is not classified as an SUV, yet larger gas/hybrid car models are qualified. As the IRA goals are to move towards an electric future, please reconsider having Tesla Model Y 5-seat categorized as SUV. Thank you, Cheuk Yam
SHAUN SULTZABERGER	1/3/2023 21:05	plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y 5 seat configuration. Thanks Shaun S

Name	DateTimeReceived	Body.TextBody
Boyd Wilson	1/3/2023 21:05	the restrictions or guidelines that allow a Tesla Model Y 5-seat version not to be classified as an SUV. Please change those so it would be classified as an SUV as the EPA does. Thank you for your consideration, K. Boyd Wilson
Kyle Westwood	1/3/2023 21:05	Tesla Model Y 5 seater is an SUV and should qualify for the 80k price cap. Hybrids should not be included in the EV tax credit because they have an internal combustion engine. Thanks, Kyle Westwood (801) 854-8266
Bo Kim	1/3/2023 21:05	This qualification must be changed immediately. The fact that Tesla Model Ys 5 seaters don't qualify and a gas guzzling, air polluting hybrid cars get the full $7,500 credit is a disgrace to all of us Americans. This credit should be applied to all EVs that people actually want to buy and drive and care about the environment. Hybrids are not EVs and pollute the air just as much as the ICE vehicles. This is an outrageous bill and needs to be changed immediately. All American made EVs should qualify for this tax credit and all non EVs should be removed.
edcalico	1/3/2023 21:05	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Ed Sent from my Verizon, Samsung Galaxy smartphone
kartik trivedi	1/3/2023 21:06	In my opinion only pure EV should get subsidy. Atleast keep minimum 200 miles EV battery capacity according to EPA guidelines. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Ideal fix: * Remove incentives for all hybrid vehicles and only have them apply to pure EVs. * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Next best fix: * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Minimum 200 miles battery capacity should be their. To the IRS and Government officials - please use this chance to prove to the American taxpayer that these categorizations are done in error. Otherwise, it will be yet another reason for the American tax payer to doubt your true intentions.
John L.	1/3/2023 21:06	Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely, One More example below: Dear IRS, I hope this letter finds you well. I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit.
Barry Turner	1/3/2023 21:06	The tax credit thing needs to be reevaluated. Penalizing Tesla because it does t weight enough is silly. Please consider doing the right thing and allowing the model Y to qualify for the tax credit too.

Name	DateTimeReceived	Body.TextBody
Andrianov, Alexandre	1/3/2023 21:06	Dear IRS, As a consumer and taxpayer, I am writing to express my dissatisfaction and frustration with the fact that the Tesla Model Y (5-seat version) is not classified as an SUV and is therefore not eligible for the $7500 tax credit. I find it absurd that a foreign-made vehicle like the VW ID4, which is both smaller externally and internally, is eligible for this tax incentive while the Tesla Model Y, which is one of the most American-made cars and represents great innovation, is not. I strongly believe that we should be supporting American manufacturers, especially ones that are leading the charge in innovation and sustainability like Tesla. It is unfair and unjust to penalize the Tesla Model Y and its buyers in this way. I urge the IRS to reconsider its classification of the Tesla Model Y and make it eligible for the same tax incentives as other SUVs. Sincerely, Alexandre G. Andrianov MD, MBA Chair Department of Medicine PBMC 1300 Roanoke Avenue Riverhead, NY 11901
Paul Chon	1/3/2023 21:06	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. Harshesh Patel	1/3/2023 21:06	Hi There, The Qualified Plug-in Electric Vehicle Credit and Rev. Proc 2022-46 program is considering weight of vehicle and not really the electric capabilities of vehicle. Why should hybrid or any car that is not fully electric get any credit and the cars that are fully electric but does not qualify due to its price or weight. I believe this program is designed to favor vehicles from few companies and not really help provide credit to true electric vehicles. To add more context, Jeep Wrangler with 50miles of electric capacity and gives very low Millage in gas for the travel above 50 miles is qualified for this credit but Tesla Model Y which is fully electric is not qualified due to its weight. This program really seems to be focused on providing advantage to Jeep, Chrysler, Ford, GM and Chevy vehicles and not really focusing on true electric vehicles. Thank You,
Jared Vanore	1/3/2023 21:07	Please consider the tesla Model Y 5 seater to be included

Mike V	1/3/2023 21:07	Dear IRS, I am writing to express my frustration over the recent tax incentive for electric vehicles (EVs). While I understand the incentive's goal of promoting the adoption of cleaner forms of transportation, I am disappointed to see that it includes certain plug-in hybrid vehicles but excludes the most popular EV in the world, the Tesla Model Y. Furthermore, it is confusing to see that the incentive includes a 22 mpg Jeep Wrangler, which clearly does not meet the same emissions standards as a fully electric vehicle like the Model Y. This inconsistency in the eligibility criteria undermines the credibility of the incentive and calls into question its fairness. I urge the IRS to reconsider its inclusion criteria for this tax incentive and to give fair consideration to all fully electric vehicles, regardless of the manufacturer.
Carey Thomas Campbell	1/3/2023 21:08	continue producing ICE cars. This defeats the purpose of the credit, which is to usher, not delay, the adoption of electrical vehicles. 2. the 5-seater Model Y should get the credit. The only difference between it and the 7 seater is 2 seats in the back that cost more (I've read around $3000) to purchase. This defeats the purpose of the credit. Thank you, Carey K2CTC Mr. Carey Thomas Campbell
Yi Chen	1/3/2023 21:08	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. juan allendy peralta diaz	1/3/2023 21:09	Hi there. My name is Juan Allendy Peralta Diaz I am sending this email regarding the comments you requested.we need to have the tesla model Y available to get the tax rebate of 7500. Tks
Barry Gall	1/3/2023 21:09	Hello, I am writing this email because the tax credits in the inflation reduction act for Tesla vehicles is extremely biased. The Tesla Model Y is the most American made vehicle in the country and yet it doesn't qualify because it's not considered an SUV in the bill. It is categorized as a SUV according to the National Highway Traffic Safety Administration. Here is a link to the website: https://www.nhtsa.gov/vehicle/2022/TESLA/MODEL%20Y%20%205-SEAT/SUV/RWD Please reconsider the bill to include the Tesla Model Y to qualify for the $7500 tax credit. Thank you, Barry Gall
Matthew Barkley	1/3/2023 21:09	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As I look into my families means of transportation I'd like to be able to go fully electric with longer range and the Tesla Model Y 5 seat is the best option for my family of 4. Unfortunately without the 7,500 tax credit not being applied leaves me looking at similarly Priced (after tax credit) ICE SUV models. I also don't understand how the EPA considers the Model Y 5 seat version an SUV, but the Inflation Reduction Act does not. How can government agencies differ on definitions? Thanks, Matt Sent from my iPhone
HC Garden	1/3/2023 21:09	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
Chirag Patel	1/3/2023 21:09	Hello, The future is definitely electric, by not providing $7500 full credit to fully electric vehicle you are not supporting the mission. Plug in vehicle are not that efficient as they need both gas and electric supported engine. Tesla model y specially both 7 and 5 seat is very efficient car with light weight and highest mileage. Tesla model y 5 seated not eligible for getting tax credit because it is light weight is bizarre. Please reconsider supporting fully electric car. Thanks! -- Thanks, Chirag Patel

Barklee Sanders	1/3/2023 21:09	Dear IRS, I am writing to express my frustration with the Inflation Reduction Act rules on vehicle classification, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am disappointed that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. I am also shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a small battery (21mi electric range) are eligible for the full $7.5k credit. This seems to suggest that special interests and political motivation may have played a role in the writing of these rules, possibly with the influence of the UAW and legacy auto lobby. The way these rules are currently being interpreted has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. For example, the Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit, while the Jeep Grand Cherokee 4xe, with a gas engine, 23 MPG (very inefficient), and only 25 miles of electric range, is eligible for the credit. This is a severe lack of negligence by the IRS to properly categorize vehicles, or it could be seen as corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. I propose that the IRS remove incentives for all hybrid vehicles and only have them apply to pure EVs. Alternatively, the SUV/Non SUV rules should be applied fairly, across the board, with consistency in order to correctly incentivize automakers and the public with the original intent of the bill. To the IRS and government officials, please use this opportunity to prove to the American taxpayer that these categorizations are done in error. Otherwise, it will be yet another reason for the American taxpayer to doubt your true intentions. At best, the current categorization is negligent and/or incompetent. At worst, it is corruption. Please fix this issue. more info here https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit?recruiter=1290758235&recruited_by_id=073c0570-8a0f-11ed-
Christian Rangel	1/3/2023 21:09	To whom it may concern. I would like to give my opinion on the tax credit. The Mach e mustang and tesla model y should all qualify with the 5 seat, the EPA considers them as SUV Christian Rangel
John Hall	1/3/2023 21:09	Its makes no sense to subsidise a vehicle which is basically an I.C.E vehicle carrying a small battery around, making it inherently less engery inefficient and less green then if you had just not put the battery in at all, while on the other hand not including actual all battery electrical vehicles like the Tesla model Y which are far more engery efficient due to not having to carry an I.C.E engine in the trunk. Kind regards John hall
Jason Cross	1/3/2023 21:09	Alcon, As an EV owner I think the roll out of which models are available makes little to no sense. The intent of the IRA is to electrify America but the best selling EV in the world was excluded The Tesla Model Y 5 seat options was excluded from the 80k limit. Also the Ford Mach E not qualifying makes no sense. I think you guys need to revisit this asap as it appears to be skewed to help cars that make no sense and hurt the best EVs on the market. Maj Jason Cross Sent from Yahoo Mail for iPhone<https://overview.mail.yahoo.com/?.src=iOS>
Vladimir Ofitserov	1/3/2023 21:09	attention that the Tesla Model Y, a pure electric vehicle with a range of 330 miles and an efficiency rating of 117 MPGe, is not being classified as an SUV by the IRS. This means that the Model Y is not eligible for the $7,500 tax credit, despite its SUV form factor and impressive efficiency. On the other hand, the Jeep Grand Cherokee 4xe, which has a gas engine and a relatively low efficiency rating of 23 MPG, is eligible for the tax credit due to its 25 miles of electric range. This seems like a gross injustice and a misalignment with the original intent of the tax credit, which was designed to encourage the adoption of sustainable transport and support American workers in the electric vehicle manufacturing industry. I strongly urge you to take action to address this issue and ensure that the IRS applies the SUV/non-SUV rules consistently and fairly. It is important that tax payer dollars are used to support the development of advanced technology and clean energy, rather than propping up inefficient gas vehicles. I would also suggest considering a revision to the tax credit guidelines to exclude hybrid vehicles and only apply to pure electric vehicles. This would more accurately align the incentives with the goals of reducing emissions and promoting sustainable transportation. Thank you for your attention to this matter. I hope to see swift action taken to correct this issue and ensure that the Federal Tax Credit is applied fairly and consistently. Sincerely, Vladimir Ofitserov Taxpayer from Californai
John Hinz	1/3/2023 21:10	I hope all is well. I came across the webpage asking for comments on form 8936. I noticed in the current version, The Tesla Model Y 5 seater only qualifies if under 55k (which it is not) but the 7 seater will qualify if it's under 80k. The 7 seater has 2 very small seats in the back which is meant for kids and I don't see why this small change from the 5 seater is a difference of 25K. This is absurd in my opinion. Please increase the MSRP limit to 80k for the 5 seater Model Y to match the 7 seater. I appreciate your consideration. Best, John Hinz.

Nash VSON	1/3/2023 21:10	Tesla should be included in the $7500 EV tax credit as it was the first company to start the fully electric EV race. As well as the Model Y was designed to be an SUV and happens to be lighter making the vehicle even more efficient. Tesla has an already established charging infrastructure and continues to improve its vehicles software. Not including the company that only sells electric vehicles and is the most valuable car company that has no debt doesn't seem to mark any sense. Teslas are the poster child of electric vehicles. Thank you
Ben Chen	1/3/2023 21:10	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Aditya R Shrivastava	1/3/2023 21:10	Tesla Model Y should be categorised as an SUV and all trims should be eligible for the $7500 credit. It is the most popular EV in the US so it should be included in the list of cars eligible for the credit otherwise the incentives lose majority of their appeal. From the Tesla Model Y buyer's perspective, the IRA credit as it stands today is pretty much useless and I sincerely wish this categorisation by the IRS can be reconsidered. Thank You, Aditya
therawfoodgod	1/3/2023 21:11	Allow the model y 5 seater to be included in the tax credit!
yi Fan	1/3/2023 21:11	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). RM	1/3/2023 21:11	This email is to provide a comment regarding lack of EV tax credit for the Telsa Model Y, a pure Electric Vehicle that has a 330-mile range and 117 MPGe and those valued less than $80,000 and more than $55,000 and the Ford Mustang Mach-E. It is my understanding that these cars are considered SUVs by EPA. Please consider this email as a request to re-evaluate the IRS' decision to exclude the above mentioned cars from the EV tax credit eligibility and instead reconsider including the cars as eligible for tax credit for car purchased after Jan 1, 2023. IRS is a non-partisan entity and the citizens of this country need to get assurance from IRS that their decision remains non-biased, objective non-judgmental and fair based on underlying data. Your reconsideration and inclusion of the car will send a message of a fair and non-partisan agency within our government that we can rely on. Thank you for your kind consideration, Mrs. Modha
Jayantibhai Patel	1/3/2023 21:11	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely, JSP Tax Payer.
diego_hernandez05	1/3/2023 21:11	To whom it may concern, Please qualify the Tesla Model Y for the 2023 EV tax credit. This vehicle is a pure eV and other vehicles that are not are qualifying for the credit. Please consider the Tesla model Y as an SUV making it eligible for a EV credit. Sincerely Diego Hernandez Sent from my Verizon, Samsung Galaxy smartphone
Elia Rosetta	1/3/2023 21:11	It is shameful that you are excluding some Tesla model Y models from the SUV category and $80,000 threshold. I hope you will reconsider and be people of principles. Thank you. Elia Rosetta
Mike Plate	1/3/2023 21:11	To Whom it may Concern, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. Magnus M. Beck	1/3/2023 21:11	IRS team, I understand that the inflation tax act wants to improve our economy while also helping our planet by incentivizing tax credit for these little to zero emission vehicles. I'm glad to living a country that wants to improve the standards of life for their people. However, omitting a vehicle such as the Tesla Model Y 5 seaters creates divisions for consumers. I am hoping to start a family soon with an household income close to 100k. Safety and value is needed for me. The Model Y offers that. I am middle class coming up from poverty when I was a kid. I understand the value of a dollar. Hard working citizens of our country have earn the support of their government looking out for them. Why take away our options of a good product? Weight is the requirement? I believe that is short sighted. It meets the volume, safety, and range value. I have a bad back with a currently small car-having something bigger to my preference and many others would be a great deal. Please consider your evaluation of the tax credit and fix it to be fair for EV vehicles to compete. In this case, specifically, the Tesla Model Y. I've had a chance to rent one through Hertz while visiting family in California. The reliability and charging network helped alleviate concerns. I could say a lot more that is most likely repeated by thousands others, but I know only you guys on the IRS can make that possible. I hope you reconsider. Thank you for reading this. I appreciate the town hall discussion. Magnus M. Beck Sent from my iPhone
Jason Rassett	1/3/2023 21:11	IRS - Just a quick note that the 5 seat Tesla ModelY should definitely qualify for the $7,500 ITC credit just as the 7 seat does. It should follow the same classification as the EPA uses which classifies it has an SUV. Additionally plug in hybrid is a technology that should have been a bridge from gas to electric. It wasnt properly rolled out and full EVs are now here. There is no reason to give any Tax credit to a technology that is already past its usefulness. Doing so just extends our dependence on fossil fuels, the vehicles are more costly over thier lifetime to maintain, and simply allows legecy auto to continue product pipelines encouraging the use of fossil fuels instead of a product pipelines that move away from fossil fuels as is the spirit of the Tax Credit. Please fix this, our future depends on it. -Jason
Joseph Rader	1/3/2023 21:11	I ordered a long range Tesla Model Y, 5-seater variant, in June of 2022 with a delivery estimate of early 2023. I was hopeful the Inflation Reduction Act would be passed in 2022. Thankfully it was signed into law in August. So I continued with my plan to wait until 2023 for the credit, even though Tesla offered a much earlier delivery in December, including with a big discount. The 5-seater vehicle I want is categorized as an SUV by the EPA and NHTSA. I fully expected to be able to get a full tax credit under the new IRA credit in 2023. When the IRS released in late December the decision to set the 5-seater Model Y to the sedan cap of $55k, I was flabbergasted. I had waited for months, waited for the IRA, only to have a finally fair tax credit potentially taken away. And only because of two kid sized back seats I didn't want in the vehicle and the fact that Tesla makes a lighter, more mass efficient vehicle. I implore the IRS to reconsider their classification of the 5-seater Model Y as a sedan, among others such as the Ford Mach-E. Please set the 5-seater Model Y MSRP cap to $80k, just as you have done already for several undeserving, heavier, polluting, gas burning hybrid SUVs. Giving gas hybrid SUVs the credit while snubbing many fully electric SUVs goes completely against the spirit of the IRA. It is meant to accelerate sustainable transportation, not give another handout to the oil industry and slow-to-change encumbant automakers. Thank you, Joe Rader
Weinan Qiu	1/3/2023 21:12	The EV Tax Credit is just so messed up ! It is soooooooo... unfair to Tesla Model Y! People have eyes and ears, they will form a judgement. If IRS wants to retain any credibility , fix this mess !
Devin Rajaram	1/3/2023 21:12	Dear Andres Garcia, I hope this letter finds you well. I am writing to request that you consider revising the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option fully embodies the characteristics of an SUV. It has the size, functionality, and EPA classification of a traditional SUV. Moreover, it is a highly efficient fully electric vehicle, which aligns with the IRS's mission of promoting cleaner and more sustainable transportation options. I strongly believe that the Model Y 5 seat option is worthy of the full tax credit available to SUVs. I encourage you to carefully reconsider its classification as such. Thank you for your attention to this matter. — Devin Rajaram Digital Designer
Murphy526	1/3/2023 21:12	If the administration is serious about the environment they would include all Tesla Model Ys for the rebate. Please reconsider.

Chris Kong	1/3/2023 21:12	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). This M-Y car should be classified for SUV eligible for full EV tax credit. Sent from my Galaxy
chen ben	1/3/2023 21:12	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Ben Chen
Damion Berger	1/3/2023 21:12	To whom it may concern; I am writing to communicate my strongly held belief that the Tesla Model Y 5 seater should be eligible for the full $7,500 tax credit in the IRA EV stimulus program and it’s an incredibly wrongheaded oversight that it hasn’t been from the beginning. In contrast, the eligibility of polluting hybrid vehicles to qualify for the full $7,500 stimulus is even more wrongheaded. Tax payer’s dollars should not be used to stimulate the purchase of ICE Hybrid vehicles that continue to pollute and include very small batteries that are rarely used at all. Please review and amend the IRA rules accordingly. Sincerely, Damion Berger New York +1 646 675 2699
Wes Wahlin	1/3/2023 21:12	I am writing to express my extreme frustration and sense of disenfranchisement with the recent tax incentive for electric vehicles. It is outrageous that the incentive includes plug-in hybrids, but excludes the most popular electric vehicle in the world; the Tesla Model Y. Furthermore, it is ridiculous that the incentive includes a 22 mpg Jeep Wrangler, which is not even close to being an efficient or environmentally friendly vehicle. This decision shows a clear lack of understanding and appreciation for the benefits of electric vehicles and the need to promote their adoption. I strongly urge the IRS to reconsider this unfair and short-sighted decision, and to include all pure electric vehicles, which includes all variants of the Tesla Model Y, in the tax incentive program. Sincerely, Wes Wahlin
Lilaben Patel	1/3/2023 21:12	Dear IRS, I hope this letter finds you well. I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit. According to the IRS guidelines, the following Tesla Model Y variants are qualified for the 7500 tax credit if their Manufacturer's Suggested Retail Price (MSRP) is under $80000: #1 Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) #2 Tesla Model Y Long Range - 7 seat variant (3-rows) #3 Tesla Model Y Performance - 7 seat variant (3-rows) However, it appears that #1 and #3 do not exist. The following Tesla Model Y variants are also qualified for the $7,500 tax credit if their MSRP is under $55,000: #4 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) #5 Tesla Model Y Long Range - 5 seat variant (2-rows) #6 Tesla Model Y Performance - 5 seat variant (2-rows) However, it appears that #4 does not exist, and #5 and #6 are priced at $65,990 and $69,990, respectively, which may disqualify them from the tax credit. This leaves only #2, the Tesla Model Y Long Range - 7 seat variant (3-rows), as the only qualified variant.

Jeff McDonald	1/3/2023 21:13	Some variants of the Tesla Model Y and the Ford Mustang Mach-E will not receive any incentives<https://www.teslarati.com/tesla-protest-ira-incentives-evs-vs-hybrids/> from the IRA at all, yet some vehicles that use fossil fuels will. Those vehicles are classified as electric vehicles because they are plug-in hybrid EVs. Jeff McDonald -- Many thanks, Jeff McDonald
Anthony Lemke	1/3/2023 21:13	or other hybrid vehicles that are basically 90% gas and 10% battery qualify, but not a vehicle like a Tesla, that is 100% electric only? I'm in support of MSRP limits, but that should be it. If the government truly wants to transition to electric vehicles, then it should be a lower credit with a MSRP cap. That should be it. Vehicles like Model Y performance, Tesla Model S, etc should not qualify. People (like me) who can afford those do not need the tax credit. Just a simple comment asking to make the rules more simple and transparent. Thank you Anthony Lemke
Jeremy Lau	1/3/2023 21:13	Not including the model Y for the tax credit is unacceptable. How is it that hybrids are included and full electric cars are not included. ALL ELECTRIC CARS NEED TO GET THE TAX CREDIT Thank you Sent from my iPhone
Dan Laurino	1/3/2023 21:13	I think the Tesla model Y 5 seater should be included and it's silly that it wasn't from the start Sent from my iPhone
wang.hi808@yahoo.com	1/3/2023 21:14	To whom it may concerned. Dear Sir/Madam, I am writing to you as a potential consumer of EVs. We are looking at buying Testla Model Y but realized that it is not qualified for $7500 EV tax credit. I don't really understand why. I assume the purpose of giving tax credits to people who bought EVs is to promote green/clean energy. However, the criteria for EV Tax Credit does not include any green/clean factor. Instead, weight of the vehicle and sales price count?? Comparing to all the hybrids, I believe Tesla Model Y (SUV) is not just more efficient in terms of MPG, it is lighter so use less material and therefore is greener. Don't you agree? Look forward to hearing from you. Regards, Mai Wang

Nan Liu	1/3/2023 21:14	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am surprised and dismayed that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems make no sense at all. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. Respectfully yours, Nan Liu Sent from my iPhone
Tom Mirasol	1/3/2023 21:14	Hello. I find it ludicrous and politically and poetically motivated that a 5-seater Tesla Y gets no credit while a gas guzzling “hybrid” does, specifically: • The IRS is not categorizing the Tesla Model Y as an SUV, even though the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. • On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Fix this IRS! Sincerely, Tom Mirasol Get Outlook for iOS<https://aka.ms/o0ukef>
Michael Giorno	1/3/2023 21:14	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Mr. Garcia, I am writing to ask for your consideration of the inclusion of the Tesla Model Y five seater in the list of qualified plug-in electric vehicles in the Inflation Reduction Act as part of the SUV classification. My request is to have the Model Y’s classification be consistent with the EPA, NHTSA and other vehicles that qualify for the $80k threshold. Having the Model Y be included irrespective of its seating configuration would be the most consistent method of applying the threshold. I appreciate your consideration into this issue. Regards, Michael Get Outlook for iOS<https://aka.ms/o0ukef>
Joseph Henricks	1/3/2023 21:15	Thank you for taking in concerns with the proposed qualifications. I'm disappointed at the qualified vehicles and the price caps they fall under. It makes no sense to me that the Ford Mach-E, VW ID4, and Tesla Model Y all include trims that fall under the lower priced other vehicles category when they are clearly recognized as SUVs, even by the list that at the same time disqualifies them. Somewhat unbelievably I found the same discount for a proper battery EV being applied to Hybrids, some of which are listed with poor fuel mileage and near unusable electric range. We will have to either do EVs right in this country, or give up another industry while also contributing greatly to air quality concerns. Most are claiming blatant corruption, but I believe this is an issue of unsuitable standards for identifying what vehicles qualify. I have also come across multiple sources claiming that leases would bypass all of the stipulations set up to encourage American made vehicles. This would be another major mistake in my view, that would further weaken our already faltering position in the world economy. I still believe we can do the right thing and lead the way on EV adoption. Prove the naysayers wrong and do this thing right! Joe

Mun A	1/3/2023 21:15	The Inflation Reduction Act has a stipulation where EV and Electric Vehicles and Hybrid Electric Vehicles are able to take advantage of up to $7,500 in Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Two main issues that are causing this: The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Ideal fix: Remove incentives for all hybrid vehicles and only have them apply to pure EVs. Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill.
Adrian Reyes	1/3/2023 21:15	Good Day IRS, The electric vehicle Tax Credit qualifications are messed up. They are supposed to incentivize people to buy fully electric vehicle. How then a hybrid Willys is eligible, and a Tesla Model Y 5 seats fully electric is not? How can we give the credit to an “electric” SUV if it weights more than “certain weight”? Many electric SUVs out there are design to weight less so they can go further on a single charge. How can you penalize that amazing low weight design by not giving the credit ? We want the credit to prioritize fully electric vehicles first. Then, maybe, a hybrid. Please ! Adrian Reyes Sent from my iPhone 13 Pro
Ronald Debolt	1/3/2023 21:16	I think Tesla Model Y 5 seater should be included and it’s silly that it’s not from the beginning Sent from my iPhone
Cameron Wood	1/3/2023 21:16	The Tesla Model Y should be eligible as an SUV at every configuration for the $80,000 limit. Other car manufacturer models marked as SUV with the same seats and less overall interior space. It is only in this $55,000 category because it’s more efficient and weighs less? You are incentivizing gas guzzling plug in hybrids? This makes no sense. Please fix this and make the model Y eligible for the $80,000 limit. Cameron Wood
vakil mammad	1/3/2023 21:16	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers’ interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely,
Richard Crenshaw	1/3/2023 21:16	I do not support the use of my tax dollars to give as much or more tax credits to plug in hybrid vehicles vs battery electric vehicles. The criteria and cut-off for SUVs vs sedans is not clearly defined and doesn’t appear to attempt to maximize the transition to zero emission vehicles. -- Richard Crenshaw 704 491 5522
G G	1/3/2023 21:16	Dear IRS, I strongly recommend the -- Tesla Model Y 5-Seater -- be eligible for a clean vehicle tax credit up to $7,500 under IRS Code Section 30D. VR, Glenn E. Gutting Las Vegas Nevada

Bradley Giacone	1/3/2023 21:17	This bill was purposely built to have Tesla the leading manufacture of EV cars in America at a disadvantage. I don't understand the logic but the parameters should be modified to include the Model Y in the bill. -Bradley Giacone
Andy Giesbrecht	1/3/2023 21:17	Hello! I would like to voice my support of the IRA and the EV tax credit as it was widely communicated and presented to the American people: Country of origin from US or free trade countries Income restrictions for high earners Price caps for cars ($55k) and SUV / trucks ($80k) Changing these rules after the vote is disingenuous and some hybrids are now qualifying while other pure EVs are not due to arbitrary last moment changes from the spirit of the IRA. Please use this chance to change the future direction of American manufacturing and infrastructure by making the rules clear and consistent. Both your and my kids and grandkids future not to mention America's, depend on you doing the right thing. Thank you, Andy Giesbrecht
theBeganovich	1/3/2023 21:17	Majority of public that supports climate change and transition to sustainable energy is very disappointed with recent IRS decisions on what vehicles receive tax credits. List consists a lot of hybrids that cannot even be considered EVs that are helping this cause as most of them have less then 30 miles EV range and will still be driven 99% of the time on fossil fuels. Tesla is the only company that it's sole mission is transition to sustainable energy. We don't care about politics between government and Tesla, but it's really bad that American made car company is being discriminated against. Environmental Protection Agency classifies Tesla model y as SUV, and IRS doesn't need to make it's own rules just to not include it on a list of cars that will get tax credits. That is the car i wanted to buy but government wants to penalize me for trying to switch to sustainable energy? Regards
hawn_nick	1/3/2023 21:17	The exclusion of the Tesla model Y variant is blatant sabotage and I want my tax dollars to include this model Y in the EV tax credit. Sent from my T-Mobile 5G Device
Vishal Vaidya	1/3/2023 21:17	I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRS tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, Vishal Vaidya
Matthew O'Dell	1/3/2023 21:18	Writing to comment specifically on the Tesla Model Y 5 seat variation being excluded from the EV tax credit. I have been planning to purchase one the begging of this year. It seems nonsensical to me to include plug-in hybrid vehicles that are less efficient in this tax credit, but omit one of the most efficient vehicles on the market. This seems especially odd as the Tesla Model Y was ranked by Cars.com as the #1 American made vehicle for 2022. <https://www.cars.com/american-made-index/> cars.com<https://www.cars.com/american-made-index/> [X]<https://www.cars.com/american-made-index/> I would like my tax dollars allocated to furthering innovation in fully electric vehicles. Please reconsider. Thank you.

Name	DateTimeReceived	Body.TextBody
Kip	1/3/2023 21:18	Providing feedback on the current requirements for the credit. The Ford Mustang Mach-e and the all versions of the Tesla Model Y should qualify for the $80,000 limit on the tax credit. These vehicles are expensive to make and the current limit creates a financial risk as they are not able to reliably product these vehicles at the current limit without taking a financial lost. Forcing consumers to pay for options they don't want or need to take advantage of the credit is financially negative for the consumer. Please take inflation into consideration when thinking about the objective. Transitioning people to an EV is good for the economy and will save them money. Also, these companies employ Americans. We should be doing all we can to support ALL American workers. Relaxing the requirements for American made EV's is good for America. Anything that still requires gas to operate should not qualify. If you want to accelerate the transition to full BEV's you cannot create an incentive to buy a vehicle that still requires gasoline to operate. Providing a credit to gas powered vehicles defeats the purpose of the legislation. Thank you,
Yugandhar	1/3/2023 21:18	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely, Yugandhar
Teak	1/3/2023 21:18	Hello, It makes no sense why a hybrid car with less than 50 miles of electric range qualifies for a tax credit but not a fully electric model Y made by Tesla. Hybrid vehicles should not even qualify for a tax credit and if you believe differently then it should be far less credit than a fully electric vehicle. On top of that Teslas are made in the United States which should give it an even higher tax credit. Thanks, Teak 760-814-0978
Brian Kirby	1/3/2023 21:18	I hope this letter finds you well. I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit. According to the IRS guidelines, the following Tesla Model Y variants are qualified for the 7500 tax credit if their Manufacturer's Suggested Retail Price (MSRP) is under $80000: #1 Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) #2 Tesla Model Y Long Range - 7 seat variant (3-rows) #3 Tesla Model Y Performance - 7 seat variant (3-rows) However, it appears that #1 and #3 do not exist. The following Tesla Model Y variants are also qualified for the $7,500 tax credit if their MSRP is under $55,000: #4 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) #5 Tesla Model Y Long Range - 5 seat variant (2-rows) #6 Tesla Model Y Performance - 5 seat variant (2-rows) However, it appears that #4 does not exist, and #5 and #6 are priced at $65,990 and $69,990, respectively, which may disqualify them from the tax credit. This leaves only #2, the Tesla Model Y Long Range - 7 seat variant (3-rows), as the only qualified variant.

Alex Litoiu	1/3/2023 21:18	To Whom It May Concern, I'm a Canadian citizen that used to live and pay taxes in the US. It's my humble opinion that the Tesla Model Y, in all regards an electric SUV, should be considered one for tax incentives. I've never heard anyone argue it's not electric or an SUV prior to these tax rules. Furthermore, I am of the impression that there are hybrids with ~20 miles of electric range that somehow get the incentive meant to incentivize electrification... Which incentivizes electrification more? A fully electric SUV or one that is 95% Internal Combustion and barely electrified? Yet the latter gets the full SUV incentive but the former doesn't. These are my opinions - I hope they will make a difference. That said, God bless you and yours! Best, Alex
Calin Ranca	1/3/2023 21:18	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. K S	1/3/2023 21:19	Dear Sir or Ma'am: This sums up the frustration: "However, it’s inexcusable that the new tax credit gives $7,500 for a vehicle like the Jeep Cherokee 4xe and not the Tesla Model Y. The main thing that people define a SUV by is the utility aspect. Of course, there’s the shape and height, but the cargo space inside is a big deal, and the Model Y actually has 100 liters more cargo space than the Cherokee 4xe. Model Y also has an efficiency of 115 MPGe versus 56 MPGe for the Cherokee 4xe. It makes no sense that the former doesn’t get access to the credit but the latter does." All the best, Kirk
Edward Song, DVM, DABVP(c/f), CV	1/3/2023 21:20	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Thank you very much. Best Regards, Dr. Edward Song, DVM, Diplomate ABVP (Canine and Feline Specialty), CertAqV Real Estate Agent (DRE# 02112996) The Mobile Veterinary Surgery Service
Kevin HUANG	1/3/2023 21:20	Hi, If US provides $7500 tax breaks for some other foreign made hybrid SUV in the new EV tax incentives program, it’s very unfair to exclude 5-seat Tesla Y from this program (MSRP $80k). 5-seat Tesla Y is a very environmental friendly vehicle and it’s made in USA. Please help to include 5-seat Tesla Y in this program to benefit US people. Thanks for your help! Best Regards, Kevin Huang
Google	1/3/2023 21:20	Dear Sir/Madam, When reviewing choices to purchase 5 seater BEV SUVs with the IRA credit, we noticed both Tesla Model Y, and Ford Mach-E are excluded while similar size hybrid and VW ID 4 are included. Doing further research w friends, it appears the deciding factor is weight, not customer utility nor space. VW appear to have gamed the system by adding weight to qualify, but this defeats the whole point of BEVs which are about efficiency and sustainability. Thus the IRA act has become the VW ID4 5 seater act because they added inneficency through weight, or hybrids which weigh more while burning fossil fuels. This is about rewarding inneficiency and fossil fuels, exactly the opposite of the goals of the EV credit. With the Model Y having the most American made content I believe, it starts to make less sense. I guess the only way Model Y 5 seater qualifies is to add more weight delivering less efficiency? Please let the consumer decide and not choose for them by including all 5 seater SUVs like the Model Y. EVs mean efficiency and good design. It's a different approach than the size over all else approach of fossil fuel EVs. People like me want to buy a BEV for my next SUV, not a hybrid that gets a credit wo being anything different than fossilgrill versions except a small electric motor. May as well keep my current ICE SUV in that case. I look forward to this oversight being corrected. Have a great day. Thanks,
Shweta Gothi	1/3/2023 21:21	We have been waiting for this rebate to buy Electric vehicle (Model Y or Ford Mach E) for our daughter, instead of another PHEV. We have Honda clarity PHEV, which is essentially ICE vehicle due to short EV range of 45 miles only. Please change criteria so make it reasonable to safe cars like Tesla (https://t.co/uTL3m4WOUn) hope this accident article will help you make decision to include Teslas. Regards!! -Shweta Gothi Personal Email: shwetagothi18@gmail.com Cypress, CA

Name	DateTimeReceived	Body.TextBody
Austen H	1/3/2023 21:21	full tax credit, when a made in America Tesla Model Y or Ford Mustang Mach E, both fully battery electric and with 250+ miles of range, do not. This looks like favoritism to petrol based legacy companies instead of embracing those with the technology and courage to fully commit to full electric vehicles. Why incentivize big, inefficient vehicles that are going to spend 90% of their life occupied by an average of 1 person? What I want to see happen is that any fully electric, made in America vehicle with 250+ miles of range regardless of MSRP should qualify for the full $7500 tax credit. This needs to change. Austen Holland 325-226-1322
Tao Zhang	1/3/2023 21:21	Dear Sir, All Tesla Model Y variants should be considered as SUVs and be included as qualified SUVs in the list. The most popular electric SUV should be included, otherwise it contradicts the purpose of EV incentives which tries to encourage more people to switch to EVs. Reasons are below: (1) Other less efficient BEV/hybrid SUVs with similar dimensions and weight are included. (2) Model Y 7 seats are listed as SUV. Regards, -- Tao Zhang
Akash Karanam	1/3/2023 21:21	I believe the current electric vehicle tax credit qualifications are not in the best interest of the spirit of the tax credit. The spirit of the tax credit is to provide a monetary incentive to reduce vehicle carbon emissions. Hence, fully battery electric vehicles should be given at least the same credit as hybrid vehicles that have gas engines and have very small electric range. These hybrid vehicles are not reducing carbon emissions at nearly the level that a battery electric vehicle is. Thus, I ask that you increase the MSRP for cars like the 5-seat Tesla Model Y so they can qualify for the tax credit since they are fully electric. Thank you, Akash Karanam
Celeste W	1/3/2023 21:21	I am so excited about the new EV credits and that it is a true credit for low/middle income families even without tax burden. However, I do not feel hybrids should be included or cars from non US manufacturers. Any car which uses fossil fuels should not be eligible for the credit. The Tesla Model Y should be included. It's the most efficient SUV and practical and safe for families. Celeste W.
Douglas Olsen	1/3/2023 21:22	The Inflation Reduction Act has a stipulation where Plug-in Electric Vehicles and Hybrid Electric Vehicles are able to take advantage of up to $7,500 in Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. Here are the primary qualifications for the EV tax credit: [https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/e9f76bb1-fcee-4219-a088-6d19cd025729.jpeg] However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Here's an example of the broken nature of this incentive in its current form: [https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/7030a68c-9d90-499b-a4b7-b6aa8ca7e046.jpeg] Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a similarly priced BMW X5, with a Gas engine, getting 50 MPG , and 31 miles of electric range, that gets the $7,500 tax credit. Studies have shown most hybrids only use gasoline, so the CO2 and pollution reducing benefits from the EV part of the Hybrid are never achieved in practice.
Michael McAfoos	1/3/2023 21:22	Please include more Tesla options in the tax credit. All Model Y trims should be considered SUVs Please also consider increasing the applicable MSRPs of the vehicles as well as the income limits of individuals to qualify for the rebate.
navjot Singh	1/3/2023 21:22	I support your decision on tax credits. Please keep limits of 55000$ on suv. If you won't, it will Not be helpful to consumers. For example Tesla raised prices of model y from 49000 to 67000$ during pandemic years. Now evrything is back, there is no shortage of chips. Let automobile makers slash their prices for over expensive cars. Thanks you

Name	DateTimeReceived	Body.TextBody
Nick Godbey	1/3/2023 21:22	there is a strong impression that it's unfair that all mustang mache's and the tesla model Y are counted as an SUV. -- Live long and prosper Nick
E. HERRMANN	1/3/2023 21:22	1. Encourage job creation and a more resilient US manufacturing base by incentivizing corporations to make their products in the US. 2. Speed the development of clean transportation technologies by incentivizing the development and purchase of energy efficient electric vehicles. The first mistake that was made was allowing hybrid vehicles with minuscule batteries, and corresponding electric range, to benefit from this program. There should be a minimum requirement of at least half of the vehicle's overall range be capable of being supplied by its batteries. Without this, you are simply extending the use of internal combustion engines and supporting the production of vehicles that have the worst of both drivetrains when it comes to problems like fire risk. The goal is to move transportation technology forward, not to keep it anchored in the 20th Century. Encourage vehicles capable of traveling hundreds of fossil fuel free miles on a charge, not hybrids with 20-30 miles of electric range. The second issue arose when your agency decided to exclude the most popular electric SUVs in the country. By not allowing all of the 5 seat Tesla Model Y variants to qualify for the $80,000 limit and $7,500 incentive, you have chosen to exclude some of the most efficient, advanced, and popular EV SUVs made in America, or the world today. I would also say this almost seems arbitrary because 5 seat variants of other manufacturers are being allowed. Vehicles with 20 or 30 miles of electric range are being allowed. Vehicles that ride higher or are heavier are being allowed, while both of these design factors detract from the goal of efficiency, even in an SUV. The Tesla Model Y has been categorized as a SUV by the EPA for the entirety of its production life. Allowing one trim of a vehicle, but not another simply creates confusion, encourages less efficient vehicle design, and tempts manufacturers to come up with gamification work arounds to the law. The final error came when vehicles manufactured outside the US were allowed to qualify if they are leased. If they are not at least assembled in the US, they should not qualify. Period. These tax dollars are being spent to build United States manufacturing technology, not other nation's. Please make the necessary changes to the specifications and enforcement of this law that help move our country forward. We are spending our grandchildren's money. Let's at least be able to look them in the eye and say that it was for their benefit in every imaginable way. Thank you for your time. Sincerely, Eduard Herrmann
Matthew Ow	1/3/2023 21:22	I hope this letter finds you well. I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit. According to the IRS guidelines, the following Tesla Model Y variants are qualified for the 7500 tax credit if their Manufacturer's Suggested Retail Price (MSRP) is under $80000: #1 Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) #2 Tesla Model Y Long Range - 7 seat variant (3-rows) #3 Tesla Model Y Performance - 7 seat variant (3-rows) However, it appears that #1 and #3 do not exist. The following Tesla Model Y variants are also qualified for the $7,500 tax credit if their MSRP is under $55,000: #4 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) #5 Tesla Model Y Long Range - 5 seat variant (2-rows) #6 Tesla Model Y Performance - 5 seat variant (2-rows) However, it appears that #4 does not exist, and #5 and #6 are priced at $65,990 and $69,990, respectively, which may disqualify them from the tax credit.
g. a.	1/3/2023 21:23	To whom it may concern, Can you please advise why the Tesla model Y, 5 seat variant (which is the best selling made in USA EV SUV) not qualifying for federal tax incentive for SUVs, while the 7 seat variant does. Additional, other EVs with 5 seats, that are smaller & not made in the US, qualified for the EV SUV tax credit. furthermore, many hybrids that uses gas & should not be considered EVs, are qualifying for the EV tax credit. The qualifications rules are inconsistent & appear to be discriminatory against Tesla which is the largest US manufacturer of EV. I'm requesting you revise your qualifications based on just & clear criteria that will apply to all manufacturers equally. All Tesla model Y variant should qualify for the SUV EV tax credit. Excluding the best selling US made EV SUV from qualifying for the tax credit is ashame and goes again the spirit & goal of the Green Deal. Thank you, George Abagi
Basant Maheshwari Wealth Advisor	1/3/2023 21:23	Hi, Tesla Model Y 5 seater has to be included and its bizarre that it has been excluded from the list. With best wishes, Pooja Maheshwari

Name	DateTimeReceived	Body.TextBody
Michael DAmbra	1/3/2023 21:23	Dear Sir or Madam, Please consider classifying a Tesla Model Y as an SUV for the purpose of EV tax credit. The vehicle has all the characteristics of a compact SUV except it is TOO LIGHT WEIGHT by a few hundred pounds per the IRS definition. Electric vehicles lose efficiency as they get heavier. LIGHT WEIGHT is a desirable specification from a national energy consumption point of view and should not be disfavored. Thanks for considering. Michael N DAmbra
Austin Jennings	1/3/2023 21:23	Hi, Please reconsider your qualifications for an SUV in the EV tax credit. Any vehicle classified as an SUV by NHTSA should be classified as an SUV by the IRS, including the Tesla Model Y Long Range Dual Motor 5-seater. Austin Jennings Data Engineer Booz Allen Hamilton 757-354-5154
Mike Sumsky	1/3/2023 21:23	Federal Tax Credits when purchasing these types of vehicles. However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even though the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Ideal fix: * Remove incentives for all hybrid vehicles and only have them apply to pure EVs. * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Next best fix: * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill.
Caleb Sparkman	1/3/2023 21:23	Hello, I don't think it is reasonable or right to provide EV tax credit of $7,500 to hybrid vehicles that have minimal electric range. A handful of these vehicles have less than 50 miles electric range from their batteries. At the same time there are fully electric vehicles not receiving the EV tax credit because they are not SUVs all of a sudden. eg some Tesla model Y and Ford Mustang Mach E. Also I think there is an electric Audi made in Mexico that is set to receive the EV tax credit. I thought this was suppose to support EV adoption and US manufacturing. Please consider reevaluating the vehicles that receive credits and at what price point those vehicles receive the credit. Caleb Sparkman Sent from my iPhone
Surendra Singh	1/3/2023 21:23	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). 2) As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery 3) (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. Most importantly TESLA is a most American company, creating thousands of job at home here in America. It is important that it gets all help from the government. Thanks, Surendra Singh

Stephen Slater	1/3/2023 21:24	(that gets less than 20 miles of electric range) doesn't make sense. I've had both vehicles (Tesla Model Y and Jeep Wrangler PHEV). Not allowing the Model Y or the Mustang Mach E to qualify for the tax credit must be amended and reversed. Thank you, Stephen Slater <https://twitter.com/farzyness/status/1609651117356351488> [FlahAyvWIAAl2GE.jpg] The car on the left has a gas engine and gets 20 MPG. It has 21 miles of electric range. It gets a $7,500 EV Tax Credit. The car on the right is ELECTRIC ONLY and gets 113 MPEe. It has 330 miles of range. IT DOES NOT GET A $7,500 EV TAX CREDIT. [https://abs.twimg.com/favicons/twitter.2.ico]<https://twitter.com/farzyness/status/1609651117356351488> Farzad Mesbahi<https://twitter.com/farzyness/status/1609651117356351488> twitter.com<https://twitter.com/farzyness/status/1609651117356351488>
Brian Gingras	1/3/2023 21:24	To: IRS. I think it is crazy that the Tesla model y 5 seater is not included in the 7,500 IRA. The Jeep is eligible and has a fraction of the range. I hope that you reconsider the Tesla model Y. Brian Gingras
Walter Axtell	1/3/2023 21:24	It makes zero sense to exclude the best selling, most popular, most American made all electric (non-hybrid) car in existence from the IRA tax credit. The Tesla Model Y is a national treasure as well as the other cars in the tesla line up. Hybrid cars have no place in this legislation. A vehicle with two separate means of propulsion is the epitome of inefficiency. They are wasteful and
Rodolfo Lagos Durán	1/3/2023 21:24	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Sincerely, Rodolfo Lagos
Jin DiCaprio	1/3/2023 21:24	Why is Tesla Model Y 5 seater not included in the $7,500 EV Tax Credit? This does not make any sense and smells like an error?
Isaac Novella	1/3/2023 21:25	Hello, I would formally like to request for the Tesla Model Y 5 seater to be a qualified vehicle under the IRS EV $7,500 rebate program. I am a qualified US taxpayer. Thank you, Isaac Novella
david Read	1/3/2023 21:25	qualifying for the IRA tax credit while plug in hybrids with limited fully electric range and burn fossil fuels do. Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Respectfully, David Read Saratoga Springs NY

Jack Fahey	1/3/2023 21:25	Please allow all Tesla Model 3's and Model Y's to receive the the highest EV Rebate in the Program. Here are the reasons why: 1. Tesla first priority is safety and everything else second. On 1/3/23, today a Tesla in California went I've a 250 foot cliff and all 4 passengers survived. Two children ages 4 and 9 went to the hospital and were release later on the same day! The safest 3 vehicles ever tested by NTSA are all Tesla (Model 3, X and Y) 2,Tesla makes the most efficient EV of all EV manufacturers. 3. Tesla built the largest supercharging network (3500 stations) without any federal assistance. 4. Tesla is one of the most American-made. Vehicles are made in Fremont California and Austin Texas. In full disclosure, I own a 2018 Tesla Model 3 with 36,500 miles and have had 0 problems. Please contact me with any questions. Respectfully, Jack Fahey 350 S Basswood Rd Lake Forest, IL 60046 Fireice350@gmail.com
Brandon Roth	1/3/2023 21:26	To Whom It May Concern, This comment concerns the Inflation Reduction Act and how electric vehicle incentives are currently being interpreted. The tax payers should not subsidize any vehicles that are not electric-only. No incentives for hybrid vehicles - they are not the future and the taxpayers should not offset their cost. Additionally, the are a few vehicles that are not properly categorized - most notably the Tesla Model Y, which the EPA classifies as an SUV but the current IRA interpretation does not. This issue must be addressed. V/r, Brandon Roth Brandonaroth@gmail.com 6409 Meadowlark Dr Dunkirk, MD 20754 585-750-1208 Sent from my iPhone
Jack Parette	1/3/2023 21:26	components (by value) coming from North America. Regardless of company origin, regardless of unionization status, regardless of lobbyist investment. Vehicles should NOT be classified or categorized (Sedan, SUV, compact, Pickup truck, whatever). Only need to meet clean vehicle status with a maximum cost of $55000.00 Clean vehicle status should be: EPA 55mpg or higher for Internal Combustion and/or hybrid OR EPA 55MPGe for Electric Vehicles We need to incentivize lower cost, and cleaner emissions period Thank you, John Parette
Kansas Capital Law Offices	1/3/2023 21:27	The definition of SUV should match or align identically with the DOT definition. Furthermore incentivizing hybrid cars with this tax credit does not do as much good for the environment as excluding them would. Also the credit should cover all fully electric vehicles made in America regardless of cost up to $200,000.00. Thank you, Mark Lodes Esquire Citizen of Kansas Tesla Employee 816-612-1318
MOHIT MATTA	1/3/2023 21:27	current bill is not categorizing the 5 Seat Tesla Model Y as an SUV, even though the Environmental Protection Agency does, which means the Tesla Model Y is not eligible for the $7,500 tax credit. Tesla is America's manufacturing powerhouse and is the only chance for the American auto industry to survive. The current rule is having a Jeep Grand Cherokee 4xe, with a gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. This is a corrupt and misuse of US taxpayers' money. I request that you apply SUV/Non SUV rules fairly, across the board, with consistency in order to correctly incentivize automakers and the public with the original intent of the bill. Fair way of doing it should be based on Emissions and only zero emission vehicles should get full credit. I am confident that by making this change, you would be able to show the public that the tax system is fair and equitable. Thank you for your time and consideration. -Mohit

Darcie Clawson	1/3/2023 21:27	Dearest IRS, As a 30+ year tax paying worker I am very perplexed at how you selected EV tax credit eligible vehicles. I am wanting to purchase an EV vehicle but struggle with the high vehicle costs. I strongly believe that vehicles that achieve high range (300+ miles) should be included over vehicles that only get ~20 miles ev range. Please adjust your standards to reward companies who achieve high ev miles over predominant ice vehicles. As a taxpayer, I believe in my government agencies to set fair standards. I have been fond of Tesla for their forward push for the transition to EVs and feel their outstanding engineering is being ignored in the advancement of ev technology. Please reassess your cars and how they meet the ev and carbon decreasing impact.l standards. Thank you for your time and consideration to re-evaluate eligible vehicles such as the 5 seater model y for the tax credit. Darcie Clawson 30+ year trench healthcare working taxpayer Sent from my iPhone
Gaurav Sharma	1/3/2023 21:27	Overall, I welcome the tax credits to incentivize EV adoption. However, there are clear biases which seem designed to 1/ Minimize tax incentives for Tesla vehicles 2/ Provide loopholes to allow benefits for cars manufactured outside of US. Specific concerns with EV tax credits: 1. Tesla Model Y is a SUV and should be treated that way to qualify for tax credits. Likewise for Ford Mach-E. 2. Tax credits for lease vehicles defeats the spirit of the bill - " Made in USA". This loophole seems to be included under pressure from the EU to allow credits for cars like VW ID4 - company caught cheating with Diesel gate.
Mélissa Ducharme	1/3/2023 21:27	Dear Mister Garcia and IRS team, We are a family and need an SUV to fit all our kids and sporting gear in our vehicle. I don't want a hybrid. I don't wish to buy an ICE, either. I was waiting for your credit program to take place before ordering our new family car. So that's really frustrating that Tesla's Model Y is not classified as an SUV and therefore not eligible for the credit. I am shocked to learn that hybrids with really low autonomy are eligible for the full $7.5k credit. Please revised your position. It looks like a corrupted government ready to do all it takes to harm a great American company. Thanks, Melissa Ducharme
Wenji Zhao	1/3/2023 21:28	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Wenji Zhao
James Moon	1/3/2023 21:28	I think Tesla Model Y 5 seater should be included and silly that it's not from the beginning. It is not right, Tesla Model Y 5 seater does not get $7,500 when a 22 mpg Jeep Wrangler gets $7,500. Tesla Model Y is fully electric and far more environment friendly than any hybrid cars! James Moon, CLU®, ChFC® President CA Ins. Lic.# 0669815 GPS Insurance & Financial Services, Inc. 1537 Rancho Hills Drive Chino Hills, CA 91709 C: (714) 458-5475

Shishir A. Dhruva, MD	1/3/2023 21:28	Dear IRS, Happy New Year! I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This USA made Tesla Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that me as a tax payer, you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, S. Dhruva MD sdhruva@gmail.com<mailto:sdhruva@gmail.com>
Gooch, Jacob Lindbergh - goochjl	1/3/2023 21:28	The Tesla Model Y is perceived in the market as an SUV and is one of the best EV's on the market. Not only is it highly efficient, it's also one of the most American vehicles on the market. This vehicle should receive the $7,500 tax credit for its importance to the US auto market and the US's ability to move to more sustainable transport. —Jake GoocH Sent from my iPhone
jimmy	1/3/2023 21:28	Why does the Tesla Model Y 5 seat not qualify as an SUV, it doesn't make sense, that car is made in the USA and very popular, and a lot of American people want to buy this car, but they can't get tax credit. Please fix this. Let us make this right! -- cheers, jimmy
James Sperling	1/3/2023 21:28	Tesla's introduction of the Model Y was clearly an entrance into the SUV category, following it's Model 3 entry into the car category. In deed, every major US auto mfg considers the Model Y competition for their respective offerings in the SUV category. As such, I believe it is logical to treat the Model Y, and all it's variants 5 seat or 7 seat, as an SUV eligible for the 7500 IRA tax credit. Further, with the current exclusion of the Model Y 5 seater, consumers will purchase the 7 seat Model Y for the $1k increment in order to capture the $7500 tax credit on the Model Y that presently comes with the 7 seater qualification. There's no economic or environmental logic to this probable outcome of enticing consumers to add unnecessary seats and weight to their SUVs. Lastly, auto mfgs in all categories should be encouraged and applauded for taking mass out of their vehicles to reduce the energy consumption of the vehicles; success in this effort should not exclude the mfg from IRS category qualification as it has presently for Tesla's Model Y 5 seater in the SUV qualification. Please consider changing the SUV qualification to include Tesla Model Y 5 seater. Regards, James James Sperling
Sultan Rahaman	1/3/2023 21:28	I think Tesla Model Y 5 seater should be included. This is outrageous. Sultan Rahaman, M.D. Family Medicine
David H Johnson	1/3/2023 21:28	rules that put this, the same vehicle, in two dramatically different categories do not conform to any common sense understanding and therefore have the appearance of willful interventionism which is unwelcome and easily avoided. Please take action to remedy this obvious flaw in the current classifications. Thanks, -David
shanmuga umasankar	1/3/2023 21:29	It is very unfair and corrupt to exclude Tesla Model Y which is pure EV while the current administration is allowing barely EV enjoy tax credits. It is simply proof that the serious climate change issue raised is not taken seriously by those that non stop talk about it. Tesla made mass EV adoption possible leading to sustainability. So please include tax credit for model Y. Regards Shan

Name	DateTimeReceived	Body.TextBody
Jeffrey Boichuk	1/3/2023 21:30	Dear IRS, I am writing to let you know my disapproval and distrust regarding how the IRS classified vehicles into the categories determining whether electric vehicles must be priced under $55,000 or $80,000 to be eligible for the $7,500 tax credit for electric vehicles included in the Inflation Reduction Act. Specifically, I am concerned about the lower MSRP limit for some plug-in hybrids, such as the Jeep Wrangler, which only gets 20 MPG and has 21 miles of electric range. I find it unfair that the MSRP limit for some fully electric SUVs, such as the Ford Mach-E and the five-seat Tesla Model Y, is higher at $80,000, while the limit for plug-in hybrids is lower at $55,000. This means that vehicles like the Mach-E and the five-seat Model Y, which have impressive EPA ratings around 300 miles of range, are not eligible for the tax credit because they are priced above $55,000. The IRS should reconsider this classification and raise the MSRP limit for fully electric SUVs like the Mach-E and the five-seat Tesla Model Y to $80,000, just like the other SUVs. It is important to encourage the adoption of fully electric vehicles, which have significantly lower emissions than their gas-powered counterparts, and the current limits do not do this effectively. I hope that the IRS will take my concerns into consideration and make changes to the tax credit to promote the adoption of fully electric vehicles. Sincerely, Jeff Boichuk Jeffrey Boichuk Assistant Professor of Commerce Marketing E boichuk@virginia.edu<mailto:boichuk@virginia.edu> M 434.202.9638
Lifestyle4JH	1/3/2023 21:30	I think Tesla's Model Y 5 seater should be included in the IRA $7500 tax rebate and it’s silly to not include it from the beginning
Daniel Sullivan	1/3/2023 21:30	To whom it may concern, I am writing for comment on the proposed irs rules for the “ Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022-42” This proposed implementation is very concerning and capricious. It would give a lower qualifying sale price to a 5 seat tesla model y (fully electric) than a hybrid jeep (21 mpg). Yet put two small seats in the back of the model y and it qualifies for the higher sales price. the EPA classifies the model y as a SUV. I recommend excluding all hybrids since studies show typical use is 95% gasoline. In the absence of that reasonable response please reclassify the model y as an suv. Thanks Ds
Turkey Toe	1/3/2023 21:31	Dear IRS, Below are my thoughts on Form 8936, Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022-42: I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as an SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and the legacy auto lobby may have had a hand in writing these rules. Thank you,
Chris Corbett	1/3/2023 21:31	It seems insane that you want to give the $7500 tax credit to a 2023 Jeep Wrangler hybrid having a 20 MPGe. And has a battery only range of 21 whole miles. And that you won't give it to a Tesla Model Y LR with 330 miles of range and 127MPGe just because it is too light by 238 lbs? How does that make any sense at all? Can you please explain? Chris Corbett 13123 Winding Creek, San Antonio, TX 78231 San Antonio, TX 78231 210-748-2105
Bruce Adams II	1/3/2023 21:31	Dear Andres Garcia, Please do not bow down to politics, do the right thing. Fix the EV tax credit and make it something we can all be proud of and include Tesla. Giving gasoline car makers free money only delays the inevitable, and it's a waste of tax payers dollars. Let capitalism run its course. To accelerate the transition to sustainable energy, only pure electric vehicles should receive the credit. The highly efficient Tesla model Y, 5 seat automobile should be on this list for the credit. Thank you for taking the time to read my email for I hope it helps you in making the right choice for the American people. Sincerely, Bruce Allen Adams II

Name	DateTimeReceived	Body.TextBody
Ron Reta	1/3/2023 21:32	This is to request that your agency designate the Tesla Model Y 5-seat EV be allowed an $80,000 MSRP cap to qualify for the newly available $7,500 tax credit, just as for the otherwise identical 7-seat version of the same vehicle, and as for similar 5-seat EVs offered by other manufacturers. Thank you. Ron Reta 1025 46th Street Sacramento, California 916-607-7094 mobile
nicklazzaro75@gmail.com	1/3/2023 21:33	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicle for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Nicholas Lazzaro
Benjamin Rosario	1/3/2023 21:33	Tesla Model Y 5 seater should be included in the full tax credit.
Anthony Bacopoulos	1/3/2023 21:33	Hi IRS -- The new EV Tax Credit is built on a flawed platform: hybrid powertrains should not be accepted into the program since they fail to reach the goal of encouraging all-electric cars and future. To properly support this, there needs to be a clear delineation between sedans and SUVs for it to make an impact. All EVs available for purchase should have equal credits based on the sedan vs. SUV qualification. These should be based on the car model rather than on the sub-options a manufacturer may offer. (example: Tesla Model Y with 5 vs. 7 Seats) Let's make this program correct and have it designed with intelligence. Thank you, Anthony Bacopoulos
Miguel Martinez	1/3/2023 21:33	Tesla Model Y is a SUV, the EPA consider it an SUV. Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit? and it is silly that it's not from the beginning qualifying for the $7,500 EV Tax Credit. Please fix this by adding the Tesla Model Y 5 seater should be included to a $7,500 EV Tax Credit. Sincerely Miguel Martinez
Junya, HUANG	1/3/2023 21:33	Dear officer, Tesla Model Y 5 seat should be qualified as SUV, otherwise they are going to loophole with 7 seat version and a seat return option. This wastes resource and shows weakness in government ruling. Please reconsider, thank you!
eric valladares	1/3/2023 21:33	Please include the Tesla 5 seat model y in the $ 80,000 qualifying category so that it is in par with the other EV brands that posses similar specifications as the Tesla 5 seater model Y. Thank you in advance. Eric Valladares Sent from my iPhone

Dave C	1/3/2023 21:33	Hello I surely would like to comment on the recent ev tax that was passed within the recent anti inflation bill. I was looking forward to possibly taking advantage but after learning of the details I was completely disappointed of the, I believe, poorly created vehicle qualifications to meet said credit. After reading the below attached image I must say that this credit on its current rules is doing the opposite of which it was passed and designed for. I kindly ask, for the sake of the American people and the environment's future, to reconsider and revise the for vehicle qualifying rules to include Tesla model Y, 3 and possibly other true ev vehicles. Thank you for allowing the American people a voice and I hope USA and IRS does the right thing. Thank you David Canale [cid:5133714328020017109160063]
dacenterp@aol.com	1/3/2023 21:34	this oversight. Thank you and best regards, David Corbin Sent from the all new AOL app for Android<https://play.google.com/store/apps/details?id=com.aol.mobile.aolapp>
Gregory S Bower	1/3/2023 21:34	Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, This memo is regarding the Inflation Reduction Act's document/policy "Manufacturers and Models for New Qualified Clean Vehicles Purchased in 2023 or After". I am respectfully requesting that the following vehicle classifications: Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) Tesla Model Y Long Range - 5 seat variant (2-rows) Tesla Model Y Performance - 5 seat variant (2-rows) be updated to "Applicable MSRP Limit" of $80,000. The Tesla Model Y, in all its variations, is the epitome of the spirit of the IRA's passenger vehicle intentions and, for so many reasons, is well-deserving of the $80,000 cap. Thank you, Greg Bower 3620 Aspen Ct Boulder, CO 80304
jack Massry	1/3/2023 21:34	To whom it may concern, I am a US citizen very concerned about this new tax credit policy. The fact that it incentivizes hybrids over pure battery electric vehicles is not right. Please Remove incentives for all hybrid vehicles and only have them apply to pure EVs. Also, very important, apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Please use this chance to prove to the American taxpayer that these categorizations are done in error. Otherwise, it will be yet another reason for the American tax payer to doubt your true intentions. Thanks, Jack Massry Sent from my iPhone
Billy Clark	1/3/2023 21:34	To whom this may concern, The recent disclosure of the classifications for electric vehicles that qualify as a SUV does not make sense to me. The EPA classifies several of the vehicles listed with a $55,000 price cap as SUVs yet the IRS is not abiding by that same classification. The purpose of the IRA was to accelerate the adoption of electric vehicles yet inefficient plug in hybrids with laughable electric range are being considered SUVs even when vehicles like the Tesla Model Y and Mustang Mach e that have more cargo space and much more efficient electric power trains are not. Gross vehicle weight should not be the deciding factor of classification. I also believe that the cost of software in a car shouldn't count towards the price cap being met. Thank you for your consideration, William Clark

Name	DateTimeReceived	Body.TextBody
Dev	1/3/2023 21:34	Hi there, I think the way the current incentives for buying an EV are not fair or well positioned at all. How can a hybrid car with maybe 30-40 miles of EV range receive the full $7500 of tax incentive but a very popular EV around the world and the US, a pure 330 mile EV range Tesla Model Y not receive any tax incentive at all? This means Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. I think the IRS should include all pure EVs regardless of price or maybe cap the price at 100k which would only exclude ultra luxury vehicles. The IRS also shouldn't try to categorize what is an SUV,Sedan etc. By just following these two rules at least it makes sense as the credit is going to more environmentally friendly vehicles which hybrid vehicles are very minimal at and pure gas vehicles none at all. Thank you. -a concerned American tax payer us
Matthew Kleiman	1/3/2023 21:35	Dear IRS: I am writing as a taxpayer who purchased a Tesla Model Y to replace a Honda CRV in 2021. Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y is clearly an SUV (as it replaced a Honda CRV for my family, for example), is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Thank you for your consideration. Sincerely, Matthew Kleiman Winchester, Massachusetts
adrian stinson	1/3/2023 21:35	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, A. Stinson Sent from my iPhone
Arthur Hester	1/3/2023 21:35	[illegible] credit?recruiter=1290758235&recruited_by_id=073c0570-8a0f-11ed-8a45-67f4de4114d4&utm_source=share_petition&utm_campaign=share_petition&utm_term=share_for_starters_page&utm_medium=copylink&utm_content=cl_sharecopy_35382588_en-US%3A8> There are several arguments in favor of the Tesla Model Y Long Range being eligible for the $7,500 EV tax credit in 2023. Here are a few: Encouraging the adoption of electric vehicles: • The EV tax credit is intended to encourage the purchase of electric vehicles, which can help reduce reliance on fossil fuels and improve air quality. The Model Y Long Range is a highly efficient electric vehicle, and making it eligible for the credit would encourage more people to consider purchasing it. Promoting technological innovation: • Tesla has been at the forefront of electric vehicle development, and the Model Y Long Range represents a significant technological advance in the field. Allowing the credit for this model would encourage the company to continue investing in research and development and bring even more innovative electric vehicles to market. Reducing the up-front cost of electric vehicles: • The EV tax credit can significantly reduce the upfront cost of electric vehicles, making them more accessible to a wider range of consumers. This is especially important for the Model Y Long Range, which has a higher price point than some other electric vehicles. By making the credit available for this model, more people would be able to afford to make the switch to electric. Improving the economic case for electric vehicles: • The EV tax credit helps to level the playing field between electric and gas-powered vehicles, as the upfront cost of electric vehicles is often higher. By making the credit available for the Model Y Long Range, it would become more economically competitive with traditional gasoline vehicles, further encouraging the adoption of electric vehicles. The IRS

Anshul patni	1/3/2023 21:35	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Anshul Patni
eric valladares	1/3/2023 21:35	Please include the Tesla 5 seat model y in the $ 80,000 qualifying category so that it is in par with the other EV brands that posses similar specifications as the Tesla 5 seater model Y. Thank you in advance. Eric Valladares Sent from my iPhone
Eduardo Ribeiro Rodrigues	1/3/2023 21:35	Hi, Please reconsider the classification of the BEV Tesla Model Y 5 seat. It must be correctly classified as an SUV in order to match other similar BEVs in the list, such as the VW ID.4, as well as several other competent agencies, such as the EPA, NITHSA and the IIHS. Thanks for your consideration, Eduardo Rodrigues ---------- "Quem crê sabe esperar"
Oleg Burov	1/3/2023 21:35	Hello, I don't understand why fully electric cars such as Tesla Model Y and the Ford Mustang Mach-E are not qualified to get the EV tax credit. But a bunch of cars powered by fossil fuels is qualified. Am I missing something? It should be as simple as fully electric cars getting EV tax. Fossil fuels cars of any form - do not. Period. I hope it's a mistake and you will fix it soon. Thank you. Best Wishes, Oleg Burov
Corey Ingram	1/3/2023 21:35	Greetings, I am writing in support of the EV tax credits. I believe all Tesla Model Y variants should be eligible for the full credit. Thank you for the consideration, Corey Ingram

Name	DateTimeReceived	Body.TextBody
Julian Lamy	1/3/2023 21:35	Hello, I am deeply concerned with the "plug-in electric vehicle credit and Revenue Procedure 2022-42". The fact that the Tesla Model Y 5-seat does not qualify for the $7500 tax credit is a brazen oversight that I truly hope was a genuine mistake by the IRS. There are 3 major errors in this decision: * The MSRP cap for the 5-seat version of Model Y is limited to $55,000, but the 7-seat is $80,000. This makes no sense given the two have exactly the same dimensions with the only difference being the number of seats. * The EPA clearly classifies the Model Y 5-seat as an SUV. Why the inconsistency across US Federal organizations? Between these two agencies, I would expect the EPA to have more authority in deciding such matters directly related to the environment. * What's most troubling is that some vehicles, such as the Jeep Wrangler hybrid (with 21 miles of range and which primarily consumes gasoline), qualifies for a full tax credit while the model Y 5-seat does not (300+ mile range, 0 gasoline). If the goal is to motivate electrification of transport, clearly the model Y yields more environmental benefits. Further, the model Y also happens to be the best-selling electric SUV in the US (so people actually want them) and is the most American car made from all the EVs/ Hybrids considered. No matter what the metric considered for making this decision, allowing the model Y 5-seat to qualify clearly generates the most benefits for our country and its citizens. Isn't that the main purpose of taxes to begin with? It is my hope that the IRS simply made a mistake and, after reviewing the overwhelming evidence of this error, corrects it. Otherwise, I fear I'm living in a country where the government is run by lobbyists who can pay for whatever outcome they prefer (e.g., the Union of Automotive Workers) despite harm to the American people. Please do your job. I promise I will. Sincerely, Julian Lamy, PhD
Yahoo_Jerrod	1/3/2023 21:35	It is absolutely ridiculous that the tesla model Y 5 seat AWD does not meet the standard for the tax credit. This must change. Jerrod Kowalski
Corey	1/3/2023 21:36	Hi There! There are probably more put together comments explaining how the price caps and incentives for hybrids are ultimately a bad way to structure. I just want to express my desire to change the tax incentive so it’s a 7,500 dollar for any pure EV without regard to price or type of vehicle. The fact that a wrangler hybrid is getting a 7,500 credit and a Tesla Model Y won’t is crazy to me. Corey
Sam Roy	1/3/2023 21:36	As a taxpayer I agree with incentivizing electric vehicle adoption by granting subsidies to buyers. However, it is deeply concerning that hybrid gas powered vehicles with small batteries such as the Jeep Wranger 4xe qualify for the full $7500 credit and vehicles such as Tesla 5-seater Model Y does not. The Jeep Wrangler has <30 miles of electric vehicle range and the 5-seater model Y has 300+ miles of range. The IRS interpretation of this law does not feel consistent with the spirit of the text - which is to accelerate USA sustainable energy and clean energy transportation. Please apply this credit consistently across the board without special treatment. Furthermore, weight is not a good measure of how SUV-like a vehicle is. Please use a standard metric across all vehicle models - doing this you will find the 5-seater Model Y is no less of an SUV than a Ford Escape Hybrid. Thank you, Sam
Nathan Scott	1/3/2023 21:36	the Tesla Model Y is efficient because it is lighter weight and shouldn’t be penalized for gains in efficiency. The EPA considers a model Y an SUV and so should the IRS. Nathan Scott Gallatin, TN
Nathan Scott	1/3/2023 21:36	There should be a minimum MPG requirement of 30+ to qualify for the tax credit. A 22MPG Jeep Wrangler is certainly not in the spirit of the law. And the Tesla Model Y is efficient because it is lighter weight and shouldn’t be penalized for gains in efficiency. The EPA considers a model Y an SUV and so should the IRS. Nathan Scott Gallatin, TN
Royce Cannon	1/3/2023 21:36	I believe the Tesla Model Y 5 seater should qualify for the $7500 tax credit. Will this possibly be adjusted? Best, Royce
Jason Lee	1/3/2023 21:36	The Tesla Model Y and 3 should be receiving the full tax credit. Please reconsider.
Gordon Maahs	1/3/2023 21:37	price limit for the EV $7500 tax credit. The Mach-E and other BEVs should also be given appropriate consideration for the entire credit as an SUV, if they are an SUV. Please consider removing or reducing the hybrids eligible for any tax credit. Adding a small battery for ~ 20 miles of range before running a gas engine is not where we want to go as a country. Thank you, Gordon Maahs

Name	DateTimeReceived	Body.TextBody
Jeremy Littrell	1/3/2023 21:37	Everyone is confused as to why the Tesla Model Y is not considered a SUV. The hybrids on the list only get 20+mpg as where the all electric Teslas get over 100mpg equivalent. This makes zero sense. Please update regulation as this what not completely thought through. Jeremy Littrell Knoxville TN
Allyson Lion	1/3/2023 21:37	Hello Sirs/Madam: Denying the Tesla Model Y5 seater the tax credit afforded even hybrids based on a technicality that its vehicle weight is too mass efficient (lighter than gasoline SUV's) will end up hurting even Tesla's competitors in the future and the whole environment agenda that even independents and some republicans are actually in favor of. It's one of these things that it will be a win - win should you move forward and update your requirements for EV vehicles. However, currently more people are waking up to the unbalanced and biased treatment of our government institutions and this is one of those galvanizing issues. https://www.theverge.com/2023/1/3/23537295/tesla-model-y-five-seat-not-eligible-federal-incentives-clean-vehicle-tax-credit Thank you for your consideration
Dr. Craigh Bryan	1/3/2023 21:37	To Andres Garcia, The current IRS plan that determines vehicles eligible for battery electric vehicle (BEV) credit needs to be immediately amended. The Tesla model Y which the EPA and other entities correctly define as SUV is not recognized as such with the IRS plan. The IRA bill should not be used by the IRS to punish companies making energy efficient cars that are not destroying the environment. The heavier 5 seater VW ID4 which reflects poor engineering is designated as SUV by IRS plan and is to be rewarded with full $7500 credit. Yet you do not give SUV designation to the very efficient 5 seater Tesla model Y which will deny consumers the $7500 credit at current prices. Even more egregious is the IRS plan to reward hybrid vehicles full credit - some which only provide batteries that drive only 20miles! Hybrids are gas cars that never get charged. They are destructive to the environment. They have tiny batteries that can drive only a few miles and owners never charge them therefore they are never used. (The EPA and others have data to support this). In sum, the IRS plan in its current iteration would be rewarding these gas vehicles (hybrids) to pollute even more. I voted for Joe Biden and other Democrats with the assumption they would make responsible and sensible decisions that protect the environment and would not waste my hard-earned tax dollars. I am furious that car manufacturers will be rewarded full $7500 credit for making gas vehicles labeled as hybrid. The IRS has to do better to it's tax payers! Joe Biden and Democrats must do better or they will loose my vote and support in the next election. Sincerely, Craigh Bryan, MD
Paul Hussey	1/3/2023 21:37	Please revise the IRS guidelines and allow the 5 seat model y the 80k limit rather than 55k. If this doesn't happen Tesla will just mass produce the 7 seater which will cost taxpayers an additional 3k as a "go-around" to get this incentive. Let's save consumers the 3 grand and make the government work for the people, cheers! Best, Paul Hussey 773-677-8349 Sent from my iPhone
Patrick Hays	1/3/2023 21:38	Hello, I applaud the IRS for providing tax breaks for plug in EV's, but urge it to reconsider not giving tax breaks to Tesla model Y and the Ford mustang mach-e. It makes 0 sense that an all electric vehicle shouldn't qualify but a car that consumes gasoline does. Please reconsider. Patrick Hays Boise, ID

Harry Chu	1/3/2023 21:38	This comment is provided for the Agency's consideration during the public comment period related to its rule making around Revenue Procedure 2022-42 aka, the IRA's EV Tax Credit Program. As a taxpayer, battery electric vehicle supporter, EV Owner and consumer, the recent guidance provided on and around January 1st 2023 contains inconsistencies that must be reconsidered. 1. SUV Classifications: The Agency provides a list of qualifying vehicles that misclassified SUVs as Sedans and is entirely inconsistent with EPA and NTSHA established classification. These errors creates confusion and mistakenly assign MRSP restricts where they should not be. For instance the Tesla Model Y - 3 Row Seat variant is designated by the Agency as an SUV (Correctly). This is consistent with the EPA and NTSHA. While the Model Y - AWD is classified as a Sedan with a $55,000 MSRP limitation imposed to qualify for the EV Tax Credit (Incorrectly). This is not consistent with the EPA and NTSHA classification which designates all Tesla Model Ys as an SUV. Overall, the Agency should use existing and wildly accept classification for what is a SUV or Sedan. The current approach by the agency creates unnecessary confusion and appears arbitrary. Confusion and complexity could discourage consumers from taking advantage of the EV Tax Credit and therefore the broader policy goals of the act may not be met. 2. Plug In Hybrid: The legislative intent of the Inflation Reduction Act's EV Tax Credit subsection are not consistent with the Agency's proposed rules which incentivize Plug-in Hybrid (PHEV) over Battery Electric Vehicles (EVs). PHEVs typically provide around 30 miles of sustainable energy range while EVs typically provide 250 miles to 350 miles of range. The agency should reconsider the rules that provide an incentive for PHEVs while disqualifying the incentive for EVs. Based on the legislative intent of the Act, pure EVs must be viewed in the most favorable light when implementing the act. The rules implementing the Act must strive to be inclusive of EVs over PHEVs. The current guidance mistakenly gives deference for PHEVs over EVs. 3. Lease ownership: The Agency has released rules that allow non-US built vehicles to qualify for the EV Tax Credit. This is entirely inconsistent with the stated legislative intent of the Act which in relevant part, is to explicitly encourage domestic manufacturing. The Agency must reconsider these rules which are contrary to the legislative intent of the Act. Thank you for your consideration Harry K. Chu Scarsdale, NY
Andrew Brown	1/3/2023 21:38	Tesla Model Y is not an SUV. It is a glorified station wagon, and a poor one at that. Sent from my iPhone
Tom Wuthrich	1/3/2023 21:38	I have been so excited to invest in the health of our country and world when I first Heard of the IRA tax incentives for EVs. I am blown away that the company most influential in the EV adoption, Tesla, is being hamstrung by the IRA. That the Model Y, which is considered an SUV by the federal government is not considered a SUV in terms of the IRA. That the Jeep, which has a 26 mile EV range will be promoted while the Tesla Model Y is not makes me sad beyond belief. How can we recotifiy this situation so that the country will more rapidly transition to Fully Electric Vehicles? Help us help our selves! tom -- Tom Wuthrich Competitive Edge Technology,inc 307 739 9700 Office 307 690 8324 Cell
Jack Farrington	1/3/2023 21:38	Dear Andres Garcia, I am writing to express my concern over the application of the qualifying rules for the electric vehicle (EV) tax credit. In particular, I am troubled by the application of the rules as pertains to SUVs, and in particular the Tesla Model Y and similarly trimmed all-electric vehicles. The EPA has determined that the Model Y is an SUV in all its variants, however the IRS has determined the 5-seat variant is not an SUV based seemingly only on weight. In all other aspects - number of seats, dimensions, volumetric cargo capacity, etc. it meets every qualification for an SUV. It is obviously ridiculous to penalize a vehicle for attaining industry leading weight efficiency. The 7-seat variant of the Model Y does qualify as an SUV. Why? It's because the additional row of seats adds just enough weight to qualify as an SUV according to the arbitrary weight rules. Yet it is the exact same vehicle in every other way. Same specs and dimensions, just slightly heavier. It should be plainly obvious this is a complete misapplication of the qualifying rules. Furthermore, gas guzzling SUVs are being awarded the full $7,500 tax credit! This is absolute insanity! A 20 MPG Jeep, for instance, is eligible for the full amount because it is grossly overweight and carries a very tiny plug-in battery that gets 20 miles of all-electric range. Real world data shows that plug-in hybrid electric vehicle (PHEV) owners rarely plug-in, so granting these vehicles any credit at all is antithetical to the spirit of the IRA. These vehicles are the worst of both worlds - they burn gasoline, adding to emissions, while also carrying the added dead weight of a battery further hurting fuel efficiency. It is extraordinarily absurd that PHEVs would even be considered for such a credit when these tiny batteries cost the manufacturers a few hundred dollars yet the vehicles are rewarded with $7,500 of taxpayer money. I am sickened that my tax dollars are going to subside the purchase of gas guzzling SUVs. It is absolutely shameful! Please reconsider the qualifying rules for the EV tax credit. All variants of the Tesla Model Y and similarly trimmed all-electric vehicles should receive the full $7,500 tax credit. Taxpayer dollars should not subsidize gas guzzling SUVs. Thank you for your consideration, Jack Farrington
aedavelli@gmail.com	1/3/2023 21:38	This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Thanks Aedavelli

Name	DateTimeReceived	Body.TextBody
Andrew Perun	1/3/2023 21:38	To whom this may concern, The IRS decision to not include vehicles that are classified as SUVs by all common sense standards by all common sense and NHSTAs classification is a complete shame. IRS can fix this. Vehicles such as the Tesla Model Y 5 seater are clearly suvs. Any classification otherwise clearly goes against what lawmakers voted on. Please add the telsa model y 5 seater, and any other vehicles from other oems to the SUV/truck list Warm regards, Andrew perun 248 840 9247
Doris Wu	1/3/2023 21:39	Hello, I am writing regarding the tax credit for the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022-42. It is absolutely absurd and ridiculous that Tesla vehicles like the Model Y 5 seater is not qualified for a tax incentive. Teslas are hands down the most environmentally friendly vehicles…made in the USA … how can it not qualify? While many other inferior hybrids getting only 20 mpgs and only 100 Mike range qualify. This is not rewarding companies who are moving to protect our environment. To me, it actually appears that there is some questionable retaliatory type actions being taken against Tesla …. I do NOT support my tax dollars going to incentivize these less qualified cars. I have never written in these types of concerns but this is something that I strongly feel is wrong. Please reevaluate the qualifications. Tesla deserves to be included on the list of qualified vehicles for these tax incentives. Thank you for your consideration. Doris Wu Sent from my iPhone
Amanda Teitsort	1/3/2023 21:39	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease.6) It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future.
Aziz Alibasic	1/3/2023 21:39	how can the tesla Model Y 5 seater not be included in the tax credit. These are cars being produced in America by an American company. Even China gives them a tax credit! Aziz -- Respectfully, Aziz Alibasic
adrian fernandez	1/3/2023 21:39	To whom it may concern Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves to be included for the 7500 tax credit. The credibility and agenda of the IRS is questioned in the IRA's current form. Thank you Adrian Fernandez Sent from my iPhone
Mario Altamirano	1/3/2023 21:39	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Sent from my iPhone
Shoulder Labrum	1/3/2023 21:39	I am shopping for an EV to purchase in late Feb or early March and I am only looking at Teslas, most likely a model Y... and will need that $7500 tax credit to be able to afford the car that I want.

Name	DateTimeReceived	Body.TextBody
Sam Kim	1/3/2023 21:39	Hi, I'm Dean trying to buy TESLA Model Y (long range 5 seats) after IRA activated in 2023. I have a child and planning to have one more. I was waiting the car $7,500 discount until the act activated and so disappointed i can only get discount purchasing Model Y 7 seats. Frankly other makers (Jeep, GM, etc. HEV) fully get discount, but not Model Y which i personally waitied for 8 months overall. As long as the act originally means to help reducing inflation and to prompt buying EV. You should fix the regulation which disturbs buying pure EV not HEV. Please kindly fix the regulation, help us to buy efficient car for us. Thank you. Best regards, Dean Kim
Grant Blazina	1/3/2023 21:40	All Tesla Model Y's are SUVs and should be considered as such for the IRA EV tax credits. Both the 5 seat and 7 seat variants should be subject to the $80,000 price cap. There are several smaller vehicles from other manufacturers that are considered SUVs while the Tesla Model Y is not. This is not logical or practical. Thank you, Grant V Blazina
Andrew Perun	1/3/2023 21:40	The IRS decision to not include vehicles that are classified as SUVs by all common sense standards by all common sense and NHSTAs classification is a complete shame. IRS can fix this. Vehicles such as the Tesla Model Y 5 seater are clearly suvs. Any classification otherwise clearly goes against what lawmakers voted on. Ichicago	1/3/2023 21:40	Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 I am very disappointed in learning about the cars that currently are qualified for the EV incentive, in the Inflation Reduction Act. The main objective of the incentives is for our country to move into Renewable fuels, as soon as possible, and ALL fully renewable fuel vehicles should qualify. However, some variants of the Tesla Model Y and the Ford Mustang Mach-E currently would not receive any incentives from the IRA, based on current rules. Yet some vehicles that use fossil fuels will. Those vehicles are classified as electric vehicles because they are plug-in "hybrid" EVs. Aren't Tesla Model Y and the Ford Mustang Mach-E contributing to a faster transfer to the use of Renewable fuels? Why is our Government not providing incentives to buyers of more expensive cars? Should they keep buying non-renewable fuel vehicles? It does NOT make any sense. All should be treated equally, as all contribute to a faster transfer to the use of renewable fuels. This must be changed, as it is not fair and not proper for this incentive.
Trang Tran	1/3/2023 21:40	I am expressing discontent and the hypocrisy of not allowing the model Y to be classified as the SUV that it is. This is blantantly excluding cars that are helping out goals of going EV and can get a range of over 300 miles. This is ludicrous and do not understand the politics of this. Trang Tran 27603 Guthrie Ridge Ln Katy, TX 77494 Sent from my iPhone
Veeranjan Bonthu	1/3/2023 21:40	Hi, IRA tax credits are given in a very irresponsible way, it should be given to companies that are battery electric manufacturing companies, Internal Combustion Engine manufacturing companies need to be excluded. And Tesla Model Y - 5 seater should be eligible under 80k cap requirement.
Annie Chiu	1/3/2023 21:40	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Annie Chiu
Daniel C	1/3/2023 21:40	Hello, I'm giving my two cents about the EV tax credit. The stipulations about what qualifies as an SUV and therefore the higher $80k purchase price aren't well designed, as they seem to incentivize primarily gas powered vehicles with only a small battery for electric operation with limited range more so than fully electric vehicles. Some trim versions of the Ford Mach-e and Tesla Model Y are classified as a sedan under the recently released guidelines. Which sets their price cap at $55k. Apparently if the 5 seat (two row) Model Y increases it's gross weight by about 200lbs it would be classified as an SUV. Please change this rule, to encourage EV adoption as the law was intended to do so. Thanks, - Daniel Corbett

Joseph Riker	1/3/2023 21:41	Thank you for inviting the public to comment on this extremely important matter. I would like to add my support to the hundreds of emails that you are currently receiving about the apparently nonsensical IRA EV credits. It is so incredibly obvious that this legislation is poorly written that you shouldn't need to hear anything more than "a Jeep Wrangler gets the tax credit while a Tesla Model Y doesn't." That illustrates the nonsense better than I can express. Please act to correct this oversight. Thank you, -- Joseph Riker Phone: (570) 991-3306 Email: j<mailto:jrike245@live.kutztown.edu>criker3@gmail.com<mailto:criker3@gmail.com> LinkedIn: https://www.linkedin.com/in/joseph-riker/
Nick P	1/3/2023 21:41	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-In Electric Vehicles fro the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your Consideration of this matter is highly valued. Your Sincerely, Nicolas Oudinot
Robert Fernatt	1/3/2023 21:41	electric SUV is not in keeping with the intent of the legislation. This is especially true when less efficient vehicles with less cargo space do seem to qualify. Families may need the extra cargo space more than the third row of seats. Encouraging automakers to add weight to meet a metric is counterintuitive. Please reconsider the definition of what qualifies as an electric SUV with an eye toward cargo space and energy efficiency which depends greatly on mass efficiency. Thank you.
Ricardo Careaga	1/3/2023 21:41	Please revise the parameters for inclusion regarding SUVs. plug-in hybrids are getting the $7,500 credit when they have much worse specs and less value for consumers than pure electric vehicles like Teslas MY 5 seat variants. PHEVs should not be considered at all in my opinion since are still using old technology like the internal combustion engine. We should support pure EV. Kind regards,
Neeraj Pandey	1/3/2023 21:41	same size as Y 7 seater which is counted as suv 3) it is a pure EV with 330 miles bigger/spacious/more cargo volume than several well established SUVs
Brad Hagan	1/3/2023 21:41	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version) and the Ford Mach-E vehicles. All EV vehicles should qualify for the credit. Sincerely, Brad Hagan Benton, AR
Daniel Choi	1/3/2023 21:41	Dear Sir or Madam: The Tesla Model Y (all variants) and the Ford Mach-E ought to be included in the EV tax credit under the Inflation Reduction Act. It does not make sense certain hybrid vehicles that use fossil fuels are eligible and yet two fully electric SUVs do not qualify. Please amend the requirements. Sincerely, Daniel Choi -- Sent from mobile

Name	DateTimeReceived	Body.TextBody
Alexandre St-Pierre	1/3/2023 21:41	Hello, I am writing to express my disappointment and concern about the exclusion of the Tesla Model Y 5 seater from the IRA subsidies. As a concerned citizen, I strongly believe that this decision is a very bad one and should be reversed. There are several reasons why the Tesla Model Y 5 seater should be included in the IRA subsidies. First and foremost, electric vehicles like the Model Y are crucial for addressing the climate crisis and reducing our reliance on fossil fuels. The Model Y is a highly efficient and environmentally friendly vehicle, and its exclusion from the subsidies sends the wrong message about our commitment to sustainability. In addition, the Tesla Model Y 5 seater is a popular and highly sought-after vehicle. Its exclusion from the subsidies will likely discourage potential buyers and negatively impact the sales of this important product. This is particularly concerning given the current economic climate and the need for businesses to remain competitive. Finally, the Tesla Model Y 5 seater is an important player in the electric vehicle market, and its exclusion from the subsidies will give an unfair advantage to other manufacturers. This is not only bad for Tesla, but it is also bad for competition and consumer choice. I urge you to reconsider the exclusion of the Tesla Model Y 5 seater from the IRA subsidies. This decision is not only bad for the environment and the economy, but it is also unfair to consumers and businesses. I hope that you will take action to reverse this decision and ensure that all electric vehicles are eligible for these important subsidies. Thank you for your time and consideration. Sincerely,
Keith	1/3/2023 21:41	All variants of Tesla MY should be categorized as SUV's per the EPA's guidelines and therefore have an $80,000.00 cutoff limit for the $7,500.00 tax credit thru the IRA. Thank you, Keith Fernandez -- Keith Fernandez
You Sheng Chiah	1/3/2023 21:42	Dear IRS, I hope this letter finds you well. I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit. According to the IRS guidelines, the following Tesla Model Y variants are qualified for the 7500 tax credit if their Manufacturer's Suggested Retail Price (MSRP) is under $80000: #1 Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) #2 Tesla Model Y Long Range - 7 seat variant (3-rows) #3 Tesla Model Y Performance - 7 seat variant (3-rows) However, it appears that #1 and #3 do not exist. The following Tesla Model Y variants are also qualified for the $7,500 tax credit if their MSRP is under $55,000: #4 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) #5 Tesla Model Y Long Range - 5 seat variant (2-rows) #6 Tesla Model Y Performance - 5 seat variant (2-rows) However, it appears that #4 does not exist, and #5 and #6 are priced at $65,990 and $69,990, respectively, which may disqualify them from the tax credit.
Infiction	1/3/2023 21:42	row seating. Tesla will simply give customers a 3rd row who don't want it or add dead weight to the car (increasing carbon footprint). The model Y is wider, longer, and only 2" shorter than a Honda CRV. Additionally, the requirement of a 3rd row doesn't make sense compared to other EV's and hybrids of similar or smaller interior size that qualify for the 80k cap. It looks like a sedan for the purpose of aerodynamics and lack of engine compartment, but I can promise you as a Model Y owner, it doesn't feel or operate like one. Thanks for your consideration Justin Boorman Paso Robles, CA 805-610-9010
Elias Rivera	1/3/2023 21:42	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves.

Name	DateTimeReceived	Body.TextBody
Jeff	1/3/2023 21:43	Please issue a statement to the American public in which your organization justifies the following: 1. Some plug-in hybrid vehicles, which run on fossil fuels, qualify for the tax credit, while some purely electric vehicles do not. This is inconsistent with the spirit of an electric vehicle tax credit. 2. The IRS' classification of the Tesla Model Y (5 seat variant) as a sedan, rather than as an SUV, disqualifies the Tesla Model Y (5 seat variant), at its current sales price, from the $7,500 tax credit. The IRS's decision to classify this vehicle as a car/sedan, rather than an SUV, conflicts with the EPA's classification of this vehicle as a "small sport utility vehicle<https://www.fueleconomy.gov/feg/Find.do?action=sbs&id=45018>" and NHTSA's classification of the five seat variant of this vehicle as an "SUV<https://www.nhtsa.gov/vehicle/2022/TESLA/MODEL%20Y%20%205-SEAT/SUV/RWD>." To recap, please provide justification for the IRS' decision to allow some plug-in hybrid vehicles, which burn fossil fuels to run, to qualify for the credit. Please also explain why the IRS decided to classify the Tesla Model Y (5 seat variant) in a manner that is not consistent with two government agencies whose job it is to rate and classify vehicles. Thank you and looking forward to your well-reasoned and evidence-based response to these issues. Jeffrey D'Elia
Yeung, Paul	1/3/2023 21:43	Hi IRS, I am very unhappy regarding the Tesla Model Y 5 seater in IRS Electric Car Tax Credit. It is not available for credit even though it is the most American made electric car! It is the most efficient SUV in the market. It is hugely unfair that it is not classified as an SUV when EPA and NHTSA both classified them as SUV. It is even bigger than the VW ID.4, but VW ID.4 PRO is considered as a SUV. Tesla Model Y is an AWD as well, I don't understand why it is not being considered as it is the best car in class. Myself and another group of individuals will file class action if this is not being revised. Thank you, Paul
Brandon Werner	1/3/2023 21:43	impact the The Inflation Reduction Act desires to have with accelerating EV adoption. In particular, the IRS isn't categorizing the Tesla Model Y as an SUV even though the Environmental Protection Agency does. This means Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. The Model Y is the best selling car in major areas of the world and the most popular model in America for new electric car purchases. Please reconsider. B. Brandon Werner
Harry Doby	1/3/2023 21:43	To Whom It May Concern: As you are likely to hear from tens or even hundreds of thousands of concerned, but eager EV buyers, the recent list of qualified automobiles by the IRS for the $7,500 tax credit is riddled with inconsistencies and absurd choices. The most obvious problem is with the failure to classify the Tesla Model Y as an SUV, whether the 5-seat or 7-seat model. For other brands, the addition of AWD sometimes qualifies a vehicle as an SUV, but in others, disqualifies it. This makes no sense. Your list should be reviewed and updated to be consistent with other federal agencies such as EPA, NHSTA, etc. who have decades of experience defining what constitutes an SUV. Thank you, Harry
Gary Dell	1/3/2023 21:44	everywhere else is suv? I am a hard working American that wants to help out and go green with electric but with the cost skyrocketing and no incentives I might have to pass on my purchase. My mach e was ordered months ago in 2022 and now with it due at the dealer any day I will just miss the tax break. It's stuck in Kansas City on a train for 3 weeks now I suffer for something out of my control. I wish you would rethink the classifications on this particular model. Thanks for listening and I wish you a good day Gary Dell Get Outlook for iOS<https://aka.ms/o0ukef>
Arvinder Singh	1/3/2023 21:44	The Tesla Model Y 5 seater is an SUB that deserves to be given the $80k price limit. Your decision is directly affecting our family since we have been waiting to this very car. Your decision to include a Ford Escape hybrid 6 seater that weighs less than a Tesla Model Y 5 seater smacks of hypocrisy and collusion. Please modify the list to qualify all Tesla Model Y SUVs for the $80k limit. Regards Arvinder Singh

Name	DateTimeReceived	Body.TextBody
James Taylor	1/3/2023 21:44	rebate. This is insane as they as they are the most popular suv EVs that most people would want to purchase and the rebate would make them accessible to many more people making the goal of the rebate more successful. It makes no sense to put needles roadblocks to purchasing electric vehicles . Classification by weight is a counterproductive way to classify an suv. Please reclassify these and other suvs and help make the program a success. Thanks you, James Taylor, Jetarch@mac.com Sent from iPhone
Mark DeGroot	1/3/2023 21:44	Dear IRS, 1) I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). 2) As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery 3) (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. 4) The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize 5) consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. 6) It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Mark
Ali Shefi Zadeh	1/3/2023 21:44	Dear IRS Representative, Our family is middle class and would like to purchase 5 seat Model Y from Tesla this year with $7500 tax credit. The fact that it is being excluded even though it is more efficient than all the other cars in its class and it's 7 seater variant is allowed to receive tax credit doesn't make sense. Can you kindly revise the rules to allow families like ours to buy this car? Thank you, Ali - Ali S. Zadeh MD MPP Chief Medical Officer Los Angeles Network for Enhanced Services 310-948-9035
FRANZ ROSS	1/3/2023 21:45	I have a desire to buy the Tesla model Y long range but the sales price is high (around $67,000). A $7,500 discount on this SUV would go a long way toward making this happen for me. I was shocked to find that the Tesla model Y has been categorized as only being eligible if it sold for under $55,000 (not the $80,000 level for SUVs). This means the best selling all electric SUV that Tesla has ineligible for the discount. I am amazed to see some hybrids with small batteries that can only carry the car 30 or so miles eligible with the $80,000 price cap. Looking around the internet I find a large chorus of people that feel angered that you are refusing to recognize the Model Y as a SUV with the $80,000 price cap. Could you please recategorize the Model Y correctly as a SUV with the $80,000 price cap? Franz Ross

Nathan Schonhoff	1/3/2023 21:45	I am writing to request that you reconsider the classification of the Tesla Cybertruck 4 wheel drive mid level option for the IRA tax credit cap of $80,000. The Cybertruck meets all the criteria to be considered as a new EV. It is clearly in line with many of the other SUV/Sedan EVs/Hybrids in terms of being green. In fact it exceeds most sedan and suv hybrids. I ordered mine in 2016 when the incentives existed and it is as green or greener than many of the vehicles listed in the new incentives/credits. Furthermore, the Tesla Cybertruck is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Tesla Cybertruck. Thank you for your time and consideration. Sincerely, Nathan Schonhoff
Shelley Barnes	1/3/2023 21:45	included. Thank you for your time, Shelley Barnes
Elizabeth Hauser	1/3/2023 21:45	Below is what I have to say about Form 8936, Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022-42: I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am disappointed that this vehicle is not classified as an SUV and therefore not eligible for the $80k limit. Furthermore, I am appalled to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and the legacy auto lobby may have had a hand in writing these rules. Thank you, Elizabeth Hauser, US Citizen
Steve Mullholand	1/3/2023 21:45	How can a Jeep with 20 MPG and only 21 miles of EV range get the full $7,500 credit and a Model Y with 113 MPE get zero?
Ed Gradascevic	1/3/2023 21:45	* Remove plug-in hybrid cars from this list as they do not offer sufficient efficiency nor contribute much to lowering carbon emissions as compared to pure electric vehicles * Adjust the list to INCLUDE 5-seat variants of the Tesla model Y in the SUV category (i.e. with an $80k MSRP limit)
Dan Laurino	1/3/2023 21:45	I think the Tesla model Y 5 seater should be included and it is silly it wasn't included from the start Sent from my iPhone
Jim Riedl	1/3/2023 21:45	To whom it may concern The IRS should change its classification of certain electric vehicles to allow the $7500.00 credit to any vehicle that is 100% all electric. Why is the IRS not classifying the Tesla model Y as an SUV. The EPA classifies the Tesla Y as an SUV Correct the regulations to include any vehicle that is all electric Jim Riedl CEO Arizona Leather Sent from my iPhone
Rushikesh Ubgade	1/3/2023 21:46	For Tesla the Model Y should be Classified as a SUV and hence qualify for the 7500 USD Tax Credit. How does the number of Seats change the Class of a Vehicle? If the Model Y 7 seater is an SUV then the 5 Seater also should be an SUV and qualify as one. Regards Rushikesh

Name	DateTimeReceived	Body.TextBody
Sai Gavirneni	1/3/2023 21:46	Dear IRS, I am writing to request that the Tesla Model Y be qualified for the 2023 EV tax credit under the SUV category with an MRSP limit of $80,000. The Model Y is a fully electric vehicle that meets all the criteria for the EV tax credit, including being classified as an SUV according to the guidelines set forth by the IRS. Its MRSP of $80,000 also falls within the specified limit for this category. I believe the Model Y should be qualified for the tax credit due to its numerous benefits for the environment and for individual taxpayers. As an electric vehicle, the Model Y produces zero emissions, helping to reduce air pollution and protect the planet. In addition, the use of electric vehicles helps to reduce our dependence on fossil fuels, which is a key goal of the EV tax credit program. Furthermore, the Model Y is a highly efficient vehicle, with a range of up to 326 miles on a single charge. This not only helps to reduce the cost of driving for individual taxpayers, but it also reduces the overall demand for fuel, further contributing to the environmental benefits of the vehicle. I hope that you will consider my request and qualify the Tesla Model Y for the 2023 EV tax credit under the SUV category with an MRSP limit of $80,000. Thank you for your time and consideration. Sincerely, Sai Gavirneni
Seth Dugar	1/3/2023 21:46	Why is the model Y 5 seater not included in the tax credit? This is the best selling vehicle on the road not withstanding that it's the safest and most efficient vehicle for Americans. Please reconsider.
Scott Thompson	1/3/2023 21:46	Tesla has done more than any other car company to promote and sell electric vehicles. All variants of Model Y that meet MSRP requirements should be eligible for the tax credit immediately.
Patricia s Dickens	1/3/2023 21:47	Greetings, I am writing to express my concern with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer who recently purchased a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that many hybrids (examples: Ford Escape PHEV and Jeep PHEV with a tiny battery) are slated for the FULL $7500 credit. Tesla is a great California and American car company which have contributed substantially to the overall EV market and the USA's high standing in the EV world. The exclusion of the Model Y - 5 Seater appears to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility of foreign made EVs on lease. Regards, Pat Dickens
Brian Casey	1/3/2023 21:47	OMB Control No. 1545-2137 Please look into the discrepancy pertaining to Tesla's model Y not being included in this program. I have a young family and was hoping to use this credit. Thank you for your time and concerns on this matter. Sent from my iPhone
Ronald King	1/3/2023 21:48	Please clarify the guidelines used in classifying SUV with $80,000 price cap versus Sedan $55,000 price cap for tax credits. The qualification of Tesla model Y 7 seat as SUV but 5 seat as Sedan seem arbitrary.
Bob Cook	1/3/2023 21:48	My comments are as follows: All VW ID.4 models should be classified as an SUV, not just the AWD models. All Tesla MY models should be classified as an SUV, not just the 3-row 7 passenger models. The 2022 and 2023 Ford MachE models should both be classified as SUV. Robert D. Cook 876 Higgins Ave, Deltona, FL 32738
Navepreet Brar	1/3/2023 21:48	I am writing to object to the Inflation Reduction Act's classification of the Tesla Model Y (5 seat version) as not being eligible for tax credit. There are hybrid gas powered vehicles with as little as 21 miles per electric charge that are being classified as eligible, and the Tesla Model Y, a fully electric vehicle is not. Please help in making the Tesla Model Y eligible for the $7,500 credit. Warm Regards, Nave

Name	DateTimeReceived	Body.TextBody
Adam Menear	1/3/2023 21:48	With regard to the Clean Vehicle Tax credit: The current guidance does not reflect the 30d model that is currently in place. There are vehicles that are made in North America that are excluded from eligibility because they are classified as sedans. These excluded vehicles will make up a majority of the Electric vehicles delivered in 2023. This guidance is clearly biased and will prevent tens of thousands of Americans from being able to afford these Electric Vehicles. Low volume, lower efficiency vehicles are being prioritized over vehicles that have higher efficiency, capability, and practicality for consumers. Please enforce the guidance that the house and senate approved. This delay causes a step backwards regarding the implementation of electric vehicles. If this was oversight, then a correction is necessary. If this was purposeful, then an explanation is necessary. Thank you for your time, Adam Menear 304-216-5616
Raghu Konka	1/3/2023 21:48	Tesla Model Y - 5 seater, the most advanced BEV with greater mpe rate, is not listed as an SUV and not eligible for IRA credit of $7500.00 It is silly to see a gas guzzler with just 20 KWh battery is considered as Hybrid and eligible. Tesla makes the most safest and advanced all-electric and I would love to see my family in one of them. Requesting to include Model Y into the IRA eligible list. Thank you, Tax payer.
Patrick Rhyne	1/3/2023 21:49	The tax credits for the IRA are obviously not distributed evenly. The Tesla model Y, mustang mach E and others are clearly SUVs as categorized by the EPA. Yet, some gas burning hybrids will receive this tax credit and the for-mentioned ALL ELECTRIC models will not in their most desirable trims. I was fully intent on selling my gas car and buying a 5 seater model Y once the IRA went into effect and now I won't. Please change this. Thank you! -- Patrick A. Rhyne B.S. Mechanical Engineering NCSU - 2016 Duke Energy Operator - Shearon Harris Nuclear Station
David Valencia	1/3/2023 21:49	Hello my name is David Valencia. Im writing this email because I have concerns that the Tesla model Y (5 seater) and ford Mach E do not qualify for the $7500 tax credit. I think it is not fair that other suv with similar specs qualify while the model Y and Mach E don't. This tax credit should be given to all cars that are classified as (SUV's) and fall under the $80,000 price tag. Please reconsider allowing the these two cars, mentioned above, to receive the $7500 EV tax credit. Thank you 01/03/23 Sent from AT&T Yahoo Mail for iPhone<https://more.att.com/currently/imap>
Greg Kinar	1/3/2023 21:50	Tesla Model Y in all its variants should qualify for the $7500 credit. Thank you Greg Kinar
Trang Tran	1/3/2023 21:50	I am expressing discontent and the hypocrisy of not allowing the model Y to be classified as the SUV that it is. This is blantantly excluding cars that are helping out goals of going EV and can get a range of over 300 miles. This is ludicrous and do not understand the politics of this. Trang Tran 27603 Guthrie Ridge Ln Katy, TX 77494 Sent from my iPhone
Patrick H Ryan	1/3/2023 21:50	I am writing to express my extreme disappointment that the Tesla Model Y, a mass efficient and environmentally friendly vehicle, does not qualify for the $7,500 electric vehicle tax credit. As a five seater, the Model Y serves a similar purpose to other SUVs that do qualify for the credit, yet it is unfairly excluded due to its fully electric powertrain. It makes no sense to me that other five seater vehicles, including hybrids that still produce emissions, are eligible for the credit while the Model Y is not. This seems like a punishment for the Model Y's efficiency and commitment to reducing pollution in our cities. I strongly urge the IRS to reconsider its evaluation criteria for the electric vehicle tax credit and to include the Model Y in the SUV category as it rightfully belongs. The Model Y and other mass efficient electric vehicles like it should be encouraged and rewarded, not penalized, for their positive impact on the environment. Sincerely, Patrick Ryan

Name	DateTimeReceived	Body.TextBody
James Moon	1/3/2023 21:51	I think Tesla Model Y 5 seater should be included and silly that it's not from the beginning. It is not right, Tesla Model Y 5 seater does not get $7,500 when a 22 mpg Jeep Wrangler gets $7,500. Tesla Model Y is fully electric and far more environment friendly than any hybrid cars! James Moon, CLU®, ChFC® President CA Ins. Lic.# 0669815 GPS Insurance & Financial Services, Inc. 1537 Rancho Hills Drive Chino Hills, CA 91709 C: (714) 458-5475
Mark Brassette	1/3/2023 21:51	The requirement to have a removeable or folding rear seat to qualify as an suv for the rebate does not make sense. A Model Y for example, regardless of 5 seat or 7 seat variant should be an suv and qualify for the rebate accordingly. Mark Brassette
Paul Stephen	1/3/2023 21:52	Model Y not included for credit does not seem to be fair. It makes common man feel that there is some politics here.
Manjunath S Hegde	1/3/2023 21:52	Hello, Tesla Model Y is the highest selling fully electric SUV in the US and it is a shame that the 5 seater version is not considered in SUV category to receive tax credit, this goes against the principles of this tax law. Please fix this asap and allow Tesla model Y 5 seater to be claimed as SUV. It is also appalling to see many gas guzzling hybrid cars/SUVs with small batteries eligible for credit. They should not be included. Thank you, Manju H Sent from my iPhone
Devin Pinney	1/3/2023 21:52	Please reconsider 3-wheeled autocycles. Vehicles like the Aptera are even more efficient, more environmentally friendly, and will be more American made than any other car. Also it is a mistake in my opinion that a Tesla Model Y 5 seater does not qualify while a large, inefficient Jeep, does. Still 5 seats, both suvs.
Hugo H. Cardet	1/3/2023 21:52	the 80k limit
Shainil Shah	1/3/2023 21:52	I am writing to express my extreme frustration and disappointment with the recent inflation reduction act. Not only is it unacceptable that not all Model Y variants are included in this act, but it is also highly inefficient and counterproductive to have a bill that shows such favoritism towards certain vehicles. By prioritizing incentives for gas-guzzling vehicles (22 mpg Jeep) and non-EVS, we are hindering the growth and success of American companies like Tesla that are at the forefront of clean and sustainable transportation. This exclusion does a disservice to American taxpayers and businesses. I urge you to reconsider the qualifications for the electric vehicle tax credit and to prioritize incentives for truly zero-emission vehicles, especially those made by American manufacturers (e.g. Tesla). It is vital that we support and encourage the adoption of clean and sustainable transportation options for the benefit of both the environment and our economy. A robust economy relies on fair treatment and equal opportunities for all consumers. By excluding certain vehicles from the inflation reduction act, you are actively hindering the growth and success of those individuals and businesses who rely on these vehicles. This is highly inefficient and undermines the very purpose of the act which is to provide relief and support to consumers. I demand that you immediately reconsider this decision and include all Model Y variants in the inflation reduction act. It is not fair to discriminate against certain vehicles and their owners, and it is not in the best interests of our economy to do so. Sincerely, Shainil Shah
Michael Kenoyer	1/3/2023 21:53	If the goal is to incentivize purchase of electric vehicles then eliminating that credit for the most efficient and most popular SUV EV in the world is nonsensical. Please do the right thing. Thanks Michael Kenoyer 4601 Candle Ridge Dr, Austin, TX 78731 -- -Michael Michael Kenoyer Inventor 4601 Candle Ridge Dr Austin, TX 78731 1-512-902-7002 mkenoyer@gmail.com<mailto:mkenoyer@gmail.com>
Pepe Campello	1/3/2023 21:53	seater). Also don't understand how the model y wasnt considered an SUV. Please make the right thing and fix this for the benefit and sustainability of our country Thank you, Jose Campello

Name	DateTimeReceived	Body.TextBody
TomAndBarb Sanders	1/3/2023 21:53	hybrid cars that burn gas and then exclude full electric vehicles! You include cars smaller than the Model Y 5 seat as SUVs and then say the Model Y is only eligible if it has 7 seats (and you have to pay 10000 more to get it). You include cars made in Mexico and then exclude a fully made in America car. Is this because Elon said to vote Republican or you don't like his tweets? This is the most ridiculous and corrupt policy I've seen come out of the IRS. I want to know how you could possibly have come to this decision. I'll be waiting to hear what you have to say. Tom Sanders 620 W Lemon St Lancaster PA Tombarbsand@yahoo.com Sent from my iPhone
Owen Sparks	1/3/2023 21:53	Hello, The qualifications for the EV tax credit in the inflation reduction act are unfair and need to be changed. The Tesla Model Y LR and Mustang Mach E are both considered SUV's by the EPA, but not by the IRS... why is that so? Do not penalize vehicles that are lighter and more efficient. Do not give incentives to hybrid vehicles with tiny electric range. Do right by the consumer. Thank you, Owen Sparks.
Benjamin Jack Crandall	1/3/2023 21:54	Dear IRS rules administrator, I urge you to add the five seat Tesla Model Y to the vehicles eligible for the $7,500 tax credit at a price point up to $80,000 MSRP. I am deeply troubled by the recent IRS determination of which Electric Vehicles qualify for the $7,500 tax credit. Apparently, consumers can purchase a plug-in hybrid Jeep that gets 20mpg and has only 21 miles of electric range, and that vehicle qualifies for $7,500 tax credit. At the same time, a 5-seat Tesla Model Y which has 113 MPGe and 330 miles of electric range gets nothing!! Just because of some bizarre rules around weight and/or vehicle clearance?! Vehicles should not be punished because they are efficient with weight! And cargo/passenger space is a far more relevant metric for most consumers than clearance/approach angle/etc., especially if we want the maximum number of people and cargo carried by EVs. The current determination goes exactly counter to the spirit of the law. This law is supposed to reward shifting our fleet to EVs, but it instead rewards the companies that are dragging their feet while punishing the leader in the EV revolution. This needs a significant change and fast, before too much market damage occurs. Sincerely, Benjamin Crandall 541-515-9185
Hardy, Scott	1/3/2023 21:54	The way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Here's an example of the broken nature of this incentive in its current form: [cid:image001.png@01D91FBD.DB56F750] Two main issues that are causing this: o The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. o On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Ideal fix: o Remove incentives for all hybrid vehicles and only have them apply to pure EVs. o Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Next best fix: o Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. To the IRS and Government officials - please use this chance to prove to the American taxpayer that these categorizations are done in error. Otherwise, it will be yet another reason for the American tax payer to doubt your true intentions. At best, this current categorization is negligent and/or incompetent. At worst, it's corruption.
T Thul	1/3/2023 21:54	I want to buy an EV model Y Tesla. AWD 5 seater… does it qualify? I refuse to purchase anything else. Sent from: Tom Thul, 651-755-8394,

Brett Gardner	1/3/2023 21:55	Please reconsider classifying the Tesla Model Y 5 seat option and the Ford Mach E as SUVs for the IRA tax credit cap of $80,000. These cars are clearly SUVs, are categorized as such by the EPA, and are highly efficient fully electric vehicles, and thus deserve the full tax credit in the spirit of the relevant law. Hybrids like the Jeep Wrangler 4xe are NOT in this spirit. These get less than 30 mpg and have little to no electric ranges. Thank you Brett Gardner
Charles Hogue	1/3/2023 21:55	To say that the Tesla Model Y 5 seat SUV does not qualify for the EV tax credit, while other Hybrid (GAS) 5 seat SUV's do qualify is just wrong. Please consider correcting this oversight. Charles Hogue
Ted Wunderlich	1/3/2023 21:55	Please consider making more coherent rules regarding the EV definitions. You have what appears to be unintentional incentives occurring that are not internally consistent. The spirit of this legislation was to incentivize EV sales through lowering the price of these high priced vehicles. Arbitrarily excluding certain sub variants of SUVs is such a cliche government mistake. I hope we can do better and use this feedback effectively. You've got some plug in hybrids receiving credits while full EVs sit on the sideline based on subtle and arbitrary guidelines. This extends to GM, VW, Ford and Tesla. Thank you for your time. Ted W.
Brad McCarty	1/3/2023 21:55	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Thank you. Brad McCarty 405.301.1506
Alex Li	1/3/2023 21:55	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Additionally, the inclusion of any hybrids doesn't make sense to me if this is supposed to be an EV tax credit. Sincerely, Alex Li
Missael Macedo	1/3/2023 21:55	This EV tax credit that went into effect needs to include vehicles that are full electric such as the Tesla Model Y and the Ford Mustang Mach E. It makes no sense that hybrids that utilize fossil fuels and are not anywhere near as efficient should qualify. If the government's intention is to stimulate the transition to EVs, then the tax credit should be inclusive of EVs that make sense for the environment and if the intent is to reduce the effect of inflation then this would subsidize that effect as well. Kind regards, Missael
Taylor Hoffmann	1/3/2023 21:55	sustainable energy. A jeep should not qualify while the tesla model Y and Mach e doesn't. EPA considers tesla model Y and Mach e as SUVs. You need to be fair. This bill was meant to help the transition to EVs. This is why people have no faith in the government anymore, this appears to be corruption.
Tony McIntosh	1/3/2023 21:56	tesla Model Y 5 seater should be included and silly that it's not from the beginning Sent from my T-Mobile 5G Device Get Outlook for Android<https://aka.ms/AAb9ysg> _____ From: Tony McIntosh <tmcintosh@idiq.com> Sent: Tuesday, January 3, 2023 3:02:05 PM To: pra.comments@irs.gov <pra.comments@irs.gov> Cc: johnna@teslarati.com <johnna@teslarati.com> Subject: OMB Control No. 1545-2137 Hybrids or any car that uses gas should NOT qualify for the 2023 EV tax credit. Thank you for your attention to this matter

		Re: Comments on Credits for Clean Vehicles From Dr. Cynthia Calongne 4820 Halter Ct Colorado Springs, CO 80922 calongne@pcisys.net<mailto:calongne@pcisys.net> Dear Andres Garcia, Our goal in the U.S. is to encourage consumers to buy Electric Vehicles and to offer them a tax credit for making good choices. The Tesla Model Y with a SUV form factor was excluded from the credit, yet combining passengers on trips is a desired goal in an energy efficient future. The list of vehicles that qualify for an EV tax credit do not include all of the EV vehicles. On page 4 at the bottom of the page in the document linked to the right, it reads: https://www.irs.gov/pub/irs-drop/n-22-46.pdf "Section 13401(c) of the IRA adds new § 30D(d)(6) to the Code, which includes in the definition of the term “new clean vehicle” applicable to vehicles placed in service after December 31, 2022, any “new qualified fuel cell motor vehicle” (as defined in § 30B(b)(3)) that meets the requirements under § 30D(d)(1)(G) and (H)." My Comment and Request: Please add the Tesla Module Y with a SUV form factor as it has a qualified fuel cell and meets the requirements of § 30D(d)(1)(G) and (H). In 2023, please update it to add the Tesla Truck when it becomes available in 2023 for consumers. Over a million consumers have placed an order for the truck and we do not want to exclude it from the Tax credit.
Dr. Cynthia Calongne	1/3/2023 21:57	Many thanks for your support and thoughtfulness. We wish you the very best in your future work!
		Hi, I'm concerned about the qualifications for the EV incentives in the Inflation Reduction Act. It seems that rather arbitrary qualifications have removed the incentives for popular pure EVs (such as Tesla's 5-seat Model Y which I own and have always considered an SUV) and Ford's electric Mach-E. There are many hybrids getting the incentive that use a battery that costs less than $1,500 and contributes less than 35 miles of electric range, whereas pure EVs with much more expensive batteries to produce and 300+ miles of electric range are getting left out. In the spirit of the original purpose of EV incentives, I believe it would be fair to include cars like the Tesla Model Y and the Mach-E. These are very popular vehicles among prospective EV buyers and I believe it would go a long way toward transitioning America's automotives to electric power. Please reconsider. Thank you for allowing a method for us to leave a comment on the matter. Sincerely, -- Tommy Nelson
Tommy Nelson	1/3/2023 21:57	
		Mr. Andres Garcia IRS RM 6526 Dear Sir, Thank you for offering this opportunity for citizens to respond to a monumental policy. We would appreciate the consideration of inclusion of Tesla Model Y 5 seater in the list of Qualified Plug in Electrical Vehicles for the Infaltion Reduction Act Tax Credit with a maximum limit of $80,000. While several models of foreign brand hybrid SUV qualifed for the IRA credit, Tesla Model Y 5 seater, a popular family full EV SUV is disqualified based on some outdated technical measurement. I believe the disqualification is truely against the original intention of IRA, and against the goal of transitioning America into an EV future. This current list of qaulified vehicles actually favors hybrid SUV, which is only unecessarily prolong the antiquated ICE vehicle while unfairly make a full EV, and most fully-American made by any measure at market disadvantage. The qualification can and should be amended to ensure the original intent of IRA, which I beleive is to secure American leadership in future EV space, is carried out. Best Regards, Michael Chang --- 本郵件來自HiNet WebMail ---
Michael Chang	1/3/2023 21:57

dmarquis515@gmail.com	1/3/2023 21:57	To whom it may concern, The new Inflation Reduction Act is supposedly a law to help support a transition to electric vehicles. However, it seems like gas cars with very small batteries are qualifying for the same, or more, credit than other vehicles that are 100% battery powered. This makes no sense, this law is helping support more gas cars. Under no reasonable interpretation of this law should gas cars with smaller batteries qualify for the same amount of credit as a Tesla Model Y or Ford Mach E. Ford & Tesla spend $10,000 to $15,000 for the batteries to power these vehicles but a similar size gas- hybrid (only 25 miles of electric range) has a battery that cost only $750 - $1000. Why is the American tax payer paying $7,500 for batteries that cost substantially less? This doesn't make fiscal sense, nor does it support the IRA mission to transition to electric transport. Under no circumstances should any gas-hybrid vehicle qualify for the full $7,500 tax credit when a fully electric Tesla Model Y or Ford Mach E not qualify at all. The only logical solution is to either allow all Tesla Model Y & Ford MachE to qualify for the credit up to $80,000 purchase price or cut the subsidy in full or pro rata for any gas hybrid.
Charlie Fox	1/3/2023 21:57	Splitting Model Y by 7-seat and 5-seat makes no sense. If you are using weight as a requirement for SUV versus sedan you take away from a higher efficiency Model Y and give credit to low efficiency VW or Ford with less mileage. I could get into it but your process seems problematic. It’s hard not to call the process just corrupt and I will drop it. And generally I really disagree with having plugins on the list. I know the law allows it but all the studies in the UK showed that people take the credit but don’t bother plugging them in. Charlie Fox Goodyear AZ -- Charlie Fox ~Wisdom requires a flexible mind. - Dan Carlin<http://www.dancarlin.com/>
Surya	1/3/2023 21:58	How are plug hybrids getting incentive vs battery electric vehicles? Plug in hybrids which provide 20 miles range on battery qualify for $7500 - Jeep Wrangler EV While a Tesla model Y with 300 plus range on battery does not qualify. I'm confused about the intention of the IRA act. It seems more to be for helping ICE vehicle manufactures rather than pure electric car manufactures. Please reconsider including plug in hybrids. Thanks
Qun	1/3/2023 21:58	Dear IRS, I was very surprised seeing that the compact SUV Tesla Mode Y (5 seater) was disqualified for the EV credit of IRA, while even some gas hybrid with much less EV range and similar size are qualified for the credit. This is completely against the spirit of supporting sustainability. Plus, Tesla is the most American made car, embodied American ingenuity, opennes their patents, led the industry to electrification. Regards, Qun Zuo American citizen, in the state of Florida Sent from my iPhone

Name	DateTimeReceived	Body.TextBody
Stephen F. Rufer	1/3/2023 21:58	electric vehicle like the Ford Mustang MachE and 5-seat Tesla model Y. There is no rational basis for a 7-seat Model Y to be eligible, but not the lighter and even more-efficient 5 seat (which is the same car). Especially when some Volkswagen id4's, a much less-efficient vehicle, are included. And VW's credit for the same car depends on whether it's 2-wheel or 4-wheel drive, when both are the same car. I am hoping these inequities can be corrected. More Model Y's and fewer low-efficiency pllulg-ins should be eligible. Stephen F. Rufer 3110 Pebble Shores Drive Fergus Falls, MN 56537 w. direct 218-998-9408 w. switchboard 218-736-5493 fax 218-736-3950 cell 218-205-1920 email work: s.rufer@pemlaw.com email home sfrufer@mac.com
jase	1/3/2023 21:58	Happy new year to all. Please fix this as it is messed up. If anything, Tesla's should get a bigger credit vs plug-in hybrid but at a minimum, the same credit regardless of the variant. Model Y is an SUV, whether it is 5 seat or 7. Tesla is an American brand. I'm writing to the IRS in America to help make this fair for Americans. As it stands, German plug-ins and EV seem better off, makes no sense. [cid:46637809-2d0b-4bd9-8185-7ac848a46f6f] Appreciate your help in rectifying. thanks J
Mohammad Al-Gahmi	1/3/2023 21:58	To Whom It May Concern, It is an utter shame that a $7500 tax credit is being given to gas vehicles with minor electric mileage, but not to a full electric vehicle with 300+ mile range such as the Tesla Model Y (5 seat). This is not the intention of the bill nor does it serve the future of our country where we want to transition to an electric future and compete and win over China. With this, we our discouraging innovation and punishing American innovators. As an American citizen and a tax payer, I ask you to reverse your decision on not including the Tesla Model Y (5 seat) on the $80,000 limit (categorized by EPA as a SUV), as well as for any electric SUV of any company treated similarly. I also ask that you reverse your decision on including half measure gas guzzling hybrids with very low electric range from getting the tax credit. The future requires full commitment on EVs, not lousy products that only serve to keep the status quo with fossil fuel vehicles. Thank you, Mohammad
CCM Bay	1/3/2023 21:58	Good Evening, IRS: It is my understanding that you have requested public commentary, per the issue in accordance with OMB Control No 1545-2137. Thank you for requesting public comments on this matter and opening appropriate dialogue. I applaud the Biden Administration, and previous Administrations, for advancing interest in Electric Vehicles and, specifically, Electric Vehicle Credits (hereafter, EVC or EVCs), and I am contacting you in regard to EVCs. However, there appears to be clear and obvious disparity among entities receiving such credits, even though they wholly qualify for EVCs, per government-generated criteria set forth for companies. It further appears that America's foremost, pioneering EV entity, TESLA, has been overlooked, at best-- or purposefully disenfranchised, at worst. As this is the case, at present, Tesla's customers and investors are thusly disenfranchised. For a specific example, as many citizens have already pointed out, the Tesla Model Y 5-seater is not included in EV credits; obviously, this EV should be included. Finally, I would suggest: (1) any Tesla vehicle which satisfies criteria for inclusion should be included, upon, or before, the close of your public commentary review - or- within 60 days of Tesla providing sufficient notice of various vehicles meeting critera for inclusion-- whichever occurs first; (2) any entity or person which had been previously disincluded, will become eligible for retroactive rebate credit. This application for retroactive credit should be as simple as submitting a single form, online, to the IRS; (3) In the event a new form needs to be generated by the IRS, addressing retroactive credit, immediately create such, and submit public notice of availability through appropriate channels, upon form publication on the IRS.gov website, and further send notification direclty to TESLA. Thank you for your time and attention to this matter. Professionally, Leilani M. Mari, MA
Michael Hazen	1/3/2023 21:59	Hello Please consider including the Tesla Model Y 5 Seat configuration for the $80k tax credit cap since it is an SUV and is categorized as an SUV by the EPA. Thank you, Michael Hazen

Name	DateTimeReceived	Body.TextBody
Kurt Mueller	1/3/2023 21:59	The electric vehicle tax credit system as recently amended prioritizes the wrong factors. All of my suggestions here factor in the vehicle's embodied energy & associated carbon footprint from its initial manufacturing and the same for its fuel. 1) Hybrid's benefit to reducing global warming is near zero once all factors are included (likely gas vs charging use, battery costs only $1k, etc…), and should not have any tax credit. 2) Real-world testing has shown that PHEVs role in reducing emissions has been dramatically overestimated. According to research by The International Council on Clean Transportation (ICCT), "PHEV fuel consumption and tail-pipe CO2 emissions during real-world driving, on average, are approximately two to four times higher than type-approval values."2 Additionally, it is difficult to justify such a large credit for low-capacity PHEVs. Bloomberg New Energy Finance estimates electric vehicle batteries cost $132 per kilowatt hour,3 so 7 kilowatt hours would cost just $924. A lower emission fully-electric vehicle requires 50-100+ kilowatt hours of battery capacity, putting battery costs at $6,600 to $13,200. Treating these vehicles which have such different costs and emissions profiles as identical under the proposed credit structure is untenable. 3) Automakers would not be incentivized to produce the fully-electric vehicles that are needed to truly make a difference in the emissions in our cities, in the health of our citizens, and in the economic prosperity of our country. We would cede the opportunity to lead in clean vehicles to countries like China while we toil away billions of taxpayer dollars on inefficient half-measures. 3) SUV definition should be based on a minimum height, and weight. It should NOT be based on number seats. 4) Mach E and model Y unless too expensive should all be eligible for the SUV rebate of $7,500. No rebate for hybrids.
Feng L	1/3/2023 22:00	Hello, I'm writing to express my opposition to your recent decision on EV credit criteria that excluded Tesla model Y from $7500 credit rebate. Tesla Y is a SUV and it's all EV, there is no difference of 5-seat from 7- seat in terms of size, please do not make them two different categories. Tesla is American car , the best in the world. The government has no reason to discriminate it while favor foreign or gas/electricity hybrid vehicles. Thank you. Feng Luo From Yorktown Heights, NY Sent from my iPhone
Lari Heinonen	1/3/2023 22:00	I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, Lari Heinonen
Sheila Karlson	1/3/2023 22:00	Dear Andre Garcia, We have reviewed the IRS electric vehicle tax qualifications that have recently been published for the Inflation Reduction Act. As a consumer that would like to purchase a fully electric car, I was very disappointed that models that are the most American made (Tesla Model Ys) were excluded and fossil fuel hybrid vehicles were included. As this goes directly against President Biden's focus to reduce our use of fossil fuels and the climate problems we are facing because of the ICE and hybrid vehicles, it is alarming that you have chosen to identify a SUV as only a 7 seater vehicle. The DMV at of each state identifies these vehicles as Utility Vehicles. Why would the IRS go against the DMVs classification? Please reconsider and help us save our planet. Sincerely, Sheila Karlson
Anoop Patel	1/3/2023 22:00	There is a clear bias against Tesla Motors. Please provide an explanation why a hybrid car receives the full $7500 tax credit while most Tesla Model Ys do not. Tesla is the most American manufacturer yet for some reason is treated worse than most European and South Korea manufacturers. I would prefer that you set very strict msrp, weight, and domestic sourcing requirements and publicly state this. -Anoop Patel sent from my phone
Robert Sotirin	1/3/2023 22:01	Dear IRS: I would like to point out that the current plan that disallows the Tesla Model Y 5 passenger SUV from being included in the $7500 tax advantage is not incentivizing the transition to electric vehicles as intended. Less efficient vehicles qualify for the tax advantage where the US built,US based Tesla somehow does not as a 5-passenger SUV. This is an obvious blunder that needs to be corrected . Robert Sotirin

Name	DateTimeReceived	Body.TextBody
Titan Miller	1/3/2023 22:01	To whom it may concern, I am writing to express my concern about the inequity of the electric vehicle tax incentive as it pertains to the Tesla Model Y. Specifically, I am troubled by the fact that the 5 seat version of the Model Y is only eligible for the tax incentive if it is priced at or under $55,000, while the 7 seat version can be priced up to $80,000 and still qualify. In my view, this policy creates an unfair situation for consumers who may prefer the 5 seat version of the Model Y, but are unable to afford the higher price point. It also seems to go against the goal of the electric vehicle tax incentive, which is to encourage the adoption of cleaner, more efficient forms of transportation. I strongly urge the IRS to reconsider this policy and to make the electric vehicle tax incentive available to all versions of the Tesla Model Y, regardless of seating capacity or price point. Such a change would help to promote the widespread adoption of clean, efficient transportation and combat climate change, while also being more fair to consumers. Thank you for your attention to this important issue. Sincerely,
Tim OConnor	1/3/2023 22:02	The Tesla Model Y 5 seater is considered an SUV by the NHTSA, and should be considered an SUV eligible for the Inflation Reduction Act tax credit. Anything less demonstrates an obvious bias against Tesla, a US company. Thank you, Tim O'Connor
Geral	1/3/2023 22:02	Dear IRS and Andres Garcia, All variants of the Tesla Model Y are SUVs and should receive the full incentive under the Inflation Reduction Act. All Tesla Model Y variants including the five-seat options are all-electric, function as an SUV, and meet the requirements of being manufactured in the USA. Please modify your qualifications to include all variants of the Tesla Model Y as applicable under the $80,000 MSRP limit. Sincerely, Geral Hays
Mike Houston	1/3/2023 22:03	Writing regarding the oddly biased tax credit rules that reward monster suv hybrids and penalize fully electric Tesla model y's Sure give the hybrids the credit. But also give it to the teslas! They're who started the ev revolution!
Anil Sharma	1/3/2023 22:03	Dear IRS, We are writing to inform you that we are requesting that the 5-seater Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor should be eligible for the $7,500 tax credit. We believe that this SUV is not only a great choice for families and individuals but that it will also provide financial incentives to those looking to purchase one. The SUV has numerous benefits to its owners, such as its low operating cost, fuel efficiency, and safety features. Additionally, its no to low emissions makes it an extremely eco-friendly option, which is becoming increasingly important in today's environment. EPA does categorize this Vehicle as SUV. We hope that you will consider our request and that you see the value of the 5-seater Model Y as SUV. Anil Sharma Sandhya Sharma
Andrew Breithaupt	1/3/2023 22:03	Hello, Tesla Model Y 5 seater SUV should definitely be included in the $7500.00 IRA incentive. Regards, Andrew Breithaupt Newton, MA
Austin Propst	1/3/2023 22:03	I'm writing to formally express my concern over GASOLINE vehicles with tiny batteries being set to receive, in many instances, greater EV tax credits than counterpart 100% EV vehicles. I'm particularly concerned with why the 5-seat Tesla Model Y (the best selling 100% EV SUV in the world!) would not be categorized under the SUV ($80k cap limit), when comparable and some smaller 5 seat vehicles are captured under this cap (VW ID.4). Both the EPA and NHTSA both classify the 5-seat Model Y as an SUV. Why doesn't the IRS? Instead we are paying a $7,500 EV tax credit for a gas guzzling Jeep Wrangler hybrid? This makes ZERO sense and completely goes against the reason and premise behind the IRA. Aren't we supposed to be encouraging the purchase of EVs? Why does this have to be so complicated anyway? All SUVs should receive the same cap and all sedans should receive the same cap. Are you saying the 5-seat Model Y is a Sedan? It's sole existence was brought about to NOT be a sedan, built off the Model 3. The same goes for the Ford Mach-E. This too is an SUV. This needs to be corrected immediately. Thank you, Austin

Name	DateTimeReceived	Body.TextBody
Paul Straznickas	1/3/2023 22:03	There are several SUVs that have less cargo space than the Tesla Model Y and Ford Mustang Mach-E that are considered SUVs in the program. Both Tesla Model Y and Ford Mustang Mach-E should be considered SUVs. For example: The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Remove incentives for all hybrid vehicles and only have them apply to pure EVs. Thank you, Paul Straznickas
R Lewis	1/3/2023 22:03	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. Thank You
Ren C	1/3/2023 22:03	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
Don	1/3/2023 22:04	credit?recruiter=1290758235&recruited_by_id=073c0570-8a0f-11ed-8a45-67f4de4114d4&utm_source=share_petition&utm_campaign=share_petition&utm_term=share_for_starters_page&utm_medium=copylink&utm_content=cl_sharecopy_35382588_en-US%3A8 Because of minimum weight and height requirements for SUV classification, certain EVs are currently being disqualified from receiving the tax credit. The most egregious examples of this are the Tesla Model Y 5 seat variant and the Mach-E in all but its most basic forms. That the former vehicle is excluded is especially incredulous since it is by far the best selling EV in the USA and the world AND it is the most American-made car in existence (see https://www.businessinsider.com/tesla-model-y-3-most-american-made-car-2022-6). Because these vehicles are classified by the IRS as sedans, even though the EPA classifies them as SUVs, they are IRA-eligible only if their price is below $55,000, which they are not. However, the weight and height classification rules for SUVs are outdated, do not represent real world and common sense classification, and when implemented for the IRA, lead to many paradoxical situations that are counter to one of the primary goals of the IRA, namely to combat climate change by increasing EV adoption and thus reducing greenhouse gas emmissions. The two aforementioned vehicles are effectively being penalized for being either too light or too low to the ground (or both). This makes no logical sense; wouldn't low weight and low drag (a result of being lower to the ground) be desirable traits in a car when determining it's effectiveness in combatting climate change, as they make the vehicle more efficient? Other vehicles, such as Jeep and Ford Escape hybrids, qualify for the full tax credit, despite the fact that they are far less efficient and actually produce just as much, if not more, greenhouse gas emissions than standard ICE vehicles, and obviously far more than full BEVs. See Plug-in hybrids are a 'wolf in sheep's clothing'<https://www.bbc.com/news/science-environment-54170207> . IRA tax credit dollars are thus being used to subsidize vehicles that do not help in the fight against climate change, and by exclusion, penalize vehicles that do. This is not the intent of the tax credit, and this is not how I want my tax dollars to be spent. Please see the following for other specific examples of the IRS classifications causing illogical and counter-productive situations with the application of the credit: https://twitter.com/farzyness/status/1609651117356351488?s=20 https://twitter.com/farzyness/status/1610306668910489605?s=20 https://twitter.com/farzyness/status/1609953499592155144?s=20

Ed Chartrand	1/3/2023 22:05	The qualifications published make no sense. The law does not delineate any difference for qualifying that is based on number of seats, yet that is the only difference between the 7 vs 5 seat Tesla model Y. And to make things worse there are other EVs that have only 5 seats that qualify for $7,500 credit. They need to allow the tesla model y 5 seaters under $80k a $7,500 credit, there is no logical reason not to. And if they don't they need to give what logic they are using to exclude it (other than tesla not being a union supporting company that has donated to the current chief executives political party) -Ed
Mitch Davis	1/3/2023 22:05	It's my understanding the purpose of the Inflation Reduction Act bill is to accelerate electric vehicle adoption, shift critical supply chains back to North America, and increase American jobs. However, the criteria as it currently stands does not incentivize these desired results. For example, the Tesla Model Y 5 seat does not qualify as an SUV while there are 5 other hybrid (gas cars) with 5 seats that do qualify. While I fundamentally disagree with funding hybrid vehicles when the technology already exists for full EVs, I would rather focus my feedback on ensuring parity in criteria across all vehicle makers and types. If these 5-seat hybrid SUV vehicles qualify for the credit, then the Tesla Model Y 5 seat most certainly should. EPA and NHTSA both label the 5 seat Model Y as an SUV. Tesla is the most American (made) car company as defined by Cars.com. Tesla has made, and will continue to make, unparalleled investments in charging infrastructure for Americans. Tesla invested in electric vehicles well over a decade ago, at great financial risk, when all other legacy auto companies actively fought against EVs. The bill should not be intended to help legacy autos "catch up" to Tesla, but to instead accelerate the production and adoption of American made EVs.
Darren Fisher	1/3/2023 22:06	There are several SUVs that have less cargo space than the Tesla Model Y and Ford Mustang Mach-E that are considered SUVs in the program, like the BMW X5 plug-in and Jeep Wrangler plug-in. The Model Y has 100 liters more cargo space than the Cherokee 4xe. The Model Y also has an efficiency of 115 MPGe versus 56 MPGe for the Cherokee 4xe. It makes no sense that the Model Y doesn't get access to the credit but the Jeep 4xe does. Also, the VW ID.4, which has about the same size as the Model Y and Mach-E, is being considered a SUV and getting access to the tax credit for a price of up to $80,000. If the purpose of the bill is to encourage sales of more efficient vehicles and Tesla manufactures the most efficient, safest and the greatest number of EVs, then it would enable greater EV adoption to make the Model Y eligible for the tax credit. Thank you for your consideration, Darren Fisher

Abhinav Vora	1/3/2023 22:06	I think tesla Model Y 5 seater should be included in the EV tax credit and silly that it's not from the beginning. Abhinav
Acheson Cheryl	1/3/2023 22:07	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Tesla model y (5 seat) somehow not eligible as suv and the $80k limit, but ford escape phev and Jeep phev and foreign made EV on lease are qualified for the full $7.5k credit. Thank you, Cheryl Acheson Park City, UT
Jose Alcid	1/3/2023 22:07	Dear Andres Garcia, The whole point of the EV tax credit is to incentivize the American people to buy electric vehicles, to help tackle climate change. Vehicles like the Tesla Model Y and Ford Mach-E, with no 3rd row seating, should be eligible to get the full $7,500 tax credit. Please revise and include these fully EV vehicles. Thank you, Jose A.
Bryant Tran	1/3/2023 22:08	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Mr Andres Garcia, I am writing to express my disgust regarding the unfair application of the new $7,500 tax credit given for electric vehicles in the Inflation Reduction Act (IRA). It is completely unacceptable that this credit is being incentivized based on seat configuration, gross weight, or vehicle class (Sedan vs SUV). In its current state it incentivises heavier, less efficient vehicles with smaller battery packs.This is a clear discrimination against certain types of vehicles and goes against the principles of this law. The tax credit should also only apply to pure electric vehicles, as these are the only ones that do not rely on fossil fuels for their propulsion. Plug-in hybrids should be fully excluded from this credit, as they primarily use their gas engines and do not provide the same environmental benefits as pure electric vehicles. All purely electric vehicles, regardless of configuration, should be included. I hope you will take my concerns into consideration and do everything in your power to ensure that the tax credit is applied fairly and only to pure electric vehicles. Sincerely,
Jared Roth	1/3/2023 22:08	Dear IRS, I am writing to express my frustration and distrust regarding the recent tax incentive for electric vehicles. I am particularly concerned that plug-in hybrids are included in this incentive, while the most popular electric vehicle in the world, the Tesla Model Y, is not. I understand that the purpose of this incentive is to encourage the adoption of electric vehicles and reduce our reliance on fossil fuels. However, it seems counterintuitive to include vehicles that still have a combustion engine, and therefore still contribute to air pollution and climate change. Furthermore, the inclusion of a 22 mpg Jeep Wrangler in this incentive seems completely absurd. While I understand that electric versions of this vehicle may be more fuel efficient than their gas-powered counterparts, they are still not as efficient as other pure electric vehicles on the market. I urge the IRS to reconsider the criteria for this incentive and prioritize pure electric vehicles over hybrids and vehicles with low fuel efficiency. This will better align with the goal of promoting sustainable transportation and reducing our carbon footprint. Sincerely, Jared Roth Sent from my iPhone
Lyse de Bourguignon	1/3/2023 22:09	Dear Andres Garcia, Please classify the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full $7500 tax credit. Lyse de Bourguignon Sent from my iPhone
Luke Santillo	1/3/2023 22:09	Hi, I've been very interested learning about the Inflation Reduction Act and the many positive impacts it's likely to make. I've been especially interested in the EV tax credit since my family is considering a new car to replace a 2007 Honda. One the the cars we've been researching is the Tesla Model Y and I was very surprised to see the IRS does not consider the Model Y an SUV while the EPA does. The Model Y is one of the the few purely electric vehicles available with a range of more than 300 miles yet it doesn't qualify for the tax credit. Additionally, some hybrid vehicles, like the Jeep Wrangler 4xe, which has a gas engine, and a battery with a 21 mile range, qualify as a hybrid SUV and the full $7500 credit. This doesn't make sense and defeats the purpose of the tax credit. Please use existing vehicle classifications already in use by agencies like the EPA and properly align incentives for true electric vehicles like the Model Y. Thanks,

Name	DateTimeReceived	Body.TextBody
Kyle Palacios	1/3/2023 22:10	Please consider categorizing the Tesla Model Y 5 seater as an SUV with an MSRP limit of $80,000. Thank you for your time and consideration, Kyle Kyle Palacios PT, DPT Palacios Correctional Physical Therapy, Inc. (773) 709-0826 kpalacios@ageeto.com<mailto:kpalacios@ageeto.com> CONFIDENTIALITY NOTICE: The contents of this email message and any attachments are intended solely for the addressee(s)and may contain confidential and/or privileged information and may be legally protected from disclosure. Diane Mayer	1/3/2023 22:10	To whom it may concern, The IRA bill as written is deeply unfair to Battery Electric Vehicles made by Tesla and Ford. To exclude the Model Y 5 Seat and the Mach E while including vehicles that use gas engines and tiny batteries with limited range is just wrong. Please amend the language to include the Model Y 5 seat (defined as an SUV by NHTSA and the EPA) made by the American company that has done more than anyone to further the transition to sustainable energy: Tesla. Ford should also be included for the Mach E. Please do not include hybrids as this only helps oil companies. Please know that my family voted for President Biden. We did so because of our concern for stopping climate change, primarily. I am disappointed with the administration over their disgraceful treatment of Tesla and Elon Musk. We will not continue to support a political party that seeks to hinder the innovation and brilliance of Tesla- since they are actually making meaningful progress in the fight against climate change. Thank you. Diane Mayer
Alex LaVelle	1/3/2023 22:10	To whom it concerns, I was disappointed in the execution of the Electric Vehicle Tax Credit of the Inflation Reduction Act. I believe that the implementation did not meet the intent of the Act. It also incentivizes suboptimal consumer and producer behavior thus: Makes incorrect assumptions for SUV or not an SUV (a seven-seat variant of a Tesla Model Y is not fundamentally different from the 5 seat variant) Disproportionally advantages Hybrid vehicles compared to their EV counterparts. This is a massive economic policy with profound implication for America's future for building and driving a sustainable future. Alex LaVelle 803-840-2784
Bart Karlson	1/3/2023 22:10	Mr. Andre Garcia, I am sending you this email regarding the electric vehicle tax credit qualifications. Tesla and electric vehicle supporters have been vocal about the inflation reduction act's qualified cars for the EV incentive. Some variants of the Tesla model Y and the Ford mustang Mach-E will not receive any incentives from the IRA at all, yet some vehicles that use fossil fuels will. This does not align with the wishes of our President and Congress. As a consumer who wishes to purchase a new electric vehicle, it is disappointing that the IRS definition of what constitutes an SUV does not align with the definition of state DMVs in the many states I have lived in. I sincerely hope that you will reconsider and allow ALL the SUVs made by Tesla (Model Y) and Ford (Mach-E) be included in the definition of an SUV for purposes of the $7,500 tax credit. Yours truly, Bart Karlson
John A Perren	1/3/2023 22:10	Representative, Below is a petition currently being signed by over 23k people and growing, there is a huge disconnect with what people want from the EV incentive program and what is clearly being tailored and influenced. This is disappointing. Please fix this. <https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit> [cid:1d53afd6-7bc2-465e-a177-01df5035af1e@namprd09.prod.outlook.com] <https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit> Sign the Petition<https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit> change.org<https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit> The Inflation Reduction Act has a stipulation where Pure Electric Vehicles and Hybrid Electric Vehicles are able to take advantage of up to $7,500 as Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. Here are the primary qualifications for the EV tax credit: However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve.

Name	DateTimeReceived	Body.TextBody
Krishna Rayapudi	1/3/2023 22:10	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
Daniel Sullivan	1/3/2023 22:11	I have comments regarding the proposed rule on ev tax credits. It is quite problematic. Firstly, the information being collected may not be relevant or necessary. The forms ask for detailed information about the qualified plug-in electric drive motor vehicles, including make and model, vehicle identification number, and date of sale. It is not clear why this information is necessary for the IRS to fulfill its duties, and there may be more efficient ways for the IRS to collect the information it needs. Secondly, the IRS has not adequately justified the need for the extension of the OMB control number expiration date. The expiration date for this control number is currently set to expire on December 31, 2022, but the IRS is proposing to extend it through December 31, 2023. Without a clear explanation of why this extension is necessary, it is difficult to evaluate the merits of this proposal. Finally, One specific example of how this rule is problematic is the treatment of certain vehicles as SUVs for the purposes of the tax rebate. The Tesla Model Y and Ford Mach E were improperly classified as not being SUVs, while a similar car, the Volkswagen ID.4, was classified as an SUV. SUVs qualify for the tax rebate at a higher sales price, so this classification has a significant impact on the amount of the rebate that individuals and businesses can receive. It is not clear why these vehicles were classified differently, and this lack of consistency undermines the fairness and transparency of the tax rebate program. Thank you for your attention to these comments. Daniel Sullivan, Agoura Hills, CA
Thanh Bui	1/3/2023 22:11	I think tesla Model Y 5 seater should be included and silly that it’s not from the beginning Sent from my iPhone
Shayne Rossum	1/3/2023 22:11	The fact the Tesla model Y a fully electric vehicle is not elegible because it is to light seems ridiculous. From my understanding it is considered an SUV by the EPA. Perhaps the IRS has a long history of defining vehicles that I'm not aware of, but from the outside looking on this appears to be politics at its worst.
Jay Couture	1/3/2023 22:12	While I’m glad the government is encouraging more people to go electric, I am confused by the classification criteria applied to a make/model. It seems to encourage inefficient models. Furthermore, hybrids should not be included if they don’t get some higher minimum MPG (e.g. 40). Why is a Tesla model Y with 5 seats not an SUV, but the one with 7 seats is an SUV? why is the VW ID4 an SUV? What were the criteria used for these classifications? I think it should be public and applied to all makes and models in consideration. Thank you for your consideration. Jay Couture
harley fluffmonster	1/3/2023 22:12	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers’ interests. Your consideration of this matter is highly valued. Yours sincerely, Kevin

Name	DateTimeReceived	Body.TextBody
Scott Nyhoff	1/3/2023 22:12	Just wanted to give feedback on the qualifications requirements for the EV credit. It is almost inconceivable to think that vehicle eligibility requirements could've come out this way if there were any good intentions behind this part of the IRA. The biggest wrong here, is giving the $7500 credit to hybrid vehicles that have small range (20 miles, etc) and are other wise existing ICE vehicles. Not only are these vehicles not the future (they are already clearly losing to BEV's), they also do nothing towards a cleaner environment. Secondly, the classification of BEV's between sedan and SUV is clearly not done well. I won't go at length into this topic as there is are better writers that have already written about this in mass, but it would center around they classification of different trims of the Tesla MY, and the Ford Mach-e. Please reconsider this to the point of applying the credit to BEV's and not to hybrids, as well as applying common sense to the classification of BEVs as SUV or sedan. This has rolled out looking like it was written by the UAW and not reviewed by anyone. Thanks for any consideration of this and the rest of the feedback you receive. Scott
johnshaull@gmail.com	1/3/2023 22:12	The Tesla Model Y 5 seater should absolutely receive the electric vehicle tax credit. I lose faith in government when such blatantly political decisions are made. Do something for the good of the country for once. John Shaull California, 92024
James Unterreiner	1/3/2023 22:12	Hello, I am writing to express my disappointment, and requesting you to change this, in your classifying of hybrids with little environmental benefits as eligible for the electric vehicle tax credits. In addition other models like the Tesla model Y are limited or not eligible. Please update this list and make sure to maximize the credits for 100% electric vehicles and limit the credit for hybrids that are still burning fossil fuels. Suggest the more fuel a vehicle burns the more the credit should be limited. Therefore 100% electric gets full credit and hybrid that gets 20MPG receives nothing. Thank you, James
Mike Burt	1/3/2023 22:12	Dear Andres Garcia, Respectfully I wanted an explanation as to why the Tesla Model Y 5 seat variant is not listed at the $80,000 Applicable MSRP Limit for the $7500 EV Tax Credit. I see the 7 seat variant is, but they are the same vehicle, and both considered an SUV. Both by the manufacturer and EPA. I see many other smaller 5 seat SUVs listed with the $80,0000 MSRP Limit, such as the Ford Escape Hybrid with under 40 miles of EV Range, while the pure EV Model Y has 330 miles and is bigger and heavier. I have to believe this must be a simple mistake and needs to be addressed. Sources: Manufacturers and Models for New Qualified Clean Vehicles Purchased in 2023 or After https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after Thank you for your time and consideration. -- Mike Burt burt.mike@gmail.com<mailto:burt.mike@gmail.com> 816-787-2414
Kerry Lee	1/3/2023 22:12	To whom it may concern: I'm writing you to ask you to reconsider the classification of the Tesla Model Y 5-seater option as an SUV as it pertains to the Inflation Reduction Act tax credit. The Tesla Model Y 5-seater option is clearly an SUV by size and function, and is classified as an SUV by the U.S. Environmental Protection Agency. Additionally, the Tesla Model Y 5-seater option has a fully-electric powertrain with an over 300-mile range battery and is highly efficient with an EPA fuel efficiency rating of over 100 MPGe. For the aforementioned reasons, please reconsider classifying the Tesla Model Y 5-seater option as an SUV that is eligible for the full $7,500 IRA tax credit. Thank you for your reconsideration and your time. Kerry Lee
marc campanaro	1/3/2023 22:13	Hi With regards to the $7,500 tax credit for electric veichles, I do not understand how a jeep Cherokee hybrid that only gets 21 miles through electric and majority of miles through gas can qualify for the SUV credit at $80,000 price limit , but an all electric Tesla 5 seat Model Y LR SUV does not qualify as an SUV and the $80,000 limit versus $55,000 limit for Non SUVs when the NHTSA classifies this model as an SUV. Does not seem like the intent of the bill is being implemented or interpreted properly. I strongly request you change the 55,000 to 80,000 for the Tesla Model Y 5 seater. I also don't understand what hybrids that use gas as the primary source of energy are included . Marc Campanaro

Name	DateTimeReceived	Body.TextBody
Doug Johnson	1/3/2023 22:13	A major goal of the IRA and the ev tax credits is to help with the transition to a sustainable energy. Vehicles that do not contribute to this direction such as plug-in hybrids should receive minimal credits. These vehicles are not efficient and have very small battery capacity. On the other hand vehicles that are efficient should receive large credits. Examples of these would be the Ford Mustang Mach-E or the Tesla Model Y 5 seater, both BEV's. It is a major slap in the face of two American car manufacturers who have come out with quality BEV's well ahead of other manufacturers. Why are you undercutting the sales of these vehicles? I strongly urge you to change the classification of these two vehicles so they qualify for full tax credits. Thank you. Sincerely yours, Doug Johnson
Matt Franzella	1/3/2023 22:13	Hello, I'd like to voice my complete displeasure at the IRS's vehicle classification for the IRA's electric vehicle tax credit. The classifications defy logic, common sense, and any kind of rationality regarding vehicles. One vehicle, the ID.4, is a sedan but if it is the AWD variant then it is an SUV. For the Tesla Model Y, which I drive, it is even more asinine- the sedan vs SUV designation is based on whether it is a 5 or 7 seat configuration. The IRS should not stand in the way of the American people moving to electric vehicles and toward a sustainable future, which the Biden administration is pushing. The government passed a great bill, but has completely fumbled the execution with these vehicle classifications and the people who suffer are the American consumers. This should be fixed ASAP as every day we don't move toward electric vehicles, fully, is another day lost at a sustainable future. Best, Matt Franzella
Aaron Ampaabeng	1/3/2023 22:13	Hello Just reviewed the new federal EV tax credit for 2023 and below are my key points I feel that need to be changed. 1. This new EV tax credit should only apply to pure electric vehicles only. Hybrids should not be included in the tax credit as study's have shown they not effective in reducing emissions. 2. SUV classifications should be based on what the manufacture classifies the vehicle not not some random rules made up by the IRA to distinguish what vehicles are SUV to be qualified for 80k tax credit. Apart from that everything looks good. Thanks.
Filipe Carvalho	1/3/2023 22:13	Thank you for the opportunity to comment on the EV tax credit. Please see below: 1. I cannot begin to understand why hybrid vehicles receive the full EV credit. EV stands for Electric Vehicles, not Hybrid Cars that in most cases have very little autonomy on their electric batteries and will mostly run on regular gas engines. 2. I do not understand why vehicles like Tesla Y 5 seats, does not classify as a SUV, but a VW ID4 5 seats, with less space does. This not to mention that Tesla is made in the US and VW is made in Mexico. I could give a few more examples like the Ford Mach-E, but not including the Tesla Y 5 seats as a SUV when US EPA classifies it as such, seems like a mistake or a deliberate action to hurt the market leader of a company that many Americans have stocks included in their retirement funds portfolios. 3. I feel frustrated and disappointed that we are using American tax payers money to subsidize hybrid cars and defining rules that penalize American made 100% EV's in benefit of other alternatives that will create jobs, profits and shareholder value outside of the US. Please kindly reconsider the above. Best regards, Filipe Carvalho
Peter T	1/3/2023 22:13	Please include the tesla model y 5 seater variant. The car is built in America and a full electric vehicle. It should be categorized as an suv and the $55k limit doesn't make sense when other hybrid cars get the $80k limit. Thanks, Peter
dplymire@gmail.com	1/3/2023 22:14	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). David Plymire

Name	DateTimeReceived	Body.TextBody
Trevor Pinion	1/3/2023 22:14	How is there a redundancy on what's classified as an SUV from your standards vs Environmental Protection Agency? The goal is for more range and efficient vehicles , not heavy and less efficient. Volume is what ultimate matters in classification of an EV. Yet "hybrids" which are AWFUL at efficiency, getting 21 miles of range and are in fact an backwards approach to clean energy, get the full $7500 tax credit ? Anyone can put a battery in a car and add an electric motor just to get a $7500 discount. This bill was insanity to begin with and should have never happened. And now the implementation and logic on cherry picking what vehicles qualify is just uterrerly asinine.
Kevin Myers	1/3/2023 22:15	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified. Hybrid should not receive $7500. How on earth Tesla Model Y (5 seat version) not on this list????? That's doesn't make any sense at all. Put aside Joe Bidden poor treatment of the greatest American EV company on earth. Thanks in Advance Kevin
Dan Breeggemann	1/3/2023 22:16	Thanks for taking comments, this is not an easy one, but incredibly important to get this right. It makes no sense that the Tesla Model Y with a third row (7 seats) qualifies as a SUV and a $7500 tax credit for under $80,000, but the Tesla Model Y with two rows (5 seats) is qualified as a car and the credit is for under $55,000. These are both the same exact SUV with a different seat configuration. This doesn't make sense and both should be SUVs with tax credits for under $80k. My understanding is there is a similar issue with the Ford Mach E. There appears to be some strange interpretations of the rules which are going to cause unnecessary issues. The companies may need to just sell 7 seats or engineer some unneeded changes to meet the rules for customers. This is too big of a program with too much money involved for this not to be done right. The future of companies, our country, and our planet are at stake. Thanks for taking comments! Dan Breeggemann 18980 Embers Ave Farmington, MN 55024 Sent from my iPhone
Karim Kanfoudi	1/3/2023 22:16	I'm writing in regards to the recent EV Tax credit and i'm genuinely shocked that some plug in hybrids are getting the full 7.5k credit while the Model Y Long Range doesn't qualify in the 5 seat configuration. As an electric vehicle tax credit it makes absolutely no sense that hybrid cars that run mostly on gas are getting a credit of $7,500 when they've only put in a battery that costs about $500. This is an absolute waste of mine and other taxpayers money- this doesn't help or incnetivse the real purpose of this bill which is for electric cars - and especially not non US brands like BMW that are not even electric. This has to be changed as my family have been waiting to buy a Model Y Long range 5 seat configuration and we are now left in the dark.. Karim Kanfoudi Manhattan Beach, CA +1 310 292 1356
여름햇님이	1/3/2023 22:18	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery It is important to support the adoption of clean energy vehicles in order to create a more sustainable future. Sincerely, su bin.
Scott	1/3/2023 22:18	Dear Andres Garcia, I am writing to express my astonishment and frustration regarding the new tax incentive for electric vehicles, the Qualified Plug-in Electric Vehicle Credit. It's unacceptable that the incentive excludes the fully-electric Tesla Model Y 5-seater as an SUV when the EPA clearly designates it as one. Further frustrating and bewildering is that plug-in hybrids, such as the Jeep Wrangler, are included as an SUV when the Jeep gets a dismal 22 MPG. I believe that incentives should be directed toward promoting the purchase of the most efficient and environmentally-friendly vehicles. The inclusion of the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind such a decision. I urge the IRS to change the Tesla Model Y 5-seater's designation to that of an SUV for the purpose of the Qualified Plug-in Electric Vehicle Credit. Sincerely, Scott Vanover

Name	DateTimeReceived	Body.TextBody
gatica3	1/3/2023 22:18	Mr Andres Garcia. I am writing in support of the tax credit for buying an electric vehicle. As we support the green agenda, some incentive is very persuasive to help people make the change to nonfossil fuel. The electric vehicles are quiet and non polluting. The middle class needs a break. Tesla is the most American made car . The model Y is an SUV, regardless of number of seats or weight. Its lighter weight is even better for the environment. Thank you for your consideration Toni a Marconi Sent from my Verizon, Samsung Galaxy smartphone
Roderick Miles	1/3/2023 22:19	Pursuant to the Inflation Reduction Act (IRA), I ask that the IRS re-review your SUV qualifications and include the Tesla model Y, as the EPA also classifies it as an SUV. Regards, Roderick Miles Sent from my iPad
Shaun King	1/3/2023 22:19	I am writing to express my disappointment in the categorization of which vehicles will receive the $7500 IRA tax credit. If this is supposed to encourage the rapid adoption of electrification and make our planet and our economy greener, then why are PURE EVs not given preference over hybrid vehicles with vastly inferior range? Why has vehicle weight been used as a factor in determining which vehicles are considered SUVs? Why do Tesla Model Ys with seven seats qualify but five seat configurations do not? The cut offs seem completely arbitrary and not aligning with the ultimate goal of rapid transition away from fossil fuels. Thank you, Shaun King
Brian Jameson	1/3/2023 22:19	[illegible] automakers are being unfairly treated, while others are getting a benefit they do not deserve. Here's an example of the broken nature of this incentive in its current form: Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Ideal fix: * Remove incentives for all hybrid vehicles and only have them apply to pure EVs. * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Next best fix: * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill.
Carey Sneska	1/3/2023 22:19	Please classify the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This Telsa model is absolutely a SUV and is categorized as such by the EPA. This is a highly efficient fully electric vehicle, and thus deserves the full $7500 tax credit. I own a Tesla Model 3 and wanted to purchase a Tesla Model Y 5 seat vehicles this year under the assumption that I'd get $7500 off. I am appalled that the IRS did not do the right thing and misclassified the Model Y. Now is your chance to correct this oversight and classify this car as a SUV so that hard-working taxpayers can get the full tax credit for the safest, most American made SUV on the planet. Thank you for your consideration. Carey Sneska

Joan	1/3/2023 22:19	Dear Sir/Madam, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Joan
Pouria Maleki	1/3/2023 22:19	Dear Andres Garcia, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Pouria Maleki
Nicholas D	1/3/2023 22:19	Further, please correct vehicle classifications. Either 1:1 with EPA or have consistency ex: vehicles smaller than the model Y are SUVs but the model y isn't?
marc campanaro	1/3/2023 22:19	On Tue, Jan 3, 2023 at 10:12 PM marc campanaro <marccampanaro@gmail.com<mailto:marccampanaro@gmail.com>> wrote: Hi With regards to the $7,500 tax credit for electric veichles, I do not understand how a jeep Cherokee hybrid that only gets 21 miles through electric and majority of miles through gas can qualify for the SUV credit at $80,000 price limit , but an all electric Tesla 5 seat Model Y LR SUV does not qualify as an SUV and the $80,000 limit versus $55,000 limit for Non SUVs when the NHTSA classifies this model as an SUV. Does not seem like the intent of the bill is being implemented or interpreted properly. I strongly request you change the 55,000 to 80,000 for the Tesla Model Y 5 seater. I also don't understand what hybrids that use gas as the primary source of energy are included . Marc Campanaro Sent from my iPhone
Jay Amin	1/3/2023 22:19	Hello, Tesla Model Y (5 seater) should be allowed to qualify for $7500 EV tax credit as it is an SUV. It is widely accepted as SUV. Plus it is pure EV and good for the climate. I see some PHEVs eligible as SUV for EV credit even though their mileage is low. Thanks for seeking feedback. Jaykumar Amin
Chuck Wolcott	1/3/2023 22:20	Dear IRS, Please change the IRS regulations so electric SUV's such as the Tesla Model Y Long Range and Ford Mach E qualify for the $7500 tax credit. This was the intent of the Inflation Reduction Act. Fix this as soon as possible. I have an order for a Tesla but can't take delivery until the IRS acts. Thank you. Charles Wolcott 208 850-1078
Anuar Sultashev	1/3/2023 22:21	I believe that the applicable MSRP limit for Tesla Model Y 5-seater was mistakenly set to $55000 and should be changed to $80000. Model Y is as an SUV, just like VW ID.4 which does qualify for $80000 limit. On top of that, Model Y is larger by every dimension and exhibits higher MPGe efficiency. I kindly ask you to reconsider and increase the limit for Tesla Model Y 5-seater version from 55000 to 80000, to ensure a fair competition among OEMs and greater incentive for consumers to move to cleaner transportation. Best regards Anuar
Paul Spradling	1/3/2023 22:21	MPG should be taken into account. A gas car with better MPG than a hybrid deserves the credit more than the hybrid. And a pure EV deserves it more than any gas car (maybe Hummer EV vs most economical car no). Gas guzzling SUVs are qualifying for the credit but Tesla Y/S/X doesn't? That's insane. I don't think there should be a MSRP cap either, it messes up everything. Also, people with higher incomes (but who are still price sensitive) should also be incentivized to get an EV, not disqualified. Limit should be much higher. The credit (amount) should go hand-in-hand with the net positive benefit of the specific car (pure EV better, more efficient better) I'm also seeing you're penalizing because Tesla Model Y is too light to qualify as a SUV. Lighter is better for the environment, come on! Thank you, -- Paul D. Spradling

Chris Neil	1/3/2023 22:21	I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Christopher Neil Sent from my iPhone
Raymond Yu	1/3/2023 22:22	Dear IRS: Here are some problems with the recent decision to categorize which vehicles qualify for the EV tax credit (I recycled some verbiage from a change.org<http://change.org> petition on this issue, but also edited the text to reflect my personal opinions): * The IRS is not categorizing the Tesla Model Y (5-seater) as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. This is a failure by the IRS to properly categorize vehicles. It is also an unfair decision against companies like Tesla that are trying their best to create a sustainable future. Instead, the above decision benefits a dying legacy auto industry by giving them EV tax credits for vehicles that are incredibly inefficient. Instead of funding the next generation of the American economy, taxpayers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross misuse of taxpayer dollars. Ideal fix: * Remove incentives for all hybrid vehicles and only have them apply to pure EVs. * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. * Categorize the 5-seater Tesla Model Y as an SUV. Next best fix: * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original
Sudhir Agir	1/3/2023 22:22	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as an SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. I hope you reconsider the rules and change them accordingly. Thanks,
Gregg	1/3/2023 22:22	I'm appalled that the Tesla model Y does not qualify as an SUV, and therefore is not eligible for the tax rebate specifically set aside for EV vehicles. This is a terrible corruption that is out in the open. Please fix this
S Sout	1/3/2023 22:22	Hi I am writing about my consumer dissatisfaction about the inflation reduction act's EV tax credit rule. Tesla model y (5 seat) somehow not eligible as suv and the $80k limit, but ford escape phev and Jeep phev and foreign made EV on lease are qualified for the full $7.5k credit. How are American made full ev vehicles not eligible for this credit? Thanks, Steve
Joshua Babcock	1/3/2023 22:22	I wanted to share my concern that the US Government is allowing the VW SUV and Jeep Wrangler the 7500 tax credit but not the mach e nor the model Y. These are easily two of the most popular vehicles at the moment for families needing a SUV/hatchback for their children's things. It is far more practical to ask folks to buy these trusted vehicles but you can't even get real world benefits from the Jeep Wrangler. As someone who's been looking to get into an EV and excited by the prospects of these credits, it's incredibly heartbreaking how complex the government has made this. It's not the companies that suffer it's the consumer and the environment. Instead of spending time disqualifying EVs, how about we continue to encourage the shift from combustion to Ev. Even the more pricer ones. Josh Babcock

Donna	1/3/2023 22:22	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Donna Hamblin North Carolina
ejertberg@gmail.com	1/3/2023 22:23	To whom it may concern, Tesla's sold in the USA are American products. They are more wholly American than many other vehicles earning a tax credit. The tax credit is essentially a subsidy, PAID BY AMERICANS, to further incentivize people and companies to pursue a path towards a fossil fuel free alternative for the automotive industry. Tesla has lead this initiative. They are without a doubt, the most influential and innovative company pushing the development and adoption of an EV centric future. Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit while a Jeep Wrangler that gets 21 miles of electric range does?!?! This is a mockery of the initiative. This disingenuous, selective application of the tax credits undermines the integrity of the very purpose it was meant to serve. It emboldens skeptics of the EV movement and sends a message to every manufacturer that success in the EV space leads to discontinued support of the US Government. This begs the question from myself and every supporter of the initiative as originally understood, "Does it really mean what I think it means?". What is the message we are trying to send? Is the EV movement corrupt? Is it destined to fail? Is this really about supporting entrenched corporations and their unions? Please stop the subjective nonsense and establish clear rules of engagement for the automakers and consumers. And please, please, please, don't reveal yourselves as petty. This issue is far beyond that human compulsion. I pray you are wise enough to understand that. I believe you are, or I wouldn't have the will to write this letter. Sincerely,
Michael PUCKETT	1/3/2023 22:23	I believe that it is flawed to not consider the Tesla model y 5 seat an SUV for the purposes of this "EV" tax credit since it actually is considered a SUV per the EPA and every standard metric. Thanks for your consideration. M. Puckett
Andrew Bezjian	1/3/2023 22:23	Hello, I'm a Colorado resident and an owner of an electric vehicle. I think the tax incentive is amazing for our countries adoption of EVs. I'm very disappointed tesla model Y (5 seater) isn't being considered for this rebate program when Jeep has eligible models getting 20 MPG! This needs to be corrected and shouldn't look to weight of vehicle rather defer to EPA guidelines. As a us tax payer we need to correct this asap. Thank you for your time. Best, Andrew Bezjian -- Best Regards, Andrew Bezjian 518-935-0218
Cobus Bergsman	1/3/2023 22:23	Dear IRS policy makers, I think the Tesla Model Y 5 seater should be included in the SUV category and be eligible for $7,500 tax credit for SUVs priced at $80,000 or less. It's lower weight is better for paved roads and efficiency. It's silly that it's not included from the beginning. Regards, Cobus.
J H	1/3/2023 22:24	Hello I am writing to you to say that I do not agree with the policy at the Ford Mach E and the Tesla model Y will not get the $7,500 tax credit but the Jeeps will due to weight. I understand that there are certain people who will only get into EV's in some thing like a jeep and this will at least get them started down that path. However the mach E and the model Y are both 100% electric and the same size is a seven seater model Y. I would politely request that you guys reconsider this because the only difference between the five seater and the seven seater is the weight.
Deborah	1/3/2023 22:24	The Tesla Model Y 5 seater should be included and silly that it's not from the beginning! Less fuel efficient cars made the list. Thank you - Deborah Morgan Sent from my iPhone

Dane Rose	1/3/2023 22:25	Tesla cars have more American parts than any other vehicle, are 100% electric and are the safest cars in the world, which is good for American citizens. A tax bill designed to promote American made electric vehicles should promote Tesla above all other manufacturers. Instead, I see that BMW is getting $7,500. for a hybrid and Jeep is getting $7,500. for a hybrid with a twenty mile battery while versions of the Model Y at lower price points are not getting this discount. WTF? Please spend our tax dollars consistent with the stated goals and the interest of the tax payer, not on special interest groups. Sincerely, Dane Dane E. Rose, Owner Mystical Landscapes Inc. www.Mysticallandscapes.com Landline: (415) 455 9161
jimdetry@comcast.net	1/3/2023 22:25	You have no clear definition of what is or is not an SUV. It is not possible to make sense of the results by comparing which autos are or are not classified as an SUV. Please fix it. Cars which have been classified as SUVs by other agencies don’t match your classifications. What qualifies you to override the judgement of people who make such classifications for a living?
Marcus S	1/3/2023 22:25	Dear IRS, I am writing to request that the Tesla Model Y be considered an SUV under the new Inflation Reduction Act and receive the full $7,500 tax credit allowed by the law. The Model Y has the seating capacity and capabilities that meet the definition of an SUV as clearly categorized by the EPA and NHTSA. Furthermore, it is worth noting that other vehicles, such as the Ford Escape PHEV and Jeep PHEV, which both have smaller batteries and are less efficient than the Tesla Model Y, are receiving the full $7,500 tax credit. This seems like an example of special interest and legacy car manufacturers working together to discredit and hurt Tesla, even though the Tesla Model Y is an effective vehicle that the Inflation Reduction Act was aiming to promote. I urge you to reconsider the classification of the Tesla Model Y as an SUV and grant it the full tax credit it deserves.
Josh G	1/3/2023 22:26	Please re-consider the categories that yall are placing various cars in. There are many "SUVs" that are not being placed in the "SUV", $80,000 category. Vehicles such as the Ford Mustang Mach-E, GM Cadillac Lyriq, Volkswagen ID.4 (4 versions), and Tesla Model Y (3 versions) should all be considered "SUVs", and therefore be allowed up to the $80,000 price limit. The Volkswagen ID.4 and Tesla Model Y even have SOME versions that ARE considered "SUVs", but not all. The way that yall have categorized these cars as "SUVs" and "not SUVs" doesnt make sense. I have seen many comments about this online, and I am concerned that the US government is "incentivizing EVs", but at the same time, seem to be "punishing efficiency". For example, the Tesla Model Y could potentially qualify for the "EV credit" if it were heavier, and/or had a taller ground clearance... both which make the vehicle LESS efficient. This goes against the goal of the "EV tax credit", which is supposed to incentivize efficient/clean vehicles. Here is a good example of why the "EV tax credit" makes no sense: There is a car that has a gas engine and gets 20 MPG. It has 21 miles of electric range. It gets a $7,500 "EV Tax Credit". There is a car that is ELECTRIC ONLY and gets 113 MPEe. It has 330 miles of range. IT DOES NOT GET A $7,500 EV TAX CREDIT. The EV that doesnt get the tax credit is because it is between $55,000 and $80,000. The EV is actually an "SUV", but is placed in the "other" category for the "EV tax credit" bill. I am writing this as a fan of PURE ELECTRIC VEHICLES, and a fan of the company that makes the most American made vehicles, Tesla. Im sure you will be getting plenty of comments about this "EV tax credit" "SUV" "issue". If you go on the internet at some point, I would imagine you might see people talking about how the new "EV tax credit" is unfair and makes no sense. Just search "EV tax credit" on Twitter. You can even look
jim0266	1/3/2023 22:26	Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Andres Garcia: My comments on on the vehicle qualifications are as follows: 1. The IRS and EPA definitions of an SUV do not align - this causes mass confusion in the market, and creates an imbalance. For example, a 5 seater Tesla Model Y and Ford Mustang Mach-E (both 100% electric vehicles), are not considered SUVs by the IRS. This excludes them from the tax credit due to the lower MSRP requirement. However, a Jeep Wrangler 4xe PHEV, a plug-in hybrid that only gets 21 miles of pure electric range, qualifies. This should not happen. There should not be a convoluted list of requirements to classify a vehicle separate from the EPA classification. If a Vehicle is listed as an MPV or SUV with the EPA, the IRS should adopt those classifications. There should be no reason why a Volkswagen ID4 AWD Pro with 5 seats is classified as an SUV, and a Tesla Model Y 5 seats is not. This will confuse consumers. 1. The requirements for PHEVS to qualify are too relaxed. Using the same example above, a Jeep Wrangler with only 21 miles of range, and only gets 22mpg should not qualify, it's atrocious. Please restrict PHEVS more, or give them a reduced tax credit.

Name	DateTimeReceived	Body.TextBody
Robert C. Rubinstein	1/3/2023 22:27	Giving EV incentives to hybrids over BEVs with far longer electric only range makes no sense. Also, the Tesla Model Y should be considered a full SUV with a price limit of $80,000 not $55,000. Thank you in advance for your consideration. Robert Rubinstein
scott izenberg	1/3/2023 22:27	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). This seems incredibly unfair and against the spirit of the bill to exclude most fuel efficient all EV! Scott Izenberg Sent from Yahoo Mail on Android<https://go.onelink.me/107872968?pid=InProduct&c=Global_Internal_YGrowth_AndroidEmailSig__AndroidUsers&af_wl=ym&af_sub1=Internal&af_sub2=Global_YGrowth&af_sub3=EmailSignature>
K & K Olson	1/3/2023 22:27	Dear Andres Garcia, This email is in regards to the Inflation Reduction Act's and which cars qualify for the EV incentive. Just as we are inclusive about diversity, the EV incentive should apply to all EV cars and SUVs. Your bias against certain vehicles is abhorrent. Play fair. Allow Tesla, Ford and others to be a part of this incentive. Sincerely, Kimberly L. Olson Inver Grove Heights, MN
Angelo Rea	1/3/2023 22:27	I am writing to express my disappointment with the electric vehicle (EV) tax credit qualifications in the Inflation Reduction Act. As someone who is passionate about sustainability and reducing my carbon footprint, I was excited to take advantage of the tax credit to purchase an electric vehicle. However, upon reviewing the qualifications, I was disappointed to learn that the credit is only available for a limited number of vehicles and that the credit phases out after a certain number of vehicles have been sold by the manufacturer. I strongly believe that the Tesla Model Y 5 seat should be included in the EV tax credit. This vehicle is highly fuel efficient and would greatly benefit from the tax credit, as it would make it more affordable for consumers and encourage more widespread adoption of electric vehicles. I urge the IRS to reconsider the qualifications for the EV tax credit and to consider including the Tesla Model Y 5 seat in the bill. This is an important step in promoting sustainability and reducing our reliance on fossil fuels. Thank you for considering my thoughts on this matter. Sincerely, Angelo Rea
John Yoon	1/3/2023 22:28	It is ridiculous that the Tesla Model Y does not qualify for the EV tax credit under the new IRA, while hybrid plug-in vehicles which use mostly gas, not electricity, do qualify. There are electric cars with similar specs to the Tesla Model Y which also qualify. Please rectify and include the Tesla Model Y under the SUV category for the IRA. Thank you, John Yoon
Solomon Sawlaw	1/3/2023 22:28	Hi, I am writing to express my concern that the Tesla Model Y 5 seat version does not qualify as an SUV and this does not qualify for the tax credit. This is wrong as other much less efficient and smaller vehicles qualify as SUVs. Please fix this as soon as possible. Thanks, Solomon Sawlaw
Zach Butcher	1/3/2023 22:28	current proposal, EVs like the Ford Mach E, VW ID 4 and Tesla model Y do not all qualify for all their trims The epa classifies the vehicles as SUVs and should receive the tax credit in line with that classification. having different trims qualify differently is bad for the consumer and manufacturers, and does not promote the adoption of EVs as the credit proposes. I suggest following the EPA definition of vehicle classifications and have all trims of a given model either be approved for the rebate or not so the lines are really clear for consumers buying the vehicles. Zach Butcher

Michael Mabry	1/3/2023 22:29	Hello thank you for the opportunity to share comments on the electric vehicle tax credit qualifications. In my opinion, it is beyond absurd to exclude Tesla's vehicles from the EV incentive. This should be corrected as soon as possible adding model Y and model 3 to the list of qualified vehicles. Thank you for allowing me to share my thoughts on this matter. Mike Mabry Cell: 214-293-9955
Cory Silverman	1/3/2023 22:29	Please ammend the EV Tax credit to include the Tesla Model Y Long Range. This is a pure EV that should be placed in the SUV category. The Environmental Protection Agency has it listed as an SUV. THANK YOU, CORY SILVERMAN Sent from Yahoo Mail on Android<https://go.onelink.me/107872968?pid=InProduct&c=Global_Internal_YGrowth_AndroidEmailSig__AndroidUsers&af_wl=ym&af_sub1=Internal&af_sub2=Global_YGrowth&af_sub3=EmailSignature>
1shawnr1	1/3/2023 22:29	Hello, Please reconsider the Tesla Model Y 5 Seat SUV classification. I purchased this vehicle with the tax credit in mind as the EPA classifies this as an SUV.
Roman Wowk	1/3/2023 22:29	There is absolutely no logic behind the $65k 5-seater Tesla model Y being INELIGIBLE for the $7500 IRA tax credit while several similarly sized gas-powered SUVs and other similar 5-seater EVs (ID.4) are. This is either gross negligence and incompetence, or outright corruption.
Siddesh Puttarevaiah	1/3/2023 22:29	Tesla Model Y all variants should be capped at USD $80k under SUV and new regulation does not make sense where Tesla Model Y 5 seats are capped at 55K as a Sedan. regards, Siddesh
brigette greener	1/3/2023 22:30	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentives for electric vehicles. It is unacceptable that the incentives include plug-in hybrids, such as the 22 MOG Jeep Wrangler, while excluding the the most popular vehicle in the world, the Tesla Model Y. As a taxpayer and concerned citizen, I believe that tax incentives should be directed towards promoting the use of the most efficient and environmentally friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of this incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and and ensure that the tax incentive is fairly apply to all electric vehicles, including the Tesla Model Y. Sincerely Brigette Greener
Raymond Liu	1/3/2023 22:30	I am writing to express my extreme frustration and disappointment with the recent inflation reduction act. Not only is it unacceptable that not all Model Y variants are included in this act, but it is also highly inefficient and counterproductive to have a bill that shows such favoritism towards certain vehicles. By prioritizing incentives for gas-guzzling vehicles (22 mpg Jeep) and non-EVS, we are hindering the growth and success of American companies like Tesla that are at the forefront of clean and sustainable transportation. This exclusion does a disservice to American taxpayers and businesses. I urge you to reconsider the qualifications for the electric vehicle tax credit and to prioritize incentives for truly zero-emission vehicles, especially those made by American manufacturers (e.g., Tesla). It is vital that we support and encourage the adoption of clean and sustainable transportation options for the benefit of both the environment and our economy. A robust economy relies on fair treatment and equal opportunities for all consumers. By excluding certain vehicles from the inflation reduction act, you are actively hindering the growth and success of those individuals and businesses who rely on these vehicles. This is highly inefficient and undermines the very purpose of the act, which is to provide relief and support to consumers. I demand that you immediately reconsider this decision and include all Model Y variants in the inflation reduction act. It is not fair to discriminate against certain vehicles and their owners, and it is not in the best interests of our economy to do so. Sincerely, Raymond Liu
Gurvinder Bhatti	1/3/2023 22:30	the tesla model y and the Ford mac E should receive the full tax credit of 7500! Why would you give plug in hydrides the full tax credit and not full EVs?
Scott Huette	1/3/2023 22:30	It's inexcusable that the new tax credit gives $7,500 for a vehicle like the Jeep Cherokee 4xe and not the Tesla Model Y or the Ford Mustang Mach-e. The main thing that people define a SUV by is the utility aspect. Of course, there's the shape and height, but the cargo space inside is a big deal and the Model Y actually has 100 liters more cargo space than the Cherokee 4xe. Model Y also has an efficiency of 115 MPGe versus 56 MPGe for the Cherokee 4xe. It makes no sense that the former doesn't get access to the credit but the latter does.

Name	DateTimeReceived	Body.TextBody
Henry Holst	1/3/2023 22:30	I JUST bought a Model Y and you guys aren't including it on the subsidy???????? Literally it's the same size as every other PHEV on the list. My wife is literally yelling at me because I thought it was 7500 less. Am I screwed? Tesla won't take the car back -- Best, Henry Holst (678) 421 - 8777
Dylan Blaiwes	1/3/2023 22:30	The proposed limits and eligibility are deeply flawed, not consumer-beneficial, nor a practical driver of sustainable transportation adoption. The vehicle eligibility list categorizes the 5-seat Tesla Model Y in the sedan/"other vehicles" MSRP bracket, yet includes the 7-seat Tesla Model Y configuration in the SUV MSRP bracket. This distinction does not make logical sense, as the 7 seat variants differ only in their internal seat configuration, which inherently sacrifices cargo space. The purpose and intent of an SUV may be to carry additional cargo, rather than additional passengers. The 5-seat Model Y configurations are SUVs as much as the 7-seat configurations are. This arbitrary categorization bizarrely included non-fully electric 5 seat vehicles, which from my perspective should NOT be considered eligible for any "EV" incentive as they are *not* purely electric vehicles and still rely on combustion of fossil fuels to be fully operational. As I have learned, the categorization has been made based on the gross weight and/or ground clearance of the vehicle, which makes no rational sense. I suggest the IRS adopt the EPA's definition for SUVs and recategorize eligible vehicles under the SUV MSRP limit (such as the Tesla Model Y in 5-seat configurations). Additionally, the IRS should remove or greatly reduce the credit awarded to hybrid vehicle purchases, vehicles which do nothing to support adoption of sustainable energy-based transportation. Purchases of hybrid vehicles with 25 mpg estimates reliant on fossil fuels should not receive a tax credit. One could argue that a pure combustion engine vehicle with a higher MPG estimate could be a more environmentally and sustainable option. Thank you for the opportunity to submit my comments. Dylan
Jason Sit	1/3/2023 22:30	Hello, I would like to express my concern that the 5-seat Tesla Model Y does not qualify for the $7,500 EV tax credit because it isn't heavy enough. We should be incentivizing auto makers to build mass-efficient (and thus more energy efficient) vehicles. We should not incentivize heavier cars! Please update the guidance to address this issue. Thank you -- Jason Sit 860.817.9801 sit.jason@gmail.com<mailto:sit.jason@gmail.com>
Darko Martinovic	1/3/2023 22:31	I would like to comment on the rules set for, Electrical vehicle, tax credit qualifications I'll try and make this short and to the point! 1. The rules and qualifications make no sense Allowing hybrid vehicles with a less then a 10kw battery and a gas guzzling engine to qualify and vehicles that lead the industry such as the Ford mach E and tesla model Y SUV not to qualify is ridiculous and smells of bribery/lobbying in favour of going opposite what the IRA was meant for. Please reverse the weight limit on what qualifies a vehicle as a SUV! 2 remove Hybrid vehicles off the list how can you support further ICE integration when the goal is to speed up the transition. 3. Leased and purchased vehicles should be all made in US 4. Stop playing favour to lobbyists it's so blatantly obvious. Thanks, Darko Martinovic
Ryan Foley	1/3/2023 22:31	Dear IRS, Can you please broaden the SUV weight limit to include Model Y? All-electric cars have up to 10x the lifespan of gasoline engines. Can you please also incentivize Mach E and Model 3? Best regards, Ryan
Timothy Triplett	1/3/2023 22:31	- It has the size to be classified as an SUV. - The Model Y is very weight efficient, which should not penalize their classification. - The EPA has classified this model as an SUV. Given these factors, and the worthy intent of the IRA to incentivize USA companies to excel in EV manufacturing, the Tesla Model Y 5-seater should be classified as an SUV. Thank you, Timothy Triplett 713.252.6141 Palestine, TX. 75801

Lev Ryzhikov	1/3/2023 22:31	While I'm very supportive of this initiative, I truly believe this insensitive should only be applied to electric vehicles and not hybrid ones. I can't believe Jeep Wrangler with 22 MPG is eligible for the credit, while Tesla Model Y 5 seater is not. I really hope IRS will reconsider that and include all electric only vehicles and exclude the hybrid ones. Thank you, Lev Ryzhikov.
Daniel & Megan Guenther	1/3/2023 22:31	Hi It's pretty messed up that a 5 seat Tesla model Y doesn't qualify when a Jeep with just 20 miles electric range does. Please stop playing politics against Tesla. Your execution is contrary to what the law is meant to achieve - sustainability and energy independence. Kind regards Dan Guenther Sent from Yahoo Mail for iPhone<https://overview.mail.yahoo.com/?.src=iOS>
Eddie Banks	1/3/2023 22:31	gas cars should not get any tax credit much less a full credit while the most efficient SUV (model Y) received zero tax rebate on its most efficient cheapest 5 seat trim. You are literally incentivizing expensive gas cars. Please fix this. Thank you Get Outlook for Android<https://aka.ms/AAb9ysg>
Todd Smith	1/3/2023 22:31	The proposed classification for EV tax credits re Tesla model Y are grossly misguided. All Tesla Model Y are SUV per EPA. PLEASE CHANGE the IRS classifications as to which vechicles qualify for EV Tax credit Please remove all hybrid vechcles as they do not help the environment
Mark McMillen	1/3/2023 22:31	To whom it may concern, The Tesla Model Y 5 seat variants are all SUVs and should qualify for the $80,000 price limit for the $7500 tax credit. Instead you are not classifying these cars as SUVs, only the 7-seat variant is subject to the $80,000 price limit. Mark
Shawn Root	1/3/2023 22:31	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version).
Matthew Z. Schwartz	1/3/2023 22:32	My name is Matt Schwartz, and I am writing to submit a comment on OMB Control No. 1545-2137. First of all, thank you for your work in soliciting, reviewing, and summarizing comments! I would like to express disagreement with the control's classification of the Tesla Model Y Long Range AWD 5 seat trim as a sedan, thus limiting its applicable MSRP to $55,000. I am a current owner of this car and interested in purchasing another for my family. It is a truly amazing vehicle, both for consumers and the environment. If you look at the specs for this trim Model Y, it seats 5 and has 76 cu. ft. of max storage volume. It is also fully electric and gets 330 mi. of range with 122 combined MPGe. The EPA classifies this car as a small SUV, and I think the general public would largely agree. This is the same classification as the Jeep Wrangler 4xe, which also seats 5 yet has only 67.4 cu. ft. of max storage volume. What's more this car is only a hybrid with a minuscule 21 mile electric range and only 49 combined MPGe. Despite all this, the Jeep Wrangler 4xe is classified under OMB Control No. 1545-2137 as an SUV with an applicable MSRP limit of $80,000. I am not sure what could possibly account for this difference in classification, but I encourage the IRS to change the classification of this Model Y trim to SUV. Thank you for your consideration! Sincerely, Matt Schwartz [https://ci3.googleusercontent.com/mail-sig/AIorK4zm0Yo05krfYDWZipqU_6m-0vOH_Em68AlMO0cFvFIdZwrovn5JUl4QvIwleAW70i_LtK6IG-o]<https://www.virgosvs.com/>

Dirk Brua	1/3/2023 22:32	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Dirk Brua
Shinu Vasudevan	1/3/2023 22:32	Hi For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Shinu Vasudevan
Lafrisbee	1/3/2023 22:32	had the year before. And then when I did my taxes on the back of napkin I realised I would be getting some of my initial payment back, but I let it go. And then the IRS threatened me for not doing my taxes. So I did. And they told me that they were going to keep my "Guessed Payment" because I did not file on time. I always thought that the IRS Rep just made out the amount I was owed by the IRS to himself? Could you check back about 20 yrs ago, 417 88 1563. Now that should let you know I don't write people I do not care about very often. However... You guys are one of the following (Or some combination) ...Incompetent (this is the best light I could view the IRS concerning this.) ...Lazy (We are going from best to worst) ...Stupid ...Rubber-stampers for some higher-up POS that took bribes from other EV manufacturers. ...or the actual POS that took the Bribe. Concerning OMB Control No. 1545-2137 How in the hell did anyone with half a brain put the 5 seat Model Y in the "sedan" group, but put some foreign EV's of similar or smaller sizes in the SUV category. Yet then categorize the 7-seater Model Y as an SUV? How in the hell do you all get to play with more than numbers? Or the better question is, "Why did the IRS get to decide what model vehicle from what company would qualify for a Tax incentive? I am sorry, but it is disheartening to see "our" government being such a group of nasty, lazy, incompetent, and/or corrupt employees/officials. Sincerely, Luke A Frisbee
Jackson	1/3/2023 22:33	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, I am writing to ask for the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Tesla is the most American made car and also leading the EV transition. Yours sincerely, Jackson Rogers

Lisa Rader	1/3/2023 22:33	Please make the MSRP cap $80k for all longe range variants of the Model Y. I ordered a long range Tesla Model Y, 5-seater variant, in June of 2022 with a delivery estimate of early 2023. I was hopeful the Inflation Reduction Act would be passed in 2022. Thankfully it was signed into law in August. The 5-seater vehicle I want is categorized as an SUV by the EPA and NHTSA. I fully expected to be able to get a full tax credit under the new IRA credit in 2023. I implore the IRS to reconsider their classification of the 5-seater Model Y as a sedan, among others such as the Ford Mach-E. Please set the 5-seater Model Y MSRP cap to $80k, just as you have done already for several undeserving, heavier, polluting, gas burning hybrid SUVs. Giving gas hybrid SUVs the credit while snubbing many fully electric SUVs goes completely against the spirit of the IRA. It is meant to accelerate sustainable transportation, not give another handout to the oil industry and slow-to-change encumbant automakers. Thank you, Lisa Rader
Rob Uhe	1/3/2023 22:33	The 5 seat Tesla Model Y should be included in the EV tax incentives. It is crazy and a complete government failure that it is not included presently, while other similar vehicles are, and even some hybrids are included! How on earth can this be good policy? Thank you for considering. Robert Uhe Sent from my iPad
steve chiu	1/3/2023 22:33	Dear IRS, What are we try to accomplish with the IRA? Improve environment, energy independent, innovation of renewable energy or try to redefine the definition of what is a SUV? Please don't lost track the true purpose of the EV credit. The goal of EV credit is to put more BEV on the road not put more PHEV on the road. The IRS should not play side with the politics and it should be neutral. Please let us the consumers to decide which EV we want to buy by not restricting or limiting the choices. The definition to qualify for the $80,000 vehicle such as 5 seater Tesla Model Y or Ford Mustang Mach E needs to be included in the $80,000 SUV rules. After all, it is us the consumer who have to spend our hard earn money to make the EV transition into the future. Look at the big picture by not focus on the technicalities. Thanks, Steve Sent from my iPhone
Lev Ryzhikov	1/3/2023 22:34	Dear Mr. Garcia, While I'm very supportive of this initiative, I truly believe this insensitive should only be applied to electric vehicles and not hybrid ones. I can't believe the Jeep Wrangler with 22 MPG is eligible for the credit, while Tesla Model Y 5 seater is not. I really hope IRS will reconsider that and include all electric only vehicles and exclude the hybrid ones. Thank you, Lev Ryzhikov.
Joseph Yan	1/3/2023 22:34	I would like to express that the current credit establishment by the IRS for Tesla 2022, 2023 Model Y All-Wheel Drive/Long Range/Performance - 5 seats variant (2 rows) are incorrect / unfair. Here is an example comparison: Tesla Model Y vs Stelantis Jeep Wrangler4xe. Tesla Model Y is a battery electric vehicle with EPA 330 miles range and Jeep Wrangler 4xe is a Hybrid vehicle with only EPA 20 miles range. Tesla Model Y gets $0 credit but Jeep Wrangler4xe gets $7,500 credit. The reason is Tesla Model Y can't get the credit because it's not an SUV. In fact, the EPA website stated that the 2023 Tesla Model Y All-Wheel Drive/Long Range/Performance is a small Sport Utility Vehicle (SUV) see below: [image.png] Tesla has made the battery electric vehicle since 2011 and their vehicles are best selling in America and also other countries. The consumers like Tesla vehicles because they're so good. So I asked the IRS to reconsider changing the Inflation Reduction Act credit establishment table for Tesla vehicles. If Tesla is able to get fair credits, I am sure that consumers will buy/trade-ins their internal combustion engine car to battery electric vehicle and in the same time it will save our planet by reducing the emission and helping our government to be independent from importing the oil from other countries. Thank you and I'm looking forward to hearing from you. Best, Joseph Yan
Jonathan Hirschmann	1/3/2023 22:35	Hello, I think the Tesla Model Y 5 seater should kindly be included in the consumer rebate and find it silly that it's not from the beginning. Thanks so much for your consideration. Jonathan Hirschmann 1 Marisa Court Livingston, NJ 07039 Sent from my iPhone

Kimbo Mundy	1/3/2023 22:35	It is absurd that some models of the Tesla Model Y and Ford Mustang Mach E are not currently qualifying for the $7,500 EV Tax credit under the proposed guidelines. These cars provide a significant ecological benefit and other models in their family of cars do qualify. Clearly, something in your selection criteria needs to change! Perhaps the vehicle weight limits? Also, it is wrong for hybrid vehicles with very low equivalent MPH are qualifying for any credit. If anything, you should be playing with the qualifying conditions to exclude those gas guzzlers! Sincerely, Kimbo Mundy, Albuquerque, NM 87122 Sent from my iPad
Steve Wang	1/3/2023 22:35	Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. Here are the primary qualifications for the EV tax credit: [e9f76bb1-fcee-4219-a088-6d19cd025729.png] However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Here's an example of the broken nature of this incentive in its current form: [7030a68c-9d90-499b-a4b7-b6aa8ca7e046.png] Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit.
Adam Hayes	1/3/2023 22:36	Referemce OMB Control No. 1545-2137: I believe that writing the rules in such a way to exclude the Tesla Model Y or the Ford Mustang, the only two US manufacturers that have taken the task of designing and manufacturing electric vehicle seriously, would be a huge set back to EV adoption.
Tamara Rogers	1/3/2023 22:36	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, I am writing to ask for the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Tesla is the most American made car and also leading the EV transition. Yours sincerely, Tamara Rogers
Alec Schemenauer	1/3/2023 22:36	Hello Andreas, I am writing a comment to the proposed OMB Control No. 1545-2137 regarding the tax credit for electric vehicles. Having some arbitrary threshold for weight and suspension is silly and encourages manufacturers to create larger, wasteful, more inefficient vehicles that are more dangerous to pedestrians. Manufacturers will creatively engineer their vehicles to take advantage of these regulations (such as adding extra weight or unnecessarily increasing suspension height with the intention for customers to remove after delivery). The definition is far too complex and the way it is formulated based on being an "SUV," which is a marketing term is silly. Please consider eliminating the SUV vs. car distinction (which I doubt is possible), or revising the SUV to only include ground clearance and a hatchback. Thank you for your consideration. -- Alec Schemenauer Kansas City, Missouri

Name	DateTimeReceived	Body.TextBody
John Gregorek	1/3/2023 22:36	To whom it may concern: Please accept the following comment for consideration in the rule making for the Inflation Reduction Act EV credit rules/qualifications. I believe the Tesla Model Y 5 seat trim should be considered an SUV that is eligible for the full $7,500 tax credit for electric vehicles up to $80k MSRP. Furthermore, I urge you to find that Plug in Hybrid Electric Vehicles (PHEVs) with small batteries should not qualify for the full $7,500 credit and $80k MSRP. The current guidance, under which the Model Y 5 seat version does not qualify as an SUV entitled to the full $7,500 credit up to an $80k MSRP while the Ford Escape PHEV does, is arbitrary and against the purpose of the law, and also leads to absurd results. For example, a Ford Escape PHEV and Jeep PHEV — both of which have small batteries and just 21 miles of electric range — are both eligible for the full $7.5k credit, but the Model Y 5 seat version, which is similar in size to those vehicles (if not larger) and also has 330 miles of pure electric battery range, does not. The guidance must be changed to correct this absurd outcome. The purpose of the law was to promote the adoption of American made clean energy vehicles by making them more affordable for consumers. By disqualifying the American made Tesla Model Y 5 seat version as an SUV for purposes of the $7,500 credit and $80k MSRP while at the same time qualifying PHEVs with tiny batteries as SUVs entitled to the full credit and $80k MSRP, the IRS is doing exactly the opposite of what the It should be doing to further the intent and purpose of the law. I sincerely hope you will reconsider the current guidance because it is against the spirit of the law and is only going to cause a massive waste of taxpayer dollars.
Ricky So	1/3/2023 22:36	Hi, All model of Tesla Model Y 5 seater should be includedin tax credit as it's the most eifficent SUV EV in the world that build in US. Please reconsider to add Model Y 5 seater in $80,000 price range. Thank you. Ricky So Sent from my iPhone
Brett Hampton	1/3/2023 22:36	Regarding the results of the rule making process of the Inflation Reduction Act, I find the exclusion of the Tesla Model Y 5 seater distressing and not keeping with the intention of the legislation. Excluding the most popular EV in the country because of slight differences in weight, price and clearance greatly limits the legislations ability to electrify the transportation system. The guidelines appear to be specifically designed to exclude one vehicle from one manufacturer (e.g. Tesla Model Y), which is bad policy and likely illegal. This decision seems influenced by politics as it favors automakers that employ labor unions, which language was explicitly removed from the bill. The IRS should therefore not create guidelines favorable to unions by which, circumvent the will of the People's representatives. This is bad policy and should be reconsidered. Regards, Brett H.
Sanjay Aiyar	1/3/2023 22:37	I am writing to you to request (with regards to the Inflation Reduction Act's vehicle price caps and corresponding $7,500 Federal Tax Credit) that the Tesla Model Y Long Range 5 seater variants and Ford Mach E be included in the SUV category that receives the $80,000 price cap instead of the $55,000 cap. The Inflation Reduction Act has a stipulation in which Pure Electric Vehicles and Hybrid Electric Vehicles are able to take advantage of up to $7,500 as Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. Here are the primary qualifications for the EV tax credit: [e9f76bb1-fcee-4219-a088-6d19cd025729.jpeg] However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers like Tesla are being unfairly treated, while others are getting a benefit they do not deserve. There is no reason why Tesla Model Y Long Range 5 seater or Ford Mach E is limited to a $55,000 price cap yet the VW iD4 with the same 5 seat form factor but is heavier (i.e. less range efficient) has an $80,000 price cap. [Image.png]
Basil Haddad	1/3/2023 22:37	Hello, Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Having minimum criteria for an electric SUV based on the weight and ride height of the vehicle is the opposite of an optimized fully electric vehicle. Reducing the ride height and lowering the weight of a vehicle increases the range, especially at highway speeds. Range is a key metric for purchasing an EV. More EV's can be produced using the same quantity of battery cells if they are lower to the ground and weigh less. Currently and for the transition period to 100% EV's, the limiting factor on their production is the availability of battery cells. The intention of this bill is to support the EV transition and in that spirit I ask that fully electric vehicles for the ride height and weight limits be removed for the criteria of determining an SUV with respect to this credit. Thank you for your consideration, -Basil Haddad

Adlan Taramov	1/3/2023 22:37	vehicles that use fossil fuels will. Those vehicles are classified as electric vehicles because they are plug-in hybrid EVs. It's a shame that most innovative and most American auto-makers are not getting the support they deserve for amazing work they're doing for future, technology, and environment. If US government is serious about fighting climate change, it needs to step up the game and encourage EV transition and production as much as possible. Please make sure Tesla gets equal treatment and support for all EVs remains a priority. Nohcho Adlan
Jeff Wujek	1/3/2023 22:37	Good evening, As a hardworking taxpayer, I expect you to work in the best interest of people like me towards a sustainable future. Electric vehicles should be getting the tax credit. If plug in hybrid vehicles which meet the minimum criteria are going to qualify when they are clearly a terrible product and not a step toward sustainability, then all tesla model 3 and y vehicles along with the mustang Mach E should qualify as they far exceed the minimum standards. The model y should not be punished for being so mass efficient that it is lighter than your arbitrary standards. Please fix this. Very respectfully, LT Jeff Wujek Naval Aviation Schools Command Sent from my iPhone
baboonboy19@gmail.com	1/3/2023 22:38	* The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Sent from my iPhone
Garfield Grant	1/3/2023 22:38	* The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Sent from my iPhone
Harmneet Gosal	1/3/2023 22:38	To whom this may regard, The newly legislated IRA has incorrectly identified the Tesla Model Y (AWD 5 Seat) trim as a sedan. This should be considered an oversight on your end as the EPA classifies this same trim as a (small) SUV. As I understand, your rationale behind this decision is because of the weight of this model, which is an incorrect methodology. We should not be discriminating against a specific trim because of the technological advancements it reaps. As currently constructed, the IRA is benefitting similar hybrid electric vehicles that offer 20-40km, which is against the mission of this bill. Please consider reclassifying the Tesla Model Y correctly as a SUV to serve the purpose of this bill. Thank you
Yun Yang	1/3/2023 22:38	I was shocked to learn that the hybrid Ford Escape PHEV and Jeep PHEV, which have very small batteries with only 21 miles of electric range, are eligible for the full $7.5k tax credit. Meanwhile, the American-made Tesla Model Y (5-seat version) is not eligible for this credit. I strongly request that you reconsider the classification of the Tesla Model Y (5-seat version) and use taxpayer money to support the promotion of real electric vehicles. Thank you for your attention to this matter. Sincerely, Yun Yang

Steve Wang	1/3/2023 22:39	The Inflation Reduction Act has a stipulation where PHEV Electric Vehicles and Hybrid Electric Vehicles are able to take advantage of up to $7,500 in Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. Here are the primary qualifications for the EV tax credit: [e9f76bb1-fcee-4219-a088-6d19cd025729.png] However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Here's an example of the broken nature of this incentive in its current form: [7030a68c-9d90-499b-a4b7-b6aa8ca7e046.png] Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit.
Artem Bondar	1/3/2023 22:39	Dear Andres Garcia, I just would like to use this opportunity and provide feedback on the recent EV Tax Credit announced by IRS. In my opinion, some of the rules that define the eligibility of the vehicle for tax credit do not make sense. For example, Tesla Model Y 5-seats have a price cap of $55K vs Tesla Model Y 7-seats have a price cap of $80k, which does not make sense, because it's pretty much the same vehicle with just the difference of two tiny seats added. All other characteristics of the vehicle, such as size, powertrain, battery, and so on remain the same. As a result of this cap - 5-seats Model Y does not qualify for a tax credit but 7-seat Model Y qualifies for the tax credit. And as a result, for me, as the consumer is cheaper to buy a 7-seat Model Y than 5-seat Model Y. Another example: Volkswagen ID4 AWD, which is a 5-seat vehicle and it's smaller in size compared to Model Y has a price cap $80K and as a result, qualifies for tax credit. This does not make sense as well. Model Y 5-seat is also AWD and even bigger than ID4, but for some reason don't qualify for the tax credit. Simply does not make any sense to me. And the last comment is that Plugin Hybrid vehicles, many of which will qualify for $7500 tax credit, but pure electric Model Y 5-seats do not qualify. What is the goal of these tax incentives? In my opinion, is to motivate people to switch to more environmentally friendly vehicles, such as EVs, right? But let's take Jeep 4xe for example, which qualified for $7500, it has 20MPG! So this vehicle will create more CO2 emissions than my wife's 2013 Honda Accord. So what's the point of incentivizing people to buy those vehicles which don't create any benefits for our environment? And on the flip side, pure EVs, such as Tesla Model Y 5-seats are not getting the incentive. I hope my feedback will be considered as well and IRS will make a revision of the recent rules for EV incentives purchase, to really serve it's goal and motivate people to really switch to eco-friendly vehicles such as pure EVs and make more pure EVs to be qualified, such as Tesla Model Y 5 seats and Ford Mustang Mach-E Thank you
Joseph Park	1/3/2023 22:39	I am writing to express my disappointment and frustration that the Tesla Model Y 5-seat model will not be included in the IRA tax credit as of 2023. As a loyal Tesla customer, I was eagerly anticipating the opportunity to take advantage of this credit when purchasing my Model Y. I understand that the tax credit is subject to change, and that it is not uncommon for certain models to be excluded from time to time. However, I feel that the Model Y 5-seat model is an important and popular option for Tesla customers, and I am disappointed that it will no longer be eligible for this credit. I hope that you will reconsider this decision and include the Model Y 5-seat model in the IRA tax credit as soon as pissible. Sincerely, Joseph Park.
Mike Kappus	1/3/2023 22:39	My feedback: I think the Tesla Model Y with 5 seats should be included in the tax credit. Not sure why it isn't when other vehicles are. I was hoping to buy one with the credit. Mike

Munchprime	1/3/2023 22:39	My understanding is that the 2023 $7500 EV Tax Credit is available to plug-in SUVs priced under $80,000. This means that the Jeep Wrangler 4xe qualifies; despite it only having an electric range of 21 miles, with the rest of its range being powered by gasoline at a very poor 20 MPG. However, purchases of the 5-seat variants of Tesla's Model Y - a highly efficient, fully electric SUV built in the United States by a U.S. company - do not qualify. This appears to be the result of the Model Y failing to qualify as an SUV; though I can't seem to get a clear answer why. Many sources speculate that it's due to the vehicle's low gross vehicle weight. Regardless of the why, this discrepancy results in tax dollars being wasted on purchases that would fundamentally contradict the stated purpose of the Tax Credit. It should be corrected immediately. The Model Y is clearly an all-electric SUV, should be classified as such, and should qualify for the credit. Additionally, vehicles that clearly do little to nothing to accomplish the goal of transitioning vehicular transit to sustainable energy - such as the Jeep Wrangler 4xe - should be disqualified. Thank you for your time, -Chris, a concerned taxpayer
Jean pierre Zuniga	1/3/2023 22:40	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit Thanks
Paul Tadrick	1/3/2023 22:40	The fact that hybrid vehicles with giant gasoline engines some with horrible MPGE equivalent numbers in the 20s qualify for this tax credit and not all purely electric vehicles is a travesty. Please reconsider the requirements. Hybrid vehicles are an over complex crutch that's not necessary for a sustainable future. All Ford mach e and Tesla model y's should qualify for this credit.
Mauricio Romero	1/3/2023 22:40	To whom it may concern, I think tesla Model Y 5 seater should be included and silly that it’s not from the beginning. Tesla makes the most American made, sourced and assembled components and should be the most worthy to be receiving any credit from our tax dollars. I would also suggest excluding hybrid models and models not made and assembled in America us
Hunter S	1/3/2023 22:41	Dear IRS, I am writing to strongly urge you to include the five seat Tesla Model Y in the new $7,500.00 tax credit offering. I believe that it makes no sense that a plug-in hybrid Jeep with only 21 miles of electric range is eligible for the full credit, while a fully electric vehicle like the five seat Model Y is not. The Model Y is a highly efficient and environmentally friendly vehicle that deserves to be recognized and incentivized by the government. Its inclusion in the tax credit program would encourage more consumers to choose electric vehicles, which would help reduce greenhouse gas emissions and improve air quality. Furthermore, the Model Y is a popular and widely available electric vehicle that many consumers are interested in purchasing. Excluding it from the tax credit program would create an unfair disadvantage for those who are considering making the switch to electric. I hope that you will seriously consider my request and work to include the Model Y in the tax credit program. Thank you for your time and attention to this matter. Sincerely, Hunter Smit
David McDonald	1/3/2023 22:41	Hello, I’d like to understand how a PHEV with a 30 mile range made in Mexico qualifies for the $7500 tax credit, but the standard Tesla Model Y long range with 300 mile range made in the US does not. This is bad policy that will adversely impact the US economy and more importantly the pace at which we combat climate change. Please explain the rationale behind this. Or better, change it! Best, David McDonald
Chad Alexander Bowman	1/3/2023 22:41	Please consider changing your definition of SUV to match that of the EPA. The current design seems wholly designed to not incentive efficient, full-battery electric vehicles such as the Tesla Model Y. It is crazy that gas vehicles with small batteries like the Jeep Wrangler, qualify when the Model Y does not. Thanks, # Chad Alexander Bowman
sam hirdler	1/3/2023 22:41	You need to make the model Y qualify for the incentive, the model Y is an SUV according to the EPA and should be treated as one. I would also prefer they the incentive only benefits pure EVs and not hybrids which are proven to not be beneficial to the environment.

Name	DateTimeReceived	Body.TextBody
Tony Girolami	1/3/2023 22:42	The model Y 5 seater is a SUV and should have a price limit of $80,000 just like the 7 seat model Y does. 2 seats does not change whether a car is a sedan or a SUV. Also plug in hybrids should not get the full credit as they still have gas engines which EVs do not have. Hope you can fix this discrepancy Tony Girolami Kirkland WA
Hans Hammar	1/3/2023 22:42	model from your list. Thanks, Hans Hammar
Vishank Parikh	1/3/2023 22:43	I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed toward promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Vishank Parikh -- -- Regards, Vishank Parikh
Brett Winton	1/3/2023 22:43	I am writing to express my frustration with the Inflation Reduction Act's EV tax credit rule. It is my understanding that the Tesla Model Y, a 5-seat SUV, does not qualify for the tax credit because it is not considered an SUV by the IRS. However, the Environmental Protection Agency (EPA) considers the Model Y to be an SUV. I find it questionable that the Ford Escape PHEV and Jeep PHEV, which have minimal electric range and low MPG, qualify for the tax credit while the Model Y does not. The Model Y has more interior space than the Wrangler WXE, and seems to have not qualified because it doesn’t meet minimum curb weight requirements? Absurd. It seems that the rule-making process was likely influenced by the auto lobby, allowing companies to avoid making necessary investments in EV manufacturing by continuing to rely on their existing internal combustion engine factory footprints. I urge the IRS to reconsider this rule and to more fairly consider the qualifications for the EV tax credit. It is important that we encourage the adoption of electric vehicles and reward those who are making an effort to reduce their carbon emissions. Sincerely, Brett Winton 2500 Grandview Ave Venice CA 90291 Get Outlook for iOS<https://aka.ms/o0ukef>
Shannon Leggett	1/3/2023 22:43	Dear IRS Agent, The Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe , 5 seater, should be eligible for the $7,500 credit because its a pure EV car, Shannon Leggett US Citizen and taz payer

Name	DateTimeReceived	Body.TextBody
Norton Rappaport	1/3/2023 22:43	Tesla and electric vehicle supporters have been vocal about the Inflation Reduction Act's qualified cars for the EV incentive. Some variants of the Tesla Model Y and the Ford Mustang Mach-E will not receive any incentives<https://www.teslarati.com/tesla-protest-ira-incentives-evs-vs-hybrids/> from the IRA at all, yet some vehicles that use fossil fuels will. Those vehicles are classified as electric vehicles because they are plug-in hybrid EVs." The IRS gives specific instructions on how to submit the comments. Comments can be submitted by mail or email. For those submitting by email, you need to include OMB Control No. 1545-2137 in the subject line and send it to Norton A. Rappaport norton@rappaprt.com (858) 349-9979
Ann DeCamp	1/3/2023 22:43	Dear Mr. Garcia, Respectfully, it makes no sense to deny the $7500 EV tax credit to the Tesla Model Y 5 seater and the Ford Mach E. These are essentially SUV's. The current IRS classification does not support the goal of incentivizing consumers to switch away from fossil fuel vehicles and allowing consumer choice. Please add the above vehicles to the list of approved qualifying vehicles. In addition, giving the tax credit to plug-in hybrids PHEV which are essentially fossil vehicles with tiny low range batteries is antithetical to the goals of true EV adoption. Sincerely, Ann DeCamp 2637 Crest Lane Scotch Plains, NJ 07076
Michael Peters	1/3/2023 22:44	Hello! My name's Michael Peters, an employee of a medical device manufacturer and military spouse from Oceanside, CA. I'm emailing to echo comments on the EV Tax credit, specifically the SUV categorization of the Tesla Model Y. All models of this vehicle are widely understood to be SUV's - the weight limit set for this credit is inappropriate. I believe all models of the Model Y should be eligible for this credit. Thanks for your time, Michael Peters
Titan_1583	1/3/2023 22:44	I thin the tesla model y 5 seater should be included and it should have been that way since the beginning. Alex
Mohammed Baig	1/3/2023 22:44	I am writing to express my frustration with the new tax incentives that disqualify the Tesla Model Y 5-seater. As a strong advocate for electric vehicles, I was deeply disappointed to learn that Model Y 5 seater no longer qualifies for the tax credits . As per EPA Tesla Model Y is SUV and it should get $7,500 credit irrespective of the number of seats. I understand that the purpose of these incentives is to encourage the adoption of electric vehicles, and I believe that the Tesla Model Y 5 seater is a prime example of the kind of vehicle that should be eligible for such incentives. It is a high-quality, reliable, and environmentally friendly vehicle that is leading the way in the transition to clean transportation. I strongly urge the IRS to reconsider this decision and continue supporting the adoption of electric vehicles by including the Model Y, 5 seater in the list of eligible vehicles for tax credits. I have no doubt that this would be a popular and effective way to encourage more people to make the switch to electric transportation. Thank you for your attention to this matter. Sincerely, Md Baig
Mark Bernstein	1/3/2023 22:44	I cannot believe that this bill was supposed to accelerate societies to adopt EV vehicles when Tesla is being cut out of the ability to offer the goverment subsidy to the top selling five seat model Y in the world. Who was behind this logic? That you have to move up to a seven seat model Y to get the subsidy makes no sense. Please change this law!!!!!!

Name	DateTimeReceived	Body.TextBody
Janco Bronkhorst	1/3/2023 22:45	Dear IRS, Please allow any vehicle that classifies as all electric to get the $7500 tax credit. I refer specifically to the Tesla Model Y, which will not be eligible for the credit. Kind regards, Johannes Bronkhorst
Barry Williams	1/3/2023 22:45	I would like to express my opinion regarding the very backwards methods that seem to be used to determine which vehicles are eligible for the IRA tax incentive. It doesn't make any sense that a hybrid truck which is way less efficient qualifies, and yet one of the most efficient and fully electric vehicles, the 5 seat Tesla Model Y does not. At best this was an oversight, but at worst, it appears to be the corruption of the UAWs pull on the US government penalizing what will be Teslas best selling vehicle this year (and what has the potential to be the best selling vehicle in the world this year). Please reconsider this very odd policy/selection process for no other reason that it is unfairly discriminatory against Tesla. Thank you for your consideration, Barry Williams Sent from my iPhone
Neil Chauhan	1/3/2023 22:45	As the owner of a Tesla Model Y, I was wondering if I fold my 2 additional seats down, does my 7-seat SUV turn magically into a non-SUV? Please recognize and acknowledge the absurdity of your position on considering the Tesla Model Y to not be considered a SUV if you only have 5 seats but is if you have 7 seats and DO THE RIGHT THING!
Su Wang	1/3/2023 22:45	Dear IRA, Please include the Tesla Model Y 5 seater version in this bill! Best regards, Su Wang
rachana_prabhakar@yAhoo.com	1/3/2023 22:45	Hello Andres Garcia, Please provide tax incentives to for Tesla Model Y. Our family wants to buy an electric car and do our part in this moment. Not giving Incentives for Tesla is not fair. Regards Rachana
Erica Ierardi	1/3/2023 22:46	Dear IRS: I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is so important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future for everyone. Sincerely,
Cristian Medina	1/3/2023 22:46	I'm writing to request a review of the Tesla Model Y 5 seat configuration to be evaluated as an SUV the same as the 7 seat version to be eligible for the $7500 credit. Having minimum criteria for an electric SUV based on the weight and ride height of the vehicle is the opposite of an optimized fully electric vehicle. Reducing the ride height and lowering the weight of a vehicle increases the range, especially at highway speeds. Range is a key metric for purchasing an EV. More EV's can be produced using the same quantity of battery cells if they are lower to the ground and weigh less. Currently and for the transition period to 100% EV's, the limiting factor on their production is the availability of battery cells. The intention of this bill is to support the EV transition and in that spirit I ask that fully electric vehicles have the ride height and weight limits be removed for the criteria of determining an SUV with respect to this credit. Thank you.

Name	DateTimeReceived	Body.TextBody
Costas Kleopa	1/3/2023 22:46	there. By having these kind of cars available to more people, it will help our county have safer roads which will save lives, and help our goals for better sustainable environment for our children. Please reconsider including the $7500 tax credit to this kind of car so more people can afford it. Thanks, Costas Kleopa
Afshin Solhdoust	1/3/2023 22:46	Why is the 5 seater version of the Tesla model Y not being classified as an SUV and why does it not receive the $7,500 incentive, while a Jeep wrangler which much less efficient and is not an EV is eligible to receive the incentive? It makes no sense!
Hooman Famili	1/3/2023 22:46	Hi. I am writing in regards to the EV tax credit pertaining to IRA. I don’t think it is right that Tesla Model Y (in most variations) is not able to take advantage of the credit. An American made car - not Mexico or Canada - that is fully electric and the leader in transitioning to sustainable transport not available to common working Americans smells of foul play. Please adjust your classification system to allow the Model Y (at least it’s common variations) to be available to more Americans who want to support our country’s mission to reduce emissions. Thank you Hooman Famili 214-228-4059 Del Mar, CA Sent from my iPhone
Hunter Smit	1/3/2023 22:46	I am writing to urge you to consider including the five seat variant of the Tesla Model Y in the new $7,500.00 federal tax credit offering. As a fully electric vehicle, the Model Y offers significant environmental benefits over traditional gasoline-powered cars, and its inclusion in the tax credit program would encourage more consumers to make the switch to electric transportation. In addition, the Model Y's five seat capacity makes it an ideal choice for families, who may be hesitant to make the switch to electric transportation due to concerns about range and practicality. By including the Model Y in the tax credit program, you would be encouraging more families to make the switch to electric vehicles, which would help to reduce carbon emissions and improve air quality. I hope that you will give serious consideration to including the five seat Tesla Model Y in the $7,500.00 federal tax credit program. Its fully electric powertrain, impressive range, and practicality make it an excellent candidate for this credit, and I believe it would encourage more consumers to make the switch to electric transportation. Sincerely, Hunter Smit
fan.zhu89	1/3/2023 22:46	To anyone who concerned, My name is Fan Zhu living in California. As a tax payer, I couldn’t understand why 7 seat model y is a suv while 5 seat model y is not? I notice the size of model y is larger than id4 pro s which is considered as suv. It doesn’t make any sense to consider a larger car as a sedan while smaller one is suv. Thanks Fan Sent from my iPhone
Cristian Medina	1/3/2023 22:47	eligible for the $7,500 credit. Having minimum criteria for an electric SUV based on the weight and ride height of the vehicle is the opposite of an optimized fully electric vehicle. Reducing the ride height and lowering the weight of a vehicle increases the range, especially at highway speeds. Range is a key metric for purchasing an EV. More EV's can be produced using the same quantity of battery cells if they are lower to the ground and weigh less. Currently and for the transition period to 100% EV's, the limiting factor on their production is the availability of battery cells. Thank you.
Dan Banks	1/3/2023 22:47	EPA thinks Tesla Model Y’s are SUVs. You guys are really screwing this up. Bought off by UAW? Dan Banks 334.328.5736

Name	DateTimeReceived	Body.TextBody
George DeNardis	1/3/2023 22:47	The Inflation Reduction Act has a stipulation where PHEV and Electric Vehicles and Hybrid Electric Vehicles are able to take advantage of up to $7,500 in Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. Here are the primary qualifications for the EV tax credit: [https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/e9f76bb1-fcee-4219-a088-6d19cd025729.jpeg] However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Here's an example of the broken nature of this incentive in its current form: [https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/7030a68c-9d90-499b-a4b7-b6aa8ca7e046.jpeg] Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Ideal fix: * Remove incentives for all hybrid vehicles and only have them apply to pure EVs. * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Next best fix:
Michael Cantore	1/3/2023 22:47	Tesla Model Y 5 seater should be included. Best, most American full EV on the market. To be excluded is ridiculous.
jerry chen	1/3/2023 22:47	Hi, I can only imagine the influx of feedback you are all getting regarding the EV tax credit and the blatant discrimination against Tesla SUVs, which are undeniably greener and safer than legacy alternatives. I'll spare the details, as I'm sure you guys have all the data you need at this point to make a judgment call on whether the current guidelines are fair and unbiased. Jerry
Alexander Bonwit	1/3/2023 22:47	I'm frustrated by the seemingly arbitrary classification criteria used to determine the eligible rebate amount for EVs in 2023. The Ford Mustang Mach E in particular seems to be classified as a car, but is in fact a crossover/SUV form factor. Most configurations of the vehicle don't even qualify for any rebate because of its current classification. The odd distinction between two vs. three-row Tesla Model Y vehicles also seems irrational. The vehicle is an SUV, and there are many two row SUVs, including other vehicles on the list that are classified as SUVs. I hope the IRS reconsiders these classifications and properly classifies SUVs as SUVs so more consumers can afford these vehicles. Without the rebate, considering the cost that large battery packs (the only practical option for many drivers living in rural areas) add to many of these vehicles, only the wealthiest will continue to be able to afford them, and gasoline vehicles will be far more appealing to many consumers. Thank you. Sincerely, Alex Bonwit
Dave Scott	1/3/2023 22:48	Dear IRS, I don't understand how you can give tax credits to vehicles that get 21, 23, or even 40 miles of EV range, and dis-qualify a Tesla Model Y that gets 320 miles of EV range. The purpose of the credit is encourage people to go electric with their vehicle choices. Hybrid cars should be excluded from the program, they still have an internal combustion engine in them, that's not helping the mission to transition to sustainable options.
Liming Lin	1/3/2023 22:48	To whom it may concern, Made-in-America Tesla Model Y 5 seater should be included in the EV credit and it's silly that it's not from the beginning. Regards, Liming
Matthew Kohler	1/3/2023 22:48	I am writing today to express my frustration regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular EV in the world, the Tesla Model Y (made in America). As a taxpayer and a concerned citizen, I believe the incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y 5 seater. Thank you, Matt Kohler 650.245.8977
Clayton Greenwood	1/3/2023 22:48	Why is Tesla being discriminated against for no reason? A model Y is obviously a SUV…Common folks. Sent from my iPhone

Trevor Ross	1/3/2023 22:48	version). Seems fishy. Regards, Trevor Ross | Private Chef Luxe Dinners 311 N Robertson Blvd #714 Beverly Hills, CA 90211 1-323-926-4655 www.cheftrevorross.com @cheftrevorross
Joe Alt	1/3/2023 22:48	SUV qualifications should be based on storage space within the car or even towing capacity, not weight of car as the lighter an EV the better it is for the environment, don't punish efficiency. Thanks Joe Alt Sent from Yahoo Mail for iPhone<https://overview.mail.yahoo.com/?.src=iOS>
Lou Petracci	1/3/2023 22:49	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Lou Petracci 909-904-3708<tel:909-904-3708>
gullet-clues0n@icloud.com	1/3/2023 22:49	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Concerned Citizen
Mesgen Amanov	1/3/2023 22:49	Dear IRS, Please include Tesla Model Y 5 seater for eligibility of $7,500 EV Tax credit. It is unfair that other automakers qualified for tax credit while their cars not even fully electric. Thank you
Bob Hutchins	1/3/2023 22:49	Please be transparent about what criteria you used to determine which vehicles are SUVs and which aren't. No single set of commonly used standards seems to apply to your choices. This confuses the citizens who are interested in the fair application of this bill. Also, if possible, please disqualify any gas or diesel powered vehicles in this tax credit, even if they are hybrids. With both powertrains, hybrids try to cover both roles and do neither well. Thank you for your time and consideration. :)
Thomas Lewellen	1/3/2023 22:50	The way that you are classifying what is/isn't a SUV and therefore available for the tax credit up to an MSRP of $80,000 incentivizes demand for heavier and less efficient vehicles. A Tesla Model Y with 7 Seats is heavier but otherwise the same build as a 5 seater and yet they are in different categories. Heavier vehicles lead to less range/more energy consumption, increase forces in accidents as well as more wear and tear of our public streets. The current rating system will seemingly incentivize automakers in making heavier/ less efficient vehicles so that they qualify for the tax credit as apparently a lighter SUV isn't a SUV based on your faulty formula.

Name	DateTimeReceived	Body.TextBody
Xin Peng Lin	1/3/2023 22:50	Hello, I find it ridiculous that a Jeep hybrid that has ~20 mpge qualifies for the 7500 tax credit but the Tesla Model Y, an SUV, which is fully EV does not. This will not help us transition into a more sustainable and less polluted future. Please reconsider the Tesla Model Y. Best, Xin
Josh G	1/3/2023 22:50	re-sending this, because i forgot to include the OMB control number in the subject Please re-consider the categories that yall are placing various cars in. There are many "SUVs" that are not being placed in the "SUV", $80,000 category. Vehicles such as the Ford Mustang Mach-E, GM Cadillac Lyriq, Volkswagen ID.4 (4 versions), and Tesla Model Y (3 versions) should all be considered "SUVs", and therefore be allowed up to the $80,000 price limit. The Volkswagen ID.4 and Tesla Model Y even have SOME versions that ARE considered "SUVs", but not all. The way that yall have categorized these cars as "SUVs" and "not SUVs" doesnt make sense. I have seen many comments about this online, and I am concerned that the US government is "incentivizing EVs", but at the same time, seem to be "punishing efficiency". For example, the Tesla Model Y could potentially qualify for the "EV credit" if it were heavier, and/or had a taller ground clearance... both which make the vehicle LESS efficient. This goes against the goal of the "EV tax credit", which is supposed to incentivize efficient/clean vehicles. Here is a good example of why the "EV tax credit" makes no sense: There is a car that has a gas engine and gets 20 MPG. It has 21 miles of electric range. It gets a $7,500 "EV Tax Credit". There is a car that is ELECTRIC ONLY and gets 113 MPEe. It has 330 miles of range. IT DOES NOT GET A $7,500 EV TAX CREDIT. The EV that doesnt get the tax credit is because it is between $55,000 and $80,000. The EV is actually an "SUV", but is placed in the "other" category for the "EV tax credit" bill. I am writing this as a fan of PURE ELECTRIC VEHICLES, a US taxpayer, and a fan of the company that makes the most American made vehicles, Tesla. Im sure you will be getting plenty of comments about this "EV tax credit" "SUV" "issue". If you go on the internet at some point, I would imagine you might see people talking about how the new "EV tax credit" is unfair and makes no sense. Just search "EV tax credit" on Twitter. You can even look
Roberto Romero	1/3/2023 22:50	Hello, Commenting to recommend revising Inflation Reduction Act EV Tax Credit. Unfair Tesla Model Y 5 seat variation is not eligible for $7500 credit but many other Hybrid non full EV vehicles are eligible. I was seeking to purchase a Model Y with this tax credit but would like to not have to purchase 7 seat upgrade. My second choice is Ford Mach-E which also should be eligible for this $7500. Thanks, Roberto Romero 619-788-9468 -- Roberto Romero (619)788-9468
Julian Kidd	1/3/2023 22:50	The new tax incentive for electric vehicles is very frustrating. It seems as though you are excluding true EVs like the Model Y and including vehicles like the Jeep Wrangler. As a tax payer and concerned citizen for our future and our children's future, please reconsider what the qualifications are for this credit. Thank you. Julian Kidd
Kavian Shahi	1/3/2023 22:50	Please include the Tesla Model Y 5 seater in the SUV group. Actually, All pure electric vehicles under $80,000 should be eligible for the tax credit in my opinion. The half measured plug in hybrids are not efficient enough to be considered in my opinion. Thanks KS Sent from my iPhone
Walt Hilger	1/3/2023 22:51	Dear IRS Representative, I have been closely following the new ev incentive regulations that were legislated in 2022. Possibly one of the most important pieces of legislation for both the national security of the US and the economy. However the actual details as they were released recently don't seem to be aligned with intent of the legislation. Specifically, electric vehicles seem to be under represented as compared to hybrid and plug in hybrid. This really needs to be reconsidered. Please use the Tesla model y suv as an example of a vehicle that should be included as an suv at the 80k rate but was somehow excluded. Thank you for your consideration of this very important implementation detail of the ev tax credit legislation. Sincerely, Walt hilger Walt hilger 16 autumn ln Natick ma 01760 Sent from my iPhone
Kyle	1/3/2023 22:51	Hello! I have a concern that Tesla Model Y SUV 5 seats aren't included under the SUV section. It is the best EV SUV right now and it doesn't make sense that it's not part of SUV category. Kyle

Name	DateTimeReceived	Body.TextBody
Christopher Solly	1/3/2023 22:51	Hello - Please reconsider giving subsidies to all Tesla models like the fully electric Tesla Model Y. It seems crazy that the government would subsidize a 22MPG Jeep with its internal combustion engine and not clean, American made Teslas. Thanks - Chris
oscar herrera	1/3/2023 22:51	OMB Control No. 1545-2137 I think tesla Model Y 5 seater should be included and silly that it's not from the beginning. It's an EV . It's silly that it's not included. Credit is being given to hybrids! Can this please be changed? Oscar Herrera
Vad I	1/3/2023 22:51	To whom it may concern, The EV tax incentives should be fair and balanced. The primary focus of these incentives should be promotion of fully electronic vehicle technology (not 30-year-old hybrids). There should be an even playing field for all companies, including Ford and Tesla. On that note, all variant of Tesla Model Y (excluding performance model) should qualify for a full $7,500, just like other OEMs. Either implement these incentives fairly across the board or don't do them at all. V/r, Tax payer.
Gram Loomis	1/3/2023 22:51	Tesla dragged the US into electrification of vehicles, and should certainly be more eligible for tax credits than many of the listed Hybrid SUVs that barely have any electric-only range, and a much larger carbon footprint. Likewise, it makes no sense that the Tesla Model Y is an eligible SUV if it has 7 seats, but not if it has 5 seats. The efficiency is actually better if you only have 5 seats and should be reflected as such in the form of tax credits.
Vivek Bajpai	1/3/2023 22:51	Dear IRS, I am writing to express my frustration with the new EV tax incentives and their confusing and inconsistent criteria for eligibility. I am particularly disappointed that a 22mpg Jeep Wrangler is eligible for full credit, while an American-built Tesla Model Y and Ford Mach E, which are much more environmentally-friendly vehicles, are not. Furthermore, I have concerns about the eligibility of plugin hybrids for full credits. Studies have shown that these vehicles produce more emissions than internal combustion engine (ICE) vehicles in real-world driving conditions. It seems counterintuitive to me to provide incentives for vehicles that are not actually helping to reduce emissions. They have a very small battery pack and do not need government incentives to compensate for the additional cost. I understand that the goal of these incentives is to encourage the adoption of electric vehicles, but it is important to ensure that they are being applied fairly and in a way that truly promotes environmental sustainability. I urge you to consider revising the eligibility criteria for these incentives to more accurately reflect the environmental benefits of different types of vehicles. Sincerely, Vivek Bajpai 942 120th Ave SE, Lake Stevens, WA - 98258
Mark Us	1/3/2023 22:51	Hello, Number of seats should not disqualify the most available electric SUV from a tax rebate program designed to increase electric car adoption. Please review for change. Tesla Model Y needs to be part of the program regardless or seats or weight. Mark
Daniel Van Dyck	1/3/2023 22:51	also one of the safest vehicles on the road(5 star rating). It is patently obvious that political corruption played a role in this exclusion, when one considers a 22mpg Jeep plug in hybrid qualifying, while the Tesla Model Y does not. Sincerely, Daniel Van Dyck
Joshua Schnall	1/3/2023 22:51	This is a public comment in regards to the EV tax credits in the inflation reduction act. "It is disgusting that EV tax credits are being given to cars which still use fossil fuels, namely plug in hybrids, while cars that are fully electric are being left out. Specifically the tax credits for SUVs which leave out many tesla model Y variants, seem to make little to no sense at all considering they are fully electric, SUVs, and also have more made in america materials than other EVs. This should be rectified immediately. And Plug in vehicles should be given less tax credits than fully electric vehicles. Thank You." -Joshua Schnall

Name	DateTimeReceived	Body.TextBody
David Tran	1/3/2023 22:51	Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, David Tran. Sent from my ifone
David DiStefano	1/3/2023 22:51	Hello, Please explain to me why the fully electric Tesla Model Y SUV with 5 seats does not qualify for the $7,500 tax credit as an SUV, but other 5-seat SUVs do, even ones with a gas-burning engine. This does not make sense and I'm hoping you can explain. Maybe it's a simple mistake? Thanks, Dave
Larry Koonse	1/3/2023 22:52	and not this model.
Kirk Rove	1/3/2023 22:53	Hi Andres, Please include all variants of Tesla Model Y as part of the SUV EV incentives instead of sedan. EPA has rated even the 5 seater as SUV, it doesn't make sense for it to be excluded. 🙏 Kirk
Gregg Oberlin	1/3/2023 22:53	why certain SUV's (Tesla model Y) would be excluded. If the climate is the reason for this ruling, hybrids should not count, but all BEV's should be equally included for the tax credit. Respectfully, Gregg Oberlin
rich@welcomehomebrands.com	1/3/2023 22:54	Under the new IRS guidelines, I have read the model y suv does not qualify for the suv tax credit. I have had other suv vehicles prior to purchasing the model Y in 2020. I do not understand why the model Y is not qualifying as an SUV for purposes of the tax credit under the Inflation Reduction Act as it is the best suv that i have ever owned. Richard Aslanian Co-Founder Welcome Home Brands, LLC 4 West Red Oak Lane, Suite 303 White Plains, NY 10604 914-696-0010 (work) 914-696-0012 (fax) 914-523-7068 (mobile) Rich@welcomehomebrands.com
Jeff Chen	1/3/2023 22:54	Please allow the Tesla Model Y 5 seat versions to qualify the $7500 credit. It is defined as an SUV by the Environmental Protection Agency. And my car title also shows that it is an SUV. Thank you for considering this change.
Vitaliy Ilnitsky	1/3/2023 22:54	finance. It model Y thank you. Sent from my iPhone
timothy martino	1/3/2023 22:54	Please consider that a battery electric Model Y five seat vehicle should be placed on the list to receive the EV Tax Credit. It's the most efficient SUV available. Tim Martino
Praveen Hugar	1/3/2023 22:54	It doesn't make sense that Tesla Model Y 5 seater is excluded from getting $7500 credit. Considering the range (over 300 miles) and the size of the car, it should qualify without a doubt especially when cars of other brands of the same size but ridiculously low range qualify for the credit. Thanks Praveen Hugar

Name	DateTimeReceived	Body.TextBody
James Percelay	1/3/2023 22:55	For the sake of the environment and fair play, please allow the Tesla Y to get the same $7500 as other similar SUVs. The German VW ID.4, which has about the same size as the American Model Y and Mach-E, is being considered a SUV and getting access to the tax credit for a price of up to $80,000. this as a major mistake since it goes against the purpose of the program, which is to encourage sales of more efficient vehicles. Vehicles with lighter weights are more efficient. There are several SUVs that have less cargo space than the Tesla Model Y and Ford Mustang Mach-E that are considered SUVs in the program, like the German BMW X5 plug-in and Italian Owned Stalantis/Jeep Wrangler plug-in. Thank you for considering this rule modification. — James Percelay JAMES PERCELAY 646.279.4122 @twitter<https://twitter.com/Twittier> @instagram<https://www.instagram.com/twittier/> @Facebook<https://www.facebook.com/james.percelay> @Linkedin<https://www.linkedin.com/in/jamespercelay/>
M McCreary	1/3/2023 22:55	As I have investigated this issue further I would like to amend/replace my previous comments with new information for clarity. The purpose of this let is to provide comment regarding Revenue Procedure 2022-42 and the associated web publication of https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after which is providing guidance on which vehicles makes and models qualify for the tax incentives. My concern is that the IRS is in violation of the Administrative Procedures Act by arbitrarily misclassifying certain variants of the Tesla Model Y as not a sport utility vehicle (SUV) and therefore request the IRS define a sport utility vehicle as is typically defined in the automotive literature as well as is classified by the EPA, NHTSA, and Department of Energy. This would make all variants of the Model Y an SUV. Statement of Law and Analysis Public Law No: 117-169 (08/16/2022) Part 4, Section 13401 (f)(11) states: (B)Applicable limitation.--For purposes of subparagraph (A), the applicable limitation for each vehicle classification is as follows: ``(i) Vans.--In the case of a van, $80,000. ``(ii) Sport utility vehicles.--In the case of a sport utility vehicle, $80,000. ``(iii) Pickup trucks.--In the case of a pickup truck, $80,000. ``(iv) Other.--In the case of any other vehicle, $55,000. (C) <> Regulations and guidance.--For purposes of this paragraph, the Secretary shall prescribe such regulations or other guidance as
John Kosoyan	1/3/2023 22:55	Dear IRS, 1 am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. 1 urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y.
Moe Thajib	1/3/2023 22:55	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future.

Name	DateTimeReceived	Body.TextBody
Robin Ren	1/3/2023 22:55	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80k price cap, not $55k. Thank you Robin -- Thanks, Robin
Mitch Gurdus	1/3/2023 22:56	To Whom it May Concern: I'm very disappointed that the purchase of a Tesla model Y does not qualify for the $7500 incentive, unless it is a seven-seat variety. That seven-seat requirement is, for some reason, not necessary for other companies. Tesla seems to have been unfairly singled out.
ali farhat	1/3/2023 22:56	Dear Internal Revenue Service, I am writing to express my frustration as a tax paying citizen regarding the new tax credit for electric vehicles. I am disappointed to see that the most popular electric vehicle, the Tesla Model Y (5 seat variant), is excluded from this credit, while inefficient plug-in hybrids like the Jeep Wrangler, which only gets 22mpg, are included. I understand the intention of the tax credit is to encourage the adoption of electric vehicles and reduce our reliance on fossil fuels. However, I believe it is unfair to exclude the Tesla Model Y (5 seat variant), which is a highly efficient and popular electric vehicle, while including less efficient options. As a taxpayer, I feel like my hard-earned money is not being used properly when credits are given to vehicles that do not align with the goals of reducing emissions and promoting sustainability. I urge the IRS to reconsider the criteria for the electric vehicle tax credit and ensure that it is supporting the most efficient and environmentally-friendly options available. Thank you for your attention to this matter. Sincerely, Ali Farhat Sent from my iPhone
Nathan R Berryhill	1/3/2023 22:56	means a Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient) with an SUV form factor does not qualify for the $7,500 tax credit. On the other hand, the Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (inefficient), and 25 miles of electric range, qualifies for the $7,500 tax credit. Please follow the same categorization as the EPA. Apply SUV/Non-SUV rules fairly, across the board, with consistency in order to correctly incentivize automakers and the public with the original intent of the bill. Thank you, Nathan Berryhill
Charles Zhao	1/3/2023 22:56	Dear Sir or Madam, I hope you had great holidays. I am writing to express my concern about Tesla Model Y 5 seater not being eligible for $7500 tax credit, please please make it eligible.
mindlessnick@yahoo.com	1/3/2023 22:56	Please include all variants of the Tesla model Y and the mustang mach e as SUVs. They are clearly not sedans or coupes. The exclusion of these vehicles is ridiculous. The intent of the inflation reduction act was to spur transition to sustainable energy to secure our energy future. To include jeep wranglers with negligible electric range and legroom and exclude a 5 seat model Y is evil. Don't be evil. Thank you Nick Archer Scottsdale AZ Sent from my iPhone
Edward Qin	1/3/2023 22:57	Dear Sir/Madam I think tesla Model Y 5 seater should be included and surprise that it's not from the beginning. Thank you! Edward 发自我的 iPhone
Gmail	1/3/2023 22:57	Dear IRS, I am writing to express my extreme frustration and disappointment that the Tesla Model Y has not been included in the tax credit for EVs. It is completely unacceptable that the Model Y, a highly efficient and environmentally-conscious vehicle, has been overlooked in favor of other hybrid cars that are not even pure electrics. It is clear that the IRS is not taking the issue of climate change seriously, and is instead prioritizing the inclusion of hybrid vehicles that are not as environmentally friendly as the Model Y. This decision is not only unfair to Tesla owners, but it is also irresponsible and shortsighted in the face of the urgent need to reduce our carbon emissions. I demand that the IRS reconsider its decision and include the Model Y in the tax credit immediately. The future of our planet depends on it. Sincerely,

Name	DateTimeReceived	Body.TextBody
Tyler Saves	1/3/2023 22:57	Hi, Thank you for accepting comments regarding the EV tax credits. I noticed that there are a few gas powered cars getting the incentive but pure EVs like the Tesla Model Y SUV is not getting the full 80,000 tax credit. The Model Y with 7 seats is receiving the full 80,000 coverage, but with 5 seats is not and is only getting 55,000 MSRP. This does not make sense to me as I would assume regardless of the seats, if it is an SUV and an EV, it should get the credits (especially over a gas car like the Jeep that qualifies). To give the 7 seat variant 80,000, but the 5 seat variant 55000 does not add up as it's the same vehicle! Please include the Model Y 5 Seater SUV under the $80,000 MSRP and allow it to get the tax credit. This will help make America significantly cleaner as this is the vehicle that the people want. Thank you
Melvin Collado	1/3/2023 22:57	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely Melvin Collado
Kenneth Sobel	1/3/2023 22:58	I do not understand why the 5-seat version of the Model Y does not qualify as an SUV for the new EV tax credit. This is even harder to understand when you see multiple 5-seat SUVs made by other manufacturers which do qualify. It seems that the government's definition of "SUV" is prejudicing Tesla for designing the Model Y to be a mass efficient vehicle. I want to see our government encourage mass-efficient vehicle designs, which will use less energy than heavier vehicles. I urge you to change your policies so that the Tesla Model Y and other mass-efficient electric SUVs qualify for the EV tax credit. Please don't enact domestic policy that encourages bad engineering. Sincerely, Ken Sobel 402 Jetty Dr Richmond, CA 94804
Randy Parz	1/3/2023 22:58	To anyone involved in defining the scope of the EV tax credit. as a general rule and in the simplest of terms; If it's size and usage falls between a sedan and a truck, it's an SUV. A large SUV is already classified as a "truck" by manufactures. The reasons for this appears to mirror the resent decision about EVs; aka: something other than logic; aka: special interests. A "crossover SUV" is not a "almost but still not quite an SUV", it's an SUV, that is more sensible for daily driving. The EV credit should also mirror what percentage of the industry average range is propelled completely by electricity. Regards, Randy
Lingli Zhao	1/3/2023 22:58	Hi IRS, I think tesla Model Y 5 seater should be included in EV tax credit qualifications and silly that it's not from the beginning. Thanks, Lingli

edward de jesus	1/3/2023 22:58	Dear IRS, I am writing to express my frustration and distrust with the recent tax incentive for electric vehicles. I am particularly disappointed that the incentive includes plug-in hybrids, but excludes the Tesla Model Y, which is the most popular electric vehicle in the world. Furthermore, I am concerned that the incentive includes a 22 mpg Jeep Wrangler, which seems to go against the purpose of promoting environmentally-friendly transportation. I understand that the goal of the incentive is to encourage the adoption of electric vehicles, but I do not believe that it is fair or logical to exclude certain popular models while including vehicles with such low fuel efficiency. I urge the IRS to reconsider its inclusion criteria for this tax incentive and to ensure that it is truly promoting the use of electric vehicles as a more sustainable transportation option. Sincerely, EDWARD DE JESUS 646-419-2184 edejesus196@gmail.com<mailto:edejesus196@gmail.com>
Charles Knecht	1/3/2023 22:58	Dear IRS: The IRS is interpreting who qualifies for EV tax credit. There is a glaring problem: Tesla Model Y 5-seater is being excluded from being counted as an "SUV." Please fix this by counting it as an SUV. This car is the most made-in-America out there and is also entirely battery-powered, not a hybrid. Qualifying hybrids with their scanty electric ranges is also very unfair. They're basically gas cars. Sincerely, Charles Knecht
Jason Brand	1/3/2023 22:58	The details in this petition say it all. Please address the nonsense definition of an SUV. "At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars." https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit -- Jason Brand 801-680-0806
Chris Nelson	1/3/2023 22:59	To Whom It May Concern, The Tesla Model Y 5 seater should absolutely be included in this. Please fix this. Best, Chris
Wojciech Kamiński	1/3/2023 22:59	Dear IRS Please include Tesla Model Y 5 seater "This means Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit." -- Pozdrawiam
Michael Holmes	1/3/2023 22:59	Please consider the inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued.

Name	DateTimeReceived	Body.TextBody
Zenos Schmickrath	1/3/2023 23:00	Dear IRS, I am writing to express my strong disagreement with the decision to exclude the Tesla Model Y (and other fully electric vehicles) from the $7500 tax credit for battery electric vehicles. As an American-made car and one of the most efficient battery electric vehicles on the market, I believe the Model Y should be included in this classification. It is highly disappointing to see that other, less efficient vehicles are included in the tax credit program while the Model Y is left out. I urge you to reconsider this decision and include the Model Y in the list of eligible vehicles for the tax credit. The Model Y is a key player in the push for sustainable transportation, and it is important that it receives the same support as other electric vehicles. Thank you for your attention to this matter. Sincerely, Zenos Jake Schmickrath
Eugene Brown	1/3/2023 23:00	Regarding your clarification of the vehicle eligibility for the IRA SUV and car level credit purchase price limits. It would seem that there is no consistency on which vehicles are eligible and which are not. For example, both the Mustang Mach E and the Tesla Model Y SUV are both classified as SUV's by the EPA. However, most trims of these vehicles are not eligible since they are not classified as SUVs in your classification and since they don't sell for under $55,000, they will be ineligible for the credit. Similarly, the VW ID4 has multiple trims, some of which are 4 wheel drive and are eligible while other vehicles are not. In contrast, several large Hybrid vehicles of similar size such as the Jeep Grand Cherokee 4xe, Audi Quatro Q5 all wheel drive, and the Ford Escape Plug in hybrid are classified as SUV's and receive the full $80,000 price limit for the credit. If there are real criteria underpinning these differences, they should be published so that the public and the manufacturers can see how these classifications are determined and why this should be different from the EPA's criteria. I believe the intent of the Congress in passing this legislation was to hasten the transition to green energy as the US is lagging behind in the adoption of these technologies. It also is odd, since most manufacturers have not been able to produce these vehicles at a profit. For example in the case of Ford, it would seem that this would give Ford an incentive to produce more Escape Hybrids (at the higher price point) and fewer of the Mach E, is a more efficient battery electric vehicle. In the short run, this might benefit Ford. However, in the long run it will decrease the pressure on the company to fully transition to electric vehicles. In the long run likely reduce rather than aid them in competing against the upstarts such as Tesla, Rivian and BYD. If the criteria is curb weight, this is a perverse disincentive, since lighter vehicles are more expensive to make and are more efficient, using less energy. It would seem that such vehicles would be the real target of the credit. The public is also confused by these criteria. And many experts in the field seem to have no good idea why some trims are included and some are not.
Leah Benson	1/3/2023 23:00	electric cars. Sincerely, A tax payer.
bing zhu	1/3/2023 23:01	Dear officer, I don’t think it’s fair for Tesla model Y . It’s definitely qualified for $7500 credit. Sincerely, Bing
Jackson Mahrt	1/3/2023 23:01	To whom it may concern, Please reconsider current IRS classification of “SUV” as it pertains to I.R.A. and follow already established, less environmentally insensitive, policy established by EPA. In no way should my tax dollars be wasted on antiquated technology of plug-in hybrids in leau of proven BEV platforms like the Tesla Model Y and Ford Mach E. General common sense should prevail and the voting American public will not continue to support politicians who act non-pragmatically and/or put lobbyist wishes above those who vote them into office. Sincerely,
Gera Cuello	1/3/2023 23:01	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. Tesla cars have proven to be the safest and most efficient car time and time again. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Please don’t let us down. This needs to be corrected immediately. Sincerely, Geraldine Cuello and Family

Name	DateTimeReceived	Body.TextBody
TJ McWain	1/3/2023 23:01	Dear IRS, I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV, has in has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Tesla Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, Thomas McWain
Wojciech Kamiński	1/3/2023 23:01	Dear IRS Please include Tesla Model Y 5 seater “This means Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit.” Z poważaniem / Best regards Wiceprezes Zarządu / Vice Chairman Wojciech Kamiński mobile: 0048 663 929 831<tel:0048%20663%20929%20831> e-mail: wojciech.kaminski@athletic.eu<mailto:wojciech.kaminski@athletic.eu> www: www.athletic.eu<http://www.athletic.eu/>
Kade Karges	1/3/2023 23:02	To whom it may concern: I'm writing to request a review of the Model Y 5 seat configuration to be evaluated as an SUV with a price cap of $80,000 for eligibility of the IRA $7500 credit. This car is categorized as an SUV by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. Seperately, the current rules seem to incentivize the purchase of some hybrid vehicles more than some fully electric vehicles. Seeing as hybrid vehicles still have combustion engines in them, this seems counter productive. Please consider adjusting the rules to properly incentivize the purchase fully electric vehicles over anything with a combustion engine. This does not mean hybrids should be excluded, but surely they should not be given special treatment over fully electric vehicles. Thanks Kade Karges US Citizen and US Tax Payer
Wojciech Kaminski	1/3/2023 23:02	Dear IRS Please include Tesla Model Y 5 seater “This means Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit.” Z poważaniem / Best regards Wiceprezes Zarządu / Vice Chairman Wojciech Kamiński mobile: 0048 663 929 831<tel:0048%20663%20929%20831> e-mail: wojciech.kaminski@athletic.eu<mailto:wojciech.kaminski@athletic.eu> www: www.athletic.eu<http://www.athletic.eu/> Z poważaniem / Best regards Wojciech Kamiński mobile: +48 663 929 831

Charles DiTrani	1/3/2023 23:02	the $7500 credit. Having minimum criteria for an electric SUV based on the weight and ride height of the vehicle is the opposite of an optimized fully electric vehicle. Reducing the ride height and lowering the weight of a vehicle increases the range, especially at highway speeds. Range is a key metric for purchasing an EV. More EV's can be produced using the same quantity of battery cells if they are lower to the ground and weigh less. Currently and for the transition period to 100% EV's, the limiting factor on their production is the availability of battery cells. The intention of this bill is to support the EV transition and in that spirit I ask that for fully electric vehicles the ride height and weight limits be removed for the criteria of determining an SUV with respect to this credit. Thank you, Charles DiTrani Sent from my iPhone

Shantanu Apte	1/3/2023 23:02	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Tesla model y (5 seat) somehow not eligible as suv and the $80k limit, but ford escape phev and Jeep phev and foreign made EV on lease are qualified for the full $7.5k credit, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. I request you to please consider and make the rules fair for consumers who are the taxpayers paying for ITA. Thanks Shantanu Apte
Wojciech Kamiński	1/3/2023 23:02	Please include Tesla Model Y 5 seater “This means Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit.” Z poważaniem / Best regards Wiceprezes Zarządu / Vice Chairman Wojciech Kamiński mobile: 0048 663 929 831<tel:0048%20663%20929%20831> e-mail: wojciech.kaminski@athletic.eu<mailto:wojciech.kaminski@athletic.eu> www: www.athletic.eu<http://www.athletic.eu/> Z poważaniem / Best regards Wojciech Kamiński CEO mobile: +48 663 929 831 wojciech.kaminski@heysolar.eu

Edmund Muth	1/3/2023 23:03	The IRS has published poorly reasoned rules for setting MSRP limits for EV’s and Plug-in EV’s that potentially qualify for the new IRA $7,500 tax credit. Specifically, the Tesla Model Y 5-seat configurations, the Mustang Mach-E and the VW ID.4 (4, 4 Pro, 4 Pro S, and S – the 5 seat variants) should have been assigned the $80,000 MSRP limit, not the $55,000 limit, to qualify (income allowing) for the full $7,500 tax credit. All are marketed and accepted by the public as SUV’s. The Tesla Model Y 5 seat is the most popular electric EV SUV in the US, the most efficient EV SUV in terms of MPGe, has the greatest Made-in-America content, and the best safety score. It is EXACTLY the kind of car that Congress intended to incentivize middle-class consumers to buy and manufacturers to build. Yet, these initial IRS rules discriminate against these extraordinary vehicles, for no good public policy or engineering reason and at variance to the intent of the law, and incentivize purchase (by granting the $80,000 MSRP gap) vastly less efficient cars, like the Ford Escape Plug-In Hybrid and the Jeep Wrangler 4xe. This rulemaking mistake should be corrected promptly. Respectfully – Edmund H. Muth

Coman Dinn	1/3/2023 23:03	I understand that the reason certain Tesla Model Y cars do not qualify for the EV tax credit is because they do not weigh enough. This is irrational and arbitrary in my opinion. The model with more seats apparently qualifies only because it weighs more. Tesla vehicles are very efficient and actually require a smaller battery which weighs less and is likely the reason the car comes in under the weight cutoff. Consumers who choose this model should not be penalized for Tesla's efficient use of materials. Sincerely, Coman Dinn
Brett Trotter	1/3/2023 23:03	I have a hard time understanding why any hybrid vehicles would qualify at all for this credit. Saying the Tesla model Y is not a SUV because it is not heavy enough demonstrates a complete failure to understand how light weighting vehicles helps with "fuel" economy. It is clear that many of these decisions were not founded in best practice or with true environmental impact in mind. They seem to be influenced more by which company or union donated more money. BEVs are selling faster than Ford, GM, Rivian, Canoo, Tesla, or BYD can make them. This country does not need to incentivize the market, but needs to ask these companies what they need to bolster production. You should be incentivizing lithium mining in the US, large scale lithium battery recycling, and research to improve battery energy density. You should not be taking orders from the UAW about how to kick back money to them for their past donations. Jeep's EV hybrid is a joke and will not reduce emissions like a pure BEV, it would actually be better to incentivize people to buy a Honda civic over a hybrid jeep. - Brett
Mitchell Gray	1/3/2023 23:04	I think the Tesla Model Y 5 seater should be included in the EV credits. It is not only lighter and more efficient than the other cars, but also has a much larger EV range. It is ridiculous it wasn't included.
Sugnesh Patel	1/3/2023 23:04	Hello, This email is intended to request the tesla model Y longe range 5 seats to be included in the EV tax credit. This is a very popular vehicle and should be included in this tax credit. Please reconsider your decision. Thank you. Sent from my iPhone
Mitch Strohminger	1/3/2023 23:04	Dear Andres Garcia, The current rules make no sense. The objective of the rules should be to support battery electric vehicles (BEV) like Teslas, the Ford Mach E and others. The tax credit should not be used for PHEV. It makes no sense, as many of these vehicles only engage their minuscule electric motors for a small portion of the time, thus still contributing massively to climate change. Also the current rules exclude Tesla Model Y 5 seater from the $7,500 tax credit despite it being an SUV. It should be subject to the $80,000 limit, however, as this limit is supposed to cover all SUVs. The 7 seater qualifies—why not the 5 seater? This makes no sense and seems quite arbitrary. Thank you. Mitch Strohminger Envoyé de mon iPad
Wojciech Kamiński	1/3/2023 23:04	Dear IRS, Please include Tesla Model Y 5 seater "This means Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit." dmitry oreshkin	1/3/2023 23:06	Dear IRS, I hope this letter finds you well. I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit. According to the IRS guidelines, the following Tesla Model Y variants are qualified for the 7500 tax credit if their Manufacturer's Suggested Retail Price (MSRP) is under $80000: #1 Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) #2 Tesla Model Y Long Range - 7 seat variant (3-rows) #3 Tesla Model Y Performance - 7 seat variant (3-rows) However, it appears that #1 and #3 do not exist. The following Tesla Model Y variants are also qualified for the $7,500 tax credit if their MSRP is under $55,000: #4 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) #5 Tesla Model Y Long Range - 5 seat variant (2-rows) #6 Tesla Model Y Performance - 5 seat variant (2-rows) However, it appears that #4 does not exist, and #5 and #6 are priced at $65,990 and $69,990, respectively, which may disqualify them from the tax credit.
Sugnesh Patel	1/3/2023 23:06	Hello, Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the credit. Sent from my iPhone
Julio Rodriguez	1/3/2023 23:07	IRS, I am writing to express concern regarding the new tax incentive of relectrice vehicles. it's not acceptable to that the incentive includes pulug-ins hybrids such as the 22 mpg jeep wrangler while excluding the most popular electric vehicle in the world the tesla model y I urge the irs to reconsider this decision to ensure thea the tax incentive is fairly applies to all electric vehicles including the Tesla model Y Thank You julio
David Cherem	1/3/2023 23:07	Hello, my name is David, I'm 19 years old from Detroit Michigan. Just wanted to let you know that my dad was going to buy me my first car a Tesla Model Y, he agreed to buy me that expensive car thanks to the new IRA and because I was going to give some of my bar mitzvah savings so we could afford it. We loved that it's cero emissions and that we will save a lot in gas, I'm hart broken to hear about your priorities in giving preference tu Gas SUVs instead of a Clean Tesla. We were literally waiting for 2023 to place the order, saved the exact amount for that and now I'm so sad and frustrated. Hope that you fix this and make the right thing. Thanks
Michael Grinshpun	1/3/2023 23:08	I write to comment on the qualified plug-in electric vehicle tax credit implementation. This comment is also attached in pdf format as a reading alternative. On December 29, 2021, the IRS published guidance for MSRP limits for certain vehicle models and trims/option configurations. This publication featured a seemingly inconsistent treatment of SUVs, classifying some as SUVs eligible for the higher $80k price cap and others not. As a result, the top 3 most popular EV SUV models and their most popular trims/configurations are priced out of the tax credit with the largest impact on the best-selling EV SUV – Tesla Model Y with 5 seats. The text of the inflation reduction act in section 13401 requires the secretary of treasury to determine vehicle classifications "using criteria similar to that employed by the Environmental Protection Agency and the Department of the Energy to determine size and class of vehicles." However, there are significant inconsistencies between the IRS methodology and EPA methodology as demonstrated in the below table: Vehicle IRS Classification EPA Classification Ford Escape Plug-In Hybrid SUV Small Sport Utility Vehicle 2WD Ford Mustang Mach-E Other Small Sport Utility Vehicle 2WD Lincoln Corsair Grand Touring Other Small Sport Utility Vehicle 4WD Cadillac Lyriq Other

Name	DateTimeReceived	Body.TextBody
Arsalaan Ali	1/3/2023 23:08	In the spirit of intellectual honesty and fairness, Tesla Model Y 5 seater should be included/qualify for the EV tax credit Kind regards, Arsalaan Ali
Pehz Jensen	1/3/2023 23:09	a counterproductive inconsistency. Regardless if there is reasoning behind the classification of Tesla's Model Y and Ford's Mach E as not SUVs, the effect is incentivising customers to buy less efficient hybrids and EVs. The Model Y and Mach E both fulfill all other requirements of the new tax credit, except the IRS decided to define them as not SUVs. This is outrageous and everyone who noticed this inconsistency knows it would be better off getting changed.
Roberto Aguilar	1/3/2023 23:09	Im submitting my comments to this change that needs to be made for tesla model 3 and model y trim. Model y is SUV and should be in the $80K threshold. the performance and long range should be in the $55k sedan range that is ridiculous when other gas power vehicles that barley have a battery inside of it gets the full credit but an full electric MADE IN AMERICA vehicle doesn't this need to change thank you for hearing me out on this. I had an order for tesla model y and now i don't have that credit please make this change ASAP please Roberto Aguilar
Brian Christ	1/3/2023 23:09	Consumers are being disadvantaged by not being able to order 5 seat model y vehicles. The model y is more mass efficient than other BEV and hybrids and therefore doesn't qualify? Better range more efficient and better for the environment so no subsidy? It doesn't seem to meet the intent of the law nor its potential benefit Brian Christ
Ryan Hanson	1/3/2023 23:09	In regards to the Inflation Reduction Act EV Tax Credit, this is a blatant betrayal of the American people (and humanity) and undermines our nations ability to make transportation sustainable, safe, clean, and most importantly affordable for everyone. First and foremost, the vehicles that qualify for the new EV Tax credit are by and large not what anyone would call an "Electric Vehicle". When the vast majority of people hear EV, they think of a car that 100% powered by electricity via batteries. No internal combustion engine. There is clearly people in power lobbying to congress (and to the media to be frank) to brainwash the American people and citizens of the world to believe that if a car has an electric motor and some batteries in combination with an ICE (commonly know as a Plugin Hybrid Electric Vehicle), it too is an electric vehicle. This is categorically false. Some of these "EVs" are so inefficient that they only have a "fully electric" range of 20 miles! And yet they qualify for a full $7,500 tax credit even though the vehicle is more expensive than a comparable sized true EV, that gets over 300 miles of fully electric range. Speaking of that true EV, the Tesla Model Y (5 seater variant), doesn't even qualify for the tax credit because it is being classified as a sedan and not SUV. Even though it's the same size and carries the same function as the 7 seater of which is classified as an SUV and does qualify for the tax credit. This makes zero sense, both should classified as SUVs regardless of the seating arrangement. To be honest, I personally believe all EVs under $100k MSRP should qualify for the full tax credit, and those EVs must be 100% battery electric with no fossil fuel backup. Any EV over $100k really should not qualify for the credit because if we're honest here, the people that can afford to buy a car like that don't need a break. Most of the EVs in that price range are luxury, like your Lucid Air GT, Tesla Model S Plaid, Tesla model X, Audi E-tron GT, Mercedes EQS etc. etc. To my point of making sustainable transportation affordable, the only way to do this is incentivize people to buy them. Most average consumers cannot afford EVs but a credit makes owning one more achievable. And the more people that buy an EV, the market for them will grow, more manufacturers will compete, and choices will be plentiful just like ICE cars today. Because of all of this, it will ultimately drive down prices of EVs as they become more commonplace. Eventually to the point a Tax Credit will no longer be needed. You can't just throw a credit on a vehicle "just because" it has some batteries and an electric motor. I mean for crying out loud there are golf carts with bigger batteries and more range than a Jeep wrangler 4xe. Why should a gas powered mall crawler with 20 miles of electric range get a tax credit
Kris de Porcel	1/3/2023 23:10	Dear IRS, I am writing another comment in case my original is filtered out as the subject was not exactly, "OMB Control No. 1545-2137". I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge you to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Automotive class rules should apply fairly across the board so that all vehicles the EPA categorizes as SUVs should receive the $7,500 tax credit up to the $80,000 MSRP. Currently, EVs like the Tesla Model Y and Ford Mach-E are being penalized for being more efficient by having less weight and being lower in ride height; these are features for electric vehicles as they increase range yet are acting as penalties in regards to the tax credit. Please fix the categorization so that vehicle categories are applied fairly across all vehicle types. EV adoption should be incentivized over hybrid vehicles which was the original intent of the bill; not penalized. Sincerely, Kris de Porcel ---------- Kris de Porcel kdeporce@gmail.com
Eugeneh0	1/3/2023 23:10	Please remove all the ones with gas engine and add Tesla mode y as suv. Regards, Eugene

Matt Fagala	1/3/2023 23:11	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular and safest electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Thanks, -- Matt Fagala "You can easily judge the character of a man by how he treats those who can do nothing for him." - Simon Sinek
Yun Peng	1/3/2023 23:11	Hello Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the IRA tax credit. Thanks Yun Peng
Hak Yun	1/3/2023 23:11	I think tesla Model Y 5 seater should be included and silly that it’s not from the beginning
Patrick Chen	1/3/2023 23:11	Tesla model Y is such a nice car, many of my friends planned to purchase it with the $7,500 credit. However we learned you did not approve it. Would you please approve the credit? We are counting on the credit. Otherwise we would not find the right EV to purchase. Patrick Chen A resident of Cupertino, CA Sent from my iPhone
Peter Sukus	1/3/2023 23:11	Move AWAY from fossil fuel, not encourage people into thinking they are helping the world by adding a gallon of gas equivalent miles of range on their suburb tanks. This kind of behaviour is going to be hammered until it's simple. Don't give into highly politicized ignorance, because mineral aren't from the USA. Give the 0 companies who can source a full battery in country and additional credit or manufacturer credit if they can do it. It should be simple: Full plugin ev? Credit Is it more efficient than a brick wall driving down the road? Then give it more! This can be a slider within the EV credit. Hummer EV credit, Tesla model y credit plug efficiency credit. Hybrid? Maybe a fraction. And by hybrid I mean all combo gas and electric cars. Why make a distinction? Is 40 miles better than 10? Sure but that is not the point. Getting off fossil fuels is the point!
yu ting chen	1/3/2023 23:12	incentives-evs-vs-hybrids/> from the IRA at all, yet some vehicles that use fossil fuels will. Those vehicles are classified as electric vehicles because they are plug-in hybrid EVs. “ This just doesn’t make any sense. Please do the right thing
Nate Wehunt	1/3/2023 23:12	Thank you for the opportunity to comment. I believe the criteria for this tax credit are completely broken. A couple of examples: Removing the 3rd row of seats from an SUV doesn’t suddenly turn it into a sedan. The Tesla Model Y is clearly an SUV and recognized as such by the EPA. But the list shows those without the 3rd row are not recognized as an SUV. PHEVs are not true EVs. A vehicle that gets 20 MPG should not be getting this credit over our US companies making vehicles getting well over 110 MPGe. Rather than trying to jump through a bunch of hoops to define the vehicles that qualify, simplify it to any vehicle that gets over say 90 MPGe and is under $80k. Every vehicle needs to get the rating anyway, so keep it simple. If someone can make a gas powered vehicle get to that level, you still improved the environmental impact of that vehicle over a more polluting one. Thanks for your service by working within our government. That probably isn’t said enough these days. Sincerely, Nate Wehunt -- Nate Wehunt President, NTMK Corp.

Sandeep Tapse	1/3/2023 23:12	Hello - Pls include 2022 Tesla Model Y in the $7500 EV tax credit. This car truly deserves a tax credit. Sent from my iPhone
Jie Guo	1/3/2023 23:13	I want my money to be spent on real EV vehicles. So I support TESLA model Y 5 seats be included in the $7500 federal TAX rebate. Thank you Sent from my iPhone
mike mueckes.us	1/3/2023 23:14	I am surprised at the way the new $7500 EV credit is structured. As a taxpayer, I would prefer there be no incentives as it looks like the Auto industry is moving to full EVs already, as it should. This satisfies my desire to see a cleaner sustainable future for our children. We should be going electric as fast as we can, no mystery there. However, if we are going to have incentives, we should do our best to make sure the incentives drive manufacturers to create efficient, fully electric vehicles. This definitely should NOT include hybrids as they can be actually less efficient than standard gas guzzling vehicles. This is because hybrids must carry the extra weight of two separate drive trains. Unfortunately, most of these vehicles rarely, if ever, use the battery mode. So, the stated MPG is actually much lower than stated in real world use. On the other hand, fully electric vehicles are an outstanding improvement in efficiency and allow consumers to charge their vehicles using rooftop solar. You can't make gas at home. So, there is no corresponding method for ICE vehicles or hybrids except at a very tiny range which isn't at all practical. Even then, the hybrid is forced to lug around the added weight of the gas powered engine when operating under battery power for the tiny range allowed by the battery. I am also shocked to see that some trim levels of the Tesla model Y are not included in the SUV category. This is absurd. There are other vehicles, from other brands, that are on the list that have 5 seats and, are less of an SUV class vehicle. I hope this is simply a mistake instead of the obvious corruption that it appears at first glance. Every trim levels of the model Y should be classed as an SUV, period. Those that sell below the $80k SUv limit should qualify for the incentive. It is ludicrous that a Jeep off road hybrid vehicle with a tiny range and a terrible MPG rating is subsidized when a truly efficient 100% EV like the model Y is not allowed into the program.
데카메롱	1/3/2023 23:14	I am writing to express my disappointment and frustration that the Tesla Model Y 5-seat model will not be included in the IRA tax credit as of 2023. As a Tesla customer, I was eagerly anticipating the opportunity to take advantage of this credit when purchasing my Model Y I understand that the tax credit is subject to change, and that it is not uncommon for certain models to be excluded from time to time. However, I feel that the Model Y 5-seat model is an important and popular option for Tesla customers, and I am disappointed that it will no longer be eligible for this credit. I hope that you will reconsider this decision and include the Model Y 5-seat model in the IRA tax credit as soon as possible. Sincerely, Bran Shim
Vicky	1/3/2023 23:14	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, vicky singh Sent from my iPhone. Sorry for brevity and typos!
Manuel Sarias	1/3/2023 23:14	To whom it may concern, Please update your current guidelines to include bona fide electric SUVs such as the Tesla Model Y 5-seater for the IRS $7500 tax credit. Why is it being left out? Please fix this. Respectfully, Manuel Sarias

Name	DateTimeReceived	Body.TextBody
Daniel carlson	1/3/2023 23:15	Americans get 100% Electric and Zero pollution isn't it more beneficial if the cars where able to drive 100 miles, then they can get to work and back home with only charging the car at night. Personally, I was hoping I could stretch the budget and buy a standard range model Y I know it's not 55K but if it was and then I saved 7.5K with your help I could almost afford it would help me save so much gas money but I have to drive 57 miles to work the only electric car can make it is with me charging at home thank you for your time. Get Outlook for Android<https://aka.ms/AAb9ysg>
Lori Copler	1/3/2023 23:15	though they use gas while other completely electric vehicles (like variants of Tesla Model Y and the Ford Mustang Mach-E) are being excluded. Thank you. Sincerely, Lori Copler
Randall Doerksen	1/3/2023 23:15	I am writing to request a reconsideration of the standard used to determine if an EV is eligible to be treated as an SUV for purposes of the $7,500 EV tax credit that was approved in conjunction with the IRA. Recently issued guidance stipulates that neither the five seat Tesla Model Y or the Mustang Mach E are eligible to be treated as SUVs under the guidelines, instead being classified as sedans and therefore ineligible for the 80,000 limit. Both of these vehicles are classified as SUVs by the EPA. What is especially perplexing is that the seven seat Model Y is classified as an SUV though it’s dimensions are identical to the five seat version. It is also perplexing that both the Jeep 4xe and BMW x5 45e (plug in hybrids) do receive the full credit despite being 5 seaters. As an aside, neither the Jeep or BMW is nearly as efficient as the Mach E or Model Y; encouraging improved efficiency was the primary purpose of establishing the tax credits. I would respectfully request a reconsideration of the classifications of the Model Y and Mach E specifically. I am considered the purchase of one of these vehicles during the next year and believe the tax credit should be available based on the intent of IRA. Respectively submitted, Randy Doerksen Wichita, KS A simple solution would be to adopt EPA classification guidelines. Sent from AT&T Yahoo Mail for iPhone<https://more.att.com/currently/imap>
Tim Curley	1/3/2023 23:16	I am considering a Model Y for purchase I hear the 5 seat is excluded for IRA incentives but the 7 seat does get the incentive. Also far less efficient hybrid Jeeps and even foreign cars qualify. I want to buy from the most experienced and most American car company. That is Tesla As a taxpayer & concerned environmentalist, this exclusion seems arbitrary and does not build trust Tim Curley Downers Grove IL Sent from my iPhone
Urs	1/3/2023 23:16	Hybrids: Is it not contrary to the spirit of the IRA to subsidize gas or diesel burning cars with the tax incentive and other measures? As far as I can see no hybrid should be included in the incentive. As it has been discovered in Europe the hybrids getting the subsidies are use almost exclusively as pure ICE (not using the battery at all). I don’t think Americans are much different. Additionally the hybrid infrastructure necessitates the continuation of the deadly fossil fuel industry, which we as a species can not afford. So in my opinion hybrids should not get any tax cuts or rebates whatsoever, they do not lower overall gas consumption. SUV The EPA has classified the Tesla Model Y as an SUV. Now the IRS de-classifies it as a sedan. It is by faaaar the most purchased electric vehicle in the USA and on the planet. Why on earth does the IRS want to hinder the sale of the most popular EV? Tesla is the only EV manufacturer capable, and in the process of manufacturing, hundreds of thousands of these cars in the USA. Why is the IRS trying to slow them down? People are not buying other EVs instead – there are very few to buy – they will be forced to buy an ICE car and burn more fossil fuels, postponing the sorely needed demise of the deadly fossil fuel industry. So, please classify the Model Y the same way the EPA did, as an SUV. Life on earth will thank you for it. Sincerely -- urs schuler, Placerville, CA
Cody Renshaw	1/3/2023 23:16	Tesla Model Y 5-seater should qualify as an SUV, in order to be consistent with the other 5 seat SUVs that do qualify for the $7,500 credit with a $80,000 MSRP limit. This is the the most American beehives there is supporting the most American jobs. Thanks, Cody Renshaw Washington, Illinois Sent from my iPhone

Jones, Evan A LT USN (USA)	1/3/2023 23:17	As a USNA Graduate, Naval Officer and Federal Employee, I am writing to express my disappointment and frustration with the federal government's decision to exclude the Tesla Model Y from the list of eligible vehicles for the electric vehicle tax credit. As a member of the military and the government, I expect our government to lead by example and make decisions that are in the best interests of our country and our environment. I understand that the purpose of this tax credit is to encourage the adoption of electric vehicles and reduce our reliance on fossil fuels. However, including vehicles that still rely on gasoline, such as the Jeep Wrangler with its 22 miles to the gallon, as part of this credit goes against this purpose. The Tesla Model Y, on the other hand, is a fully electric vehicle and should be eligible for this credit.? This decision disheartens me and makes me question the government's motivations. Why is the government supporting vehicles that still rely on fossil fuels with a credit meant for electric vehicles? I urge the IRS to reconsider this decision and include the Tesla Model Y in the list of eligible vehicles for the electric vehicle tax credit. We must do everything we can to support the transition to electric vehicles and a sustainable future. I hope that the IRS will take my concerns into consideration and make the necessary changes to include the Tesla Model Y in the electric vehicle tax credit. Very Respectfully, LT Evan "INCANTS*" Jones VAQ-131 NATOPS Officer
Justin Brolyer	1/3/2023 23:17	Dear IRS I'm writing to express my concern that the Tesla Model Y 5 seater is not included in the eligible vehicles to receive the IRA EV tax credit. The Model Y 5 seater should be classified as an SUV as it is classified as one by the EPA and has been classified as a SUV since it was first brought to the market. Please consider revisiting the vehicles allowed to receive the credit and add the Model Y 5 seater. Thank you Justin Brolyer Sent from my iPhone
Neal Seiwert	1/3/2023 23:17	Dear IRS, I am writing to express my disappointment that the 5 seat Tesla Model Y is not part of the IRS EV Tax Credit program. I urge the IRS to reconsider its decision and to include the 5 seat Tesla in the EV Tax Credit program.Thank you for your attention to this matter. Sincerely, Neal Seiwert Sent from my iPhone
Chen L	1/3/2023 23:18	Tesla model y is not a SUV? Which corrupted officials made that decision? Please publish the names. Chen
Chris Shen	1/3/2023 23:18	Hello IRS, Please classify the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. I think this car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves. It is so silly that it is not from the beginning. I want MY TAX DOLLAR to support the car manufacturer which makes our planet sustainable for our next generation. I think there are millions of players who share the same perspective. Thanks you, A very concerned taxpayer from California
Corbin Williams	1/3/2023 23:18	To whom it may concern, Who in their right mind wrote these EV tax credit rules? Y'all qualify a gas guzzling Jeep which only gets 21 Miles on a single charge while getting 20 MPGe. Keep in mind besides filling up with gas weekly, this vehicle still needs regular oil changes creating further contamination in our environment. The low 21 mile battery capacity also means significantly lower total miles per battery life cycle which is even worse for the environment. (Example: 1,000 full battery cycles = 21,000 miles of driving range for the Jeep) Whereas the Tesla Model Y can easily achieve 330 Miles fully electric at 117 MPGe. Tesla Model Y is the most American SUV on the list. Tesla's high 330 mile battery capacity also means significantly greater total miles per battery life cycle which is greater for our environment. Please see attached list if you're still confused. (Example: 1,000 full battery cycles = 330,000 miles of driving range for the Tesla) Does this make any sense at all? These EV tax credit rules are absolute garbage and need to be revised immediately. How the hell can you guys qualify any vehicle that has a gasoline engine for EV Tax Credits?! Yes, we're talking about the same gasoline vehicles that will be mostly banned for new vehicle sales starting in 2035!! I would love to hear back from someone at your office or at least an acknowledgment that you read this email. This is so bizarre. Make it make sense for me?! Pure EV's with the absolute highest range, MPGe and assembled in America should be the only qualifying vehicles on the EV Tax Credit rebate. I know y'all don't just sitting behind a desk in Washington and don't really give a damn about the environment or the citizens of this beautiful country. Thank you, Corbin Williams American Tax Payer

Jim McClarin	1/3/2023 23:18	OMB Control No. 1545-2137 Hi, The inclusion of HEVs while excluding BEVs seems to thwart the intent of the bill. Also, if SUVs receive a higher MSRP threshold to qualify, why not accept the industry or EPA definition of SUV? Jim McClarin Sent from Mail<https://go.microsoft.com/fwlink/?LinkId=550986> for Windows
Phil Muljana	1/3/2023 23:18	To Whom It May Concern, I am writing to express my concern about the EV tax credit bill that is currently in place in the United States of America. I believe that this bill is fundamentally unfair and the way it is implemented is not within the spirit of the original intention of the law. The bill allows a number of hybrid vehicles to receive a $7,500 EV tax rebate, even though this is supposedly an EV tax credit bill. These hybrid vehicles - including the Audi Q5 TFSI e Quattro PHEV, BMW X5 xDrive45e, Ford Escape Plug-in Hybrid, Jeep Grand Cherokee 4xe, and Jeep Wrangler - have an effective MPG ranging from 20 to 61, significantly lower than the Tesla Model Y, which has an effective MPG of 127. The purchases of the hybrids listed above could choose to exclusively use only gas in their new hybrid vehicle, which would go directly against the intention of the bill to encourage the purchase/usage of clean energy in new vehicles in North America. It seems unfair to allow these vehicles to receive a tax credit while the Tesla Model Y, which has a much higher efficiency and runs 100% on battery, receives nothing. In conclusion, I urge you to consider the unfairness of this bill and the negative impact it could have transitioning our country toward a sustainable and cleaner future. Sincerely, -- [http://chart.apis.google.com/chart?cht=qr&chs=120x120&chl=MECARD%3AN%3APhilip+Muljana%3BEMAIL%3Apmuljana%40gmail.com%3BNOTE%3AIf+you+can+read+this%2C+then+I+think+you're+awesome!%3B%3B] ~ Philip Muljana ~ pmuljana@gmail.com<mailto:pmuljana@gmail.com> ~ Hard Work will take you anywhere you want to go.
Brij Patel	1/3/2023 23:19	Dear IRS, I am writing to express my concern regarding the eligibility requirements for tax credits on vehicles. While I understand that the credit is intended to encourage the use of fuel-efficient vehicles, I believe that the current criteria do not adequately reflect this goal. Specifically, I am disappointed to see that the Tesla Model Y, an American-made brand with a strong emphasis on sustainability, is not eligible for the credit, while the Jeep Wrangler, a less fuel-efficient hybrid, is. In a world that is increasingly focused on sustainability, it seems unfair to reward companies like Jeep Wrangler with tax dollars, while brands like Tesla are left out. I understand that the IRS has a difficult job in determining eligibility for tax credits, but I hope that you will consider revising the criteria to better reflect our collective goals of reducing our environmental impact and supporting American businesses that are leading the way in sustainability. Thank you for considering my feedback. Sincerely, Brij
Kyle Riebeling	1/3/2023 23:19	car. This is actually causing inappropriate rewards for some automakers and too little rewards for others. One major issue is that the 5 seat Tesla Model Y does not qualify as an SUV, even though it is an SUV even accordingto the EPA. What qualification somehow makes one thing an SUV verse others? Tesla Model Y is arger than some of the 5-seat vehicles listed to be eligible for the SUV credit. This does not make any sense. Also there are inefficient hybrids that can receive the full tax credit even though they are mostly combustion engine. This money is meant to support electric drive train. Please review the list of SUV and Cars that are eligible for the EV Tax credit. At minimum please apply SUV/Non SUV rules fairly, across the board, with consistency in order to correctly incentivize automakers and the public with the original intent of the bill. It would be great if only pure electric vehicles were eligible not hybrids because the technology in a hybrid is not worth supporting further development. And it causes more carbon emissions according to studies.

Rafael Pena	1/3/2023 23:19	Howdy, reaching out to lend my voice to the ev tax credit qualifications. All tesla vehicles that meet the price threshold need to be considered for the full $7500 tax credit. Tesla is 100% ev what is what the incentive is for, to lure consumers to buy smarter more fuel efficient vehicles that reduce its carbon footprint. Disqualifying the model Y is a nonsensical overlook and harms consumer with bigger families who only wish to help out the environment. Additionally removing the manufacturer cap limit on Tesla should be considered as well due to the immense popularity of the car. Potential Tesla owners shouldn't be out at a disadvantage simply bc of the volume of sales. I think the definition of ev should mean 100% ev. 21 miles for the jeep and it's a ev, what a joke. Please consider my request. Sincerely a Tesla model 3 owner.
Brian Machado	1/3/2023 23:20	Dear IRS, I am writing to express my concern about the recent inflation reduction act. It is unfair that not all Model Y variants are included in this act, and it is counterproductive to show favoritism towards certain vehicles. By prioritizing incentives for gas-powered vehicles and non-EVs, we are holding back the growth and success of companies like Tesla that are leading the way in clean and sustainable transportation. This exclusion does a disservice to American taxpayers and businesses. I urge you to reconsider the qualifications for the electric vehicle tax credit and to prioritize incentives for truly zero-emission vehicles, especially those made by American manufacturers (e.g., Tesla). It is important that we support and encourage the adoption of clean and sustainable transportation options for the benefit of both the environment and our economy. A healthy economy depends on fair treatment and equal opportunities for all consumers. By excluding certain vehicles from the inflation reduction act, you are hindering the growth and success of those individuals and businesses who rely on these vehicles. This is inefficient and goes against the purpose of the act, which is to provide relief and support to consumers. I request that you immediately reconsider this decision and include all Model Y variants in the inflation reduction act. It is not fair to discriminate against certain vehicles and their owners, and it is not in the best interests of our economy to do so. Sincerely, Brian A. Machado
Justin Schmader	1/3/2023 23:20	Dear Internal Revenue Service, I am writing to express my frustration and confusion about the new tax incentive for electric vehicles. I had hoped that this incentive would encourage the adoption of more environmentally friendly transportation options. However, it seems that it actually incentivizes vehicles that are more harmful to the environment, such as the Jeep Wrangler, which only gets 22 miles per gallon equivalent. On the other hand, fully electric vehicles, like the Tesla Model Y, can get up to 120 miles per gallon equivalent. If the intent of the incentive is to encourage the use of more fuel efficient vehicles, then it is bizarre that it would actually reward the purchase of a vehicle that is less efficient. I understand that the goal of the incentive is to reduce our reliance on fossil fuels and improve air quality. However, by rewarding the purchase of less efficient vehicles, it seems that the incentive is not achieving its intended goals. I hope that the IRS will consider revising the criteria for this incentive to ensure that it is truly encouraging the adoption of more fuel efficient and environmentally friendly transportation options. Sincerely, Justin Schmader
Kal Aboulhosn	1/3/2023 23:21	To whom it may concern. Let me start by stating how important this tax incentive for some EV vehicles is for the consumers in the US and green energy as hole. I'm writing to request a review of the Model Y 5 seat configuration to be evaluated as an SUV the same as the 7 seat version to be eligible for the $7500 credit. Having minimum criteria for an electric SUV based on the weight and ride height of the vehicle is the opposite of an optimized fully electric vehicle. Reducing the ride height and lowering the weight of a vehicle increases the range, especially at highway speeds. Range is a key metric for purchasing an EV. More EV's can be produced using the same quantity of battery cells. Based on the inclusion and exclusion criteria there is great deal of unfairness some against tesla and some pro other models that shouldn't even qualify. Sincerely, Khaldoun Abouelbosn, MD
Davis, Gabriel	1/3/2023 23:21	To whom it may concern, Please consider including the Tesla model Y in the $7,500 tax credit program for this year. I was hoping to buy one or the Tesla Truck later this year. 🙏 Thanks, Gabe Davis
Brian Leung	1/3/2023 23:21	I am writing to express my frustration and disappointment with the fact that the Tesla Model Y 5 seater does not qualify for the IRA $7500 credit. It is my understanding that this credit is intended to encourage the adoption of electric vehicles and to reduce our reliance on fossil fuels, which are major contributors to climate change. However, it appears that the rules surrounding this credit have been written by special interest groups, and there are many political motivations at play. This is unacceptable, as it undermines the integrity of the credit and calls into question the motivations of those who created the rules. I strongly urge the IRS to reconsider the eligibility criteria for this credit, and to ensure that it is fairly and transparently applied to all electric vehicles that meet the necessary requirements. The Tesla Model Y 5 seater is a highly efficient and environmentally friendly vehicle, and it should be eligible for this credit. Sincerely,,

Name	DateTimeReceived	Body.TextBody
Raymond Ma	1/3/2023 23:22	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, I would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Raymond Ma
Gene Shepherd	1/3/2023 23:22	I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-frendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Ivis E. Shepherd
Sharon Liu	1/3/2023 23:22	Dear IRS, Please treat all EV manufactures fairly and include Tesla Model Y 5 seat as SUV. It's silly to not do that from the begging and will only make us tax payers's confidence on how our tax money are spent. Thanks, Sharon
Alex Novosad	1/3/2023 23:22	Dear IRS team, Re: SUV EV credits classification, I think weight isn't what makes a car an SUV; internal room/space, number of passengers, plus lack of trunk is what makes a car an SUV. As lighter alloys and engines are developed (as is the case with Tesla, for example), it is obvious that weight will reduce and thus qualifying by weight is wrong. Just think as a human how you discern an SUV from a sedan. All SUVs have: - 5 to 8 seats - No protruding trunk like a sedan (the rear door is 5th door instead) - Certain minimum height (vehicle height, not off the ground) - More internal room than sedans (hence the "utility" part). Not sure about the exact number, but if you looked at lowest internal space in cubic meters (not just cargo space, but include occupant space) for an SUV, it would still be a larger number than highest internal space of any non-limo sedan. Please do not penalize Tesla (or any other) brand for making lighter, more efficient SUVs. This is the innovation we should incentivize, not punish. The whole point of this credit is to reduce pollution, and by definition - the lighter the vehicle, the less energy it takes to move, hence less pollution. It is thus against the intention of this bill to penalize lighter vehicles. Thank you so much for your hard work! I know reading probably a lot of hate isn't easy. Best,
Anthony Tapia	1/3/2023 23:22	I really believe that the Tesla Model Y 5 seater should be viewed as an SUV and have a price cap under $80K to qualify for the EV credit. If the goal is to truly electrify the fleat then it would be a huge disservice to exclude the most popular EV. It is silly that we can take an ICE vehicle and slap a small 14.4 KV battery and that qualifies. Makes no sense to give same incentive for a plug in hybrid and a full EV. I commute 100 miles per day. If I get a plug in hybrid that drains the battery after 30 miles then for 70 miles I am using gas. Makes no sense to incentivize this! Please don't lose sight of why this credit went in in the first place. Thanks, Anthony Tapia
Ed	1/3/2023 23:22	It is unfathomable to me that 2 particular cars have been left off the acceptable list for the $7500 credit. I am speaking of the Tesla Model Y 5 seat and the Mustang Mach E. They are certainly considered by most people as an SUV. It seems contrary to the spirit and goal of the legislation that they should be left off while a very similar car that is manufactured by a German car company, the VW ID 4, is on the list. Please consider a change to include these 2 cars. Thank you. Ed Kula Sent from my iPad

정승환(logan)	1/3/2023 23:22	Dear [IRS], I am writing to bring to your attention an issue with the IRS tax credits for electric vehicles. It has come to my attention that the Tesla Model Y 5 seat model is not included in the list of eligible vehicles for the tax credit starting in 2023. As a prospective Tesla Model Y owner, I was counting on the availability of this tax credit to offset the cost of purchasing an electric vehicle. I understand that the tax credits are meant to incentivize the purchase of electric vehicles and help reduce our dependence on fossil fuels. However, the exclusion of the Model Y 5 seat model from the list of eligible vehicles seems counterintuitive to these goals. I urge you to reconsider the exclusion of the Model Y 5 seat model from the tax credit program. This model is a popular choice for families and individuals who are looking to make the switch to electric, and its exclusion from the program could discourage them from making the switch. Thank you for your attention to this matter. I look forward to your response. Sincerely, [JEONG SEUNG HWAN]
Gary Wright	1/3/2023 23:22	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Gary Wright
anna3730@yahoo.com	1/3/2023 23:23	It is totally inconsistent with industrial policy that the Tesla Model Y 5 seater is not included here. What is the policy rationale? Regards. Annalisa Nash Sent from Yahoo Mail on Android<https://go.onelink.me/107872968?pid=InProduct&c=Global_Internal_YGrowth_AndroidEmailSig__AndroidUsers&af_wl=ym&af_sub1=Internal&af_sub2=Global_YGrowth&af_sub3=EmailSignature>
Dead Tree Joins	1/3/2023 23:23	This looks bad, Tesla model y should be allowed the 7500.00 incentive. Please change this!!! Best Regards, Mark Martinek Sent from my iPhone
cesar escamilla	1/3/2023 23:23	Hello IRS, I'm responding to feedback requested regarding the "Inflation Reduction Act" that was sign into law. As you know this bill is meant to have an impact for consumers to adopt EV's but Teslas are being left out. Particularly the Model Y 5 seater variant. I do not understand your methodology as to how you arrive to this conclusion. Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves
Scott Riley	1/3/2023 23:23	Dear Sir or Madam, I am writing to register my objection to the classification of the Tesla Model Y Dual Motor (5 seat variant)(AWD) as something other than an SUV. There are similar vehicles with 5 seats being classified as an SUV, such as the the VW ID 4 AWD and Ford Escape, even though the latter has an internal combustion engine, and only a very small battery. I would also like to register my objection to any internal combustion engine vehicles being considered in this act. Regards, Scott Riley 707-342-1825
M Michelin	1/3/2023 23:23	+ Add $2,500 of batteries (for a whopping 21 miles of electric range) = Get a $7,500 subsidy. Jeep Wrangler 4xe [Inline image] Meanwhile, a true EV SUV with 15x the range and more cargo capacity doesn't qualify because it's not "SUV enough" (Tesla Model-Y Long Range 5-seat variant) [Inline image] If you would like to continue to show how corrupt our government is, then you'll let this stand. If you would like to show some semblance of sanity in an otherwise corrupt government, you'll change this to allow the incentive for full-battery electric vehicles only and not ridiculous hybrids with ICE that still take in gas out of the ground (and pump carbon into the air). MM
Steve Wang	1/3/2023 23:23	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Zheng Wang

Kyle	1/3/2023 23:24	I want Tesla Model Y 5 Seat to be qualified $7500 tax credit. Who the hell thinks it's not a SUV? Is the people there really care about electrify the America?
Toan Hong	1/3/2023 23:24	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that the incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, -- TOAN A. HONG T: 305.610.5173 E: toanhong@gmail.com<mailto:toanhong@gmail.com>
Nathan Haase	1/3/2023 23:25	It seems that a tax credit for Electric Vehicles should include all domestic Electric Vehicle makers. Maybe a slightly smaller credit for imported Electric Vehicles to account for the added fossil fuels. Every Tesla vehicle should be eligible, perhaps especially the Model Y. I'm a dad of 2 kids and have few larger Electric Vehicles to choose from as it is. The tax incentive should support anyone making the switch to Electric Vehicles regardless of production volumes. If it can't be equitable at $7500 then reduce it to $5,000 for all first-time New Electric Vehicle buyers. Sent from my iPhone
Puffer Pig	1/3/2023 23:25	To whom it may concern, Thank you for your time taking my concerns into consideration. I have been a long term EV owner and advocate. I was optimistic that the bill would be a simple approach to help Americans gain access to American brands like GM and Tesla since they no longer qualify. I was optimistic that the bill would have provided competition to improve the industry, advance technology in the EV space and advance our society away for the pollution and green house gas emissions Bureaucracy and special interests groups have so much influence that our laws have become paths forward to pay them back for their campaign financing and other sinister ways to corrupt those who shouldn't be. This is clear from the list of cars that are "eligible" for the credit. 1) It's a grave error to include hybrids at all into the bill as they have been shown to be significantly less environmentally friendly than both ICE and EV's. (i.e. the plug in Jeep w/ 20 miles of range). A more prudent and fair measure ion hybrid were to be included would be to have an equation where the rebate matches the percentage of total range of the vehicle provided by the battery pack in addition to the percentage of battery materials from the US. Having an EV rebate on a negligible range battery in a car with the ability to charge to its 20 mile capacity is a crime committed on the American Tax payers who support those automobiles. 2) Excluding the American made, Model Y as a SUV (a 5 seater) while including the Ford Escape; a Plug in Hybrid and German's Volkswagen ID.4 AWD, 5 seat capacity vehicles is a mind boggling error and mis use of intended tax dollars. (The total area in the Model Y is larger than both of these cars). Model Y seating capacity is 7 and there is a 55K cap vs the 80K for these other undeserving models. Including these Plug in Hybrids and hybrids as a whole to these credits for electric vehicles strengthen the public's opinion that government incentives for private industry show that the government is more interested in looking like they are doing something than in actually doing anything. Please consider this when compiling new guidance.

Kenneth	1/3/2023 23:25	OMB Control No. 1545-2137 I am writing to you to request (with regards to the Inflation Reduction Act's vehicle price caps and corresponding $7,500 Federal Tax Credit) that the Tesla Model Y Long Range 5 seater variants and Ford Mach E be included in the SUV category that receives the $80,000 price cap instead of the $55,000 cap. The Inflation Reduction Act has a stipulation in which Pure Electric Vehicles and Hybrid Electric Vehicles are able to take advantage of up to $7,500 as Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. Here are the primary qualifications for the EV tax credit: [e9f76bb1-fcee-4219-a088-6d19cd025729.jpeg] However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers like Tesla are being unfairly treated, while others are getting a benefit they do not deserve. There is no reason why Tesla Model Y Long Range 5 seater or Ford Mach E is limited to a $55,000 price cap yet the VW iD4 with the same 5 seat form factor but is heavier (i.e. less range efficient) has an $80,000 price cap.
Edward Qin	1/3/2023 23:25	Dear Sir/Madam Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thanks again. Edward 发自我的 iPhone 在 2023年1月3日，下午7:56，Edward Qin <edwardqin72@gmail.com> 写道： Dear Sir/Madam I think tesla Model Y 5 seater should be included and surprise that it's not from the beginning. Thank you! Edward 发自我的 iPhone
Sunil Shah	1/3/2023 23:25	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. Sunil
dlink.camera@juno.com	1/3/2023 23:26	Please make all Tesla Model Ys eligible for the $7,500 credit. It is clearly an SUV, and every publication that I read, before the recent IRS publication, included the Model Y as an SUV that would qualify (and none even remotely questioned if it would meet the criteria.) The distinction between the 5 and 7 seater makes no sense - it is the same car and carries the same environmental benefit. What makes it more outrageous is that a number of similar size 5 seaters, who aren't even electric and get as low as 20 mpg, somehow qualify. This defeats the purpose of the bill, and only serves to hurt a transition to Evs. I get that some may not like Musk or Tesla, but you are not just punishing them - you are punishing innocent people and harming the environment with your decision.

Amy Serwinowski	1/3/2023 23:26	All Tesla Model Y's should qualify for the 7,500 EV tax credit. Here's an example of the broken nature of this incentive in its current form: [https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/7030a68c-9d90-499b-a4b7-b6aa8ca7e046.jpeg] Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. This IRS needs to use a fact based way to determine an auto's qualification as a SUV by following the EPA's guidelines to properly categorize vehicles. The 5 row Tesla Model Y should clearly qualify for the 7,500 EV tax credit. Regards, Amy Serwinowski 10142 NW 69th Manor Parkland, FL 33076
Steve Lisciani	1/3/2023 23:26	Please consider adding a requirement that any vehicle that qualifies for the credit - fully electric or hybrid - must have a minimum battery range of no less than 100 mi and/or a minimum mpg over 35 for hybrid vehicles. A vehicle with a battery range of less than 100mi and/or a vehicle with mpg less than 35 is not helping to reduce emissions and therefore should not be part of the program. Additionally the number of seats in a Tesla Model Y should not be the determining factor between the vehicle being considered a sedan or an SUV. The Jeep Wrangler only has 5 seats and is consider an SUV. Furthermore in many states the 5 seat Model Y is required to be registered as an SUV. Thank you for your consideration of my comments. I look forward to seeing the revisions. Stephen Lisciani
Chris Laughlin	1/3/2023 23:26	All trims of the Tesla Model Y should qualify for the new credit.
Laurie	1/3/2023 23:27	This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves ---------- Forwarded message --------- From: Laurie <teukellys@gmail.com<mailto:teukellys@gmail.com>> Date: Tue, Jan 3, 2023 at 9:19 PM Subject: OMB Control No. 1545-2137 To: <pra.comments@irs.gov<mailto:pra.comments@irs.gov>> [cid:1857a91e3a537ca1a2f1] Laurie Kelly 136 Grant Ave Takoma Park, MD 20912 -- Laurie Kelly, M.Ed. John Patton	1/3/2023 23:27	I am writing to request that you reconsider the Tesla Model Y 5-seat option as an SUV classification for the IRS tax credit cap of $80,000. The Tesla Model Y 5-seat option meets all criteria necessary for it to be considered an SUV. It has the size and functionality of a traditional SUV and as such it is clearly an SUV. Additionally, it is categorized as an SUV by the Environmental Protection Agency (EPA). Additionally, the Tesla Model Y 5-seat option is a highly efficient, electric vehicle that directly supports the IRS's goal of promoting the use of clean, sustainable transportation. The Tesla Model Y 5-seat option is 100% electric only, unlike other vehicles on the list that are hybrids. As such, I believe the Tesla Model Y 5-seat option deserves the full EV tax credit available to SUVs. I hope you will take my request into consideration and reconsider the classification of the Tesla Model Y 5-seat option as an SUV. Thank you for your time. Sincerely, John H Patton

Jim Copeland	1/3/2023 23:27	Dear Internal Revenue Service, I am writing to bring to your attention an issue with the current subsidy program for electric vehicles. It appears that there is a misalignment of incentives in the program as it currently stands. To illustrate this point, I would like to draw your attention to two specific vehicles: the Jeep Wrangler Wxe, which is a traditional internal combustion engine (ICE) SUV, and the Tesla Model Y 5 seat variant, which is a fully electric SUV. The Jeep Wrangler Wxe has a range of only 21 miles when equipped with $2,500 worth of batteries, yet it qualifies for a $7,500 subsidy. Meanwhile, the Tesla Model Y, which has a range of over 300 miles and more cargo capacity, does not qualify for a subsidy because it is not considered to be "SUV enough." This discrepancy seems to indicate that the current subsidy program is not properly aligned with the goal of encouraging the adoption of electric vehicles. It is unfair to provide a subsidy to a vehicle with such a limited electric range, while denying a subsidy to a vehicle that is significantly more efficient and has a much larger impact on reducing emissions. I respectfully request that the Internal Revenue Service review this issue and consider adjusting the subsidy program to ensure that it is better aligned with the goal of promoting the adoption of electric vehicles and reducing emissions. Thank you for your attention to this matter. Sincerely, Thanks,
Jim Graves	1/3/2023 23:27	Excluding the Tesla Model Y from tax credits, while including hybrids, is counter to the stated purpose. Jim Graves Sent from Proton Mail for iOS
Jim Varney	1/3/2023 23:28	Dear Internal Revenue Service, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. [Inline image][Inline image] The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers, as well as support American manufacturing and help us catch up to China in this space, a crucial step toward our future national economic security. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV. The EPA guidelines clearly define these vehicles in their appropriate categories, so there's no need to invent a new classification method. I also strongly recommend that we reevaluate the eligibility for credits for foreign-made EVs on lease in order to promote local manufacturing and support our long-term national security goals. It is important to support our national adoption of clean energy vehicles and American-made products in order to create a more sustainable future while protecting our long-term prosperity in the face of major disruptions in this space. Sincerely, Allan Omar

Walker Richardson	1/3/2023 23:28	Dear Internal Revenue Service, I am writing to bring to your attention an issue with the current subsidy program for electric vehicles. It appears that there is a misalignment of incentives in the program as it currently stands. To illustrate this point, I would like to draw your attention to two specific vehicles: the Jeep Wrangler Wxe, which is a traditional internal combustion engine (ICE) SUV, and the Tesla Model Y 5 seat variant, which is a fully electric SUV. The Jeep Wrangler Wxe has a range of only 21 miles when equipped with $2,500 worth of batteries, yet it qualifies for a $7,500 subsidy. Meanwhile, the Tesla Model Y, which has a range of over 300 miles and more cargo capacity, does not qualify for a subsidy because it is not considered to be "SUV enough." This discrepancy seems to indicate that the current subsidy program is not properly aligned with the goal of encouraging the adoption of electric vehicles. It is illogical to provide a subsidy to a vehicle with such a limited electric range while denying a subsidy to a vehicle that is significantly more efficient and has a much larger impact on reducing emissions. I respectfully request that the Internal Revenue Service review this issue and consider adjusting the subsidy program to ensure that it is better aligned with the goal of promoting the adoption of electric vehicles and reducing emissions. Thank you for your attention to this matter.
Wayan Lee	1/3/2023 23:28	Dear IRS, I am writing to express my frustration and distrust regarding the new tax inventive for electric vehicles. It is unacceptable that the incentive includes plug in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivation behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Wayan Lee (Wei-En)
Alex Chu	1/3/2023 23:28	The new tax credit that exclude Tesla model Y 5 seater is simply unfair. It does not show an equal and fair standard across all auto makers. All Model Ys should be classified as SUVs and be eligible. Weihan Chu California
Sean Anteau	1/3/2023 23:28	vehicles which use curb weight to determine the vehicle’s class. Specifically this has caused the Tesla Model Y 5 seater to not qualify for the tax credit. The new tax credit should ideally cover all battery electric vehicles assembled here in the United States, which would mean including all of Tesla and Rivian models and their trim levels. Sean Anteau
Nathan Rogers	1/3/2023 23:29	This email is in regards to the Inflation Reduction Act EV Tax Credit. Hybrids should NOT be included. You can travel farther on an EV bicycle than a hybrid. Weight of a vehicle should not determine if a vehicle is an SUV. EVs need to be designed lighter than ICE vehicles to obtain better efficiency. So classifying the vehicles by weight undermines the mission of the tax credit. All models of the Ford Mustang EV and Tesla model Y should be categorized as SUVs, and receive full $80k eligibility. Thank you, Nathan

Colin Hall	1/3/2023 23:29	Hello, I'm writing to request that some changes be made to the EV Tax Credit rules. 1) The definition of an SUV needs to be clear and consistent. Weight is a really poor measure vehicle class, especially with EVs because lowering weight is the primary way to increase range and efficiency. The number of seats is also not necessarily indicative of vehicle class. Interior volume would be one possible way to classify the vehicles. Another could be whether there is open access to the trunk space or not. Regardless, it needs to be consistent so that similar vehicles are treated the same. 2) Plug-in hybrids should not be treated the same or better than full electric vehicles. The Jeep 4XE, for instance, still uses a gas engine and thus has emissions, even though the battery range is extremely limited. Yet that vehicle is eligible for more incentives than the Tesla Model Y? It simply doesn't make sense. One vehicle removes emissions from the road and the other doesn't. 3) The battery mineral requirements need to have a lower threshold for the first year. So few cars are eligible and will continue to be eligible for years because these requirements aren't being phased in. It's also really hard for consumers to understand the regulations. There needs to be a clear way to communicate what vehicles are eligible and why or why not. Thanks,
Kyle	1/3/2023 23:29	I want Tesla Model Y 5 Seat to be qualified $7500 tax credit. Who the hell thinks it’s not a SUV? And why is the plug in hybrids with a tiny tiny battery get full $7500? Give $7500 because the car has $1000 battery? Can’t waste tax money like that. Are the people there really care about electrify the America?
Gian Solomon	1/3/2023 23:30	The EV tax credit should promote EVs like a 100% made the US Tesla model Y. Why does the 5 seater not qualify? This must be fixed. Gian Solomon +1 (646) 872 8708
Lingli Zhao	1/3/2023 23:30	Hi IRS, Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you.
jpbynon	1/3/2023 23:30	Internal Revenue Service Dear Sirs, Please revisit the opportunity for all Tesla Model Y automobiles to qualify for tax advantages. The big picture we should not forget, is to get as many internal combustion engines off our nations highways. Climate Change is something all of us should be aware of and everything we can do as a community to improve our country is paramount. Sincerely, J. Bynon California
Misty McKeown	1/3/2023 23:30	I think tesla Model Y 5 seater should be included for the $7,500 tax credit. Come on man! Thank you, Misty McKeown (530) 356-2900 CalBRE #01970547
Pavan Thakran	1/3/2023 23:31	Dear IRS, Why is the Tesla Model Y 5-seater being penalized for being mass efficient (i.e. for weighing less) compared to its peers and for that reason being classified as a sedan as opposed to a SUV when vehicles that are shorter, narrower and less energy efficient are being classified as SUV. Robbing Tesla Model Y 5-seater from the $7,500 IRA EV Tax credit is absurdly counter intuitive and misses the essence of the IRA EV tax bill. PLEASE correct this mistake and treat Tesla Model Y 5-seater, one of the MOST AMERICAN MADE vehicle, as a SUV and extend the $7,500 EV tax incentive to it. It is silly that was not not from the beginning. Kindest regards, US Taxpayer Sent from my iPhone

Name	DateTimeReceived	Body.TextBody
Brandon Conde	1/3/2023 23:31	Jeep has 20MPG and 21 miles of electric range, tesla model Y 5 seater has 113 MPEe. It has 330 miles of range. This needs to be corrected. Sent from my iPhone
Abdallah Zeid	1/3/2023 23:31	Happy new year for everyone, It’s not make sense for me to not consider Tesla Model Y from the $7500 tax credit and you approve a hybrid car for tax credit $7500 . It’s a very disappointment and I looking forward to fix this problem OMB Control No. 1545-2137 Thanks
brandon H	1/3/2023 23:31	To Whom It May Concern, I believe there are some inconsistencies in your approach to classifying vehicles as SUVs in terms of consumer and voter expectations. For example, * 2022-2023 Model Y (2-Row: $55,000 cap, 3-Row: $80,000 cap) * 2022-2023 Mustang Mach-E ($55,000) * 2023 VW ID.4 (RWD: $55,000 cap, AWD: $80,000) I would expect these vehicles to fall under the $80,000 SUV limit. It seems strange to me that the 3 row version would be different on the Model Y, while other SUVs are not required to have a third row to meet this criteria. Furthermore, I'm not sure I understand the logic in the drivetrain affecting this classification like on the ID.4. If a vehicle is in a gray area then it should advance to the higher of two brackets. This provides an unreasonable advantage to some manufacturers and should not be allowed to continue. Thank you, Brandon
shuangquan.wang	1/3/2023 23:32	Hi IRS, Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you, Shuangquan Wang Sent from my Galaxy Z Fold 4
Rob Kremers	1/3/2023 23:32	Dear Internal Revenue Service, I am writing to bring to your attention the issues with the current system of Federal Tax Credits for electric and hybrid vehicles. It is unfair that some automakers are unfairly treated while others receive benefits they do not deserve. This is a gross misuse of taxpayer dollars and undermines the efforts of companies like Tesla, who are working to advance the adoption of sustainable transport in the US. One specific example is the categorization of the Tesla Model Y. Despite being classified as an SUV by the EPA and having a battery size 15 times larger than that of the Jeep Grand Cherokee 4xe, the Model Y is not eligible for the $7,500 tax credit due to the IRS' interpretation of the qualifications. Meanwhile, the Jeep, a hybrid vehicle with a gas engine and only 25 miles of electric range, does qualify for the credit. I propose that the IRS fix this issue by either removing incentives for hybrid vehicles and only applying them to pure electric vehicles, or by applying the SUV/non-SUV rules consistently and fairly across all automakers. This would align with the original intent of the Inflation Reduction Act, which was to promote the development of sustainable transport built by American workers and advance the US as a leader in electric vehicle manufacturing. As a believer in the potential of electric vehicles, I urge the IRS to take action on this matter. The opportunity to restore trust and promote a fair market is within your reach. Let's not lose ground to countries like Canada, which are already making significant investments in this industry. Sincerely, Rob Kremers
Jeffrey Wu	1/3/2023 23:32	Dear IRS, To be honest, in recent years, Tesla made huge contributions on EV cars and always fight for climate change. It will be benefit for all Americans, and all mankind. Exclusive the most popular 5 seats Tesla Y vehicle for $ 7500 credit to me is not a proper way to prompt people transit from gas cars to EV vehicles. For our planet, for our next generations, please include 5 seats Tesla model Y in the incentive program. Regards, Jeffrey Wu

Name	DateTimeReceived	Body.TextBody
Mark Cat	1/3/2023 23:33	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Thank you, Mark
Jesse Sletteland	1/3/2023 23:33	The IRS guidelines for these tax credits make zero sense. They were intended to encourage the purchase of zero emission vehicles but instead punish the one company that has done the most to promote their success. Tesla appears to have been strategically and purposefully disadvantaged. A Jeep wrangler with a gas engine and a tiny battery that only gets 20 miles of range qualifies for this tax credit but a model Y with zero emissions and 300+ miles of range does not. Do we want to get off oil and stop polluting our world or do we not? If we do then these qualifications need to change. Jesse Sletteland Advance Realty and Management
Dennis Le	1/3/2023 23:34	I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly a SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the model Y 5 seat option as a SUV. Thank you for your time and consideration. Sincerely, Dennis Le
Casey Wickland	1/3/2023 23:34	I am writing to request that the Tesla Model Y 5 seater be included on the list of qualified vehicles for the federal electric vehicle tax credit. I believe that the Model Y should have been included on this list from the beginning, as it is a highly efficient and environmentally friendly vehicle with longer range batteries than many other vehicles on the list. I understand that the objectives of the Inflation Reduction Act include reducing greenhouse gas emissions and promoting the use of clean energy. The Tesla Model Y 5 seater is a perfect fit for these objectives, as it has a range of up to 326 miles on a single charge and produces zero emissions. I urge you to re-evaluate the qualifications for the federal electric vehicle tax credit and consider adding the Model Y 5 seater to the list. If you do not add the Model Y 5 seater, I would appreciate a reply explaining the logic used in the decision and how it correlates with the objectives of the Inflation Reduction Act. Thank you for your time and consideration. Sincerely, Casey
tara burmeister	1/3/2023 23:34	To Whom It May Concern, Please review the categorization of the pure EV Tesla model Y (5-seater). The Tesla model Y vehicle, with 7 seats, is almost exactly same size as the 5 seater & is classified as an SUV with the price limit of $80,000. It is very frustrating that the 5 seat model is NOT classified as an SUV but as sedan, and therefore doesn't qualify for the EV tax credit due to the $55K price limit. This is a very good electric vehicle and is the one I am looking to purchase this year. If the purpose is to help people get into electric vehicles it makes no sense to EXCLUDE the best selling model in the US and Europe from EV credit! The differences between the 5 and 7 seat model are so minimal and shouldn't be used to exclude this top of the line EV! Please reconsider the classification and allow US buyers to get the 5 seat Tesla MY with the IRA EV credit. Sincerely, Tara Burmeister Canton, SD Sent from my iPhone

Jinesh Sanghvi	1/3/2023 23:34	Dear IRS, I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, Jinesh Sanghvi
Andrei Bulucea	1/3/2023 23:34	point of view. Please allow SUV classification for all pure electric SUVs, not just some. Not allowing certain good SUVs (such as MacheE or Model Y) can disrupt the industry by putting at great disadvantage great zero-emission vehicles! And finally, please allow lighter SUVs to qualify, not just heavy models. Lighter = more efficient = fewer emissions. Thank you, Andrei .
Brandon Conde	1/3/2023 23:35	How can gas engine cars with only ~20 miles of electric drive be included and a Tesla model Y SUV is not? One is vastly bette Edie the environment, and it’s not the keep. Disappointed in you, this needs to be corrected.
sw27	1/3/2023 23:35	Hi IRS, Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you, Tax Payer
Jamie Waldow	1/3/2023 23:36	IRS, Add the Tesla model Y for the EV tax credit. It’s one of the most absurd things to add hybrid fossil fuel cars to the list and not the fully electric model Y. This comment is to petition for the Tesla model Y to be added for the $7,500 tax credit. Sincerely, Jamie
Cameron Elms	1/3/2023 23:36	buy in efficient vehicles. The tax credit should apply to all vehicles under the price set point that exceed 50mpge. What is the point in subsidizing vehicles that get lower mileage than my 2013 hybrid. I also don’t understand why the Tesla model y is not considered an SUV in only some variants. Enforcing tax code in this manner is what leads companies to make a worse product in order to qualify for incentives and in the end no one wins. Please review what vehicles get this tax incentive because it makes no sense as is. Thanks you, Cameron Elms
Jonah Poster	1/3/2023 23:36	classifies it as an SUV. There is no reason why a Jeep that has 21 miles or electric range should get a 7500 rebate when the Tesla Model Y has a 330 miles of pure electric range. Tesla also should not be penalized for making a lighter more compact SUV. If your rebate seeks to encourage people to buy electric vehicles, I hope you will reconsider your insensible stance. Thank you, Jonah

Sullivan Scott	1/3/2023 23:36	Dear IRS, Don't understand why tax dollars designed to support electric vehicle adoption would end up going towards anything except ev's. I don't believe hybrids of other phev's should count, and am against the idea. Also I have been saving to buy a Tesla model Y to support the movement of going electric, and was looking forward to road tripping across the country with my family, fully electric and that car doesn't even qualify? But then I see a Jeep, hybrid that hardly runs on electric qualifies for the full $7500?? I can't begin to understand this decision, please change this. Sincerely James
shuangquan wang	1/3/2023 23:37	Hi IRS, Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you, Tax Payer
john chappell	1/3/2023 23:37	Please update the guidance to include the Tesla Model Y 5-seater as available for the full $7500 tax credit. Best, John Sent from my iPhone
Brandon	1/3/2023 23:37	Tesla Model Y 5 seater should qualify for the SUV IRS EV Tax Credit.
Mike kelly	1/3/2023 23:37	I think the tesla Model Y 5 seater should be included. Penalizing a manufacturer for making a weight efficient SUV while allowing hybrids with 7kw batteries is so wrong. Even the playing field. Mike
Jiang Kan	1/3/2023 23:37	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Sent from my iPhone
Seth Dyer	1/3/2023 23:38	Dear IRS I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Seth Dyer
Vitaliy Ilnitsky	1/3/2023 23:38	finance. It model Y thank you. Sent from my iPhone
John Mattox	1/3/2023 23:39	Your inclusion of vehicles with poor efficiency and exclusion of vehicles with high efficiency like the Mach E and Tesla Model Y from the SUV group creates the opposite incentive intended. Please adjust your definitions of what counts as a n SUV to be in line with how the EPA and NTSA classifies them rather than the apparently arbitrary classifications now in place. Any deviance in classification from the EPA classifications should be disfavored and equally applied and clearly explained. Best to just follow the already existing US Gov classification schemes -- Sincerely, John Mattox
Sergio Guerrero	1/3/2023 23:39	Very disappointed that certain EVs are not eligible for the credit, include the 5 seater Tesla Model Y. I would encourage you all to revisit the criteria for qualifying and consider the importance of moving to a future with clean, sustainable transportation. Thank you, Sergio G Florida resident Sent from my iPhone

James Tuchel	1/3/2023 23:39	Hi There, While I am supportive of the plug in electric vehicle credit its current implementation seems very clumsy. Specifically it is extremely poorly designed that plug in hybrids with only a few dozen miles of electric range qualify for the full credit while the 5 seater Tesla Model Y, with over 300 miles of electric range, does not qualify as an SUV with an $80k price limit. This clearly defies common sense. I implore you to update the execution of this legislation to categorize the Tesla Model Y 5 seater as an SUV and therefore qualify for the full credit when priced <$80k. Thanks for your time and attention, James Tuchel 4801 Sonata Ln Los Angeles, CA 90042
Brian C	1/3/2023 23:40	I support the concept of the qualified plug-in electric vehicle credit. I don't think the rules regarding what vehicles qualify make sense. Some of the PEHVs that qualify have an all electric range, according to the EPA guidelines, of less than 50 miles. I don't think they should qualify as their adoption would have a marginal effect on reducing greenhouse emissions and reducing inflation. At the same a few crossovers/SUVs, as classified by the EPA, are not included despite being all electric and under the price cap of 80k. In particular the absence of all variations of the Ford Mustang Mach E and Tesla Model Y that are priced less than 80k is hard to understand. Perhaps consider using EPA estimates for all electric miles (e.g. more than 150 all electric miles) and EPA classification to categorize vehicles into the "SUVs/Trucks/Vans," and "All Other." EPA guidelines and classifications are well established and broadly accepted. Using them may result in better application of IRA credits and less controversial results relative to the current proposed criteria. Thanks -- Brian Cosmano
Kashyap Kapasi	1/3/2023 23:40	Hello I am a US citizen and I feel my tax dollars should be directed specifically to encourage Green Energy adoption. It shouldn't be wasted in providing tax credits to Plug in Hybrid sedan's or SUV which burn fossil fuels. Its' simple only cars whose powertrain runs on pure electric should be eligible Regards Kashyap
Matthew Taylor	1/3/2023 23:41	Please make the Tesla Model Y long range all wheel drive 5-seat sport utility vehicle qualify for the full $7500 tax credit. To call this electric vehicle not a sport utility vehicle is obviously factually inaccurate. Furthermore, you must delete all of the incentives for plug-in gas hybrids, which are gas vehicles and are not even real electric vehicles. Matthew Taylor beingmatthew@gmail.com
bkb710	1/3/2023 23:41	My name is Barry Borger and I live on Long Island in NY. I am 67 yo and although am collecting social security I do continue to work and pay taxes to our Great Nation. My Dad served in 2 Wars and taught me what patriotism is all about. Yes I signed up for the draft but was never drafted back in 1973. That said as a son of a true patriot we do need to move forward toward electrification to save our planet. Subsidizing hybrid vehicles like the German BMW SUV which gets 23mpg city as well as the German Audi e tron Quattro which gets 16 mpg city makes no sense. Both are plug in hybrids that use fossil fuels release hydrocarbons into the atmosphere and contribute to the destruction of our planet. Only FULL electric vehicles should be subsidized under this plan if we are to continue to motivate automakers to fully electrify and attempt to reverse the damage gasoline has already done to our climate. Thank you for taking the time to read this and thank you for trying to save the nation that my Dad so loved. Sincerely Barry Borger Bkb710@aol.com 516 581 4599 Sent from my iPad
Kevin P	1/3/2023 23:41	Tesla model y is a 5 seater. A jeep guzzles gas at 20 mpg. Global warming is real and UAW Unions are killing the world with their lunacy. Elon might not be your most love ally, but obviously teslas easily qualify over a damn jeep- like cone on bro! Tesla should qualify. Kevin
Sally Li	1/3/2023 23:41	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Regards, Sally Li

Name	DateTimeReceived	Body.TextBody
Ilian Roudev	1/3/2023 23:41	Hello IRS, The federal tax credit for EVs is constructed in a poor manner. There are plug in hybrid cars that are mostly gas powered cars that qualify yet Tesla (all electric) does not. How does this make sense? A jeep that gets 20mpg and only 20 TOTAL miles of electric qualified yet a Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. Please fix this as soon as possible before you ruin the EV industry with bad lawmaking. Thanks, Ilian Roudev
Philip Emanuele	1/3/2023 23:42	Please fix the obvious error and qualify the Tesla Model Y 5 seater model. I hear it didn’t get a subsidy because it was light weight… being light weight is economical and in the spirit of this legislation, thanks. -Phil
Stephen Mabry	1/3/2023 23:42	The Tesla Model Y 5 seater should be considered an SUV [like the 7 seater Model Y] and eligible for the $7500 tax credit. The IRS calculations for certain weight = SUV are off the mark. Quit discriminating against Tesla. It's an American company bringing MANUFACTURING jobs to America for Americans. GM/Ford outsource their autos in Mexico and other countries. Teslas are the MOST AMERICAN-MADE cars in the world. Let's support America, not Mexico.
Dan Burkland	1/3/2023 23:43	I am writing to express my extreme frustration and disappointment with the EV incentives included in the recent inflation reduction act. It is unacceptable that the IRS did not adhere to the NHTSA’s vehicle definitions and instead went out of their way to exclude certain configurations of battery electric EVs like the Tesla Model Y (5 seater), Ford Mach-E, and VW ID.4. In the case of the 5-seater Tesla Model Y, it was wrongfully excluded because of its ride height and weight (it was deemed too light). What is even more ridiculous is that inefficient plugin-hybrid electric vehicles (PHEVs) like the Jeep 4xe (which gets 20mpg and has a battery that can only propel it ~20 miles) qualify for the full incentive. This is plain wrong and does little to encourage folks to pick truly cleaner vehicles. We should not be penalizing BEV manufacturers who innovate and produce extremely efficient SUVs like the Tesla Model Y. Please reconsider exclusions like the 5-seater Tesla Model Y and make the incentive requirements as clear & fair as possible. Thanks, Dan Burkland dburkland@dburkland.com<mailto:dburkland@dburkland.com> 763-498-3646
Cyril Pyfferoen	1/3/2023 23:43	Offering ANY incentive for an "EV" with electric range of less that 200 (or maybe 100) miles is a blatant misappropriation of public tax dollars. It goes against the Title of, of not the spirit and intentions set forth by the bill. GASOLINE vehicles with LESS THAN 30 miles of electric range should not receive ANY subsidies. In fact hybrid are quite often driven as entirely gas vehicles, thereby not achieving the started efficiencies. Additionally, qualifying SUV vs non-SUV by the mass of the vehicle is additional non-sense. Body type and (maybe) passenger count should determine this. Finally, declaring HARD price caps is a bad idea, it encourages pricing (up or down) to fit exactly to the limit - instead of free market playing a larger role. Thanks Cyril Pyfferoen
Grant Damas	1/3/2023 23:43	We need more electric vehicles on the road. 1. Hybrid vehicles shouldn't be getting a federal tax credit. 2. You should apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. 3. Please remove the MSRP limit. If someone wants to spend $60k on an EV, they should get the same tax credit as someone who spends $50k. Grant Damas

Name	DateTimeReceived	Body.TextBody
Praveen Nagaraj	1/3/2023 23:45	Hello IRS, Please fix the list of eligible vehicles as Model Y 5 seater and Mach-E should be considered a SUV and limit should be increased to 80K USD. Seems like blatant corruption where the purpose of the inflation reduction act is being defeated by providing more subsidies to polluting vehicles and encouraging more cars to be less efficient by referencing archaic rules. Hope this is a clerical error and can be fixed rather than blatant corruption to reduce American competitiveness. Thanks Praveen
donghai wang	1/3/2023 23:45	Dear IRS, I am writing to express my frustration and disappointment that the new tax incentive for electric vehicles includes plug-in hybrids, but excludes the Tesla Model Y, which is currently the most popular EV in the world. It is completely unacceptable that a 22 mpg Jeep Wrangler is included in this incentive, while a much more environmentally-friendly and efficient vehicle like the Model Y is left out. This decision shows a complete lack of understanding and concern for the state of our environment, as well as a lack of support for the most innovative and forward-thinking companies in the industry. I urge you to reconsider this unfair and short-sighted decision, and to include the Tesla Model Y in the tax incentive program. If this issue is not addressed, I will have no choice but to express my discontent through any means necessary. Sincerely, Donghai Wang
Jay Jang	1/3/2023 23:46	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is concerning to me that the incentive includes plug-in hybrid electric vehicles (PHEVs) such as the Jeep Wrangler, which only has a fuel efficiency of 22 miles per gallon, while it excludes popular all-electric vehicles such as the Tesla Model Y. In a time when climate change is an increasingly pressing concern, it is crucial that we prioritize the use of fully electric vehicles over those that still rely on fossil fuels. By including PHEVs in this tax incentive, it feels as though the IRS is not taking this issue seriously and is instead prioritizing the interests of certain automakers. I urge the IRS to reconsider its decision and to consider the environmental impact of the vehicles that are included in this tax incentive. It is important that we encourage the use of fully electric vehicles, like the Tesla Model Y, in order to make a meaningful difference in the fight against climate change. Sincerely,
Daniel Jordan	1/3/2023 23:47	businesses away from fossil fuels that all hybrids use, and, focus on electric vehicles that do not pollute and operate much more efficiently. Increase the price limits and reduce the weight limits for SUVs so that lower weight and more efficient SUVs that weigh less will qualify for EV rebates as lower weight vehicles are simply more efficient and better serve the goals of the IRA and should not be penalized because they are actually superior in terms of being lighter in weight. Kindest Regards, Daniel Jordan
David Freeman	1/3/2023 23:48	My concern is that EV SUVs should not be excluded. The EPA classified it as a SUV. The IRS should follow suit and allow it to take the credit. There is not a limiting factor here that makes sense. Add the Model Y 5 seater to the 7500$ tax credit at $80,000 Thanks, David Freeman
-H-	1/3/2023 23:48	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Hui
Chris	1/3/2023 23:48	Please consider applying common sense ruling that the EV tax credit for Model Y 7 seats should also apply to 5 seats. It is an identical car! Thank you. Regards

Name	DateTimeReceived	Body.TextBody
Raghavender Byreddy	1/3/2023 23:48	Hi , I request you to please consider tesla model y 5 seater long range to qualify for 7500$ tax rebate as tesla model y is the most efficient fully electric vehicles with 330 miles of range and the size and design of the vehicle perfectly fits the suv specification. Please don't go simply by weight of the vehicle as it penalizes the innovation of making the vehicle lighter white retaining the suv features. Thanks Raghu
Daniel Jordan	1/3/2023 23:49	Please remove all hybrid gas engine qualifications and instate all pure EV qualifications so that we move our economy and government support of businesses away from fossil fuels that all hybrids use, and, focus on electric vehicles that do not pollute and operate much more efficiently. Increase the price limits and reduce the weight limits for SUVs so that lower weight and more efficient SUVs that weigh less will qualify for EV rebates as lower weight vehicles are simply more efficient and better serve the goals of the IRA and should not be penalized because they are actually superior in terms of being lighter in weight. Kindest Regards, Daniel Jordan
Dennis Price	1/3/2023 23:49	The 5 seat blue SUV is built in Mexico and has 23 miles of EV range. It gets a $7.5k EV Federal Tax Credit in the US. The 5 seat white Tesla SUV is built in America and has 330 miles of EV range. IT GETS $0. The surprise is that the Tesla Model Y five seater, according to the IRS, is not classified as a SUV despite every other organization classifying it as a SUV. This means the Tesla Model Y does not qualify for the MSRP limit of $80,000 and receives zero tax credit. The criteria used by the IRS appears to be applied inconsistently across brands and needs to be corrected. This looks bad because it implies the IRS are applying the criteria selectively and shows an obvious bias against Tesla and certain other brands. Indeed there seems to also be a bias towards hybrids and against battery electric vehicles by the IRS. One has to wonder why the IRS should show such bias. [image] [image]
Arshjit Singh	1/3/2023 23:49	I am writing to express my concern over the recent release of the list of vehicles eligible for the $7500 subsidy for the EV tax credit. I was shocked to see that Tesla, a company that has played a crucial role in the transition to electric vehicles and is widely considered to be the most American-made car, was left out of the list mainly its most popular and cheaper models (model Y-5 seater & more) Furthermore, it is disappointing to see that the list includes hybrid cars that only offer a limited electric range of 25-30 miles. These hybrid cars are merely battery-operated for the sake of being called electric vehicles, and they do not offer the same benefits as true electric vehicles in terms of reducing greenhouse gas emissions and dependency on fossil fuels. This inclusion ultimately slows the pace of the EV revolution and undermines the major goal of the policy, which I believe was to transition the world to sustainable and efficient energy sources, such as electricity. As someone from India, I look up to the United States as a leader when it comes to bold and life-changing policies and decisions. However, this decision to exclude Tesla and include these insufficient hybrid cars does not align with this reputation. Tesla has been at the forefront of the electric vehicle movement and has made significant contributions to the development and adoption of EVs. I strongly believe that All Tesla models should be included on the list of eligible vehicles for the EV tax credit. This would not only be a fair and just decision, but it would also encourage more people to purchase electric vehicles, particularly the best EVs that America has to offer. It is important that America leads the way in the transition to electric vehicles and sets a good example for the rest of the world to follow. I urge you to reconsider this decision and include Tesla on the list of eligible vehicles for the EV tax credit. The transition to electric vehicles is vital for the future of our planet, and we need to do everything in our power to encourage and support this transition. Ignoring Tesla and making a mockery out of a potentially sound policy is not helpful in the long run and needs to be corrected as soon as possible. Thank you for considering my perspective. Sincerely, Arshjit Singh

Name	DateTimeReceived	Body.TextBody
Brad Heisler	1/3/2023 23:49	I'm writing to provide comments on the recent electric vehicle tax credit qualifications. Initially, thanks for your hard work in preparing to implement provisions of the IRA enacted by Congress this fall. No doubt you have to follow the legislation, and so do not have a free hand to re-write the IRA, nevertheless, there are some very unfair results that have been produced by the recent electric vehicle tax credit qualifications. In particular, two vehicles that would seem to exemplify the types of vehicles that should receive the $7500 tax credit at up to the $80,000 MSRP limit would be the Ford Mustang Mach-E and the Tesla Model Y (5 seat), but they are limited to only being eligible at up to the $55,000 MSRP. If I were re-writing, the IRA legislation, I would be asking why the legislation is distinguishing between SUVs and cars in the first place? Smaller and lighter cars use less energy and so are more environmentally desirable. The recently published IRS guidelines on vehicle tax credit qualifications seem to get the incentives backwards by encouraging the purchase of more expensive and heavier vehicles to earn the larger credit. However, it is my understanding that these MSRP caps are written into the IRA legislation, so are out of your authority to fix. My recommendation would be to use as much authority as you have to allow as many vehicles as possible to qualify for the $7500 tax credit below the $80,000 MSRP cap. This should especially be done if the vehicles that are not qualifying for the $80,000 MSRP cap are too small or too light to qualify. Some are suggesting that the Ford Mustang Mach-E and the Tesla Model 5 (5 seat) are slightly too light to qualify for the higher $80,000 MSRP cap. If this is true, and if there is any way for you to do so, I recommend that this weight limit be reduced or eliminated so that lighter SUVs can qualify. Perhaps you have some creative ideas for solving this problem other than my recommendation above. I would encourage you to do something at least to try to fix this discrepancy. While Tesla can just (wastefully) put a third row of seats in every car they sell and thus qualify, Ford is really being discriminated against with their Mustang Mach-E needing to be under $55,000 to qualify for the tax credit. If nothing at all can be done, notify Congress and request a re-write. I suspect Ford and Tesla could get Congress to enact some minor adjustments to meet your recommendations for more fairness. If you can make adjustments to fix this problem, I strongly urge you to take such action. Thank you
John Yang	1/3/2023 23:49	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Jon Yang
graham rennie	1/3/2023 23:51	How can people take the USA seriously when it's government take tax payers money to fund heavy inefficient hybrids that do 21 miles on electricity and then use gas to carry on the journey while carrying both a gas drivetrain and an ev drivetrain? This is unbelievable US stupidity and shows only that you seem to be hiding behind green credentials to promote and sustain gas vehicles. Tesla model Y with 5 seats and 300 + miles of pure Ev range is unable to get the tax credit? What a joke this country is. Stop sticking to rigid rules and use common sense ones. Thank you for encouraging pollution of the planet and raising the chances of my family getting cancer! Disgusted!
Trevor Tilger	1/3/2023 23:51	To whom it may concern: The fact that the Telsa Model Y is not included in this credit is an outrage. If the U.S. truly cares about EVs and carbon emissions this credit needs to be amended immediately to include Telsa EVs as well. Thank you.
J 3030	1/3/2023 23:51	Tesla Model Y 5 seater should be allowed under the rules. Thank you, Jose R Ogando 703-653-4233 jose3030@gmail.com<mailto:jose3030@gmail.com>
michael lanier	1/3/2023 23:53	The Tesla Model Y 5 seater should not be included in the irs rebate as it's not a fully electric vehicle. Michael Lanier
Vinay	1/3/2023 23:53	Dear Sir/Madam I think tesla Model Y 5 seater should be classified as SUV and price limit on this vehicle should be 80,000.00 and silly that it's not from the beginning. Thanks Sent from my iPhone Vinay Ratanpara

Name	DateTimeReceived	Body.TextBody
Jeremy McDonald COLDWELL BANK	1/3/2023 23:53	Dear IRS, I am writing to express my concern about the new EVA tax credit bill and how it is misaligned with the goals of promoting electric vehicle adoption and reducing carbon emissions. It is disappointing to see that the current legislation provides a $7,500 subsidy for ICE SUVs with only 21 miles of electric range, while excluding true electric SUVs with significantly more range and capabilities. This creates a distorted incentive for consumers to choose less efficient and less environmentally friendly vehicles, rather than encouraging the adoption of more advanced electric technologies. Furthermore, the criteria for determining which vehicles qualify for the tax credit seems arbitrary and does not accurately reflect the capabilities of modern electric vehicles. The Model Y, for example, is a highly efficient and capable electric SUV, but it would not qualify for the subsidy due to its classification as an "SUV." I urge the IRS to reconsider the current EVA tax credit bill and to adopt a more comprehensive and fair approach to supporting the transition to electric vehicles. By promoting the adoption of advanced electric technologies and supporting the development of a more sustainable transportation infrastructure, we can make meaningful progress towards reducing our carbon footprint and addressing climate change. Sincerely, Jeremy McDonald Licensed Real Estate Salesperson Coldwell Banker Prime Properties Cell: 315-418-0291 jeremy.mcdonald@cbpp.com jmcdonaldcbpp.com Coldwell Banker Prime Properties, its agents or employees will NEVER send wiring instructions without our Accounting Department FIRST verbally
Andrew Hua	1/3/2023 23:53	Dear IRS, I am writing to express my dissatisfaction with the exclusion of the EV tax credit for the Tesla Model Y LR 5 Seater. I understand that the credit is meant to encourage the adoption of electric vehicles and reduce our reliance on fossil fuels, and I believe that the Model Y LR 5 Seater should be included in this program. The Model Y is a highly efficient and environmentally friendly vehicle that meets all of the criteria for the EV tax credit. It has a range of over 300 miles on a single charge, and it produces zero emissions while driving. Its advanced technology and innovative design make it a leader in the electric vehicle market, and it should be recognized as such by the IRS. Furthermore, the exclusion of the Model Y from the EV tax credit is unfair to those who have purchased or are considering purchasing this vehicle. Many people choose the Model Y because of its environmental benefits, and they should not be penalized for making a responsible and socially conscious decision. I urge the IRS to reconsider its position on the inclusion of the Model Y in the EV tax credit program. The Model Y is an important step forward in the transition to a cleaner, more sustainable transportation system, and it should be recognized as such by the government. Thank you for considering my concerns. Sincerely, Andrew Hua (408) 930-7934 ahua0323@gmail.com
Ryan Gottlieb	1/3/2023 23:54	All electric cars and SUV's should be included in the tax credit before any PHEV. Regardless of price, weight. The best selling EV is excluded from this credit. Sent from my iPhone
RyanJohns	1/3/2023 23:54	Remove incentives for all hybrid vehicles and only have them apply to pure EVs. Or at a minimum, incentives for pure EVs should be much greater than hybrid vehicles. Rules should be fairly applied to SUV/Non SUVs across the board, with consistency in order to correctly incentivize automakers and the public with the original intent of the bill. Respectfully Ryan M Johns 17104 Brook Ct Mount Vernon, WA 98274 360-333-6505
Craig	1/3/2023 23:54	I think that it is a mistake that the Tesla Model Y - 5 Seater was not included in the full tax credit. Please reconsider this and allow the Model Y - 5 Seater to be included. Craig Salahub
hill567@yahoo.com	1/3/2023 23:55	Please correctly classify Ford Mustang Mach E and Tesla Model Y as SUVs so the government incentivizes full electric vehicles that will help fight climate change. It's inexcusable that less efficient hybrid SUVs made by Jeep and Audi will get the full credit while the Tesla and Ford models would get $0. This makes no sense and would actually lead to increased carbon emissions.

Name	DateTimeReceived	Body.TextBody
Yi Yang	1/3/2023 23:55	As the only true American engineering marvel over the pas several decades, we got to support our domestic EV industry as well as the company that's behind it all: TESLA. Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. I trust that this is a honest mistake not a conspiracy. Thank you.
Christophe Thibault	1/3/2023 23:56	This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Thank you -A concerned taxpayer
C Stout	1/3/2023 23:56	The current categorization of vehicles is causing some perverse incentives, please fix as follows. Add: Incentives for efficient pure electric vehicles, Tesla Model Y and Ford Mach-E. They should qualify for the SUV category. Remove: Incentives for inefficient hybrid vehicles that will continue to emit greenhouse gases likely beyond 2030 (example: Jeep Grand Cherokee 4xe). Please read (why we should not incentive any further fossil fuel consumption): Electrify, by Saul Griffith<https://g.co/kgs/HLaSDN> -Craig Stout
Nate Brown	1/3/2023 23:56	Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, Please consider EPA rated distance instead of vehicle size when determining qualification for Inflation Reduction Act Tax Credit. There are too many cases like the following that don't keep with the spirit or intention of the bill: The Jeep Wrangler has a gas engine and gets 20 MPG. It has 21 miles of electric range. It gets a $7,500 EV Tax Credit. The Tesla Model Y is ELECTRIC ONLY and gets 113 MPEe. It has 330 miles of range. It does not get $7,500 EV Tax Credit. The Audi Q5 e Quattro gets 23 miles of electric range. It has 5 seats. It has a gas engine. It qualifies for the $7.5k IRA EV Tax Credit. The Tesla Model Y gets 330 miles of electric range. It has 5 seats. It does not have a gas engine. It doesn't qualify for same credit. Thank you so much for your time and I look forward to seeing what decisions you make. Nathan Brown
Adam Orta	1/3/2023 23:57	Dear IRS, I am writing to request that the Tesla Model Y 5 seater be added to the Inflation Reduction Act (IRA) vehicle tax credit list. As a responsible and environmentally conscious citizen, I believe that the Model Y is an excellent choice for the IRA tax credit program due to its impressive efficiency and range. First and foremost, the Model Y boasts an impressive range of up to 326 miles on a single charge, making it one of the longest range electric vehicles on the market. This means that drivers of the Model Y can easily go about their daily lives without the need to constantly stop and charge the vehicle, which can be a hassle and a time-consuming process. In addition to its impressive range, the Model Y is also a highly efficient vehicle. It has a fuel efficiency rating of 122 MPGe in the city and 103 MPGe on the highway, making it one of the most efficient vehicles available. This efficiency not only saves drivers money on fuel costs, but it also has a positive impact on the environment by reducing carbon emissions. Given the efficiency and range of the Model Y, I strongly believe that it should be included on the IRA vehicle tax credit list. I hope that you will consider my request and add the Model Y to the list of eligible vehicles for the tax credit program. If the Model Y is not added to the list, I would greatly appreciate a reply explaining the decision and how it aligns with the goals of the IRA. Thank you for your time and consideration. Sincerely, Adam

Name	DateTimeReceived	Body.TextBody
Jinhyoung Park	1/3/2023 23:57	Dear Sir or Madam, I am writing to express my concern over the fact that the Tesla Model Y 5-seat model is not eligible for the IRA tax credit in 2023. As a potential customer who was considering purchasing this vehicle, I was counting on the tax credit to help offset the cost. I understand that tax credits are subject to change, but the sudden exclusion of the Model Y 5-seat model from the program is disappointing. This model is a highly efficient and environmentally friendly option, and I believe it should still be eligible for the tax credit. I hope that you will reconsider this decision and find a way to include the Model Y 5-seat model in the IRA tax credit program once again. Your attention to this matter is greatly appreciated. Sincerely, Jinhyoung Park.
Lunick JD	1/3/2023 23:57	Mr. Garcia Remember, you work for the PEOPLE. It smells very corrupt to exclude Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. You know it. Everyone knows it. We demand you reconsider. Thank you,
Me	1/3/2023 23:57	Dear IRS, I am writing to express my concern about the Electric Vehicle Tax Credit qualifications under the Inflation Reduction Act. It has come to my attention that there are several issues with the current interpretation of these qualifications that are causing a number of problems and creating incorrect incentives. One major issue is the way that the IRS is categorizing certain vehicles. For example, the Tesla Model Y is being classified as a sedan, rather than an SUV, despite the fact that the EPA categorizes it as an SUV. This means that the Model Y, a pure electric vehicle with a 330-mile range, 117 MPGe, and an SUV form factor, is not eligible for the $7,500 tax credit. On the other hand, the Jeep Grand Cherokee 4xe, which is a hybrid vehicle with a gas engine, 23 MPG, and only 25 miles of electric range, is eligible for the credit. This inconsistency in classification is causing confusion and unfair treatment for both the public and automakers. It is also leading to the misallocation of taxpayer dollars, as the tax credit is being given to inefficient gas vehicles rather than supporting the advancement of the electric vehicle industry. I urge the IRS to reconsider its classification system and ensure that the Electric Vehicle Tax Credit is being applied fairly and accurately. It is important that we prioritize the development of sustainable transportation and support American workers, rather than funding outdated technologies. Thank you for your attention to this matter. Sincerely,
Troy Kirchenbauer	1/3/2023 23:57	Dear IRS, I am disappointed in the recent announcement regarding the tax credit and the specific guidance given regarding eligibility. I would like to see more transparency in the rigor behind what appears to be an uneven handling of eligibility by brand. Further, I'm not sure that I understand the motivation behind the various caps on MSRP for sedans vs SUVs. Isn't the point of this credit to incentivize the change toward clean energy? Please reconsider how best to use our tax dollars without creating uneven incentives tied to opaque criteria and vehicle types. Best regards, Troy Kirchenbauer
jeff ashlock	1/3/2023 23:57	This is an EV that will help save the planet much more so than some of the hybrids eligible for the higher credit and I would hate to see it at a disadvantage. Thank you, Jeffrey Ashlock
Jordan Payne	1/3/2023 23:57	Hello! The recent introduction of guidelines for the $7,500 tax credit for new EV car purchases seems to leave out a critical subset of vehicles. Predominantly all Tesla model Y variants. There is some confusion around whether or not the Y is an SUV, but it is in fact labeled an SUV by several other government departments. In addition, the MSRP limits seem too restrictive for most innovative models (ie. Tesla vehicles) to be included in all trims. Most cars these days are very expensive, with the new Nissan Z barking up the tree of $60,000 in top trim. Increasing the MSRP limit will help include more cars, notably fully electric cars which are the ones who are actually pushing the boundaries of innovation and technology. Please consider revising the rules to better include all Tesla Models in the $7,500 tax incentive. Thank you,
Marcus Weber	1/3/2023 23:58	engine if we are to make a successful effort to lower carbon output. I know the IRS can help achieve these goals with good economic incentives. Thank you.

Austin Higby	1/3/2023 23:59	Hello, I am writing to provide perspective on electric vehicle tax credits. Simply put, i disagree with the current decision. Overall, I would not consider myself a “fan” of Tesla. they are over-hyped and do not focus on the important things. That being said, I find it rather interesting that some of their vehicles will not qualify for the electric vehicle tax credit. The biggest reason this is surprising is because other cars that are hybrid fossil fuels/electric that will qualify but fully electricity vehicles are not. This is where we are tying to go, and this hinders others from getting there. Maybe I do not understand the reason where the current limits, such as weight, factor into the decision making. How is it decided how heavy the car can be? What significance does that play in making it a “clean energy” car? In closing, I believe that the Tesla Model Y, as well as other cars that are similar such as the Ford Mustang Mach-E, should qualify for this tax credit. Maybe when electric cars become more commonplace, we can raise the standards to EXTRA clean vehicles. We must take baby steps by getting people to these vehicles first, then finding how we can do better once we reach that step. Thank you for your time in reading this. God Speed. Austin Higby
Lady Marie	1/4/2023 0:02	subject: OMB Control No. 1545-2137 Dear IRS, Please revise the policy to make all fully electric vehicles such as all trim models of the ford Mach-E and the Tesla Model Y eligible for the EV tax credit. The Tesla Model Y 5 seat configuration is the most American-made, energy efficient, and safest car you can buy. The current policy says it's NOT eligible for the $7.5k, based on obscure and irrational metrics such as clearance height, weight, and angle. It should be based instead on battery energy efficiency. Low electric mile vehicles like a keep hybrid should not receive the full credit. As a US citizen and taxpayer, I want my tax dollars to support tax credits that incentivize the purchase of fully electric vehicles, not small battery inefficient gas hybrids. Do not penalize manufacturers like Tesla that make mass efficient vehicles. Simplify and use EPA SUV vehicle definitions instead. Thank you Marie Mai 525 Tirol Ct Milpitas CA 95035 Sent from my iPhone
Ken Keast	1/4/2023 0:02	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery. (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
Ron H	1/4/2023 0:02	Sir, The IRS needs to correct the tax credit qualification limit for the Tesla model Y five passenger SUV. Tesla's competitors Audi, BMW Ford and Jeep all have five passenger SUVs that are granted a $7500 tax credit qualification limit of $80,000, yet the Tesla model five passenger SUV has a limit of $55,000. This is totally unfair and unacceptable as this Tesla model Y is a five passenger SUV like its competition. I am not a Tesla owner and have no plans to buy one. However, I find that the current IRS EV tax credit qualification is manipulating the market by unfair and possibly illegal use of its authority. Please feel free to forward this email to the appropriate resources to correct this qualification. Regards, Ron Hopfner
Shiuh-hua Wood Chiang	1/4/2023 0:03	IRA classifies 5 seater Tesla Model Y as sedan is wrong. Classifocation based on vehicle weight penalizes low weight and weight efficient vehicles. Classification should be based on interior volume and cargo volume. EPA classification rules can be used as a reference.
Sergey Korshunov	1/4/2023 0:03	Hello, Although there are several Tesla Model Ys on the list, the only ones that qualified as an SUV with an $80,000 MSRP limit were the seven-seat varieties. Please include 5 seat model Y's in the SUV category with $80,000 MSRP limit. [Inline image] Thank you, Sergey Korshunov

Joseph Millevolte	1/4/2023 0:03	To Whom It may concern, I hope this message finds you in wonderful spirits! It has been very disappointing to say the least, to hear that many of the vehicles that qualify for the Information Reduction Act's $7500 tax rebate qualification criteria are plug-in-hybrids that primarily rely on fossil fuel based internal combustion engines. Many fully electric made in USA vehicles with ~300 (~110 MPGe) mile electric range do not qualify for the $7500 incentive, where similarly sized plug-in hybrids that are primarily powered by internal combustion engines that have a MPGs of ~20 miles do qualify. Keep in mind many of these vehicles I have outlined above have fall into the same category of SUV and are a similarly priced vehicle. The current qualification framework makes no sense to many of the EV enthusiasts outside of the beltline. Please do a better job of developing a pricing structure that more closely aligns with the spirit of the law, to removes qualification stipulations that appear to convey favoritism to the incumbent auto industry. Regards, Joseph Millevolte
Ebin Rajmon	1/4/2023 0:04	Reg: EV classification under the IRA Hi, I wanted to give some feedback on the classification of EVs under the IRA. Some hybrid vehicles with small battery packs (as little as 50 km EV range) are receiving the entire $7500 credit. While on the other hand, Tesla 5 seater mode Y and Some variants of the Ford Mustang Mach-E are not eligible for any credit. This is because they are not classified as SUVs even though they are. Since your goal is to facilitate people to afford EVs, I believe it would be great to reconsider this classification and include pure EV SUVs under the SUV classification. Ps. I heard that Model Y 5 seater was not classified as an SUV because it weighed less by a few pounds. This is basically penalizing the company for making lighter, safer, efficient vehicles. Thanks
Jackson Lambirth	1/4/2023 0:04	To whom it may concern, I believe in my humble opinion that EVs such as the Tesla Model Y Performance should be considered for the $7,500 tax credit. Many have gone out of their way to provide eco friendly driving options and inturn believe they should be rewarded for making this decision. They have a 0 carbon emission while some vehicular on your list still have a carbon emission. Please take my request into consideration. Sincerely,
Alan Busby	1/4/2023 0:04	I am a concerned citizen as I feel like the IRS used a poor rationale to determine what is an SUV and what is a car for the electric car tax credit. The only thing that should separate the two vehicles is storage capacity and number of passengers. Everything else, particularly weight and car length is completely absurd. A better electric car is lighter, and yet you are penalizing cars that are well made because they are light and have a smaller footprint. Both a small footprint and light weight are good things, and yet you make them bad based on your ruling. Likewise, cars should also get bonuses based on their overall electric only range. It is absurd to have a car that is electric in name only get a larger credit just because it meets nonsensical weight and length requirements. Finally, as an American citizen, I am personally offended at the seeming incompetence of the government officials making these decisions. Their decisions are random and arbitrary. It makes government officials as a group look bad, and it obviously does not follow the clear spirit and purpose of the law. It is no wonder that people look down on government officials, and I say that as someone who used to be one. Please change these rules right away for the benefit of our society, our environment, our respect for law, our respect for government officials, and our sense of rightness and fairness. The rules were poorly thought out and need to be changed right away. Alan Busby, OD, MS
Peter Tang	1/4/2023 0:04	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, -- Peter Tang

Ryan Hostetler	1/4/2023 0:04	Hello, As an EV fan and future owner it seems odd to me that some versions of the Ford Mustang Mach-E and Tesla Model Y don't qualify for SUV status for the IRA tax credit. Please reclassify the Model Y 5-seater and the Mach-E as SUVs. Both are much more energy efficient than comparable gas and hybrid SUVs and I think that's the intent of the IRA. Thank you Ryan Hostetler Whitefish, Montana
ROMVLVS OSB	1/4/2023 0:04	We want our government to encourage the design, manufacture, and sales of fully electronic vehicles. There is a Tesla model which the IRS must classify correctly as an SUV, with the corresponding IRS credit. Do the right thing please. Respectfully yours, David F. Paul 6373 Franklin Gate DR El Paso, Texas 79912
Kip Thammavongsa	1/4/2023 0:04	Dear Sir/Madame, Assuming the "Tesla Model Y 5 seats" is a "Generation Y family with 5 children below age 10" and the "Tesla Model Y 7 seats" is a "Generation Y family with 7 children below age 10". Currently, the IRS helps the "Generation Y family with 7 children" with child tax credit. In other words, the "Tesla Model Y 7 seats" gets EV tax credit. The "Generation Y family with 5 children" is not getting any help. The family is hungry and in need of help, too, during this unpredictable climate and economic changes. Please allow the "Tesla Model Y 5 seats" the EV tax credit, too. Thank you. Regards, Kip Thammavongsa
Jia	1/4/2023 0:04	To Whom It May Concern, Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Best regards, Jason Zhang -- GranTurismo 伟大的旅程．． グランツーリスモ
David Wang	1/4/2023 0:05	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. David Wang Atlanta GA
Paul DobbinSchmaltz	1/4/2023 0:05	Re: Inflation Reduction Act and the EV tax credit. I can't believe I have to even say this, but... why is it that there are hybrids (non-EVs) that are getting a $7,500 tax credit when there are Battery Electric Vehicles (BEVs) that are not? e.g. the Tesla Model Y. Why are we, as tax payers, being forced to pay to subsidize a hybrid vehicle that BARELY has an EV-like capability of say 21 miles? That's absolute rubbish. If you want to make it make sense and absolutely *have to*, then the bill should, at best, allocate only a percentage of the EV tax credit to hybrids. e.g. you could make it equal to the percentage of EV-capable miles vs Gas miles! Then use that savings to support more/all BEVs! Better yet: Hybrids are not the way of the future, we don't need to support them! Hybrids have been around long enough that anyone that wants to build one *can* -- and has been able to for a long time now. Why should I pay for them to build these half-measures that they've either elected not to all these years (until BEVs showed up) or are just using as a money grab to keep scamming the public into keeping their company afloat with inferior tech? They're the ones that chose profits over innovation for decades, so perhaps (definitely) they deserve to suffer huge losses. Saying a hybrid is better for the environment is like saying recycling makes single-use plastics good for the environment. Yeah, it's better than not recycling at all -- if it's actually executed on perfectly. But in reality most recyclable material ends up in the ocean or trash dumps. So, for the same reason we don't pay citizens for turning in recycling, we shouldn't subsidize half-measures like hybrids that don't represent the future we need anyway. 100% clean energy is a must for public health. Hybrids are just the worst of both worlds (EV and Internal Combustion); they don't excel at either and have the problems of both. Anyway, I digress... But, excluding Tesla from getting the tax credit on vehicles is clearly a push *against* Tesla--and for what? Tesla is the most American car company! Singling Tesla out is ridiculous and we won't stand for it! The EPA
Yuan Liu	1/4/2023 0:05	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you.
Jack Tobin	1/4/2023 0:06	I am writing to express my deep dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). I'm frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease.
Jeff Lovington	1/4/2023 0:06	It is OBSCENE you're NOT giving ELECTRIC VEHICLE tax credits to ELECTRIC VEHICLES such as the Tesla Model Y that use NO GAS You've already murdered the planet and doomed the 99% to complete misery before ecological and civilizational collapse from fossil fuel usage for 1% multigenerational inheritance profits. Now you have to throw this flagrant corruption in the faces of everyone with enough intellect to not deny that fossil fuel hse causes apocalyptic global warming. remove all those extremely heavy giant unnecessary GAS vehicles that get essentially zero range from their battery from the credit and give the EV tax credit to EVs

Name	DateTimeReceived	Body.TextBody
Jeffrey Greenfeld	1/4/2023 0:06	I just want to comment that I think the guidelines the IRS is adopting for the EV credit is absurd and should be altered so as not to penalize lighter, more efficient vehicles. Specifically, I take issue with the weight requirement for a vehicle to be considered an “SUV” which unfairly favors hybrid vehicles (which have two drivetrains) and penalizes more efficient BEVs like the Tesla model Y, a vehicle I own. An SUV should be defined by more reasonable criteria, like cargo storage capacity and towing capacity (you know, the things that practically set an SUV apart from a sedan). I hope that you will reconsider your criteria for what constitutes an “SUV” so that the spirit of the law is not subverted. The spirit of the law is to incentivize the American public to switch to vehicles that reduce emissions. It makes sense, then, that the greatest incentive should go to vehicles that reduce emissions the most. That’s battery EVs, not plug in hybrids. My tax dollars bailed out the auto industry in 2009, I’d like to not repeat that mistake. Sincerely, Jeff Greenfeld
David W	1/4/2023 0:06	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Weijia Wang Duluth GA
Trinity	1/4/2023 0:07	Tesla Model Y 5 seater should have been and should definitely be included and its terrible, silly, and plain awful that it wasn't from the beginning. No thank you to our tyrannical evil government. [3ccaf23161ab330ab00b53f07e8425a9fb014dce]
Brian Steele	1/4/2023 0:07	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Thank you -- Brian Steele, M.Ed, LBS Licensed Behavioral Specialist Consultant / Mobile Therapist T.W. Ponessa & Associates Counseling Services, Inc. 717 341 7328 Briansteele425@gmail.com<mailto:Briansteele425@gmail.com>
John McDonagh	1/4/2023 0:07	Please reconsider including Tesla Model Y 5 seat variant as an SUV under the new IRA vehicle cap of $80,000. This is clearly an SUV and should not be limited to only the 7 seat variant of the Model Y. Thank you John McDonagh
Praveen Oberai	1/4/2023 0:08	Dear IRS, Thanks for hearing my comments. Please include all variants of Tesla Model Y. It is most made in USA car and will be the best selling car of the world. It is best to keep these incentives to all electric vehicle and not include hybrid vehicles. Thanks Praveen Sent from my iPhone
michael ren	1/4/2023 0:09	I am confused why Tesla model y is not categorized as SUV. If you look at Nhsta website, it has been labeled as SUV. https://www.nhtsa.gov/vehicle/2022/TESLA/MODEL%20Y%20%205-SEAT/SUV/RWD Tesla has been improving the efficiency of the model by reducing the weight. That can not be the execuse to not treated at SUV. Meanwhile, it is not reasonable to give credit to low efficient hybrid car, while not giving credit to high efficient SUV. It is totally against the reason of the Credits. I urge you to correct this as a tax payer. Thanks Min

Name	DateTimeReceived	Body.TextBody
Jerry Park	1/4/2023 0:10	I am writing to express my disappointment that the Tesla Model Y with 5 seats is not included in the IRA tax credit starting in 2023. As a Tesla customer, I was eagerly anticipating the opportunity to take advantage of this credit when purchasing my Model Y. However, it has come to my attention that this particular model is not eligible for the credit. I understand that the IRA tax credit has eligibility requirements and that not all models may qualify. I feel that the Model Y 5-seat model is an important and popular option for Tesla customers, and I am disappointed that it will no longer be eligible for this credit. I believe that the Model Y with 5 seats should be included in the credit given its popularity and the fact that it meets the requirements for other credits and incentives. I hope that you will consider my request to include the Model Y with 5 seats in the IRA tax credit for future years. Thank you for your time and consideration. Sincerely, Jae-hwa Park -- Jae-hwa(Jerry) Park <jaehwa@gmail.com<mailto:jaehwa@gmail.com>>
Aaron Pilcher	1/4/2023 0:10	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Aaron P
Joey B	1/4/2023 0:10	Dear IRS, I am writing to plead with you to include the Tesla Model Y 5 seater on the Inflation Reduction Act vehicle tax credit list. I understand that the IRS has the difficult task of evaluating and determining which vehicles are eligible for this credit, but I strongly believe that the Tesla Model Y should be given serious consideration. One of the main reasons I believe the Model Y should be included on the list is its impressive efficiency. The Model Y has a range of up to 326 miles on a single charge, making it one of the most efficient electric vehicles on the market. This not only saves drivers money on gas, but it also helps to reduce our dependence on fossil fuels and mitigate the negative impacts of transportation on the environment. In addition to its efficiency, the Model Y also boasts impressive performance and handling. It is able to accelerate from 0 to 60 mph in just 3.5 seconds, making it one of the quickest SUVs on the market. It also has a 5-star safety rating, making it a top choice for families and individuals alike. I understand that the IRS has strict criteria for determining which vehicles are eligible for the Inflation Reduction Act vehicle tax credit. However, I strongly believe that the Tesla Model Y meets all of the necessary criteria and would make an excellent addition to the list. I would be very grateful if you could take the time to consider my request and, if the Model Y is not added to the list, please provide a reply explaining the decision and how it aligns with the IRA. Thank you for your time and consideration.
Christina Beach Hostetler	1/4/2023 0:11	Hello, I have been an EV supporter for 5 years and will be an EV owner. It is disconcerting to me that some versions of the Ford Mustang Mach-E and Tesla Model Y don't qualify for SUV status and for the IRA tax credit. I was hoping you could please reclassify the Model Y 5-seater and the Mach-E as SUVs. Both are much more energy efficient than comparable gas and hybrid SUVs and I think that's the goal of the IRA. Thank you Christina Hostetler Whitefish, Montana
Tony G	1/4/2023 0:13	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Also, it makes no sense that any hybrid vehicles qualify for the $7,500 credit. Regards,. Anthony Giletto
Jeff Adams	1/4/2023 0:13	Please classify the Ford Mustang MachE as an SUV qualifying for the $7500 rebate. A similar vehicle from Volkswagen is listed as an SUV. Best regards, === Jeff Adams Sent from my tablet

justsolo	1/4/2023 0:14	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Erik Control Los Angeles, CA -- Typos provided by my iPhone
Chris D'Anna	1/4/2023 0:14	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery are eligible for the full credit. Why in the world would you use a different vehicle classification than the EPA? Why overcomplicate things? This is government bureaucracy at its worst and why I have changed political affiliations and will vote for whichever party will shrink government and the associated bureaucracy. Please strive to do better. Chris D'Anna christopherjdanna@gmail.com<mailto:christopherjdanna@gmail.com>
Sriram Manian	1/4/2023 0:14	I am writing to express my dissatisfaction with the inflation reduction act's EV tax credit rule. I recently became aware that the Tesla Model Y (5 seat), which I was considering purchasing, is not eligible for the full $7,500 credit as an SUV. However, I have noticed that the Ford Escape PHEV and Jeep PHEV, as well as foreign made EVs on lease, seem to qualify for the full credit. I understand that the credit is limited to vehicles with a base price of $80,000 or less, but it seems unfair that the Tesla Model Y is not eligible for the credit simply because it is classified as a sedan rather than an SUV. I believe that all electric vehicles should be eligible for the credit, regardless of their classification or base price. I urge the IRS to reconsider the eligibility requirements for the EV tax credit and to make it more inclusive for all electric vehicle buyers. As a consumer who is committed to reducing my carbon footprint, I feel that I should be rewarded for making environmentally-friendly choices, rather than being penalized for purchasing a vehicle that does not fit into a specific category. Thank you for your attention to this matter. Sincerely, Sriram Manian
milton degeorge	1/4/2023 0:15	Dear IRS, Please include all electric vehicles when considering tax incentives if able. But you must certainly include all Tesla Model Y. Their lower weight makes them a BETTER SUV than most since they save the environment even more than other EVs. Both 5 seat and 7 seat Tesla should be allowed 7500 federal tax rebate. Thank you. Milton Degeorge, LPN Sent from my Verizon, Samsung Galaxy smartphone
Silas Löffler	1/4/2023 0:15	Dear IRS, unfortunately your vehicle categorization makes absolutely no sense and gives the wrong incentives. The IRS should rewards the most American made clean energy vehicles like the Tesla Model Y or the Ford Mustang Mach E, but instead it rewards foreign car companies like VW or even worse PHEVs. Please either align the MSRP accordingly (Model Y is an SUV) or get rid of the PHEVs completely, Thanks! Greetings

Name	DateTimeReceived	Body.TextBody
SomaSekhar Gondi	1/4/2023 0:15	I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, Soma G
Sawyer Merritt	1/4/2023 0:15	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Sawyer
Steven Zourabian	1/4/2023 0:15	Hello, It is unacceptable that pure electric vehicles such as Tesla Model Y 5 seat version is not eligible for the EV tax credit but hybrid gas electric vehicles are eligible. This is not supporting a transition to sustainable energy and is quite corrupt. I am in strong support of IRA EV tax incentives to be provided to ALL pure electric vehicles. Sent from my iPhone
Josh Eldred	1/4/2023 0:16	To whom it may concern, The current rules for qualifying EVS are not based upon reasonable interpretation or intent of the credit. There should not be an incentive to make heavier vehicles (SUVs) such as the model Y. All Tesla vehicles should qualify, if ANY hybrid vehicle can qualify. I don't believe that any hybrid vehicles should qualify at all. Very Respectfully Josh Eldred (702) 496-4214

Name	DateTimeReceived	Body.TextBody
Craig Spawn	1/4/2023 0:16	The new rules outlining which EVs qualify for the new EV tax credits do not make a lot of sense. The purpose of the bill was to encourage the sale of more efficient vehicles. As the current rules stand, a Tesla Model Y 5 seat with an EPA MPGe of 122 or a Ford Mustang Mach E with an EPA MPGe of 93 don't qualify for the $80,000 limit, but the Jeep Wrangler 4xe which only has an EPA MPEe of 49 and an MPG of 20 does qualify? the model Y qualifies if the customer adds tiny third row seats, which makes the car heavier and less efficient. Apparently, and a lot of this is uncertain due to lack of visibility of how the rules are made, the Tesla and Ford don't qualify due to them not being heavy enough? So, the rules that are supposed to make vehicles more efficient require that the manufacturers make the cars less efficient so that they can comply with the mandate to make them more efficient? It just doesn't make sense. Craig Spawn 6016 Poplar Ct. Bellvue, CO 80512 (970) 493-7129
Don Lee	1/4/2023 0:17	The Jeep plug-in has a gas engine and gets 20 MPG. It has 21 miles of electric range. It gets a $7,500 EV Tax Credit. The Tesla Model Y is ELECTRIC ONLY and gets 113 MPEe. It has 330 miles of range. IT DOES NOT GET A $7,500 EV TAX CREDIT. Please do the right thing. The Model Y should absolutely be classified as an SUV and qualify for the credit.
Nowsc	1/4/2023 0:17	You need to do something so as not to deny tax credit for the Tesla model Y. You’re not being fair when comparing it with other similar ‘SUV/sedan’ cars. Thank you kindly in advance for your soonest reply, – – Harald Illig |_____| Y
Michael Pierce	1/4/2023 0:17	Hello, My name is Michael Pierce and I am a resident of Deltona, FL. I would like to share my comments with regards to the proposed tax credits for certain EVs as part of the IRA. Specifically, I want to voice my concern that some BEVs are being excluded entirely for reasons that are either unclear or irrational, while other PHEVs are included. The fact that the Ford Mustang Mach-E and the five-seater variants of the Tesla Model Y won’t be eligible because they aren’t being classified as SUVs is just plain wrong in my opinion. It’s my understanding that they are just below the minimum weight requirement that the IRS created for the purposes of classifying vehicles for this legislation, which completely ignores the fact that the EPA does in fact classify them as SUVs. The most glaring example of why this doesn’t make sense is that the 7-seat variants of the Model Y are being classified as SUVs, making them subject to an $80k MSRP cap, while the 5-seater isn’t - ask almost any member of the public if they think it’s fair to classify those two variants differently and they’ll tell you it’s not. Moreover, my personal issue is the fact that these tax credits were ostensibly intended to help promote and encourage people to purchase more environmentally-friendly vehicles - if that’s the case, then why are PHEVs with batteries that are tiny by comparison being treated as equals to fully electric BEVs? A Ford Escape PHEV isn’t going to have anywhere near the environmental impact as a Mustang Mach-E or a Volkswagen ID.4. Please reconsider the way you are classifying these vehicles. We need to be doing anything and everything that we can to get people to stop buying vehicles with combustion engines of any kind. Creating technical reasons to exclude fully electric vehicles from these sort of tax incentives runs counter to the principles that the legislation is supposed to follow, which is what a majority of the public wants. Thank you for soliciting the public’s opinions on this matter and for taking the time to read my opinion in particular. Please let me know if you need any additional information from me. - Michael

Jay Friedman	1/4/2023 0:17	Dear IRS, I hope this letter finds you well. I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit. According to the IRS guidelines, the following Tesla Model Y variants are qualified for the 7500 tax credit if their Manufacturer's Suggested Retail Price (MSRP) is under $80000: #1 Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) #2 Tesla Model Y Long Range - 7 seat variant (3-rows) #3 Tesla Model Y Performance - 7 seat variant (3-rows) However, it appears that #1 and #3 do not exist. The following Tesla Model Y variants are also qualified for the $7,500 tax credit if their MSRP is under $55,000: #4 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) #5 Tesla Model Y Long Range - 5 seat variant (2-rows) #6 Tesla Model Y Performance - 5 seat variant (2-rows) However, it appears that #4 does not exist, and #5 and #6 are priced at $65,990 and $69,990, respectively, which may disqualify them from the tax credit.
Gregory Herman	1/4/2023 0:18	For: Public Response to "IRA" EV Vehicle Credit From: Gregory Herman, (Charlotte, NC) IRS EV Credit Link: https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after The only glaring question that comes to mind so far, with the proposed vehicle list, and corresponding "Applicable MSRP Limit" values, is how the Tesla Model Y 7-seat vs 5-seat variant, of the exact same car body, with the sole difference being a fold-up 3rd row seat option... Disqualifies the 5-seat variant from receiving the "SUV MSRP limit", for the EV tax credit... This would not be a big deal and no one would care if this was literally any other vehicle, since the price to performance of all but a handful of non-Tesla EVs, in EV tax credit range, are even worth considering in the first place (not inferior or compliance cars)... This looks like a blatant attempt by bloated, incompetent, "larger" legacy auto, trying to lobby to slow down a more nimble competitor, who has a superior product offering... I might give GM and Ford the benefit of the doubt, but these clowns were making fun of Tesla during the 2010s... While the startup automaker was investing billions of dollars into American factories, battery technology, and building out a work class supercharger network... Laying the groundwork for where Tesla has pushed EV adoption, in the auto industry today... Other rules are already being bastardized, to please decaying automakers who refuse to build in the US... The least you could do is give Tesla a semi fair shake at regaining access to the EV credit, which they have not been able to tap for years because they were "too successful"... Thank you for your consideration, and I hope that you allow innovative companies to play on an even playing field with legacy incumbents... - Gregory Herman
Brandon Knoblauch	1/4/2023 0:19	Dear Andres Garcia, I am writing in protest of the fairness of the new EV Tax Credit (Qualified Plug-in Electric Vehicle Credit and Rev. Proc 2022-46.) The new EV Tax Credit, which went into effect on January 1st, 2023, unfairly gives $7,500 tax credits to heavy, non-US based, inefficient plug-in hybrid gasoline vehicles which have an electric range of less than 40 miles, but $0 for the Tesla Model Y SUV, which is rated the "#1 Most American-Made Car"<https://www.cars.com/articles/cars-coms-american-made-index-adds-tesla-to-exclusive-list-of-multiyear-chart-toppers-model-y-nabs-no-1-451081/>, has 330 miles of electric range, is lighter, more efficient, and produces zero tailpipe emissions. See attached photo highlighting the absurdity of the 5 seater 100% electric, 100% American Tesla Model Y SUV receiving ZERO DOLLARS as a subsidy, while these gas guzzling foreign cars get $7,500. Please correct this absurd injustice to our people and offense to one of our country's greatest manufacturers. And please explain to me how this injustice was ever allowed in the first place. Sincerely, Brandon Knoblauch
Pulkit Arora	1/4/2023 0:20	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Sent from my iPhone
Brian Summers	1/4/2023 0:20	To Whom It May Concern I truly believe that the Ford Mustang Mach E should be considered an SUV. The capacity is the same as the Ford Escape, many have all wheel drive, the EPA lists it under “Small SUV” on their fuel economy site, and Ford has always marketed it as an SUV. Thank you for your consideration. Brian Summers

Caleb Sayan	1/4/2023 0:21	To whom it may concern, In September 2021, I ordered a Rivian R1S SUV. Unfortunately, due to supply shortages Rivian has not been able to fulfill my order yet. In 2022, I signed a "Binding Purchase Agreement" (BPA)last August to ensure that I would still receive the same tax incentives that were available when I placed my order. When I placed my order, the total cost was $70,000 and has since increased to $75,500. Though the cost is still under the $80,000 cap I fear that once the battery requirements thresholds are established in March half of my incentives will be taken away. In an earlier drafting of the language on consumers who signed BPA it did not declare a period that the BPA would not be applicable for those who received/purchased their vehicles in 2023 but lates revision seems to state that that those who signed BPAs and receive their vehicles in 2023 will potentially lose part or all of their tax incentives. It feels especially unfair to penalize those who have not been able to purchase vehicles due to supply chain shortages brought on by the pandemic. I implore you to change the BPA language to its original form and allow those who signed a BPA prior to August 16th 2022 to receive the tax incentives available at that time even if they purchase in 2023 or later due to supply chain constraints. Respectfully, Caleb Sayan 919-699-2747 Get Outlook for iOS<https://aka.ms/o0ukef>
jrussell2239@gmail.com	1/4/2023 0:22	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Sent from my iPhone
Dennis Price	1/4/2023 0:22	Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, I would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. The selection criteria also appear to be applied selectively across different brands showing a clear bias against some plugin electric vehicles and favoring hybrids. This would encourage buyers to purchase less efficient hybrids rather than more efficient pure electric vehicles. Your consideration of this matter is highly valued. Yours sincerely, Dennis Price
Uzair Hafeez	1/4/2023 0:23	Hello, Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. -- Sent from iPhone - please excuse typos.

Kendall Reichley	1/4/2023 0:23	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Kendall Reichley -- Sent from a device that cannot correctly auto-correct despite having more computing power than NASA when it sent two men to the moon.
du.carl2009@gmail.com	1/4/2023 0:23	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you.
Matt Bennett	1/4/2023 0:24	Hi, I strongly disagree with the current ev tax credits. It disproportionately favors hybrids (which still use plenty of gas/oil) and penalizes some FULLY electric vehicles like the tesla model y!?! If the ev tax credit is in place to support the transition of clean energy then all fully electric cars, suvs, trucks, vans, buses should qualify, and tax credit should be phased out based on an individuals income not the car. In summary I strongly believe only fully electric vehicles should receive a tax credit, and all fully electric passenger and cargo vehicles qualify. Phase out based on individual income only. Regards, Matt
Abdullah Gheith	1/4/2023 0:24	Hello, I personally think this EV tax credit failed horribly and needs to be change or this whole move to renewable energy will never come to fruition. I've been waiting for this for awhile now for this EV tax credit to be passed while saving up what i can to buy a Tesla model Y as soon it was passed but now I'm finding out that I will not be getting any credit for the car I want because it's not heavy enough and doesn't have 7 seat but a hybrid car with only 20 miles on its batteries will get it ? That's insane literally Insane. Now I'm pretty sure many people like myself will just go buy a gas car if this doesn't change to a logical EV credit system. I will be 100% staying with my current gas car if this doesn't change and any new car I get will most likely be a gas car. Please for once just look out for the people and not your corporate friends, please just this one time let us the people get a pass. Thank you Abdullah Gheith
Zach Grady	1/4/2023 0:24	Hello, I do not agree with the way the IRS has decided between non SUV/trucks and SUV/Trucks. Weight should not be a factor. This method penalizes companies who are weight efficient and rewards those who aren't. When a 5 seat PHEV (Ford escape) that is smaller than a 5 seat full EV (Tesla model Y) is classified as an SUV and the EV isn't, something is wrong. Since the IRS isn't really in the automotive sector, I highly recommend the IRS use EPA or NHTSA classifications. Thank you, Zach Grady
William Ellingsworth	1/4/2023 0:24	To whom it may concern, I think it's ridiculous that hybrid gas cars qualify for this tax credit, but a pure EV like the Model Y 5-seater does not. You should be ashamed of yourselves. Sincerely, A disgusted U.S. citizen
Minzhe Wu	1/4/2023 0:24	I am writing to express my frustration and distrust over the new tax incentive for electric vehicles (EVs). It is unacceptable that a 22 mpg Jeep Wrangler and other plug-in hybrids are included in this incentive, while certain variants of the most popular EV in the world, the Tesla Model Y, are excluded. This decision shows a clear lack of consideration for the environmental benefits of EVs and a preference for traditional, gas-guzzling vehicles. It is also unfair to those who have chosen to purchase a Tesla Model Y and are now being denied the tax incentive that is offered to less efficient vehicles. I urge the IRS to reconsider this misguided policy and to include all variants of the Tesla Model Y and other popular EVs in the tax incentive. The future of transportation depends on it. Sincerely, Minzhe Wu Sent from my iPad

Name	DateTimeReceived	Body.TextBody
Albert Aguiar	1/4/2023 0:24	Dear IRS, I am writing to express my frustration and distrust regarding the decision of applying tax incentives to electric vehicles. As I understand, low efficiency plug in hybrids SUV (e.g. Audi Q5, Jeep Wrangler) are granted with the incentives while excluding the most popular EV Tesla Model Y which offers much higher efficient pure electric range. As a taxpayer and concerned citizen, I believe that incentives should be directed towards promoting the use of environmentally friendly vehicles. I urge the IRS to reconsider this decision and ensure the tax incentive is fairly applied to all EV vehicles, including Tesla Model Y. Sincerely Albert Aguiar
Kvs Pavan	1/4/2023 0:25	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version).
Steve Hoffman	1/4/2023 0:25	To Whom It May Concern, I am writing to request two additional vehicles be included as part of the electric vehicle tax credit. Some variants of the Tesla Model Y and the Ford Mustang Mach-E should meet the requirements as an SUV as they are currently categorized by other federal agencies such as the Environmental Protection Agency. The Tesla Model Y and the Ford Mustang Mach-E are pure EVs and meet the spirit of the Presidents program to rid our country of fossil fuels and improve our air quality. It makes no sense that a Jeep with a small battery that uses an internal combustion engine as its primary source of power with a 22 MPG range. A Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. That does not make sense. Let's make this right and include all variations of the Tesla Model Y and Ford Mustang Mach-E as part of the electric vehicle tax credit. Regards, Steve Hoffman 518 Easterby St Sausalito, CA 94965
Raj	1/4/2023 0:26	Tesla Model Y 5 seater should be included in the EV rebate. It is the best EV in the market, and it's sad to see hybrid vehicles with just 20-odd miles range on battery get EV rebate but the American made and best-in-the-world EV (Tesla) is excluded. Thanks and regards; Rajdeep Saha
Ashley Neil	1/4/2023 0:26	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Ashley Neil Systems Engineer | Head IT CALGARY FOREIGN EXCHANGE [calforexlogo] The CORE Calgary | Ground Floor T154 154/317 7 Avenue SW Calgary AB T2P 2Y9 403-351-1112 | x2201 | email<mailto:Ashley%20Neil%20%3caneil@calforex.com%3e> | website<https://urldefense.proofpoint.com/v2/url?u=http-3A__www.calforex.com_&d=DwMGaQ&c=PzM68gSF_5r1R7BCE75oeA&r=FpiM56E3YTMAotkNe2XoqnCWO2Rwxm1Z0Hys6MgY8dU&m=8VQ4UeQzL2NSiainxtl0pTL4_1HX-qJo7mE7Me7PPj4&s=LKKcN-EgM1NK3OKAvMgztqA2jiwDwi-sdVjrsDh7tGo&e=> | map<https://g.page/CalforexCalgary>
MelloBreather	1/4/2023 0:26	* The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. * Solutions: * Remove incentives for all hybrid vehicles and only have them apply to pure EVs. * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill.
Chris Sugar	1/4/2023 0:27	Hello, Feedback on new EV tax credits. Please have someone review the criteria for SUVs. There are plug in models with small batteries that get the full 7500 credit while a Tesla model y with 5 seats does not qualify as a suv. Something seems very odd. Thanks.
Ashley Neil	1/4/2023 0:27	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Ashley Neil

George Wogiatzis	1/4/2023 0:27	Dear IRS, I was shocked to learn that tax incentives are being given to hybrids and not the most popular versions of the Tesla model Y. Tesla is the engine that will drive American business into the future. The IRS is incentivising consumers to purchase polluting old technology. This is a bad call. It's bad for the environment. It's bad for innovation. By incentivising hybrids, American companies will not have the pressure they need to incentivise the to compete with Chinese EVs. This move will ultimately lead to the bankruptcy of the American auto industry, and China will take over. I urge you to reconsider this terrible incentive for hybrids. George
soorya sharma	1/4/2023 0:27	Dear IRS: Please consider all Tesla model Y configurations and Ford Mustang Mach-E as SUVs. Currently some of these models are considered as sedans, which is incorrect. Thanks Soorya Sharma
Justin Long	1/4/2023 0:27	Comments regarding exclusion of Mach E and Model Y in tax credit: I think these vehicles should absolutely be included in any EV incentives to encourage overall growth in adoption of zero emission vehicles. In general, I think if the vehicle is made in America I would hope to incentivize more domestically produced cars. Regarding the criteria used to classify the Mach E, it seems to be flawed since so many factors apply and weight can reflect many trims including battery capacity. I think instead it may be more logical to determine the configuration and ability of the vehicle. Thank you, Justin Long -- Sent from my mobile device
Stephen M	1/4/2023 0:27	Hi IRS, I am reaching out because the current EV tax credit makes no sense. I can get a 7500$ credit for a jeep hybrid with poor mileage, but not the Tesla model Y. Please fix this this. Thanks, Stephen
g Ferris	1/4/2023 0:28	Musk is a jerk, but there is NO reason that the Tesla model Y should be excluded from full tax credits while vehicles that are much worse for the environment are included....this is just wrong and reekes of political payback that should not be at the expense of the environment. G Ferris
Ashley Neil	1/4/2023 0:28	Why aren’t ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Ashley Neil
Drew Sande	1/4/2023 0:28	The IRA EV tax credit is extremely bias against the ONLY company making pure EV’s that sell. Typical Government WASTED tax dollars. Every Model Y and Model 3 Tesla makes should be on the list to receive the Credit. Hybrids are a JOKE! Wake Up! V/R, Drew Sande

William Pabon	1/4/2023 0:28	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, William Pabon
Arush Jain	1/4/2023 0:28	Please include all trims of the Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank You.
Allen Du-F21C	1/4/2023 0:28	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you.
Ashley Neil	1/4/2023 0:28	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Ashley Neil
Scott Consolatti	1/4/2023 0:29	The IRA credit qualifications are too complex. Please simplify. If an EV is classified as an SUV, Van or Pickup Truck (of any type/size/weight), then it should get the $80K limit. Other EVs get the $55K limit. Also, no PHEV should get the full credit. PHEVs should only get partial credit because their battery size/range is limited. I think NO PHEVs (NO hybrids) should get any credit anymore. The goal is to get as many full EVs on the road as possible, and to get away from ICE entirely. Weight should not be a factor to classify SUV because that incentivizes the wrong thing! An SUV that is light is more efficient and should be rewarded, not penalized. The IRS should NOT reclassify an EV at all. If it is classified and sold as an SUV, then it is an SUV and gets the $80K limit. Thanks for your consideration, -Scott Consolatti
greensoundroom	1/4/2023 0:29	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the tax credit. Thanks
matthew whiteley	1/4/2023 0:30	The tesla model Y 5 seater should be included in the EV tax credit that is going to be released in 2023. Teslas are some of the most American made cars out there. Please include this car, for the betterment of the economy, EV economy, an American company, and for this planet.
Calforex Live	1/4/2023 0:30	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Concerned tax payer

Name	DateTimeReceived	Body.TextBody
Anthony DiRegolo	1/4/2023 0:31	Please heed your colleagues at NHTSA (the federal government's experts on consumer vehicles) and reconsider how you classify 5 seat electric vehicle SUV's for the $7,500 EV tax credit. See their website links below. https://www.nhtsa.gov/vehicle/2022/TESLA/MODEL%20Y%20%205-SEAT/SUV/RWD https://www.nhtsa.gov/vehicle/2022/FORD/MUSTANG%20MACH-E/SUV/RWD Both Tesla's 5 and 7 seat model and Ford's Mach-E should qualify for this subsidy under the $80,000 SUV price threshold. Not the $55,000 price threshold. Also, why would a hybrid which uses gasoline as its primary fuel source qualify for an electric vehicle tax credit? This seems to be a rather large allocation of tax payer resources. Please consider removing hybrid from eligibility of the electric vehicle tax credit. Thank you for your attention and consideration for these comments. - Anthony
Jackey C H Leung	1/4/2023 0:31	To whom it may concern, I believe that the Model Y 5 seater should be considered a SUV and should be eligible for the $7,500 tax credit. Regards, Jackey Leung Sent from my iPhone
Michael Heister	1/4/2023 0:31	As currently interpreted, the Inflation Reduction Act EV tax credit is very unfair to Tesla, and offers full tax credits to inefficient vehicles with gas engines. It's weird that the EPA classifies the Tesla Model Y as an SUV, while the IRS currently does not. It's also weird that a vehicle like the Jeep Grand Cherokee 4xe, which has a gas engine, gets a thirsty 23 mpg, and offers a paltry 25-mile electric range, qualifies for the full $7500 tax credit. Please fix the tax credits by: 1. Removing incentives for all hybrid vehicles. Only pure EVs should qualify. 2. Apply SUV/non-SUV rules fairly, across the board, with consistency in order to correctly incentivize automakers and the public, in the spirit of the original intent of the bill. Sincerely -
William Blaney	1/4/2023 0:32	Dear IRS, I am writing to express my extreme disagreement with the Inflation Reduction Act's guidelines which disqualify the Tesla Model Y from receiving the SUV electric vehicle tax credit due to its weight being too light. 1) I believe that the weight requirement is not a fair or accurate measure of a vehicle's environmental impact. 2)Hybrids are getting the full credit and that should not be incentivized they burn fossil fuel and emit greenhouse gases. 3)Denying people the opportunity to receive the SUV electric vehicle tax credit because Model Y weight is ~240lbs too light seems counterintuitive to the Act's goals of promoting the use of electric vehicles. I urge the IRS to reconsider its disqualification of the Tesla Model Y as an SUV and to instead focus on the overall environmental and safety benefits of this vehicle. Thank you for your attention to this matter. Sincerely, Bill B East Hartford, CT
Michael Tram	1/4/2023 0:32	Dear IRS, I think the electric vehicle tax credit qualifications are not fair. Why aren't real EVs qualified but hybrids are? In my opinion, I think $7,500 tax credit should include Tesla Model Y for 5 seat and Mustang March-E Best regards, Michael
Mark Cromwell	1/4/2023 0:32	popular and highly-rated vehicle has not been included in the credit from the outset. The Model Y is a top-performing electric vehicle, with a range of up to 326 miles and a 5-star safety rating. It is a reliable and practical choice for both personal and commercial use, with a spacious interior and versatile cargo capacity. Furthermore, the Model Y has received widespread acclaim for its innovative features and sleek design. It is a true industry leader and a major contributor to the growth and mainstream adoption of electric vehicles. In light of these facts, it is baffling that the Model Y has not yet been included in the EV tax credit. This exclusion places an unnecessary financial burden on those who choose to purchase this vehicle, and it sends a confusing message about the government's commitment to promoting the transition to electric transportation. I urge you to rectify this oversight and extend the EV tax credit to the Tesla Model Y 5 seater. It is the right thing to do for the consumers who have chosen this vehicle and for the future of sustainable transportation. Sincerely, Mark Cromwell

Indiana Neil	1/4/2023 0:32	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Indiana Rei
max xu	1/4/2023 0:32	IRS, I think the main goal of the bill is to use tax payers's money to accelerate EV adoption and buildup leading position of US EV manufacturing to help climate change. That said, here are my concerns and disappointments about the bill: 1. Hybrids are qualified for $7500. I believe not a single one of them should because they do very little if any for the goal. 2. All Tesla Model Y should qualify for $7500 because all Model Y are the same size. It is absurd that Model Y 7 seaters are qualified but not others. I have a strong feeling that this is accurately targeting Tesla driven heavily by OEMs' influences, because Model Y is the best selling model and is the biggest threat to OEMs. I strongly suggest the IRS to revisit the bill and do the right things please. Best Regard,
Kevin Rodal	1/4/2023 0:33	I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler 4xe, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y and Ford Mach-E. Sincerely, Kevin Rodal
Boston Neil	1/4/2023 0:33	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Boston Akira
Himansu Desai	1/4/2023 0:33	Dear IRS, There are several issues with arbitrary including or excluding vehicles in the list of vehicles eligible for the IRA rebate. EXAMPLE: Jeep Wrangler hybrid (gas guzzler and very, very limited all electric range) qualifies for $7,500 Tesla Model Y (100% clean electric, best seller, all american made) does NOT qualify for anything. ZERO DOLLARS. This is for the 5 seater version. Tesla Model Y IS a real SUV. Why would the IRS incentivize people to buy a Jeep over an all electric Tesla SUV? Please reconsider. Thanks _ Himansu Desai
Gabriel Camacho Perez	1/4/2023 0:33	Dear IRS I believe that the tax exception of 7,500 usd should apply to all electric vehicles including Tesla model Y SUV. This is critical to promote adoption of electric vehicles, which will help reduce CO2 emissions and help us to transition to renewable energy. Please consider including all electric vehicles on the tax credit Best Regards Gabriel Camacho Sent from my iPhone
Ashley Neil	1/4/2023 0:33	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Concerned tax payer

Name	DateTimeReceived	Body.TextBody
boni fo	1/4/2023 0:34	Dear IRS, I write to comment on the EV credit incentives you have posted recently. Please clarify to the public your definition of an SUV and the criteria that led to your decision to exclude some purely electric vehicles (5-seats Tesla model Y and mustang mach-E do not qualify for $80,000 MSRP) while many hybrid cars (e.g. Cherokee 4xe) were included even though they have far less MPGe (far smaller battery). An important note is that most SUV buyers care about cargo space, so the cargo space is a big deal, and the Model Y has ca. 100 liters more cargo space than the Cherokee 4xe. In my opinion, hybrid vehicles should NEVER have the same incentives as purely electric vehicles, actually they should have far less. Thank you for taking the time to read this and for your consideration. Sincerely
Jacob Avolio	1/4/2023 0:34	TESLA MODEL Y 5 SEATER IS AN SUV YOU MUST RESPECT THE SERVICE WE HAVE TO TALK! Thanks, Jacob Avolio direct: 647 989 7311
Alejandro Victorero	1/4/2023 0:34	It is with great disappointment that I write to you. In December, the IRS listed the vehicles that qualified for the 2023 EV tax credit. Some of these vehicles include plug-in hybrid EVs that use gas and batteries. Although there were several Tesla Model Ys on the list, the only ones that qualified as an SUV with an $80,000 MSRP limit were the seven-seat varieties. The Model Y all-wheel drive, long-range, and performance five-seat variants do not qualify for the tax rebate because their MSRP exceeds the IRS $55,000 threshold. This means Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. My comment on this is: the NTSA and all other automobile entities, classify the model Y as an suv. What is the IRS rationale to not consider it one? And why are we giving a tax credit to hybrids with tiny batteries and range? How does it make sense to offer a 7500 credit for vehicles which batteries cost around 1000 as they're so small? Please correct course as this literally goes against the intent of the legislation in accelerating the use of electric cars over ICE vehicles. Thanks, Alejandro Victorero
Satish Kodeboyina	1/4/2023 0:34	I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. S KODEBOYINA 972-978-4262
Ashley Neil	1/4/2023 0:34	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Concerned tax payer
Signal Hill AV	1/4/2023 0:35	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Concerned tax payer

Ashley Neil	1/4/2023 0:35	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Concerned tax payer
Michael T. James	1/4/2023 0:35	To whom it my concern, I find it very troubling that the Tesla Model Y 5 seat variant does not qualify for the $7500 credit and a Jeep plug in hybrid that only has 20 miles of electric range does. This does not incentivize buying an EV. Please raise the Tesla Model Y 5 seat variant to the list of $80.000 MSRP sport utility vehicles. Thank you, Michael James
Eduardo Flores	1/4/2023 0:35	This needs to be fix. All model Y from tesla should get the tax credit as they are consider SUV and also are full electric. Should get corrected asap. Makes no sense that "hybrid" cars with virtually few tens of miles are elegible and not all the model Y from tesla. Sent from my iPhone
Ashley Neil	1/4/2023 0:35	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Concerned tax payer
Ashley Neil	1/4/2023 0:36	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Concerned tax payer
Edwin Louie	1/4/2023 0:36	The Tesla Model Y, 5 seater should be included and silly that it's not from the beginning. -Edwin Sent from my iPhone
Ken Pollock	1/4/2023 0:36	Tesla model Y 5-seat version should be included in the tax credit for Electric vehicles. By excluding it you are highlighting your servitude to the UAW and all the corruption that implies. Sent from Ken's iPad
Atom Edsall	1/4/2023 0:36	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Concerned tax payer
Ashley Neil	1/4/2023 0:37	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Concerned tax payer
Bevelmon	1/4/2023 0:37	To whom it may concern. I am NOT in favor of giving tax payer dollars to non-BEV vehicles. The EV incentives in the IRA are just that, EV incentives, they should not be extended to hybrid vehicles that are simply Gas vehicles with tiny batteries. Hybrid vehicles do almost nothing to address the pollution, CO2 emissions, or help the transition to sustainable energy the world desperately needs, sooner than later. Additionally, classifying SUVs based on the number of seats, and differently from one federal agency to another is Government at its worst. This clearly gives the appearance of government picking winers and losers or blatant corruption. Please apply the rules for SUV classifications equally and fairly across all brands and all government departments. Lastly, if the purpose of US EV incentives to support vehicles made in America… then the rules should not be bent to allow foreign produced vehicles to qualify. This should be obvious to everyone. Thanks for your attention on this matter. Steve Guthrie
cfxroot@gmail.com	1/4/2023 0:38	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Concerned tax payer

Name	DateTimeReceived	Body.TextBody
Bill Chen	1/4/2023 0:39	Hi Officer, Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. It is not reasonable to exclude Tesla model Y from SUV list, while having some other similar EVs in the list. Regards, Bill -- This electronic communication and the information and any files transmitted with it, or attached to it, are confidential and are intended solely for the use of the individual or entity to whom it is addressed and may contain information that is confidential, legally privileged, protected by privacy laws, or otherwise restricted from disclosure to anyone else. John Pruett	1/4/2023 0:39	Dear IRS, Tesla Model Y 5 seater should be classified as a SUV for the tax credit cap of $80,000. Please reconsider. Regards, -John P.
PEGGY C VROOM	1/4/2023 0:39	The TSLA Model Y five seater should qualify for the $7,500 EV tax credit. It defies logic that other SUV five seater partial EVs/hybrids qualify and Tesla's five seater fully electric SUV doesn't. Please rectify this immediately. Thank you, Peggy Vroom 6205 Lefthand Canyon Dr Jamestown, CO 80455
Richard Baughman	1/4/2023 0:39	The IRA rules set by the IRS are seriously messed up and need amending! The Jeep Wrangler is a hybrid gas car that has 21 miles of electric range yet qualifies for the $7500 tax credit, while the Tesla Model Y, an all-electric SUV EV with 113MpgE with 300 miles of electric range does not qualify for *any* credit. The Mustang Mach-E, another all-electric EV, also does not qualify for any credit. WHAT ARE YOU THINKING??? Please fix this!
Cora Bernados	1/4/2023 0:39	Dear Sir/Mam, On the perspective of an accountant there is no fair on giving tax credit to SUVs. Tesla is qualified in receiving such which the government does not give to Tesla. Tesla has 113 MPEe and it has 330 miles of range. Please review your qualifications to be fair to Tesla. Thank you. Cora
Ernesto	1/4/2023 0:40	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease, particularly on models that still run primarily on fossil fuels. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
Fred Nourbakhsh	1/4/2023 0:40	Hello, I am sending this email to voice my opinion against some of the provisions of this new IRS Tax Incentive for electric vehicles referenced in OMB Control No. 1545-2137. The spirit of the IRA act was to move us away from fossil and into green energy, yet this EV tax incentive rewards consumers who purchase hybrid vehicles with low gas mileage of under 25MPG and short EV range of under 50 miles with $7500 credit, while full EVs with 90+ MPGe and 300+ miles of range such as the Ford Mustang and Tesla Model Y are excluded! These cars are far greener and US built, yet are at a disadvantage with $0 credit versus less efficient hybrids made overseas getting the full credit! I would appreciate the agency's reconsideration of how this is applied to these full battery electric EVs. Thanks, Fred Nourbakhsh

max xu	1/4/2023 0:40	IRS, I think the main goal of the bill is to use tax payers's money to accelerate EV adoption and buildup leading position of US EV manufacturing to help climate change. That said, here are my concerns and disappointments about the bill: 1. Hybrids are qualified for $7500. I believe not a single one of them should because they do very little if any for the goal. 2. All Tesla Model Y should qualify for $7500 because all Model Y are the same size. It is absurd that Model Y 7 seaters are qualified but not others. I have a strong feeling that this is accurately targeting Tesla driven heavily by OEMs' influences, because Model Y is the best selling model and is the biggest threat to OEMs. 3. Tesla is the best EV company in the world hands down. US gov should be proud of Tesla. Tesla deserved to be treated correctly. I strongly suggest the IRS to revisit the bill and do the right things please. Best Regard, -max
Alex Safahi	1/4/2023 0:41	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery 21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Regards, Alex
Bo Yan	1/4/2023 0:41	Are you kidding me that fucking wrangle PHEV is eligible for $7500 tax credit and tesla Model Y is not? Whoever made this decision is either retarded or corrupted.
Nikolas Cantrell	1/4/2023 0:42	Hello Andres Garcia, Regarding the vehicle models selected as eligible for the 2023 EV tax credit.. * Qualifying gas burning hybrid SUVs as eligible for the $80,000 cap while disqualifying purely electric zero emission SUVs is incredibly illogical when the purpose of the credit is to incentivize lower emissions. * The Tesla Model Y (5 seat variant) and the Ford Mach E are both fully electric and characterized as SUVs by the EPA yet the IRS is choosing not to qualify them for the EV tax credit as SUVs. Strangely, hybrid SUVs of similar size and configuration are being qualified despite their higher emissions. * Besides resulting in increased damage to the Earth's climate and public health, this decision to disqualify two of America's zero emission SUVs for the credit without any scientific or consistent logic will also massively undermine the taxpayer's trust in the competency and integrity of the IRS. Thank you for your consideration.
Xiaoqin Li	1/4/2023 0:42	We would appreciate the consideration of the inclusion of the Tesla Model Y and Ford Mach-E Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. The Model Y is a highly desirable electric SUV due to its classification as an SUV, as certified by KBB (https://www.kbb.com/tesla/model-y/) and the NHTSA, among others. It is also the most popular, safest, efficient, and environmentally friendly electric SUV on the market. Allowing only a single variant of the Model Y to qualify for the tax credit seems unfair, as it excludes a significant portion of Tesla's customer base. If a customer ends up purchasing a hybrid Jeep that gets $7500 but only 20 MPGe and less than 30 miles electrified range, over a Mustang Mach-E (Gets 98 MPGe) or Model Y (Gets 113 MPEe) because of the IRA, after all, then the initiative pretty much fails at its core as a green policy. When compared to the qualified Volkswagen ID.4 AWD Pro, the Tesla Model Y is a more suitable candidate for the SUV $7,500 tax break. It has a longer range, more advanced technology, and more cargo space, making it a highly desirable choice for consumers looking for an electric SUV. Additionally, compared to qualified electric vehicles such as the Nissan LEAF S, which has a range of only 40 kwh on a single charge, the Model Y is a much more efficient and cost-effective choice. Allowing vehicles with such a limited range to qualify for the tax credit would be a waste of taxpayer dollars. Thank you, -- _____ Xiaoqin Li Software Engineer at Google

Name	DateTimeReceived	Body.TextBody
Arun Dhakne	1/4/2023 0:42	ATN: Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, I hope this letter finds you well. I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit. According to the IRS guidelines, the following Tesla Model Y variants are qualified for the 7500 tax credit if their Manufacturer's Suggested Retail Price (MSRP) is under $80000: #1 Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) #2 Tesla Model Y Long Range - 7 seat variant (3-rows) #3 Tesla Model Y Performance - 7 seat variant (3-rows) However, it appears that #1 and #3 do not exist. The following Tesla Model Y variants are also qualified for the $7,500 tax credit if their MSRP is under $55,000: #4 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) #5 Tesla Model Y Long Range - 5 seat variant (2-rows) #6 Tesla Model Y Performance - 5 seat variant (2-rows) However, it appears that #4 does not exist, and #5 and #6 are priced at $65,990 and $69,990, respectively, which may disqualify them from the tax credit. This leaves only #2, the Tesla Model Y Long Range - 7 seat variant (3-rows), as the only qualified variant. We understand that the IRS guidelines currently only allow for the 7 seat variant of the Model Y to qualify for the tax credit. However, we would like to request that the IRS reconsider the Model Y as an SUV regardless of its seating capacity. The Model Y is a highly desirable electric SUV due to its classification as an SUV, as certified by KBB (https://www.kbb.com/tesla/model-y/) and the NHTSA, among others. It is also the most popular, safest, efficient, and environmentally friendly electric SUV on the market. Allowing only a single variant of the Model Y to qualify for the tax credit seems unfair, as it excludes a significant portion of Tesla's customer base.
Michael S	1/4/2023 0:43	My comment on this tax credit, it seems unjustified that a 5 model Y seater not qualify but a 7 seater of the same vehicle does. Other EVs of the same size qualify with a 5 seater. Doesn't seem fair. The price cap is far too low for electric vehicles especially the model Y 5 seater. Battery's are expensive and only getting higher as the demand increases so the price cap does not reflect that of some vehicles. A jeep with 21 miles if electric range will cost a lot less material wise than a car with 300 miles of charge. I was interesting in buying an electric car especially a tesla since they dont have dealerships trying to take advantage of this tax credit with a "market adjustment". The desired configuration of the car that is practical for my lifestyle and cargo size needs is of the 5 seater. Please raise the height of the electric car price cap to that of the 7 seater and decrease the amount awarded to plug in Hybrid. Thank you, Michael
Samarth Gupta	1/4/2023 0:43	Requesting you to consider the classification of Tesla Model Y 5 seat option as an SUV for the IRA tax credit of $80,000. Thanks! Samarth Gupta
Chris Keyes	1/4/2023 0:45	I'm writing to request a review of the Tesla Model Y 5 Seat configuration to be evaluated as an SUV just like the 7 seat version and be eligible for the full $7500 credit. Having minimum height and weight requirements for an electric SUV flies in the face of an optimized EV and are not what make this a sport utility. The AWD and traction control systems of the Model Y grant it greater capabilities in the sporting category than almost all other SUVs deemed eligible under the IRS. Additionally, the EPA views the Model Y 5 seater as an SUV. I'm asking that ride height and weight limits be removed from the criteria for determining an SUV with regard to this credit. Thank you,
Anthony Boreland	1/4/2023 0:45	I am writing to you to request (with regards to the Inflation Reduction Act's vehicle price caps and corresponding $7,500 Federal Tax Credit) that the Tesla Model Y Long Range 5 seater variants and Ford Mach E be included in the SUV category that receives the $80,000 price cap instead of the $55,000 cap. The Inflation Reduction Act has a stipulation in which Pure Electric Vehicles and Hybrid Electric Vehicles are able to take advantage of up to $7,500 as Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. Here are the primary qualifications for the EV tax credit: [e9f76bb1-fcee-4219-a088-6d19cd025729.jpeg] However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers like Tesla are being unfairly treated, while others are getting a benefit they do not deserve. There is no reason why Tesla Model Y Long Range 5 seater or Ford Mach E is limited to a $55,000 price cap yet the VW iD4 with the same 5 seat form factor but is heavier (i.e. less range efficient) has an $80,000 price cap. [Image.png]

Name	DateTimeReceived	Body.TextBody
Joel Lisenby	1/4/2023 0:45	I would suggest any vehicle that is capable of fitting 22 or more banana boxes and has a ground clearance > 6" should be considered an SUV. Bjorn's data is published in the following google spreadsheet: https://docs.google.com/spreadsheets/d/1V6ucyFGKWuSQzvl8lMzvvWJHrBS82echMVJH37kwgjE/edit#gid=0 -- Joel Lisenby On Tue, Jan 3, 2023 at 5:03 PM Joel Lisenby <joel.lisenby@gmail.com<mailto:joel.lisenby@gmail.com>> wrote: Hello, I wanted to comment on the requirements for the $7500 clean vehicle credit to qualify at the $85,000 SUV price point. For the Tesla Model Y, from what I understand the qualification is granted to the heavier 7 seat model, however due to the high tech materials and design of the Model Y, the 5 seat model weighs in just slightly under the 6000 weight limit to qualify as an SUV. I believe that weight should not be a factor in deciding if a vehicle is an SUV or not. Instead SUV status should be granted by internal square footage, and the Model Y should qualify in any form (5 seat or 7 seat) as an SUV as it is a very large interior space. Setting a minimum weight is actually counter-productive to a clean electric vehicle credit because it discourages reduction of weight and thus higher efficiency vehicles that use less energy, and therefore produce less emissions from charging. Thank you for considering my thoughts on the matter, -- Joel Lisenby Escondido, CA 92029
DAVID CROWE	1/4/2023 0:46	Please review the EV vehicles that have up to $80000 tax credits of $7500 that should be included as they are SUV`s models such as: Tesla model Y 5 seat SUV Ford Mustang Mach E SUV As other EV`s not listed As ford escape and other 5 seat SUV `s are included.  Thankyou for you consideration of these SUV`s David Crowe
Jeremy Lang	1/4/2023 0:47	The EV tax credit table is a confusing mess because of the arbitrary/contradictory distinctions between sedans vs. SUVs. ALL Tesla Model Y's should be classified as SUV ($80k cap) as should the Ford Mach-E. Probably the Bolt EUV and Cadalac Lyric as well. It makes no sense for vehicles bigger yet more environmentally friendly than the Ford Escape Hybrid to be classified lower! It would also be great to include an exception for driver assistance and safety feature add-ons from the cap, especially the lower cap. The law was intended to encourage EV adoption and the current table does not do an adequate job of that. If any vehicles should be arbitrarily put at the lower cap it is hybrid drivetrains--not full Battery Electric Vehicles with over 250 miles of range.
Boba T	1/4/2023 0:47	The IRS is soliciting comments concerning qualified plug-in electric vehicle credit and Revenue Procedure 2022-42. Comments: 1) The Qualified Plug-in Electric Drive Motor Vehicle Credit should not apply to any PHEV vehicles as they use Internal Combustion Engines that pollute, offering very limited EV mode ranges. 2) Credit level should be based on EV's official EPA range and not SUV vs. Non-SUV criteria (which as currently defined are clearly biased to exclude the most popular domestic EVs) 3) Income caps should be entirely removed (or at least structured such that any EV purchase generates some level of credit) As written now, the credit does a poor job of incentivizing EV adoption, rather opening the door to more Internal Combustion Engine vehicles, which is counter to the stated objective to promote domestic EV and battery industries. Doing so will allow foreign competitors abroad to leapfrog the US in these critical technologies, much like what has happened in electronics and leading edge semiconductor manufacturing. THANKS.
sslujtner@gmail.com	1/4/2023 0:48	Hello, The following should be considered SUV's and qualify for up to $80k MSRP cap; Tesla Model Y (all variants including 5 seater) Mustang Mach-E (all variants) VW ID 4 (all variants) They are considered SUV's by NHTSA, car review magazines/websites every other source. Please fix the classification. I would hate to see my tax dollars be used for a $7,500 tax credit on a 20MPG Wrangler and not the Pure EV's listed above. Steven Slujtner

Richard Medina	1/4/2023 0:48	I write to voice my opinion regarding the structure of incentives for hybrid vehicles as well as the marginalization of certain electric vehicles in the current form of the Inflation Reduction Act. Instead of funding electric-powered automobiles made by the American auto workers for the American economy, American taxpayers are funding old technology with dubious benefits by incentivizing the purchase of inefficient gas-powered hybrid vehicles to the tune of billions of dollars. This is a gross misuse of taxpayer dollars. The ideal fix is to: * Remove incentives for all hybrid vehicles and only have them apply to pure EVs. * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the Inflation reduction Act. Feel free to contact me if you have any questions or concerns regarding my statement. Thank you. -- Regards, Richard Medina +1 718 219 6295
Felipe Gonzales	1/4/2023 0:49	All Teslas Model Y are SUVs and should have the 80k MSRP limit
Samer Barakat	1/4/2023 0:49	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Samer Barakat
Imran Shivji	1/4/2023 0:50	I am writing to bring to your attention an issue with the current subsidy program for electric vehicles. It appears that there is a misalignment of incentives in the program as it currently stands. To illustrate this point, I would like to draw your attention to two specific vehicles: the Jeep Wrangler Wxe, which is a traditional internal combustion engine (ICE) SUV, and the Tesla Model Y 5 seat variant, which is a fully electric SUV. The Jeep Wrangler We has a range of only 21 miles when equipped with $2,500 worth of batteries, yet it qualifies for a $7,500 subsidy. Meanwhile, the Tesla Model Y, which has a range of over 300 miles and more cargo capacity, does not qualify for a subsidy because it is not considered to be "SUV enough." This discrepancy seems to indicate that the current subsidy program is not properly aligned with the goal of encouraging the adoption of electric vehicles. It is unfair to provide a subsidy to a vehicle with such a limited electric range, while denying a subsidy to a vehicle that is significantly more efficient and has a much larger impact on reducing emissions. I respectfully request that the Internal Revenue Service review this issue and consider adjusting the subsidy program to ensure that it is better aligned with the goal of promoting the adoption of electric vehicles and reducing emissions. Thank you for your attention to this matter.

Name	DateTimeReceived	Body.TextBody
Brendon Townshend	1/4/2023 0:51	Regarding how cars are qualified for receiving a $7,500 credit under the Inflation Reduction Act, I am concerned about the discrepancy of Tesla's Model Y 5 seat configuration being classified as a sedan and not an SUV. I currently own a 5 seat Tesla Model Y that was sold to me as an SUV, it is an SUV by the EPA, and is used as an SUV. I tow my camper with the Model Y, take it off road, and use it as a work rig during the week. As someone that deeply cares about the quick transition to an electric future, the mis-categorization of the 5 seat Model Y and the Ford Mustang Mach E needs to be corrected. They both are cars that set the right example and are in the same vein that the IRA is intended to accomplish. Please change the Tesla Model Y and Ford Mustang Mach E to be categorized as an SUV so customers can take advantage of the tax credit they deserve under the IRA. Thank you, Brendon Townshend -- Townshend Cellar Address: 1222 N Regal Rd Spokane, WA 99202 Phone: (509) 481-1367 Email: b.townshend@townshendcellar.com<mailto:b.townshend@townshendcellar.com> Website: www.townshendcellar.com<http://www.townshendcellar.com> [https://ci3.googleusercontent.com/mail-sig/AIorK4xcxb4RnWDEFe1pbKvKTtc-0bzEFedGwu7wnAmSARQjYdywsCOBdjB9x7SG6VbA6xdSlDLMWpo]
Chasypoo	1/4/2023 0:52	I think that the tesla Model Y 5 seater should be included in the tax break and it is silly that it's not from the beginning Sent from my iPhone
Ashwin Matta	1/4/2023 0:53	Dear Sir or Madam, This is a petition to make 2 fundamental improvements to the Inflation Reduction Act: 1. Fix the discrepancy in classifying a Tesla Model Y 5-seater as a non-SUV (subject to $55,000 price limit instead of $80,000). The 5-seater is the exact same size as a 7-seater (3 rows) Model Y and larger in size than some other 5-seater SUVs (eg. Volkswagon ID.4) which are classified in the $80,000 SUV bucket. The Model Y is the most efficient SUV out there, perfect for small-family road trips. Hence excluding it from the full $7500 exemption is doing a disservice to goal of the IRA to accelerate EV adoption. Buying the 3rd row option, while enabling the rebate, increases the cost of the purchase compared to the 5-seat option. 2. Come up with a better methodology for giving rebates to plug-in hybrids. A hybrid with as little as $1000-worth 7.5kW battery qualifies even if its gas mileage is atrociously low. This is clearly unfair as it incentivizes companies to continue selling gas guzzlers with tiny electric motors that would not really get used in practice. Instead, the rebate should be on the weighted average of the gas mileage PLUS the electric motor mileage achieved. This weighted average of the gas+electric mileage should be at least 50 MPGe in order to qualify for the full $7500 rebate. Otherwise, IRA hasn't moved the needle towards full 100+ MPG EV efficiency. A good weightage ratio would be 75% for EV miles and 25% for gas miles. So if a hybrid can drive 50 miles on battery and 30 miles on 1 gallon of gas, its weighted MPG is 0.75*50+0.25*30=45 MPG. Since this is smaller than 50 MPG, the rebate should be reduced at least by 50% ($3750). On the other hand, if the hybrid has a larger battery that drives 60 miles on the battery and 30 miles on 1 gallon of gas, its weighted MPG is 52.5 and should get the full $7500 rebate. Note that 60 miles are sufficient for most city driving with daily charging, with the gas mileage only being used for long-distance trips. Please consider modifying the hybrid ratings accordingly.
Chris Blackmore	1/4/2023 0:53	I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Respectfully, Chris Blackmore

Christian Karlsson	1/4/2023 0:54	Dear irs, 1 am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. 1 urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Simon, Democrat and 50 year old tax payer
Jim French	1/4/2023 0:54	Dear Andres or whom it may concern, I believe in Tesla's sustainable energy mission and the government's support of that mission and my tax dollars to be in support of that mission. Should the IRS designate the Tesla Model Y as a PC Passenger Car when other more vehicle oriented agencies, the EPA and NHTSA, classify the Tesla Model Y as an SUV/MPVs? The NHTSA Part 583 American Automobile Labeling Act Reports identifies 11/2023, NHTSA categorized Tesla Model X & Y as MPV Multi-Purpose Vehicle and S & 3 as PC Passenger Car. In a separate document Interpretation ID: 14896-4.pja NHTSA states that "Sport utility vehicles clearly meet the MPV definition." In addition, the Interpretation also says "Generally speaking, designation of the vehicle type is up to the manufacturer." Tesla clearly markets the Model Y as an SUV. The EPA designates it an SUV. Every car site that covers it, categorizes it as an SUV. How in the world can the IRS state otherwise? https://www.nhtsa.gov/part-583-american-automobile-labeling-act-reports https://www.nhtsa.gov/interpretations/14896-4pja Please reply with any any questions or comments. Thanks, Jim French 3008 Royal Forrest Dr.
Charles Orosz	1/4/2023 0:54	better to do at the moment so I'll speak my mind: EV tax credits should be handed out to corporations not based on their product's price tag, but instead on the environmental benefit that their products have. Tesla's model Y deserves to be eligible for the 7,500$ tax rebate as the vehicle far outclasses its competitors that the IRS has chosen. Many of the vehicles that are eligible still run on fossil fuels, and seeing as how this subsidy is intended to promote the EV industry, I also believe that putting all-electric vehicles as top priorities for subsidy eligibility is a must. In my view, the IRS should do good on its obligation to properly distribute these incentives in an objective manner. If you're reading this, thank you for having taken the time to read this through. On a personal note, do you have any opinions on this?
Tyler Van Gorder	1/4/2023 0:54	I am writing to express my disappointment that the new tax incentive for electric vehicles includes a plug-in hybrid, but does not include the Tesla Model Y, which is currently the most popular electric vehicle in the world. Furthermore, it is disappointing to see that the incentive includes a Jeep Wrangler, which only gets 22 mpg. I understand that the goal of the tax incentive is to encourage the use of electric vehicles and reduce reliance on fossil fuels. However, excluding the Model Y and including a vehicle with such low fuel efficiency seems to undermine this goal. I urge the IRS to reconsider the inclusion of the Model Y and to set higher standards for the fuel efficiency of vehicles that are eligible for this incentive. Thank you for your attention to this matter. Sincerely, Tyler
Christian Karlsson	1/4/2023 0:54	Dear irs, 1 am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. Scott Stambush	1/4/2023 0:56	Dear Sir (I hope you're a "Sir", if not please forgive me), Please consider adding the Tesla Model Y Five-Seater to the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. Probably the most American made pure EV, the 5 seater Model Y is currently disqualified based on outdated measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Additionally, the easier you make it for families to afford a Tesla, the more potential lives you will be saving. I'm specifically referring to the recent incident in the news about a Tesla that wasallege intentionally driven off a cliff in CA by a man who seemed to want to kill himself and his wife and two kids. Fortunately, all four occupants survived that 250 foot fall thanks to Tesla's fantastic engineering, and (tbh) luck. Allowing the 5 seater Model Y to qualify for the tax credit will also make all the conspiracy theorist stop saying President Biden wants to hurt Tesla because he is corrupt. I don't believe President Biden is corrupt. I do however believe this is a big mistake that needs correction. You've got a big job, and perfection is an illusion. Thank you for reading this. Yours sincerely, Scott Stambush
Tom Kleven	1/4/2023 0:57	Dear IRS, I think the EV Tax Credit should include treat all Tesla Model 3 as sedans up to $55K and all Tesla Model Y as SUVs up to $80K. I think it's terrible that a partial hybrid with a tiny battery gets a full tax credit while an American-made electric vehicle is excluded for some nonsensical reasons. Fix this please and restore some faith in the US government. Thanks. Tom Kleven Bothell, WA
최종완	1/4/2023 0:57	I am writing to express my disappointment and frustration that the Tesla Model Y 5-seat model will not be included in the IRA tax credit as of 2023. As a Tesla customer, I was eagerly anticipating the opportunity to take advantage of this credit when purchasing my Model Y. I understand that the tax credit is subject to change, and that it is not uncommon for certain models to be excluded from time to time. However, I feel that the Model Y 5-seat model is an important and popular option for Tesla customers, and I am disappointed that it will no longer be eligible for this credit. I hope that you will reconsider this decision and include the Model Y 5-seat model in the IRA tax credit as soon as possible. Sincerely, Brian Choi
HIRAV PAREKH	1/4/2023 0:57	$80,000. These cars are clearly SUV, and are categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserve to be the full tax credit in the spirit of the relevant law. Regards, Hirav Parekh US Tax payer
Tom Kleven	1/4/2023 0:58	> > I think the EV Tax Credit should include treat all Tesla Model 3 as sedans up to $55K and all Tesla Model Y as SUVs up to $80K. > > I think it's terrible that a partial hybrid with a tiny battery gets a full tax credit while an American-made electric vehicle is excluded for some nonsensical reasons. > > Fix this please and restore some faith in the US government. Thomas Emmerich	1/4/2023 0:58	Dear Andres Garcia, I've read the list of qualified vehicles for the Electric Vehicle Credit beginning in 2023. I think the list needs some serious review. The vehicles that qualify as SUVs seems random and does not agree with what the EPA defines as SUV. Also, some of the vehicles that do qualify can barely be called EVs (i.e. run mainly on gasoline and have poor fuel efficiency) and some that do not qualify for the credit are some of the most efficient vehicles on the market (e.g. Tesla Model Y 5 seater). As someone who wishes the country to make the transition to more environmentally friendly transportation, I don't think the way the President's much touted Inflation Reduction Act bill is being implemented supports what the President himself keeps saying he intends to do with this bill. Thanks, Thomas Emmerich Oxnard, CA

Name	DateTimeReceived	Body.TextBody
Majed Azzam	1/4/2023 0:58	To whom it may concern, I would like to voice my support for all EVs (including Tesla Model Y and Ford Mach E) to get equal opportunity when being considered for the electric vehicle tax credit. Thank you,
Raymond Holland	1/4/2023 0:59	Dear Mr. Garcia, I am writing to express my strong objection to the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure, specifically the exclusion of the US-manufactured Tesla Model Y from the SUV category. I am extremely disappointed to see that vehicles largely manufactured outside of the US and with much worse environmental profiles are being allowed for this credit, while the Tesla Model Y, which is manufactured in the US and has a significantly better environmental profile, is being excluded. This seems completely arbitrary and unfair. I urge the IRS to reconsider this decision and include the Tesla Model Y in the SUV category for the Qualified Plug-in Electric Drive Motor Vehicle Credit. As a taxpayer and a concerned citizen, I strongly believe that we should be supporting and incentivizing the production of environmentally-friendly vehicles, especially those made in the US. Sincerely, Raymond Holland
Ryan Wilmot	1/4/2023 0:59	I am writing to express my concern regarding the $7,500 subsidy offered for a Hybrid ICE SUV equipped with only around $2,500 worth of batteries, which provides a mere ~20 miles of electric range. While the most popular EV on the market, the Tesla Model Y, doesn’t qualify for any subsidy under the rules set forth. I understand the intention behind this subsidy is to encourage the use of alternative fuel vehicles. I believe it is unfair that a vehicle like the Tesla Model Y, which has 15 times the electric range, does not qualify for this subsidy because it is not considered "SUV enough and/or not heavy enough." The Tesla Model Y is a true electric SUV that has the potential to make a significant impact on reducing emissions and improving air quality. It is disappointing that this vehicle, which has proven to be a viable alternative to traditional ICE SUVs, is not eligible for the same level of support. I urge you to reconsider the qualifications for this subsidy and to include vehicles like the Tesla Model Y that are truly dedicated to the promotion of alternative fuel technologies. Thank you for your attention to this matter. Sincerely, RYAN WILMOT Registered Voter Santa Clara County, California
Rafael Shpigel	1/4/2023 0:59	IRS, I find this absolutely ridiculous that model Y does not qualify for EV tax credit! The Jeep wrangler is a hybrid 4xe that barely gets 20 electric miles and you made it eligible for $7,500?! This is complete misuse of tax payer money! I, as a tax paying citizen, implore you to make the model Y eligible for the full $7,500 EV tax credit. Please respond to this email. Get Outlook for iOS<https://aka.ms/o0ukef>
Matthew Kellerman	1/4/2023 0:59	future for the next generation. The most popular EV today is the Tesla Model Y, which in its standard configuration of 5 seats is currently ineligible. I would recommend that if the U.S. government is serious in its commitment to the aforementioned goals that it include this vehicle configuration in the list of vehicles which are to receive the full tax credit! -Matthew Kellerman 949-573-0502
Zan An	1/4/2023 0:59	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Z
Vanneth Nhim	1/4/2023 0:59	Please make changes so that pure EVs can get the full tax credit instead of hybrids/plug ins because those are mainly combustible cars with only 20-30 miles of electric range but those cars get the full $7500 tax credit when pure EVs like the Model Y are capped at $55k and at this model doesn't qualify unless the consumer gets the 7 seater but that comes at a higher cost. Please give all EVs the $7500 tax credit to incentivize buying pure EVs instead of subsidizing hybrids which are basically still gas cars. This is not what the voters wanted under this administration.

Name	DateTimeReceived	Body.TextBody
Asad Hassan	1/4/2023 1:01	This is not right. The Internal Revenue Service (IRS) is inviting consumers<https://www.federalregister.gov/documents/2022/12/30/2022-28402/proposed-collection-requesting-comments-on-form-8936-qualified-plug-in-electric-drive-motor-vehicle#addresses> to share comments on the electric vehicle tax credit qualifications. Tesla and electric vehicle supporters have been vocal about the Inflation Reduction Act's qualified cars for the EV incentive. Some variants of the Tesla Model Y and the Ford Mustang Mach-E will not receive any incentives<https://www.teslarati.com/tesla-protest-ira-incentives-evs-vs-hybrids/> from the IRA at all, yet some vehicles that use fossil fuels will. Those vehicles are classified as electric vehicles because they are plug-in hybrid EVs. -- Best, Asad C: 952-737-2130
Mike Treacy	1/4/2023 1:01	I am writing regarding the Tesla Model Y exclusion from the $7,500 tax credit. I think it is dangerous to divert consumers away from a vehicle manufactured by the only company who can actually meet the logistical needs of nationwide charging networks. My concern is pushing consumers towards ill-equipped manufactures will ultimately turn people away from EV in the long run. I ask that you guys reconsider the decision. Please contact me with any additional questions or concerns Best Regards Mike Treacy
Huang, Mingxiong	1/4/2023 1:01	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Mingxiong Huang
sfaridi@gmail.com	1/4/2023 1:02	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). In addition, how come a plug-in hybrid is qualified for the tax credit does not serve the purpose of this Act. This Act should be promoting fully electric vehicles. Regards,
Ankit Vasa	1/4/2023 1:03	Some model of Jeep - plug-ins have a gas engine and gets 20 MPG. It has 21 miles of electric range. It gets a $7,500 EV Tax Credit. Tesla Model Y is ELECTRIC ONLY and gets 113 MPEe. It has 330 miles of range. The Tesla DOES NOT GET A $7,500 EV TAX CREDIT. This is messed up and I don't think it was the intention of the law. Please reconsider what vehicles quality for the tax credit. THANK YOU!! - Ankit Vasa
Anthony Hunter	1/4/2023 1:03	don't qualify for SUV status for the IRA tax credit. The 5-seat version of the Model Y is not very different from the 7-seater. There are plenty of vehicles considered SUVs that are similar to the Y 5-seater. Please reclassify the Model Y 5-seater and the Mach-E as SUVs. Both are much more energy efficient than comparable gas and hybrid SUVs and I think that's the intent of the IRA. Thank you, Anthony Hunter Get BlueMail for Android<https://bluemail.me>
sebastien	1/4/2023 1:04	I am extremely concerned about the new electric vehicle tax credit qualifications. In particular, I do not understand how vehicles like the Tesla Model Y 5 seater are excluded while absurdities like the Jeep Wrangler (or to a lesser extent hybrid vehicles) are included. The government must do everything it can to accelerate the transition to renewable energy and this tax incentive is poorly aligned with this imperative. Please correct this oversight and make it right. Thank you, Sebastien Ballesteros
Daniel Coady	1/4/2023 1:04	Hello, Incentivizing plug in hybrids (with heavy gas usage and low eMPG) and heavier SUVs over more efficient and lower weight SUVs with more storage and range is ridiculous. So, is giving a $7500 credit to leased foreign-made vehicles. Do the right thing and fix this situation, Your guidelines do not comply with the spirit and intent of the inflation reduction act. Sincerely, Dan Coady Tax payer and environmentalist

Name	DateTimeReceived	Body.TextBody
wu Benny	1/4/2023 1:04	IRS, I think the main goal of the bill is to use tax payers's money to accelerate EV adoption and buildup leading position of US EV manufacturing to help climate change. That said, here are my concerns and disappointments about the bill: 1. Hybrids are qualified for $7500. I believe not a single one of them should because they do very little if any for the goal. 2. All Tesla Model Y should qualify for $7500 because all Model Y are the same size. It is absurd that Model Y 7 seaters are qualified but not others. I have a strong feeling that this is accurately targeting Tesla driven heavily by OEMs' influences, because Model Y is the best selling model and is the biggest threat to OEMs. 3. Tesla is the best EV company in the world hands down. US gov should be proud of Tesla. Tesla deserved to be treated correctly. I strongly suggest the IRS to revisit the bill and do the right things please.
lindsay burrows	1/4/2023 1:04	don’t qualify for SUV status for the IRA tax credit. The 5-seat version of the Model Y is not very different from the 7-seater. Vickie	1/4/2023 1:05	I am writing to express my dissatisfaction with the inflation reduction act's EV tax credit rule. Specifically, I am disappointed that the Tesla Model Y (5 seat) is not eligible for the credit, while the Ford Escape Hybrid and Jeep Hybrid are qualified for the full $7,500 credit. The Tesla Model Y is an American-made, 100% electric vehicle, and should be eligible for the credit. Period. The IRS isn’t categorizing the Tesla Model Y as an SUV even though the Environmental Protection Agency does?! Put politics aside and consider our planet and those of us doing our small part by purchasing 100% electric vehicles, specifically Teslas. I urge the IRS to reconsider these rules and to make the EV tax credit more equitable for American made 100% electric vehicles. Regards, Tax Payer Vickie MacFadden
Vish Nath	1/4/2023 1:05	I am writing to plead with you to consider adding the Tesla Model Y 5 seater to the Inflation Reduction Act (IRA) vehicle tax credit list. As you may know, the Model Y is a highly efficient and environmentally friendly vehicle that would greatly benefit from being included on this list. One of the main reasons the Model Y deserves to be included on the IRA vehicle tax credit list is its impressive range. With a range of up to 326 miles on a single charge, the Model Y can easily meet the needs of even the most long-distance commuters. This not only reduces the need for gasoline, but it also means that fewer carbon emissions are released into the atmosphere, making it an excellent choice for those looking to reduce their carbon footprint. In addition to its range, the Model Y is also incredibly efficient. Its electric motor delivers instant torque and quick acceleration, which means it uses less energy to get up to speed. This, combined with its low drag coefficient and lightweight design, makes it one of the most efficient vehicles on the road today. I understand that the IRS has a limited number of vehicle tax credits available and that you must carefully consider which vehicles are eligible for this program. However, I strongly believe that the Tesla Model Y 5 seater meets all of the necessary criteria and would make an excellent addition to the IRA vehicle tax credit list.

Name	DateTimeReceived	Body.TextBody
Joseph Bolus	1/4/2023 1:05	Dear Internal Revenue Service, I am writing to bring to your attention an issue with the current subsidy program for electric vehicles. It appears that there is a misalignment of incentives in the program as it currently stands. To illustrate this point, I would like to draw your attention to two specific vehicles: the Jeep Wrangler Wxe, which is a traditional internal combustion engine (ICE) SUV, and the Tesla Model Y 5 seat variant, which is a fully electric SUV. The Jeep Wrangler Wxe has a range of only 21 miles when equipped with $2,500 worth of batteries, yet it qualifies for a $7,500 subsidy. Meanwhile, the Tesla Model Y, which has a range of over 300 miles and more cargo capacity, does not qualify for a subsidy because it is not considered to be "SUV enough." These discrepancies seem to indicate that the current subsidy program is not properly aligned with the goal of encouraging the adoption of electric vehicles. It is unfair to provide a subsidy to a vehicle with such a limited electric range, while denying a subsidy to a vehicle that is significantly more efficient and has a much larger impact on reducing emissions. The way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Here's an example of the broken nature of this incentive in its current form: [image.png] Ideal fix: Remove incentives for all hybrid vehicles and only have them apply to pure EVs. Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original
Adam Tentis	1/4/2023 1:06	I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVS. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, Adam Tentis
Sukh Dulay	1/4/2023 1:06	Please allow the 5 seater Tesla Model Y to qualify. This policy doesn't make any sense if we can't buy this vehicle. This is the most efficient EV out there.
Don Cotton	1/4/2023 1:06	Dear IRS, Please review and correct the designation for all variants of Tesla's Model Y. Clearly, all model y's should be classified as "SUV". Also, how could a hybrid with 30miles of EV range get a tax break, but not the most American made car, Model Y with 330 miles of range. This is wrong. Regards Don Cotton 415-515-4027
Sunil Srinivasan	1/4/2023 1:07	It doesn't make any sense to give EV credit to any of cars above $30,000 Please stop wasting tax payers money, do not give tax credit to either Tesla Model Y or any of the other cars which are way above $50,000 Thank you, Sunil
Cynthia Ng	1/4/2023 1:08	I am writing to express my disappointment and frustration that the Tesla Model Y does not qualify for the federal tax credit for electric vehicles. As a loyal Tesla customer, I have always been impressed with the company's commitment to sustainability and innovation. However, I am disappointed to learn that the Model Y, which I recently purchased, is not eligible for the tax credit. I understand that the tax credit is based on the availability of credits and that they are allocated on a first-come, first-served basis. However, I believe that the Model Y should be eligible for the credit given its status as a fully electric vehicle. Not only is the Model Y an environmentally-friendly choice, it also meets all the requirements for the tax credit as outlined in the Internal Revenue Service's guidelines. I am writing to request that Tesla take action to ensure that the Model Y qualifies for the federal tax credit. I believe that it is important for the company to stand behind its commitment to sustainability and to support its customers who are making a conscious decision to purchase a fully electric vehicle. I look forward to hearing from you regarding this matter. Sincerely, Xin Ng Sent from my iPhone

Name	DateTimeReceived	Body.TextBody
Gang Gu Park	1/4/2023 1:08	I am writing to express my disappointment that the Tesla Model Y 5 seat model will not be included in the Individual Retirement Account (IRA) tax credit for 2023. As you may know, the IRA tax credit is an important incentive for many individuals and families who are considering purchasing electric vehicles, as it helps to offset the cost of these vehicles and make them more affordable. I understand that the decision to exclude the Model Y 5 seat model from the IRA tax credit was likely based on a variety of factors, and I respect the process by which these decisions are made. However, I believe that it is a mistake to exclude this particular model from the credit, as it is a popular and highly sought-after vehicle that is widely regarded as a leader in the electric vehicle market. In addition to its environmental benefits, the Model Y 5 seat model offers a number of features and benefits that make it an attractive option for many consumers. Its advanced technology and innovative design make it a top choice for those who value performance and efficiency. I believe that it is important to support the development and adoption of electric vehicles like the Model Y, and I hope that the decision to exclude it from the IRA tax credit will be reconsidered. Thank you for your time and consideration. Sincerely, Ganggu Park
정상인	1/4/2023 1:09	I am writing to express my disappointment and frustration that the Tesla Model Y 5-seat model will not be included in the IRA tax credit as of 2023. As a Tesla customer, I was eagerly anticipating the opportunity to take advantage of this credit when purchasing my Model Y. I understand that the tax credit is subject to change, and that it is not uncommon for certain models to be excluded from time to time. However, I feel that the Model Y 5-seat model is an important and popular option for Tesla customers, and I am disappointed that it will no longer be eligible for this credit. I hope that you will reconsider this decision and include the Model Y 5-seat model in the IRA tax credit as soon as possible. Sincerely, The best climber is the one, who enjoys the climbing the best! Jung sangin lion. Flight team / Pilot (Captain)
fariba ramos	1/4/2023 1:09	As a taxpayer and an EV owner, I'm deeply concerned regarding the new tax incentives for plug in Hybrid vehicles while an all electric car like Model Y is excluded from the list of eligible cars. I urge IRS to revise the list of eligible vehicles and include cars with highest efficiency and low emissions available in the market. How does a Jeep Wrangler with 22 mpg is eligible for tax incentives but an owner of all EV with 300 miles Tesla Model Y range can't use the same tax credit? Tesla Model Y should be included in the list of eligible cars for tax credits. Regards, Fariba Ramos
Diana Spilotro	1/4/2023 1:10	Dear IRS - Why is the Tesla Model Y (a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor) not eligible for the $7,500 tax credit? What factors were involved in making the decision to exclude this vehicle? I am extremely dissatisfied that this vehicle is not on the list. Regards, DS
계지민	1/4/2023 1:10	I am writing to express my disappointment and frustration that the Tesla Model Y 5-seat model will not be included in the IRA tax credit as of 2023. As a Tesla customer, I was eagerly anticipating the opportunity to take advantage of this credit when purchasing my Model Y I understand that the tax credit is subject to change, and that it is not uncommon for certain models to be excluded from time to time. However, I feel that the Model Y 5-seat model is an important and popular option for Tesla customers, and I am disappointed that it will no longer be eligible for this credit. I hope that you will reconsider this decision and include the Model Y 5-seat model in the IRA tax credit as soon as possible. Sincerely, Keji [https://mail.naver.com/readReceipt/notify/?img=pXbdKAFR14nwFrUYaqKwFzMdaAM%2FpxUdKrtdM6UrF4koKAv%2Fp6MXK6ioFA3gMX%2B0Mogwa Vl5WLl5pNiC740ThoRmb4u5MreRW6k5%2BHFg1Biq74%2BT%2B2%3D%3D.gif]
Peter Pei	1/4/2023 1:11	Tesla is the best selling and most American made EV in the entire market. Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. And please follow Europe and China to disqualify plug in hybrid with gas tank for the incentive Thank you. Sent from my iPhone

Name	DateTimeReceived	Body.TextBody
tom lei	1/4/2023 1:11	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you for your attention on this matter! Best regards, Tom Lei -- Sent from Gmail Mobile
Zhi An	1/4/2023 1:12	I was very surprised and disappointed that most models of Tesla was excluded from receiving the EV credits. It is just ridiculous to exclude vehicle such as Tesla model Y which is an EV and SUV. Please fix this glaring mistake. Regards. Z
Uday Patel	1/4/2023 1:12	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Uday Patel Sent from my iPhone
Teo	1/4/2023 1:13	Hi, It has come to my attention that the recent EV Tax credit has been implemented in a way that prevents the SUV from Tesla (model Y) to be eligible in the 5 seat configuration as it falls below a weight category. The same vehicle with 7 seats is eligible. The main issue I believe lies in understanding the design challenges in designing an EV. Weight is something manufacturers are now working hard to reduce component weights in order to improve efficiency. customers should not be “punished” for wanting to purchase a more efficient vehicles. I urge your committee to look further into this and figure a more grounded way to incentivize EV’s As an example, an Hybrid Jeep with a Petrol engine and a small battery get’s the full credit. As the incentives has been setup, it helps the purchase of a Petrol Recreational vehicle more than an EV Kindest regards, Teo Morabito
john McCarthy	1/4/2023 1:14	I am writing to request that the Tesla model Y long range be included in the IRA $80k price limit and not the $55k max. It is an SUV and compared to some of the other vehicles that have received the credit which a PEVs, it’s exclusion doesn’t really match up to the rational for the IRA bill which is to progress the electrification of the automobile in the USA market. As well, there is an option to get this credit for a third seating row which is not what I would want for this vehicle and reduces the credit by $3k. While I understand that putting together these rules are hard but stepping back and looking across the various approved versions is also important. For instance, the VW ID.4, which has about the same size as the Model Y and Mach-E, being considered a SUV and getting access to the tax credit for a price of up to $80,000. It really doesn’t make sense and seems to arbitrarily exclude this particular vehicle. Please consider updating this rule to include the Tesla model Y long range as a qualified SUV in the $80k price range upon your next review. Thanks, John McCarthy

Roo Arebalo	1/4/2023 1:14	MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Ideal fix: * Remove incentives for all hybrid vehicles and only have them apply to pure EVs. * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Next best fix: * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers Thank you, Roo Arebalo
Brandon Crouch	1/4/2023 1:14	Model Y should. Tesla is the most AMERICAN car company period. This is being done on purpose to inhibit Tesla because Elon Musk is a disruptor that has spread light on the lies and corruption of Democrats and they are trying to get back at him by not including Tesla. This is calling you out because of those stupid decisions. Tesla Model Y is the number one selling ELECTRIC VEHICLE and should qualify and any Hybrid should not.
peter garton	1/4/2023 1:15	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version).As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Peter Garton
Andrew Chu	1/4/2023 1:16	To whom it may concern; Please apply tax credits fairly and in the spirit of the law which is to incentivize ev adoption not to put a finger on the scale of competition. Tesla model Y and model 3s should receive a tax credit equal to comparably priced evs particularly if those evs are hybrids with only 7kw batteries. Regards, Andrew Chu
Guang Dong	1/4/2023 1:16	To whom it may concern, Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. I believe EPA consider model Y as SUV. Thanks, Guang -- Best Regards. Guang Dong Ph.D. Mechanical Engineering Department University of Michigan Ann Arbor, 48109, MI

Name	DateTimeReceived	Body.TextBody
Yulin Yin	1/4/2023 1:19	Dear Officer, I notice the current policy categorize 5 seater Tesla Model Y as sedan with a price cap of 55k USD for the EV tax rebate. It is NOT a smart move for the most American pure EV and it is double standarded comparing the similar size cars. Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thanks,
aneil326@yahoo.com	1/4/2023 1:19	Why aren't ALL Tesla Model Y variants eligible for the $7,500 IRA tax credit? They should be, ALL Tesla Model Y variants! Kindly adjust tax credit rules/guidelines to include ALL Tesla Model Y variants for the $7,500 credit. Best regards — Concerned tax payer
Charlie Wang	1/4/2023 1:21	Hi I do believe Tesla model Y 5 seater should be included in the tax credit of $7500 given it is a SUV and so popular in US. CHarlie
Kyle Bergholtz	1/4/2023 1:22	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, but excludes the most popular electric vehicle in the world, the Tesla Model Y. Furthermore, it is outrageous that a 22 mpg Jeep Wrangler is included in the incentive. This decision shows a clear bias against electric vehicles that are actually making a significant impact on reducing carbon emissions. The inclusion of a low-efficiency vehicle like the Jeep Wrangler only undermines the goal of this incentive and serves as a disincentive for consumers to purchase more environmentally-friendly vehicles. I urge the IRS to reconsider this decision and make the necessary changes to include all-electric vehicles, especially the Tesla Model Y, in the tax incentive. We must do everything we can to support the transition to a more sustainable future, and this starts with fair and unbiased policies. Sincerely,
Minjae Joe	1/4/2023 1:22	나의 iPhone에서 보냄 전달된 메시지 시작: 보낸 사람: Minjae Joe <snssns12@icloud.com> 날짜: 2023년 1월 4일 오후 3시 21분 23초 GMT+9 받는 사람: pra.comments@irs.gov 제목: OBM CONTROL NO.1545-2137 Dear whom it may concern I am writing to express my disappointment and frustration that the Tesla Model Y 5-seat model will not be included in the IRA tax credit as of 2023. As a Tesla customer, I was eagerly anticipating the opportunity to take advantage of this credit when purchasing my Model Y. I understand that the tax credit is subject to change, and that it is not uncommon for certain models to be excluded from time to time. kokoball88	1/4/2023 1:23	I am writing to express my disappointment that the Tesla Model Y 5 seat model is not eligible for the IRS tax credit starting in 2023. As a consumer considering purchasing this electric vehicle, the tax credit played a significant role in my decision making process and its removal will likely impact my ability to purchase the Model Y. I understand that the tax credits are meant to incentivize the adoption of electric vehicles and reduce our reliance on fossil fuels. The Model Y 5 seat model, with its impressive range and performance, is a valuable addition to the electric vehicle market and should be eligible for the tax credit. I hope that you will consider extending the tax credit to the Model Y 5 seat model in the future. In the meantime, I will have to carefully reconsider my decision to purchase this vehicle. Wilson Puvvula	1/4/2023 1:24	Hi Irs, I'm writing to show my frustration and distrust in the bill passed that a plug-in hybrid which is primarily run in gas and just has 22 miles for electric range qualifies for $7500 tax credit but the most environmentally friend FULLY ELECTRIC and SAFEST CAR IN THE PLANET (Tesla Model Y) does not qualify for the tax credit if $7500. This is absolute miss use of of tax payers money and disrespecting companies like Tesla which delivers truly American built ELECTRIC VEHICLES NOT PLUGin hybrid to customers. Not providing TESLA Model Y the same incentive as Volkswagen ID 4 just because TESLA built the safest and lighter electric vehicle(improving efficiency for customers) than other manufacturers shown lack of common sense. This is a blatant attempt to penalize companies who put the humanity, environment and safety of the customers first. I really hope this is corrected and you act in the best interest of the tax payers. Thanks,
Ben Gitter	1/4/2023 1:24	Dear IRS, I am writing to express my dissatisfaction with the inflation reduction act's EV tax credit rule. I recently learned that the Tesla Model Y (5 seat), which I believed would qualify for the credit as an SUV, is not considered an SUV and therefore is not eligible for the credit. I find this to be deeply unfair, as there are other EVs on the market, such as the Ford Escape PHEV and the Jeep PHEV, that do qualify for the full $7,500 credit. To add insult to injury, even foreign-made EVs on lease are eligible for the credit. I strongly urge the IRS to reconsider this rule and stop this favoritism towards certain automakers. It is unacceptable that certain EVs are being treated differently simply based on their make and model. In addition, I have a number of questions that I would like the IRS to answer in order to clarify this issue: Why was the Tesla Model Y not considered an SUV and therefore not eligible for the credit? How was the decision made to include certain EVs and not others in the credit program? Is it possible for the IRS to reconsider the eligibility of the Model Y and other EVs that may have been unfairly excluded? Can you provide more information on the criteria that was used to determine which EVs qualify for the credit? How can consumers appeal their eligibility for the credit if they feel they have been unfairly denied? I hope to receive a prompt and satisfactory response to these questions. Sincerely, Ben Gitter
Duncan, John Francis	1/4/2023 1:25	Hi - I'm commenting on OMB Control No. 1545-2137. There are two fundamental problems with the rules as currently written: 1) you include PHEVs with very little range like those from BMW that offer approximately 20 miles of EV range (these are not EVs since many people won't bother plugging them in), 2) you require SUVs to have 7 seats which is leading to huge vehicles on the road which are not very efficient (Hummer truck, Jeep Wagoneer). The solution is easy: 1) require significant range for a PHEV to qualify as an EV (e.g., 50 miles of range), 2) include smaller SUVs like the 5-seat Tesla Model Y (the 7 seat version has a basically unusable rear seat), and what can be more American than a Tesla which is designed, engineered, and manufactured in the U.S.. In the long term I appreciate this EV incentive program and the American component requirements. I think the details of the program can be improved per suggestions above. Thanks -John Duncan
Irene Kong	1/4/2023 1:25	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Sent from my iPhone
Donnie	1/4/2023 1:26	Hi, All Tesla Model Y should qualify for $7500 because all Model Y are the same size. It is absurd that Model Y 7 seaters are qualified but not others. I strongly suggest the IRS to revisit the bill and do the right things please. Best Regard, -max _____ <https://wx.mail.qq.com/home/index?t=readmail_businesscard_midpage&nocheck=true&name=Donnie&icon=https%3A%2F%2Fthirdqq.qlogo.cn%2Fg%3Fb%3Doidb%26k%3DTwDRRu3pwwWVhriaKiaf94DQ%26s%3D0&mail=183925903%40qq.com&code=IZqnx6vCSQ5MGaRbvcNcuYbwUllDtkwDyIY4hQ9JrUbXt7alijLE_NhxuiTtrv_8VNqAogd8mldby0NyzQhj1w> [https://thirdqq.qlogo.cn/g?b=oidb&k=TwDRRu3pwwWVhriaKiaf94DQ&s=0] Donnie 183925903@qq.com

Sam Chen	1/4/2023 1:26	As a US taxpayer, I am greatly dissatisfied with the handling of the inflation reduction act tax credit. 1. Why are hybrids included with the same tax credit as EVs? They are like “clean diesel”. NOT CLEAN. Some of these only do 20 miles TOTAL on electric. Unacceptable. 2. Why do some SUVs like the Tesla Model Y 5 seater variant not have an MSRP limit of $80,000 while some SUVs like the Tesla Model Y 7 seater does? They have the same battery, same powertrain, same everything expect 2 extra seats. They’re both SUVs. They should have an $80,000 MSRP limit. This is the worst policy I’ve ever seen written. Please fix it! Additionally, please see the following change.org petition. https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit Thank you! Sam Chen 909-248-3806
현병진	1/4/2023 1:28	I am writing to express my disappointment and frustration that the Tesla Model Y 5-seat model will not be included in the IRA tax credit as of 2023. As a Tesla customer, I was eagerly anticipating the opportunity to take advantage of this credit when purchasing my Model Y. I understand that the tax credit is subject to change, and that it is not uncommon for certain models to be excluded from time to time. Faris Arditianto	1/4/2023 1:28	I am writing to bring to your attention a problem with the current tax credit system for electric vehicles. It seems that fully electric SUVs such as the Tesla Model Y are being unfairly disqualified from receiving the credit simply because they are more mass efficient than other SUVs. As smart people who can understand the concept of mass efficiency in vehicles, I am sure you will agree that this decision does not make sense. If the goal is to encourage the use of more fuel-efficient vehicles, then shouldn't we be rewarding those vehicles that are the most efficient, regardless of their size? The Model Y is a fully electric SUV with zero emissions, and it is available in Standard, Long Range, and Performance versions. It is a prime example of a car that should be rewarded for its efficiency and zero emissions. I urge you to reconsider this policy and to consider the environmental benefits of fully electric vehicles in determining eligibility for the tax credit. The future of our planet depends on our ability to transition away from fossil fuels, and decisions like this only hinder our progress. Thank you for your attention to this matter. Sincerely, Faris Ardi

Wilson Dayakar Puvvula	1/4/2023 1:28	Dear IRS, I hope this letter finds you well. I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit. According to the IRS guidelines, the following Tesla Model Y variants are qualified for the 7500 tax credit if their Manufacturer's Suggested Retail Price (MSRP) is under $80000: #1 Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) #2 Tesla Model Y Long Range - 7 seat variant (3-rows) #3 Tesla Model Y Performance - 7 seat variant (3-rows) However, it appears that #1 and #3 do not exist. The following Tesla Model Y variants are also qualified for the $7,500 tax credit if their MSRP is under $55,000: #4 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) #5 Tesla Model Y Long Range - 5 seat variant (2-rows) #6 Tesla Model Y Performance - 5 seat variant (2-rows) However, it appears that #4 does not exist, and #5 and #6 are priced at $65,990 and $69,990, respectively, which may disqualify them from the tax credit. This leaves only #2, the Tesla Model Y Long Range - 7 seat variant (3-rows), as the only qualified variant.
Ben Cozine	1/4/2023 1:29	To Andres Garcia, the Internal Revenue Service, & whom it may concern, I'm writing in response to the tax credit for EVs and plug-in hybrids recently introduced by the IRS in response to the passing of the IRA in 2022. It is my belief that the SUV classification requirements selected by the IRS do not reflect the intention of the bill congress passed — a bill designed to reduce greenhouse gas emissions and make electric vehicles more affordable to the American people. The ground clearance and weight requirements favor less efficient, heavier vehicles such as plug-in hybrids (PIH) which only offer 20-25 miles of electric range, compared to their pure-EV counterparts with 250+ miles of range. This classification system does not make 'EV miles' more attainable to the American people. This classification system forces customers to purchase unneeded expensive add-ons (additional seats in the Tesla Model Y, for example) in order to qualify for the incentive. This classification system favors automakers who are doing less to electrify and improve the efficiency of their fleet. I, along with my fellow like-minded Americans, request that the IRS update its guidance to follow the Environmental Protection Agency's well-accepted vehicle classification system. Thank you for your time,
Flixxy.com	1/4/2023 1:29	It makes no sense that the 5-seater Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient!!!), SUV form factor and 100% built in the USA is not eligible for the $7,500 tax credit. Only pure EVs should get the full credit. Hybrids should get partial credit. Hubert Heller 1854 Venetian Point Dr| Clearwater | FL 33755 | USA Tel: +1 (727) 251 8855
David Okamoto	1/4/2023 1:29	To whom it may concern, Please use NHTSA guidelines to determine if a vehicle is an SUV. The Tesla Model Y 5 seater should be classified as an SUV, not a sedan. Thank you, David Okamoto

Name	DateTimeReceived	Body.TextBody
umyas boutique	1/4/2023 1:30	I am writing to bring to your attention a problem with the current tax credit system for electric vehicles. Alex Pittius	1/4/2023 1:30	Hello, The Tesla Model Y 5 seater should be eligible for the full $7,500 tax credit at $80k MSRP. It’s a SUV! Thank you, Alex P
David Dominguez Hooper	1/4/2023 1:32	I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Best, David Dominguez Hooper
Jim Curtis	1/4/2023 1:32	Hi, I think the Tesla Model Y 5-seat SUV should qualify for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA and NHTSA, and is a highly efficient fully electric vehicle that is made in the USA. Jim Curtis Placerville, California

Paul Chamberlain	1/4/2023 1:32	Thank you for taking comments... It looks like the current implementation of the "EV Tax Credit" doesn't accomplish what it should. There are plenty of pure battery EVs on the market and it is wrong and wasteful to incentivize hybrid vehicles, especially those with insignificant batteries. Furthermore there should not be arbitrary cut-offs on the sales price and unexplainable categories. Here's an example that seems like it would actually incentivize what's good for the country: Place of Manufacturer qualification: keep it the same Origin of Battery Minerals qualification: keep it the same Eliminate the distinction between sedans, SUVs, trucks, etc. Battery-only range qualification: To encourage lower emissions, vehicles that can't drive very far without emissions should not get the entire incentive. This could be graduated or calculated but a tiny battery-only range should result in a tiny fraction of the credit. Anything over, say 200 mile range, should receive 100%. For instance: range_qualification = battery_range/200 (maximum of 1.0) Example: a vehicle with a 50-mile battery range would get 25% of the incentive. Cost qualification: High-end luxury vehicles should not receive the incentive. This could be graduated or calculated but a consumer vehicle selling for over $100K should receive little or no incentive. Anything less than say $50K should receive 100%.
Jonathan Woodbury	1/4/2023 1:33	the 5-seat and 7-seat variants can share the same $80,000 MSRP limit for Sport Utility Vehicles. I think doing so would better meet the goals of the IRA. Thank you! Jonathan Woodbury Durham, NC
Emil Sultanov	1/4/2023 1:33	I am frustrated that fully electric SUV, 5 seater version of Tesla Model Y gets $0 in tax credit in accordance to IRA, while a hybrid version of Jeep Wrangler qualifies for a full $7500 tax credit. Here is a simple comparison, where on average battery lasts for about 1000 full charge cycles: * Model Y has an electric range of 330 miles, 1000 cycles will get 330,000 clean miles * Jeep Wrangler hybrid has an electric range of 21 miles, 1000 cycles will only get 21,000 miles. Model Y will get almost 15 times more clean miles than Jeep Wrangler, but meanwhile it does not get any incentives for US Government, how does this make sense? I hope you will consider this, Thanks! Emil Sultanov.
Sean Ermer	1/4/2023 1:34	It is concerning to me how arbitrarily the SUV category of the EV tax credits seems to be defined. There are vehicles that qualify as SUVs which are questionable and yet the Tesla Model Y does not. It suddenly qualifies if you add the third row option which is more expensive and not everyone wants. The goal of the tax credit should be to accelerate EV adoption, support US based jobs, and to make EVs more accessible. I fail to see how excluding the most US built SUV from the tax credits does that. Please reconsider the definition of SUVs to support all US based automakers as we head into into uncertain economic times. Thank you, Sean Ermer

Anish Bhanot	1/4/2023 1:35	Dear IRS. I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for vour time and consideration. Best Regards, Anish
Ranjit Annamalai	1/4/2023 1:35	I think the classifications of SUVs seems very haphazard. The EPA seems to have a classification already of cars and SUVs and it seems like just using that would make more sense. I don’t agree that many hybrids will get a larger tax incentive vs fully electric vehicles because of the seemingly arbitrary rules used to classify SUVs. If the EPA has a different classification than the IRS then it looks like the IRS is being arbitrary even if they have a set of guidelines they are following. Thanks Ranjit
Alex Jeffs	1/4/2023 1:36	incentive than fully electric vehicles. If you don't fix this you will be making a massive mistake. The 5 seater model y classification as not an SUV ties in handy with bidens refusing to acknowledge Tesla as the leader in ev's. You are allowing what is supposed to be an ev incentive bill to be a bailout yet again for legacy auto who has time and time again refused to see the writing on the wall until Tesla proved it to them and forced them to create compelling electric vehicles. Stifling real competition and giving a handout to unions because of their political donations is not the right move. I stand with Elon musk and farzad mesbahi in there position that this is blatant corruption and a payback to democratic party donors. This is not an ev incentive it's an under the table payment.
Robert Tolleson	1/4/2023 1:36	tax credit where a Tesla model y SUV does not qualify. There is no rationale to some of your decisions regarding which cars get the credit. Please reconsider which car should get this qualification. This program should promote full electric vehicles not hybrids. Hybrids are not the future of transportation. Thank you Robert Tolleson
Main	1/4/2023 1:37	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Cameron Vanderzeyde
Mathias Niederdorfer	1/4/2023 1:39	Dear Ladies and Gentlemen, Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Also it is the most “American” car that you can buy at the moment. So this will also push the US economy in such hard times. Best regards. Mathias Niederdorfer
alex feldman	1/4/2023 1:40	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Alex Feldman

Anton Ramli	1/4/2023 1:40	Dear IRS, I am writing to express my concern about the new tax incentive for electric vehicles (EVs) that has been implemented. While I appreciate the efforts to encourage the adoption of EVs, I believe that the current incentive unfairly excludes certain models, specifically the Tesla Model Y. As a potential EV buyer, I am disappointed to learn that the Model Y is not eligible for the tax credit, while other hybrid models are. This seems to be an unfair and arbitrary distinction, as the Model Y is fully electric and meets all the other qualifications for the incentive. I understand that the tax code can be complex and that there may be valid reasons for certain exclusions. However, in this case, it is not clear to me why the Model Y has been left out. I urge the IRS to reconsider its decision and to consider the Model Y for inclusion in the tax incentive program. Thank you for considering my concerns. Sincerely, Anton Ramli
Yen Chen	1/4/2023 1:40	OMB Control No. 1545-2137 Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Yen Chen Sent from my iPhone
Milton Dehmer	1/4/2023 1:41	should be encouraged to purchase autopilot and Full Self Driving to reduce accidents. Similar all electric vehicles, including those from other manufacturers, should have the same limit. Thanks for your consideration of this proposal. Qiaoli Meng	1/4/2023 1:43	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you.
hamtime33@gmail.com	1/4/2023 1:44	Hello, I was disappointed to see that the proposed list of electric vehicles qualified for federal tax credits seemed to incentivize some less efficient vehicles over much more efficient ones, particularly in the “SUV” category. As an example, the Tesla Model Y, which gets 115 MPGe is not on the SUV list (an admittedly difficult category to neatly define) but the Jeep Cherokee 4xe is on the list despite its unimpressive 56 MPGe rating. Same goes for the Ford Mustang Mach E. The model Y is certainly sportier and boats more storage (utility?) than the Jeep, so it’s omission based on a fuzzy definition is confounding. If the purpose of the policy is to incentivize the purchase of cleaner vehicles, then the cleanest ones should definitely be included on the list of vehicles qualified for the incentive. Any electric vehicle that is arguably an SUV should be included on the SUV list because that is the best policy for consumers, tye economy, and for the environment - even if it risks muddying a traditional definition of an “SUV.“ I respectfully request the IRS revisit the lists of qualified EVs in order to incentivize the most rapid shift to EVs in the United States that is possible. Not doing so, and continuing to leave out certain very popular, widely available, mass-produced (in America!) models works against the country’s climate and economic goals. Thank you for reading, and thank you for doing what you can to implement the best policy possible.
Seonman Kim	1/4/2023 1:44	Dear whom it may concern, I am writing to express my disappointment and frustration that the Tesla Model Y 5-seat model is not included in the IRA tax credit as of 2023. As a customer considering to buy an EV this year, I was eagerly anticipating the opportunity to take advantage of this credit when purchasing my Model Y. I understand that the tax credit is subject to change, and that is not uncommon for certain models to be excluded from time to time. However, the IRA’s decision that Model Y 5-seater is not categorized as a SUV due to the body weight does not make sense in my opinion, especially in that any EVs should be designed to be much lighter than gas cars to maximize performance (e.g. EPA range). The Model Y is a highly desirable electric SUV due to its classification as an SUV, as certified by KBB (https://www.kbb.com/tesla/model-y/) and the NHTSA, among others. It is also the most popular, safest, efficient, and environmentally friendly electric SUV on the market. Allowing only a single variant of the Model Y to qualify for the tax credit seems unfair, as it excludes a significant portion of Tesla's customer base. When compared to the qualified Volkswagen ID.4 AWD Pro, the Tesla Model Y is a more suitable candidate for the SUV $7,500 tax break. It has a longer range, more advanced technology, and more cargo space, making it a highly desirable choice for consumers looking for an electric SUV. Additionally, compared to qualified electric vehicles such as the Nissan LEAF S, which has a range of only 40 kwh on a single charge, the Model Y is a much more efficient and cost-effective choice. Allowing vehicles with such limited range to qualify for the tax credit would be a waste of taxpayer dollars. I hope that you will reconsider this decision and include the Model Y 5-seat model in the IRA Tax credit as soon as possible. Sincerely,
John Shetron	1/4/2023 1:45	should be included in this EV incentive. Especially the Jeep gas guzzler! Also, please apply the incentive authorization fairly to all EV vehicles including the Tesla Model Y, one of the most "Made In America" vehicles available in the U.S. Sincerely, John Shetron

JingShao Chen	1/4/2023 1:45	Dear Madam and Sir, Tesla makes the best EV that is designed and made in America. Its cars, suvs, and pickups should be entitled to the $7,500 EV tax credit. This is not only about fairness, but it also is vital to the America economy, to the benefit of the environment that all of humankind live in. Regards, -- US Citizen Jingshao Chen Mobile: +1 (408) 480-2661 Email: jingshaochen@gmail.com<mailto:jingshaochen@gmail.com>
Tudor Patroi	1/4/2023 1:46	Hi, Do what is right and give the Tesla Model Y the $7500 incentive. You have one car designed and made in America which has enough range, the best MPGe, does not use gas at all, so it is unacceptable to subsidize others before it. Thanks Tudor
runar botnen totland	1/4/2023 1:50	Dear IRS, I am writing to express my concern about the exclusion of the Tesla Model Y from EV incentives as a SUV. I believe that this exclusion is unfair and that the Model Y should be eligible for the same incentives as other SUVs. The Model Y is a fully electric vehicle that meets all of the requirements for classification as a SUV, including its size and seating capacity. It is also a more environmentally friendly and fuel efficient alternative to traditional SUVs, which aligns with the goals of the EV incentives program. I understand that the IRS has the authority to determine which vehicles are eligible for EV incentives, and I respectfully request that the Model Y be included in this program. I hope that you will consider my complaint and take action to include the Model Y in the EV incentives as a SUV. Thank you for your attention to this matter. Sincerely, Runar Totland
M.mar301	1/4/2023 1:50	Re: $7500 tax credit/rebate for electric vehicles Let’s make this simple: credit vehicles based upon percentage built/fabricated in the USA, and based upon the mpge values. The higher the % built in the USA, and the higher the mpge, the more benefit it has to our society. If it has 4 wheels, and fully enclosed cabin, and meets top IHHS safety scores, it’s a car/suv. The price really doesn’t matter, as the benefit is fixed/maximum of $7500, and that becomes a smaller percentage of the purchase price the more expensive the item becomes. $7500/30,000 >> $7500/130,000 If it has 2-3 wheels, or a partially enclosed cabin, or doesn’t meet safety scores, it’s something less, and gets a lot less credit, Bottom line: tesla is the most made in USA car, ford Mach-e is made in Mexico, and hybrid plug in electrics are not a solution. Thus the plug in cars should not get more than a trivial amount which drops over time, or is tied to verified all electric driving. Anyone from Europe or Asia who complains, tell them the simple truth: the United States is spending this taxpayer money on something. We choose to spend it on something made by people who live and work in our country, and therefore pay wage based taxes to our country. In what universe would it be reasonable to demand Korea or Germany to spend their taxpayer money on an imported product or service, especially when there is a qualified supplier in the country? Thank you. Mark Millet
sullivan xie	1/4/2023 1:50	Please classify the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. Ithink this car is clearly an SUV, is categorized as such by the EPA,and is a highly efficient fully electric vehicle, and thus deserves. It is so silly that it is not from the beginning want MY TAX DOLLAR to support the car manufacturer which makes our planet sustainable for our next generation. Ithink there are millions of players who share the same perspective. Thank you!

Name	DateTimeReceived	Body.TextBody
Shiraz Akmal	1/4/2023 1:50	Dear IRS, The Inflation Reduction Act has a stipulation where Pure Electric Vehicles and Hybrid Electric Vehicles are able to take advantage of up to $7,500 as Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Ideal fix:
marlin balthazar	1/4/2023 1:52	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. Chris Boylan	1/4/2023 1:54	Hi, As a US citizen concerned about global warming, I'd like to express my dissatisfsction with the eligigibility requirements of the EV tax credit. First of all, it makes no sense to me that any hybrid vehicle should qualify for the full tax credit. Gas engines in hybrid vehicles cause global warming. Period. Even if the grid goes 100% renewable a hybrid car will spew dirty emissions from fossil fuels any time it is driven past its EV range (normally around 20 miles). Including hybrid vehicles in the credit only encourages sluggish auto makers like Toyota not to push forward with zero emissions vehicles (like true EVs). Meanwhile EVs get cleaner as the grid gets cleaner. And EV owners can install solar power systems to make their carbon footprint even lower. So disqualifying most options of the Tesla Model Y (a fully electric SUV as qualified by the EPA) from the tax credit goes against the goals of the tax credit in the first place - to reduce emissions and the threat of global warming by encouraging American consumers to switch to non-polluting electric vehicles. The Model Y is an SUV according to the EPA so it should qualify for the credit up to the $80,000 cap, just like other electric SUVs do. Reduce the credit for hybrids. And include *real* EVs like the Tesla Model Y in the program so American consumers will be incentivized to make the *right* choices for the environment. Thanks,
slm h	1/4/2023 1:56	Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Not to mention, far less efficient vehicles with less than 1/10th the electric range are qualifying for the credit. This is contrary to the intention of the ev tax credits. The Tesla Model Y is also one of the most American-made EV's and so the tax credit would also be beneficial to the American economy. Your consideration of this matter is highly valued. Yours sincerely, Stephen Marcotte
Michael Pfafflin	1/4/2023 1:59	Dear IRS, I am writing about the EV tax credit qualifications. These qualifications are crazy complicated. They need to be simplified in a manner that is efficient for the IRS, Tax accountants, the car manufactures, and the consumer. These rule are going to cost a lot of time and money by all involved, with many appeals from consumers who thought they qualified for the tax credit, but did not, because of the wrong trim being ordered on a vehicle. A seven passenger EV SUV can get a credit but a five passenger of the same vehicle can't? Firstly, the credit should be for pure EV's only, NOT plug in Hybrids. That is not accomplishing the reason for the credit, which is to promote clean sustainable transportation. How can a Hybrid that gets 20-35 miles on a charge, still uses last centuries polluting fossil fuel for the main energy that may get 30 MPG get a $7500 tax credit and an all electric vehicle that gets 125+ MPG equivalent get $00? That's crazy wrong. The Tax Credit should be available for ALL EV's, not just for a chosen few manufactures or models. (Following just the battery rules put in place to qualify) Why not simplify instead of the typical bureaucratic mess the government makes. Suggestion: 10% off the MFR List price of any full EV. Simple! Cost Efficient! And promote the reason for the tax credit: The adoption of Electric Vehicles. Thank you, Michael J Pfafflin
Frank DelCampo	1/4/2023 2:00	jurisdictions the best selling overall car) does not fully qualify for the tax credit for all trims. Totally understandable if the cost of the car is above the set maximum but the Tesla Model Y is clearly an SUV and should be eligible in my opinion. To make matters even crazier there are more expensive and smaller in volume cars that do qualify. Please reconsider, as this must be an oversight. Frank DelCampo 18 Forest Gate Lane WIlmington, DE 19810 302-533-8607

Sean Bosely	1/4/2023 2:01	Dear Mr. Garcia, I am writing to express my strong objection to the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure, specifically the exclusion of the US-manufactured Tesla Model Y from the SUV category. I am extremely disappointed to see that vehicles largely manufactured outside of the US and with much worse environmental profiles are being allowed for this credit, while the Tesla Model Y, which is manufactured in the US and has a significantly better environmental profile, is being excluded. This seems completely arbitrary and unfair. I urge the IRS to reconsider this decision and include the Tesla Model Y in the SUV category for the Qualified Plug-in Electric Drive Motor Vehicle Credit. As a taxpayer and a concerned citizen, I strongly believe that we should be supporting and incentivizing the production of environmentally-friendly vehicles, especially those made in the US. Sincerely, Sean Bosely 2748 Borthwick Ave Henderson, NV 89044 208-867-9773
Sam Vandiest	1/4/2023 2:02	Irs, Why doesnt get the tesla model y an ev tax credit of 7500? This makes no sense!! Grts
Quentin	1/4/2023 2:02	Please change the tax credit situation. Include the Mustang Mach E and Tesla Model Y. The differences between models seem trivial. Side note, but incentivizing gas cars that have a battery in them is idiocy. Thanks
Naga Raj	1/4/2023 2:03	Tesla Model Y 5 seater should be included in the list of vehicles that get credit. It is absurd that other plug-in hybrids are getting the credit while Tesla Model Y 5 seate (which is pure EV) does not get the credit.
Matt Joslin	1/4/2023 2:03	Hello, Please update the Tesla Model Y 5 seater limit to $80,000 as it is definitely an SUV and is the top selling electric vehicle in the United States! Thank you, Matt -- Matthew Joslin, MBA 609-577-0699 matthewmartinjoslin@gmail.com<mailto:matthewmartinjoslin@gmail.com>
Kyle Blagg	1/4/2023 2:04	Hello Sir or Madam, The tax credit being offered for plug-in electric vehicles, as drafted at the time of this message, does not meet the spirit of the credits intention. The credits goal is to encourage the adoption of new electric vehicles by the American populace, by lowering the burden of entry to help reduce America's emissions footprint. How can vehicles that have gas engines and are only capable of traveling 21 miles on all electric battery qualify for the tax credit, while other all electric vehicles that push the market forward, like the Ford Mustang Mach-E and the Tesla Model Y, not qualify for the credit? This is a slap in the face to consumers and an insult to the goal of the tax credit in the first place. Please reconsider the qualifications for a the tax credit. Thank you and best regards,
Benjamin Towers	1/4/2023 2:06	Dear Sir or Madam I am hoping you would clarify why the EPA classes vehicles in one way, (such as classing most variants of the Tesla model Y as an SUV), and the IRA classes then another way to reduce their EV incentive relative to peers. Obviously having the most American made EV lose out doesn't seem very fair. Thank you B Towers
donna wolf	1/4/2023 2:07	Tesla Model Y 5 seater should qualify as SUV Donna Wolf Donna Wolf Design

Name	DateTimeReceived	Body.TextBody
Chris Raybould	1/4/2023 2:09	Hi I think it is disgraceful how you classify the 5 seater Tesla Model Y as a small SUV despite its proportions being larger or similar those classified higher with a larger max price cap - including those that are mostly propelled by fossil fuels!! This is clearly collusion against a non-unionised auto manufacturer. Please reconsider this immediately and include all Model Y variations within the ITA tax credit. Despite being non-unionised, Tesla is the greatest American hope for the auto industry and is challenging foreign companies globally with a leading share of the EV industry. Chris Raybould Ohio
CL Jameson	1/4/2023 2:10	no sense. Charles Jameson
Sam Chun	1/4/2023 2:11	Not sure how all tesla model y models do not quality as a suv when they're pure electric. I have a five seater model y and it is definitely a SUV! See below! <https://twitter.com/farzyness/status/1609651117356351488?s=20&t=MFlBsCkDOze1UDwVExMacQ> [FlahAyvWIAAl2GE.jpg] The car on the left has a gas engine and gets 20 MPG. It has 21 miles of electric range. It gets a $7,500 EV Tax Credit. The car on the right is ELECTRIC ONLY and gets 113 MPEe. It has 330 miles of range. IT DOES NOT GET A $7,500 EV TAX CREDIT. [https://abs.twimg.com/favicons/twitter.2.ico]<https://twitter.com/farzyness/status/1609651117356351488?s=20&t=MFlBsCkDOze1UDwVExMacQ> Farzad Mesbahi<https://twitter.com/farzyness/status/1609651117356351488?s=20&t=MFlBsCkDOze1UDwVExMacQ> twitter.com<https://twitter.com/farzyness/status/1609651117356351488?s=20&t=MFlBsCkDOze1UDwVExMacQ>
Eric Poppen	1/4/2023 2:11	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Sent from my iPhone
Govindan Rajeev	1/4/2023 2:12	I am writing to express my concern with the current list of vehicles eligible for the Qualified Plug-in Electric Drive Motor Vehicle Credit. It seems that the rules for determining eligibility are not entirely in alignment with the intent of the credit. The Tesla Model Y 5 seater, the most popular EV in the United States with a range of over 300 miles, is not classified as an SUV and is therefore ineligible for the credit at its current price. Meanwhile, several PHEVs with minimal electric range are eligible for the credit. It seems unfair that the Tesla Model Y, which is clearly leading the way in the transition to electric transportation, is not eligible for the credit. Since the purpose of the credit is to encourage the adoption of electric vehicles, it is counterproductive to exclude a vehicle like the Model Y that is so widely popular and has such a long electric range. I strongly urge the IRS to reconsider the eligibility requirements for the EV credit, and to ensure that vehicles like the Tesla Model Y are included in the list of eligible vehicles. Thank you for considering my comments. Govindan Rajeev 2446 34th St, San Diego, CA
Robertas Viskupaitis	1/4/2023 2:13	Hi, Could you please explain how did you determine which vehicle is SUV and which isn't? I know NHTSA and EPA considers Model Y a SUV and some other cars within the EV list. . Please see this youtube video for reference but I think you are already aware of this. https://www.youtube.com/watch?v=fBMC_kojBgI if you are not allowed to click on links just go to regular youtube https://www.youtube.com/ and type the rest next to the youtube link. watch?v=fBMC_kojBgI Kind regards,

Name	DateTimeReceived	Body.TextBody
Richard Ross	1/4/2023 2:13	1. Hybrid vehicles are not electric vehicles — they should not qualify, especially for the full $7,500 credit. Is the intent to sell cars or transition to EV's? 2. The Model Y, Mach-E, and ID 4 are all SUVs; they should all qualify for the full SUV $80k MSRP limits. Don't bullshit the public pretending there's a difference between the 7 or 5 seat Model Y, or that something about the ID 4 trims make them different classes. 3. It makes no sense to incentivize the hybrid Jeep, with a battery range of less than 30 miles, but not a Model Y. Model Y has literally >10X the battery range. What's the real motive here? 4. $7,500 is a lot of money to hand out when we're facing unprecedented inflation. -Richard
runar botnen totland	1/4/2023 2:15	The weight limit is arbitrary and does not accurately reflect the capabilities of modern SUVs. Many SUVs that weigh less than 6,000 pounds are just as capable and versatile as heavier models, and should not be excluded from the SUV classification. 1. The weight limit unfairly disadvantages smaller, more fuel-efficient SUVs. By requiring SUVs to be over 6,000 pounds, the weight limit effectively excludes many smaller, more fuel-efficient models that may be better suited for certain consumers and driving situations. 2. The weight limit does not take into account other factors that contribute to a vehicle's fuel efficiency and emissions. Factors such as aerodynamics, engine efficiency, and tire rolling resistance are also important in determining a vehicle's impact on the environment, and should be considered in addition to weight. 3. The weight limit may limit consumer choice and prevent people from finding the vehicle that best meets their needs. Consumers should be able to choose the SUV that best fits their lifestyle and driving habits, regardless of its weight. Regards Runar
Prabh Shergill	1/4/2023 2:16	Tesla model Y 5 seater should be recognized as an SUV as it follows all the guidelines for it to be considered a SUV. Thanks and please take this into consideration.
Martin Košumberský	1/4/2023 2:17	I am reaching out to you in the matter of IRA EV tax credit. I really appreciate this new incetive to support transfer to more ecological ways of transportation. However I am quite concerned about the published list of qualified EVs. There are clearly huge discrepancies in terms of what EVs really are, and how ecological and efficient is to operate those vehicles. For example weight cannot be taken as factor determining if vehicles is SUV or not, simply because more weight means less efficient vehicle. Please make sure that such important facts, like MPG (or eMPG) and actual inner size of vehicle, determine if vehicle qualifies for IRA tax credit. Thank you and best regards. Martin Kosumbersky
Nick Khoury	1/4/2023 2:18	Dear Sir/Madam, Please consider revising the allowable card for qualification for tax credit to fulfill the mission to move the USA to clean energy. As cars today have become very sophisticated we cannot use past criteria to categorize car types like "SUV's". Example is including a 7 seater Tesla Model Y but excluding same vehicle and battery in 5 seater option. This exclusion also appears incorrect when vehicles that are Hybrid or PHEV are included with a fraction Electric capacity and range. Chart below highlights discrepancy. Tesla Y 5 seater is excluded while the Ford and Jeep are included. As a US Tax Payer who sees China taking the lead on clean energy I must respectfully request this error be corrected. Our future and govt. credibility depends on it! [cid:49e3ccc5-3189-4fee-93a0-ea35746dbeb2@namprd09.prod.outlook.com] Nick Khoury Portland, Oregon
Eugen Zimbelmann	1/4/2023 2:18	please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Y is definitely an SUV. Best Eugen Zimbelmann
shahram	1/4/2023 2:19	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version).

Name	DateTimeReceived	Body.TextBody
Elmar Schumacher	1/4/2023 2:20	Dear Madams and Sirs, the classification system seems to rely on inconsistent metrics: 1. Pure BEVs should be in a higher incentive group then Hybrids in order to foster the transition to battery electric vehicles (that are more expensive to make then an ICE car with small battery attached to it). 2. The lightest and most efficient vehicles shouldn't be penalized by pushing them from SUV to Sedan. Example: all Mustang Mach-E and all Tesla Model Y are SUVs and should be classified as such. I understand that this is hard to get right. Please do you best to support the transition to BEVs in the US. Thank you. Best Regards, Elmar Schumacher
Andrew Balogh	1/4/2023 2:21	To Whom it may concern: I am contacting you regarding the IRS's announcement of vehicles that qualify for the 2023 EV tax credit. To my surprise and disappointment, the Tesla Model Y all-wheel drive, long-range, and performance five-seat variants do not qualify for the tax rebate. The Model Y is a pure EV, with minimal impact on the environment. Excluding any Tesla model from the 2023 EV tax credit is an atrocity. I highly encourage the IRS to revise the current list of vehicles eligible for the 2023 EV tax credit to include every Tesla Model. Thank you and I look forward to your response. Sincerely, Andrew Balogh Music Producer / Composer / Artist Management Mobile (424) 285-3034<tel:(424)%20285-3034> Stay Connected: https://www.imdb.com/name/nm7107896/ www.twitter.com/ABaloghMusic<http://www.twitter.com/ABaloghMusic> www.instagram.com/baloghmusic<http://www.instagram.com/baloghmusic>
Fabian Ebert	1/4/2023 2:21	I want to share my comment on: Title: Qualified Plug-in Electric Vehicle Credit and Rev. Proc 2022-46. OMB Number: 1545-2137. Form Number: 8936, 8936-A and Schedule 1 (Form 8936-A). I want you to know that I am not agreeing with the setup of this EV tax credit. Tesla Model Y, arguably one of the best and most power-efficient EV's and 250+ miles electric range, is excluded in some cases from the tax credit. Meanwhile, hybrid vehicles with approximately 25 miles of electric range get included. This makes no sense to me to incentivize EV's, and I want you to review this, and do better. Thank you. Sincerely, A concerned consumer
ilari väisänen	1/4/2023 2:21	Model Y and Mach E ARE suv's, classified by EPA. It makes no sense to punish them for being build light, this is good for environment, range, efficiency, consumption, performance, driving experience and for the roads paid by American taxpayers. Also, it discusts me how you make these decisions without taking any look into these companies. You are forcing them to make insane structural changes just to fit your weird price caps and requirements (like 7 seats). Tax credits should be 2000$ per electric vehicle, no hybrids, no income caps, no vehicle caps, no anything that makes company and consumer actions more complicated. -Ilari

Liana Otake	1/4/2023 2:23	To whom it may concern, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Liana
Ricky White	1/4/2023 2:24	I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Ricky
Baocheng Wang	1/4/2023 2:24	Please include all trims of Tesla Model Y 7 seater in the SUV category with a $80K price cap, not $55K. Thank you. -- Thanks & best regards Roger Wang
Hrishi Deshpande	1/4/2023 2:26	Dear IRS, I am extremely happy to see US government is trying to push for EV adaptation however deeply concerned and extremely disappointed the way TESLA has been mistreated by the same government. Tesla supporters and critics will agree on one thing for sure , there is no doubt TELSA has single-handedly changed the course of auto industry. By discrediting openly government is bringing shame upon themselves. How can you ignore pure EV car company which re-paid all debts well before time and not using any government money to run R&D and day today operation? How can you allow the incentives to be avail on hybrid plugin like Jeep Wrangler which is made out of US and does not allow TESLA cars which are 100% made in US? As taxpayer and concern resident I would like to register my protest for not allowing the use of incentives towards clean environment friendly vehicles such as Tesla Model Y and deliberately discrediting TELSA I would like to request IRS to reconsider their decision and ensure that incentives are fairly applied to all electric vehicles including Tesla Model Y Sinciealy Hrushikesh Deshpande
Jeremy Goemaat	1/4/2023 2:28	Dear IRS, We understand that the IRS guidelines currently only allow for the 7 seat variant of the Model Y to qualify for the $7,500 IRA tax credit. However, we would like to request that the IRS reconsider the Model Y as an SUV regardless of its seating capacity. The Model Y is a highly desirable electric SUV due to its classification as an SUV, as certified by KBB (https://www.kbb.com/tesla/model-y/) and the NHTSA, among others. It is also the most popular, safest, efficient, and environmentally friendly electric SUV on the market. Allowing only a single variant of the Model Y to qualify for the tax credit seems unfair, as it excludes a significant portion of Tesla's customer base. When compared to the qualified Volkswagen ID.4 AWD Pro, the Tesla Model Y is a more suitable candidate for the SUV $7,500 tax break. It has a longer range, more advanced technology, and more cargo space, making it a highly desirable choice for consumers looking for an electric SUV. Additionally, compared to qualified electric vehicles such as the Nissan LEAF S, which has a range of only 40 kwh on a single charge, the Model Y is a much more efficient and cost-effective choice. Allowing vehicles with such limited range to qualify for the tax credit would be a waste of taxpayer dollars. In conclusion, we respectfully request that the IRS reconsider the Tesla Model Y as an SUV regardless of its seating capacity and include the 5 seat (Long Range and Performance versions) in the list of qualified vehicles for the $7,500 tax credit. The Model Y's classification as an SUV, popularity, safety, efficiency, and environmental friendliness make it a highly desirable choice for consumers looking for an electric SUV. Thank you for considering my request. Sincerely, Jeremy Goemaat, Managing Member Elmwood Holdings, LLC

Jimmy Moscoso	1/4/2023 2:29	Dear IRS, I was planning to but a Tesla Model Y this year. However, I found out this car does not get the EV Tax Credit? Please correct this. Kind regards, -- Jimmy O. Moscoso
Jun Zhang	1/4/2023 2:29	I hope this letter finds you well. I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit. According to the IRS guidelines, the following Tesla Model Y variants are qualified for the 7500 tax credit if their Manufacturer's Suggested Retail Price (MSRP) is under $80000: #1 Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) #2 Tesla Model Y Long Range - 7 seat variant (3-rows) #3 Tesla Model Y Performance - 7 seat variant (3-rows) However, it appears that #1 and #3 do not exist. The following Tesla Model Y variants are also qualified for the $7,500 tax credit if their MSRP is under $55,000: #4 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) #5 Tesla Model Y Long Range - 5 seat variant (2-rows) #6 Tesla Model Y Performance - 5 seat variant (2-rows) However, it appears that #4 does not exist, and #5 and #6 are priced at $65,990 and $69,990, respectively, which may disqualify them from the tax credit.
Michelle Bahn	1/4/2023 2:33	Dear IRS, This is Eunkyung Michelle Bahn, a very concerned US citizen. The new tax credit provision which excludes most of the Tesla model Y based on price cap and weight is not acceptable. You need lighter vehicle to ensure longer range with a given battery. For the government to use tax payer money to subsidize less energy efficient Jeep which still uses gas in hybrid and not give credit for most Tesla model Ys is totally unacceptable. I request that all of model 3 and Ys, maybe with exception of performance version, be allowed for full tax credit of $7500. Thank you. Sincerely, Eunkyung Michelle Bahn
Rafael Rincón	1/4/2023 2:33	Hi, Clearly the model Y should qualify for a rebate considering the other cars that qualify. Rafael Rincón
Ron McKinney	1/4/2023 2:34	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future.

Ryan Walker	1/4/2023 2:36	Dear IRS, I am writing to express my deep disappointment in the recent decision to exclude certain variants of the Tesla Model Y and Ford Mustang Mach-E from the electric vehicle tax credit qualifications under the Inflation Reduction Act. As a proud owner of a Tesla, I am committed to doing my part to reduce my carbon footprint and contribute to a more sustainable future. However, it seems that the IRS is not doing its part to support individuals who are making environmentally responsible choices. I understand that the government has limited resources and must make difficult decisions about how to allocate them. However, I strongly believe that providing tax incentives for the purchase of electric vehicles is a smart investment in the future of our planet. Not only do electric vehicles produce zero emissions, they also reduce our dependence on fossil fuels and improve air quality. It is therefore disheartening to see that certain variants of the Tesla Model Y and Ford Mustang Mach-E, which are fully electric, will not be eligible for these incentives, while some vehicles that use fossil fuels and are classified as electric vehicles because they are plug-in hybrid EVs will be eligible. I urge the IRS to reconsider this decision and to ensure that all fully electric vehicles, regardless of their MSRP, are eligible for tax incentives under the Inflation Reduction Act. I also urge the IRS to reconsider its classification of the Tesla Model Y as an SUV, as it is classified as such by the Environmental Protection Agency. Please do not let short-sighted budget constraints stand in the way of a more sustainable and healthy future for us all. Sincerely,
Wayne Kim	1/4/2023 2:37	Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. Here are the primary qualifications for the EV tax credit: [https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/e9f76bb1-fcee-4219-a088-6d19cd025729.jpeg] However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Here's an example of the broken nature of this incentive in its current form: [https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/7030a68c-9d90-499b-a4b7-b6aa8ca7e046.jpeg] Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit.
Basir Ahmad Obaidi	1/4/2023 2:41	I am writing to express my extreme frustration and disappointment with the recent inflation reduction act. Not only is it unacceptable that not all Model Y variants are included in this act, but it is also highly inefficient and counterproductive to have a bill that shows such favoritism towards certain vehicles. A robust economy relies on fair treatment and equal opportunities for all consumers. By excluding certain vehicles from the inflation reduction act, you are actively hindering the growth and success of those individuals and businesses who rely on these vehicles. This is highly inefficient and undermines the very purpose of the act, which is to provide relief and support to consumers. I demand that you immediately reconsider this decision and include all Model Y variants in the inflation reduction act. It is not fair to discriminate against certain vehicles and their owners, and it is not in the best interests of our economy to do so. Regards Basir Ahmad Obaidi
Dott. Emanuele Albenga	1/4/2023 2:42	Hi, I think your inclusion criteria for cars eligible for 7500 dollars tax credit are wrong. Tesla model y is classified as suv by fhva. Limit the 5 seats option buying price to 55000 considering it a sedan is arbitrary at best. Raise it to 80000 like all other suvs. Incetives to ev generally should not exist. If they do the should at least be fair to everyone. Thank you for your time. Best regards Emanuele Albenga, MD. Inviato da iPhone
Steve McAtee	1/4/2023 2:42	The new federal EV rebate should be applied to all Tesla models. It’s ridiculous to apply the full $7,500 to a Jeep hybrid that gets less than 25 miles of pure electric range and then give the pure electric 100+mpge Tesla Model Y 5 seater no credit at all. Fix this! -Steve McAtee Kentucky

Name	DateTimeReceived	Body.TextBody
John D	1/4/2023 2:45	I believe all Tesla model Y configurations (not just 7 seat) should be classified as SUVs per the IRA for the $80K MSRP limit. The EPA classifies all Tesla model Ys as small SUVs, which makes sense given their increased cargo space and configuration (e.g. no fixed deck behind back seats, fold down back seats, etc) snd a bit higher ground clearance. IRS should not disqualify them as SUVs. BEV (100% electric) small SUVs should not be disincented under the IRA with too low an MSRP threshold (car vs SUV) as it can also disincent behaviors which the IRA is intended to incent (purchases of more envirnomental vehicles). Disqualifying small SUVs may make some people purchase larger, less efficient SUVs to get the IRS tax incentives. Having to purchase 7-seat option to get the IRA tax rebate would disincentive purchasing of a more environmentally efficient vehicle (it reduces the net value of the tax rebate, and wastes space and extra weight, and it may encourage some customers to seek out heavier SUVs, which would decrease overall environmental benefit. Thanks, John -- Please excuse any terseness, typos, or auto-correct errors, as I composed this message on a smartphone.
Brian Karcher	1/4/2023 2:46	The Inflation Reduction Act has a stipulation where Ford Electric Vehicles and Hybrid Electric Vehicles are able to take advantage of up to $7,500 in Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Here's an example of the broken nature of this incentive in its current form: [7030a68c-9d90-499b-a4b7-b6aa8ca7e046.png] Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even though the EPA and NHTSA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross misuse of taxpayer dollars. Ideal fix:
M. Simpson	1/4/2023 2:46	Please include Tesla's Model Y. This deserves inclusion. We deserve inclusion as shareholders. These games must stop please. Thank you for your attention. Michael Robert Simpson Tucson, Arizona
Charles Chen	1/4/2023 2:47	Dear IRS, I am writing to express my frustration and distrust with the new tax incentive for electric vehicles. It is unacceptable that the most popular EV on the market, the Tesla Model Y, is not included in this incentive, while a 22 mpg Jeep Wrangler is. This decision shows a clear bias against Tesla and a lack of understanding of the current EV market. Furthermore, the inclusion of plug-in hybrid vehicles as eligible for this incentive only further undermines the progress being made towards fully electric transportation. It is imperative that the government supports and incentivizes the adoption of pure electric vehicles, not just hybrids that still rely on fossil fuels. I urge the IRS to reconsider this flawed incentive and include all popular, fully electric vehicles in any future tax credits. Sincerely yours, Charles Chen
David Hays	1/4/2023 2:48	The Tesla Model Y should be classified as an SUV, not a sedan. The diff between 5 and 7 seats is irrelevant. Sent from my iPhone
Ashish Jhaveri	1/4/2023 2:49	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am surprised that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. The model Y 5 seat option meets all the criteria to be considered an SUV as it has the size and functionality of a traditional SUV and is also categorized as such by Environmental Protection Agency (EPA). The Model Y 5 seat option is a American-made, highly efficient fully electric vehicle which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV eligible for $80k limit, as well as reevaluate the eligibility for credits for foreign-made EVs as well as less efficient hybrids.

reinier.meyer@gmail.com	1/4/2023 2:52	Hello Mr Garcia. I write you today because of the issue about the credit for the Tesla Model Y. Indeed, some hybrid gas car build in Mexico, with a small size and no more range that 23 miles can recieve the credit and the model Y 5 sits can't recieve it. The model y is the highest car made in USA , has 3 More than 300 miles of range and it's cleaner. This should be fix no ? Thanks Have a great year. Reinier
Kiran Gangineni	1/4/2023 2:55	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater , Ford MachE in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely Kiran Gangineni
Tijmen van den Elzen	1/4/2023 2:55	I think it's great that a lot of EVs are getting federal tax credits now. It seems wrong though to not have the Tesla Model Y qualify for those subsidies, while other (more pollutive) cars do. End customers should not be penalized for driving a fully electric vehicle simply because it's too light (and therefore, efficient). Thank you, Tijmen
Kevin Koran	1/4/2023 2:55	Hello, The Tesla Model Y 5-seater should be included for the $7,500 EV tax credit. Additionally, it is completely absurd and downright thievery to be giving an ELECTRIC VEHICLE tax credit to any vehicle that is a gas-consuming. -Tax Payer -- Kevin J Koran kevjkoran@gmail.com<mailto:kevjkoran@gmail.com> 702-576-5795
Mithun Vyas	1/4/2023 2:56	I am writing to comment on the eligibility for the $7500 tax credit for electric vehicles. I strongly believe that the Jeep Wrangler plug-in hybrid should not be eligible for this credit, as it still has a significant reliance on fossil fuels. On the other hand, I believe that the Tesla Model Y 5 seater pure electric vehicle should be eligible for the credit, as it has zero emissions and relies solely on electricity for power. I understand that the tax credit is intended to encourage the adoption of electric vehicles and reduce reliance on fossil fuels. However, allowing hybrids like the Jeep Wrangler to receive the credit undermines the purpose of the program and does not effectively incentivize the adoption of truly zero-emission vehicles. I urge the IRS to reconsider the eligibility requirements for the electric vehicle tax credit and ensure that only pure electric vehicles are eligible for this important incentive. Thank you for your attention to this matter. Sincerely, Mithun Vyas

JASON MAYR	1/4/2023 2:57	I have to admit I was quite surprised that the Model Y (All Trims) was not listed as a SUV. I own a Model Y and it not a sedan at all. I've own SUV's for many years now. I think it's governmental BS mixed with lobbying from the big three the Classification NEEDS TO BE REVISED and based off the EPA's classifications. Tesla started the EV revolution and shouldn't be castrated for being the best. Everyone that could get an advantage to own one and it a tax credit or point of sale credit can make that happen then it should be allowed. The big three needs to realize that there's a new American Automaker on the block and that's TESLA. Jason 904-335-7803 Sent from my iPhone CONFIDENTIALITY NOTICE: This e-mail message including attachments, if any, is intended for the person or entity to which it is addressed and may contain confidential and/or privileged material. lionel Gomes Da Rosa	1/4/2023 2:58	I am writing to express my concern about the current qualification requirements for the Federal Tax Credit for electric vehicles. It has come to my attention that the Tesla Model Y, 5 seats, a pure electric vehicle, built in America with a range of 330 miles and an efficiency rating of 117 MPGe, is not being classified as an SUV by the IRS. This means that the Model Y is not eligible for the $7,500 tax credit, despite its SUV form factor and impressive efficiency. On the other hand, the Audi Q5 HHEV, which is built in Mexico and has a gas engine is eligible for the tax credit due to its 23 miles of electric range! This seems like a gross injustice and a misalignment with the original intent of the tax credit, which was designed to encourage the adoption of sustainable transport and support American workers in the electric vehicle manufacturing industry. I strongly urge you to take action to address this issue and ensure that the IRS applies the SUV/non-SUV rules consistently and fairly. It is important that tax payer dollars are used to support the development of advanced technology and clean energy, rather than propping up inefficient gas vehicles. I would also suggest considering a revision to the tax credit guidelines to exclude hybrid vehicles and only apply to pure electric vehicles. This would more accurately align the incentives with the goals of reducing emissions and promoting sustainable transportation. Thank you for your attention to this matter. I hope to see swift action taken to correct this issue and ensure that the Federal Tax Credit is applied fairly and consistently. Sincerely, Lionel Gomes Da Rosa
Henry Castleton	1/4/2023 2:59	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version).
Henry Castleton	1/4/2023 2:59	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version).
Hamid Reza Erfanian	1/4/2023 2:59	I am writing you to comment on new directions regarding tax credit on EVs. It's so disappointing to not see Tesla Model Y 5 seats as a SUV with $80000 price cap. Tesla model Y is more spacious and bigger than many other cars in the list considered as SUV. I have an Audi Q5 and was hoping to move to EV by taking the tax credit advantage. Best, Hamid
Ilya	1/4/2023 2:59	Dear Sir or Madame, I am writing to provide feedback on the list of SUVs deemed by IRS to be eligible for the IRA EV tax credit. Ruling most Tesla Model Y versions not eligible for the credit because they are not deemed to be SUVs according to some arcane criteria (too light?) makes no sense. Model Y is clearly an SUV, it is made in the USA with the highest proportion of US parts, and is an extremely efficient EV. It makes sense for it to qualify for the full tax credit. It is absurd that plug-in hybrids with very low efficiency and electric range get the full IRA tax credit as SUVs, but Model Y does not. As a citizen and a tax payer I strongly call for you to revise these rules and stop disadvantaging American-made, highly efficient SUVs such as Tesla Model Y.

Name	DateTimeReceived	Body.TextBody
Tope, Kenneth W	1/4/2023 3:01	Tesla Model Y is an SUV – regardless of 5 or 7 seats. If the model y was less efficient (if it weighed 250 more pounds) – it would have qualified for the $80K limit instead of $55K limit. Does that make any sense at all? A superior product Designed and built in America – being screwed by American government….:(Bravo – you led – and it matters. Ken Tope
Diego Moroño	1/4/2023 3:02	This is focused as an "EV Tax Credit" so ELECTRIC VEHICLES should be helped. Tesla Model Y should not be thrown out because it is more efficient (thou lighter) than the rest. Thank you very much.
Zachary Dube	1/4/2023 3:05	Fix the tax credit so the Teslas will rightfully qualify In December, the IRS announced the vehicles<https://www.teslarati.com/tesla-vw-evs-2023-ev-tax-credit/> that qualified for the 2023 EV tax credit. Some of these vehicles include plug-in hybrid EVs that use gas and batteries. Although there were several Tesla Model Ys on the list, the only ones that qualified as an SUV with an $80,000 MSRP limit were the seven-seat varieties. The Model Y all-wheel drive, long-range, and performance five-seat variants do not qualify for the tax rebate because their MSRP exceeds the IRS $55,000 threshold. The graph below shows which Tesla vehicles qualify for the EV tax credit. [https://www.teslarati.com/wp-content/uploads/2023/01/Screen-Shot-2023-01-03-at-1.50.05-PM.png]<https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after> Credit: IRS Farzad Mesbahi, who pointed out this fact and received a response from Elon Musk, launched a petition titled, Fix the Inflation Reduction Act EV Tax Credit<https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit?recruiter=1290758235&recruited_by_id=073c0570-8a0f-11ed-8a45-67f4de4114d4&utm_source=share_petition&utm_campaign=share_petition&utm_term=share_for_starters_page&utm_medium=copylink&utm_content=cl_sharecopy_35382588_en-US%3A8>. At the time of this article, the petition has 19,525 signatures. The petition pointed out that the IRS isn't categorizing the Tesla Model Y as an SUV even though the Environmental Protection Agency does "This means Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit." Disclosure: Johnna is a $TSLA shareholder and believes in Tesla's mission.
George Gomez	1/4/2023 3:08	Dear Andres Garcia, IRS, It would be ideal to include the Tesla Model Y car line in your $7500 EV tax credit. It makes sense to include as many Tesla models to be able to promote ownership of as many EVs as posible to help the environment. I would be in the market for one and could use the incentive. I am sure there are many people like me. Please let me know if you have any questions, thank you, regards, Jorge F Gomez 23146 Vista Way, Lake Forest, CA 92630 714 394 6290
Roey Rosenblith	1/4/2023 3:09	Hello Mr. Andres Garcia, I am writing to you as a private citizen who also happens to be a Tesla employee. The views are my own, not of my company. Tesla employees close to 100,000 people, the vast majority of which live in the United States. If you include our families the numbers likely round out to about 300,000 that will be affected by how you choose to implement this tax decision. All we are asking for is a level playing field that would allow our company to compete against other vehicle manufacturers without being given an unfair advantage due to the IRA. I can also assure you that the most popular trim that Tesla makes, as it is a vehicle targeted at middle class families, is the Model Y compact SUV. I am an owner of such a vehicle myself. The average family in the US is 3.15 people, a five seater is more than adequate and is typically the most popular trim. Due to arbitrary weight, seat configuration, and clearance specs, the IRS appears to be restricting this vehicle from receiving the $7,500 tax, unless it is a 7 seater, which adds $3,000 to the price of the vehicle. If you don't need a 3rd row, this effectively reduces the tax credit to $4,500. Oddly other 5 seater EV SUVs, and Hybrids qualify for the full $7,500 tax credit. It is particularly striking that a vehicle with a gas engine qualifies for this credit when one of most popular EVs in the United States does not. This seems to defeat the primary purpose of this credit which is to encourage the mass adoption of EVs. Thank you for your time and your work. -- Roey Rosenblith +1-314-629-6842
qsnexus	1/4/2023 3:10	All Tesla Model Y 5 seater (SUV) variants less than $80,000 USD should be eligible for the $7,500 tax credit incentive. I believe that PHEV vehicles should not be AS eligle as fully electric vehicles either.

Name	DateTimeReceived	Body.TextBody
Marc Rogoff	1/4/2023 3:14	automakers and cars that are not in fact pure EV's. The classification of the Tesla model Y 5 seat variant as (not an SUV) is a particular case in point. How can the 7 seat version be construed as an SUV and the 5 seat version not? This is abuse of power at the very least… Tesla cars are the only EV's completely made in the USA and their best selling model is being targeted. This smacks as a bailout for legacy automakers who are unionised and are not even making the cars in the USA. Marc Rogoff [cid:123C967A7CDF4CD5B350C6E6ACE5DF09]
Fredrik Holmqvist	1/4/2023 3:14	Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Taxpayer dollars should go to where we need to go, not where we already are. Please: 1. Remove incentives for all hybrid vehicles and only have them apply to pure EVs. 2. Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. At the very least, please apply number 2. Kind regards, Fredrik
Will S	1/4/2023 3:14	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version).
Ming Xu	1/4/2023 3:15	IRS, I think the main goal of the bill is to use tax payers's money to accelerate EV adoption and buildup leading position of US EV manufacturing to help climate change. That said, here are my concerns and disappointments about the bill: 1. Hybrids are qualified for $7500. I believe not a single one of them should because they do very little if any for the goal. 2. All Tesla Model Y should qualify for $7500 because all Model Y are the same size. It is absurd that Model Y 7 seaters are qualified but not others. I have a strong feeling that this is accurately targeting Tesla driven heavily by OEMs' influences, because Model Y is the best selling model and is the biggest threat to OEMs. 3. Tesla is the best EV company in the world hands down. US gov should be proud of Tesla. Tesla deserved to be treated correctly. I strongly suggest the IRS to revisit the bill and do the right things please. Best Regard,
Henry Castleton	1/4/2023 3:16	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version).As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery(21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
Edwin van Eijk	1/4/2023 3:17	Sir, madam, On the inflation reduction act and its application to electric cars: All Tesla Model Y's are registered as SUV's and should therefore be eligible to the full tax discount. It makes no sense to include some models (7-seaters) and others (mostly the 5-seaters) not. Please amend. Dr. H.E.J. van Eijk.
Henry Castleton	1/4/2023 3:18	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version).As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Ken Kaprielian	1/4/2023 3:18	and a Model Y Doesn't. - Ken

Name	DateTimeReceived	Body.TextBody
Kyle Pettys	1/4/2023 3:18	This bill as written comes off as either misinformed or intentionally ignorant and dishonest. Hybrid cars with small electric footprints and low efficiency are receiving the full credit while fully electric vehicles like the Tesla Model Y are not receiving the tax credit. The Model Y is becoming the most commonly purchased EV. This seems to be made to punish Tesla specifically for the administration's love of unions and or lobbyists- not the real issue at hand of clean energy and electrification of our automobile industry. Tesla has led and leads this charge (this bill could not exist if not for their leadership in the industry) and you are attempting to undermine this cause and use dishonest means to keep them from the same tax credits for consumers other much less deserving model of cars are receiving. This bill needs to be changed immediately!
Glenn Cook	1/4/2023 3:18	The IRS tax incentive should include all models of Tesla Model Y at the $55,000 price point regardless of seating capacity. Furthermore all hybrids should be removed due to fossil fuel utilization and the Ramkisoon's they put into the environment. Glenn Cook Founder/CEO EVTransports dba SafeRydr 407-443-5137 glenn@evtransports.com www.SafeRydr.com
M. Brojak	1/4/2023 3:19	Hello, My concern is that the EV incentives stiffle the US pure EV makers like Tesla and Ford, favouring hybrids instead. This will give China, which focuses on pure EVs, an upper hand. The only right thing for advancing the country is to incentivise pure EVs made in the US, even if this puts at disadvantage the likes of GM, who are lobbying for hybrids only because they aren't innovative enough to compete in the high-tech pure EV landscape. The fix well articulated here: https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit Ideal fix: * Remove incentives for all hybrid vehicles and only have them apply to pure EVs. * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Next best fix: * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. --
Kevin Stuart	1/4/2023 3:21	Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. Very dumb.
Chris Ryan	1/4/2023 3:24	I believe the Tesla Model Y 5 seater should be incentivized under the new tax codes. Disincentivizing a weight efficient SUV is not the best use of taxpayer dollars to move to a sustainable future for energy. Please reconsider this part of the restrictions for the betterment of the United States.
Eric Estes	1/4/2023 3:24	Vet here, having an issue with the IRA EV tax credits being so clearly structured against Tesla that it allows for NON-AMERICAN manufacturers & less-American manufacturers than Tesla, to get credits where Tesla *doesn't* for ridiculously arbitrary reasons. The lighter, MORE EFFICIENT 5 seat SUV doesn't get the credit but a heavier less efficient LESS AMERICAN vehicle does? That spits in the face of the spirit of the bill... How is that encouraging Americans to invest in the cleanest air for our cities? Keep the most money on American soil? It looks like someone was paid off. Someone needs to get rid of the credits entirely or make it LESS OBVIOUSLY a handout for party donors... (Unions. I mean... it's so obvious it hurts) Thank you for your time.
Gonzalo Solis	1/4/2023 3:26	I am writing to express my extreme frustration and disappointment with the recent inflation reduction act. Not only is it unacceptable that not all Model Y variants are included in this act, but it is also highly inefficient and counterproductive to have a bill that shows such favoritism towards certain vehicles. By prioritizing incentives for gas-guzzling vehicles (22 mpg Jeep) and non-EVS, we are hindering the growth and success of American companies like Tesla that are at the forefront of clean and sustainable transportation. This exclusion does a disservice to American taxpayers and businesses. I urge you to reconsider the qualifications for the electric vehicle tax credit and to prioritize incentives for truly zero-emission vehicles, especially those made by American manufacturers (e.g., Tesla). It is vital that we support and encourage the adoption of clean and sustainable transportation options for the benefit of both the environment and our economy. A robust economy relies on fair treatment and equal opportunities for all consumers. By excluding certain vehicles from the inflation reduction act, you are actively hindering the growth and success of those individuals and businesses who rely on these vehicles. This is highly inefficient and undermines the very purpose of the act, which is to provide relief and support to consumers. I demand that you immediately reconsider this decision and include all Model Y variants in the inflation reduction act. It is not fair to discriminate against certain vehicles and their owners, and it is not in the best interests of our economy to do so. Sincerely, Gonzalo

Name	DateTimeReceived	Body.TextBody
David Raines	1/4/2023 3:29	The most American made and efficient cars are produced by Tesla. The fact that. their most popular car, the 5 seat Model Y, is not included under the IRA tax refund guidelines due to an arbitrary weight limit is absurd. In effect, You are penalizing them for making a better car.
Liam West	1/4/2023 3:30	To whom it may concern - I am writing to request that you reconsider the classification of vehicles such as Tesla Model Y 5 seat option and Ford Mustang Mach E as SUVs for the IRA tax credit cap of $80,000. These vehicles meet all the criteria to be considered an SUV. They have the size and functionality of a traditional SUV, and are also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, believe that it deserves the full tax credit available to SUVS. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, Liam West
Derek Nichols	1/4/2023 3:31	To:Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224 I am writing to address the subjective vehicles listed for the new EV tax credit and inquire about such limitations. An EV is a significant investment for the average American citizen. As such, approved vehicles should be based on objective data with approvals for all vehicles that meet desired EV standards. The Tesla Model Y SUV which meets high standards but exceeds your arbitrary $55k and $80k limits should be included in the EV tax credit. In summary, American taxpayers should be eligible for the $7500 tax credit when purchasing any EV that meets objective efficiency requirements - not based on handpicked models with no objective rationale. Respectfully, Derek Nichols Douglasville, GA
woodcut.rider_07@icloud.com	1/4/2023 3:33	Please consider Tesla model y 5 seater as an SUV. Andy Iska (702) 210-4895
许德正	1/4/2023 3:33	Tesla model Y 5 seat is definitely a SUV and should be eligible for the 7500 EV tax credit.
Rajesh Ravindran	1/4/2023 3:37	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
Jordan Rhyne	1/4/2023 3:39	Hello, Please consider making changes to this IRS ruling to allow popular 100% electric vehicle models such as the Ford Mach-E and the Tesla Model Y fully eligible for the $7,500 tax credit. The current interpretation excludes the most affordable trim levels of these highly efficient electric only vehicles that get over 100 MPGe whereas many gas/electric hybrids, some of which get under 30 MPG are eligible for the full credit. This creates perverse incentives for Americans to purchase less efficient cars which contradicts the spirit and intent of the IRA. Thank you for considering, Jordan Rhyne Philadelphia, PA

김기석	1/4/2023 3:40	I am writing to express my disappointment and frustration that the Tesla Model Y 5-seat model will not be included in the IRA tax credit as of 2023. As a Tesla customer, I was eagerly anticipating the opportunity to take advantage of this credit when purchasing my Model Y. However, I feel that the Model Y 5-seat model is an important and popular option for Tesla customers, and I am disappointed that it will no longer be eligible for this credit. I hope that you will reconsider this decision and include the Model Y 5-seat model in the IRA tax credit as soon as possible. Sincerely KS Kim
Sam Suther	1/4/2023 3:54	Hello Andres Garcia, I hope this message finds you well. I am a consumer and prospective buyer of gas, hybrid and electric vehicles. It is a shock to me that the Tesla Model Y (~330 mi EV range) was not granted a $7500 EV tax credit, particularly while this credit was given to hybrid vehicles, including the Jeep Wrangler, with meager EV range (~25 mi). I believe this tax credit should be granted to the Model Y immediately in conjunction with the overwhelming majority of prospective car buyers/consumers. If the goal is truly to accelerate the shift to TRUE electric vehicles by increasing affordability, it seems blasphemous and unacceptable that Model Y was NOT included. Furthermore, hybrid vehicles in my view should not be granted this credit, and I can assure you this is the overwhelming consensus with my peers. It is imperative that this is fixed rapidly. Thank you for your consideration,
Daniel Sakamoto	1/4/2023 3:55	I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Daniel Sakamoto
Omar Al-Homsi Hernández	1/4/2023 3:57	I hope this message finds you well. I am a consumer and prospective buyer of gas, hybrid and electric vehicles. It is a shock to me that the Tesla Model Y (~330 mi EV range) was not granted a $7500 EV tax credit, particularly while this credit was given to hybrid vehicles, including the Jeep Wrangler, with meager EV range (~25 mi). I believe this tax credit should be granted to the Model Y immediately in conjunction with the overwhelming majority of prospective car buyers/consumers. If the goal is truly to accelerate the shift to TRUE electric vehicles by increasing affordability, it seems blasphemous and unacceptable that Model Y was NOT included. Furthermore, hybrid vehicles in my view should not be granted this credit, and I can assure you this is the overwhelming consensus with my peers. It is imperative that this is fixed rapidly. Thank you for your consideration, Omar Al-Homsi
Freddy C	1/4/2023 3:58	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves
BOOMbox 5625	1/4/2023 3:58	The Tesla model Ys are some of the most efficient and American made electric SUVs on the the planet, how can we not support them with the full EV tax credit? They have the greatest potential to help with the sustainability goals of the Ira.
Brian Lawley	1/4/2023 4:00	I can't believe that tax dollars are being used to help people buy hybrid vehicles that still use gasoline. And the fact that the Mustang Mach E and Tesla Model Y don't qualify for rebates when they are WAY more efficient and pollute less than almost all other vehicles on the road (and are made in America) makes the IRA and program look highly-biased and the rules look arbitrary at best. Please only allow for fully electric vehicles and include the most popular and best ones for the environment for the rebates. Sincerely, Brian Lawley
Nikita Patel	1/4/2023 4:01	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned resident, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Nikita Patel -- Nikita Patel
Nick Coronado	1/4/2023 4:06	Hello, I'm writing to request that the 5 seat model Y MSRP limit be increased to $80,000 so that it's in line with the other incentives, the Audi Q5 TFSI e Quattro is a similar sized 5 seat vehicle and it's MSRP limit is $80,000. If the goal of this tax credit is to increase EV ownership, it makes no sense to exclude the 5 seat model Y. Hybrid vehicles should also be excluded from the tax credit as these vehicles have a very limited zero carbon range. Thanks, Nick

Carter Multz	1/4/2023 4:14	Dear Treasury, Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224 Giving a $7500 tax credit to purchase PHEV or “hybrid” like the Jeep, which is essentially a gas car with a tiny battery and motor will not help move the US to sustainable transportation. Excluding the Model Y 5 seater seems very unfair and illogical. Punishing the leading BEV maker, (and Elon Musk’s stupidity parade on Twitter) will only do a great favor to China who will take the industry and Americans will be forced to buy Chinese made cars. This will lead to the world petrol dollar to transition from the US dollar to the Chinese yuan. This political graft, paid for by the UAW, will destroy any chance Big Auto will sincerely transition to sustainable transportation, and their jobs will still be lost to Mexico. Giving Big Auto $7500 for PHEV, essentially ICE cars with tiny battery/motors is a huge mistake. Regards, Carter Multz
Tyler Bang	1/4/2023 4:15	Dear IRS, I believe our tax dollars should be put towards incentivizing purchases of the most efficient and environmentally-friendly vehicles, but this would not be the case if the Model Y 5-seat configuration is classified as a non-SUV. I ask you to reconsider this decision. Thank you, Tyler Bang
Christopher Concepcion	1/4/2023 4:15	Hello, I'm writing to you to express my dissatisfaction on the classification of the Tesla Model Y (5 Seat variant). If the 7 seat variant is classified as an SUV, then so should the 5 seat option. This company makes one of the best EVs on the market and to deny the SUV classification for the tax credit is a disservice to consumers who are trying to do good and purchase a good EV. Thank you for your time, Chris Concepcion
Vadim Ilin	1/4/2023 4:17	Dear IRS, I am writing to express my concern about the unfair treatment of Tesla Motors company. More specifically, I don’t understand how the 5 seat configuration of the Tesla Model Y is not eligible for the full $7,500 electric vehicle tax credit, while similar vehicles from other manufacturers are. I understand that the purpose of this credit is to encourage the adoption of electric vehicles, which offer significant environmental benefits over internal combustion engine (ICE) vehicles. However, I believe it is unfair to discriminate against certain electric vehicle models in this way. Furthermore, I believe it is wasteful to offer this credit to hybrid vehicles, which deliver only modest improvements over ICE vehicles in terms of fuel efficiency and emissions. In my opinion, this credit would be better utilized by offering it only to fully electric vehicles, which offer significantly greater benefits in terms of reduced emissions and reliance on fossil fuels. I hope that the IRS will consider these points and take action to ensure that the electric vehicle tax credit is applied fairly and effectively. Sincerely, Mr. Vilin
philipandamandasonefeld@yahoo.c	1/4/2023 4:18	Sent from my iPhone Begin forwarded message: From: philipandamandasonefeld@yahoo.com Date: January 4, 2023 at 3:53:38 AM EST To: pra.comments@ira.gov Subject: OMB control NO. 1545-2137 My comment is for the IRA electric vehicle tax credit. If the VW ID4 and other SUV’s that are the same size as the Tesla model y are included under the $80,000 cap as a SUV and the 7 seat Tesla model y is included as a SUV, but the 5 seat Tesla model y is included as a sedan than this is Trump level incompetence and corruption. If this incompetence and corruption continues and is not corrected for pure politics; my wife, myself, and my children will stop voting Democrats and vote republicans the rest of our life. This level of corruption will not be forgotten. Sent from my iPhone

Name	DateTimeReceived	Body.TextBody
Tim Aspinall	1/4/2023 4:22	I think tesla Model Y 5 seater should be included and it is silly that it’s not been from the beginning. Why is the vehicle that is leading the way for electrification of our fleets being penalised in this way, yet shockingly poor hybrid ev with less than 20 miles range get the full credit? Had objectivity been totally replaced by special interest groups in your organisation? Tim Aspinall
Kyle Koehler	1/4/2023 4:24	* Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. To the IRS and Government officials - please use this chance to prove to the American taxpayer that these categorizations are done in error. Otherwise, it will be yet another reason for the American tax payer to doubt your true intentions. Thank you! Kyle Koehler kyle.b.koehler@icloud.com
Max	1/4/2023 4:32	The car on the top has a gas engine and gets 20 MPG. It has 21 miles of electric range. It gets a $7,500 EV Tax Credit. The car on the right is ELECTRIC ONLY and gets 113 MPEe. It has 330 miles of range. IT DOES NOT GET A $7,500 EV TAX CREDIT. Does this make sense? Unless you choose the one with 7 seats, making it a little heavier (and thus more inefficient). The Tesla model Y is a SUV regardless of number of seats.. A true EV-tax credit should incentivize the adoption of electric vehicles! Not extremely inefficient ICE-vehicles. [image.png] [image.png]
Mickey McIntire	1/4/2023 4:34	Why is the Tesla Model Y 5 seater not included in the tax credit? It's an SUV and it is the same exact car as the Model Y 7 seater just 270ibs lighter. Mickey McIntire CIC, CRM Fleury Risk Management Director of Risk Control and Sales mickey@fleuryrisk.com<mailto:mickey@fleuryrisk.com> 1-518-917-3289 -- Mickey McIntire, CIC, CRM Director of Risk Control and Sales Fleury Risk Management 7 Daggett Drive Redford, NY 12148 O: 518-478-6314 x 105 C: 518-917-3289 Mickey@fleuryrisk.com<mailto:Mickey@fleuryrisk.com> fleuryrisk.com<http://fleuryrisk.com> This message and any attachments are intended only for the use of the addressee and may contain information that is privileged and confidential. Kris Desruisseaux	1/4/2023 4:35	Good evening, It does not make sense to me that the Tesla Model Y 5 seater falls under "other" and is not regarded as an SUV, when other cars are being classified as SUV. This hurts consumers, especially since the Model Y is fully electric as opposed to hybrid. Thank you
francesco bini	1/4/2023 4:37	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version) Make no sense keeping this model out. Include the most sold EV inside if you rellay want to be fair and real in transitioning the futire to electric. Do consumers have the right to choose or you want to choose for them ? Regards Dott. Francesco Bini

Name	DateTimeReceived	Body.TextBody
James Read	1/4/2023 4:39	Dear IRS, I am writing to express my frustration and concern regarding your decision not to provide $7500 EV tax credits to individuals who purchase pure battery electric vehicles such as the Tesla Model Y and Ford Mach-E. As a consumer considering the switch to an electric vehicle, this decision is extremely disheartening and confusing. Whilst there are other vehicles that may be purchased with a tax credit, very few can match the energy efficiency of the Tesla Model Y in particular. It is well-established that pure battery electric vehicles have significantly lower emissions than their hybrid and fossil fuel counterparts. They also have the potential to play a crucial role in reducing our dependence on fossil fuels and combating climate change. It is therefore deeply problematic that the IRS would choose to extend EV tax credits to hybrid electric vehicles with small battery packs and higher emissions, such as the Jeep Wrangler, while denying these credits to pure electric vehicles. In particular, it is absurd that hybrid electric vehicles with a battery pack as small as $1000 would be eligible for a $7500 tax credit, while some pure electric vehicles are not. This decision does not align with the goals of reducing emissions and promoting the transition to a more sustainable transportation future. I strongly urge the IRS to reconsider this decision and extend the EV tax credits to all individuals who purchase pure battery electric vehicles. This will not only incentivize the adoption of these cleaner and more efficient vehicles, but also send a clear message that the IRS is committed to supporting the transition to a cleaner future. Thank you for sharing the news inviting comments on this issue. I look forward to your response.
Carles Vidal Garcia	1/4/2023 4:39	Fix the Inflation Reduction Act EV Tax Credit<https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit?recruiter=1290758235&recruited_by_id=073c0570-8a0f-11ed-8a45-67f4de4114d4&utm_source=share_petition&utm_campaign=share_petition&utm_term=share_for_starters_page&utm_medium=copylink&utm_content=cl_sharecopy_35382588_en-US%3A8>. the IRS isn't categorizing the Tesla Model Y as an SUV even though the Environmental Protection Agency does "This means Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit." Fix it now, thank you, Enviat des del iPhone de Carles Vidal
Alexander Holbrook-Diaz	1/4/2023 4:41	Add all variants of the model Y to the SUV Category of the tax incentive, regardless of seat configuration
Julian Brandt	1/4/2023 4:41	Dear IRS, I hope this letter finds you well. I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit. According to the IRS guidelines, the following Tesla Model Y variants are qualified for the 7500 tax credit if their Manufacturer's Suggested Retail Price (MSRP) is under $80000: #1 Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) #2 Tesla Model Y Long Range - 7 seat variant (3-rows) #3 Tesla Model Y Performance - 7 seat variant (3-rows) However, it appears that #1 and #3 do not exist. The following Tesla Model Y variants are also qualified for the $7,500 tax credit if their MSRP is under $55,000: #4 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) #5 Tesla Model Y Long Range - 5 seat variant (2-rows) #6 Tesla Model Y Performance - 5 seat variant (2-rows) However, it appears that #4 does not exist, and #5 and #6 are priced at $65,990 and $69,990, respectively, which may disqualify them from the tax credit.

Name	DateTimeReceived	Body.TextBody
Thomas McArthur	1/4/2023 4:46	IRS, I am disgusted and appalled with application of the “EV” Tax Credit. This should only apply to fully Electric Vehicles. Not Hybrids. Definitely not hybrids with ~23 miles of electric range and ~20 mpg (which will be burning fossil fuels for 90%+ of its journeys). Why does the EV Tax Credit not apply to the Tesla Model Y 5 Seater? 330 miles of electric range ☑ No polluting Internal Combustion Engine ☑ No burning of fossil fuels ☑ No need to buy fossil fuels from Russia (takes away their power and wealth) ☑ The most efficient EV SUV ☑ The most popular CAR (not just EV) in the world ☑ This at best, calls into question the IRS’ competency and at worst the IRS’ integrity and outright corruption with Legacy Automakers/Donations and the Democratic Party. Does the IRS actually want to transition to EVs? Or bail out Legacy Automakers? This “EV” Tax Credit gives us a clear and alarming answer.
Marius Nygaard	1/4/2023 4:46	Tesla Model Y 5 seater should obviously be included, and I'm amazed that it’s not from the beginning. Regards, Marius Nygaard
bhavin virani	1/4/2023 4:48	Dear IRS, I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, Bhavin Virani
Ronald Leckfor	1/4/2023 4:51	Remove incentives for all hybrid vehicles and only have them apply to pure EVs. Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Next best fix: Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. The Tesla Model Y is considered to be an SUV by the EPA and to be consistent, across government agencies, the IRS should also consider it an SUV as well. It certainly is not a Sedan, like the Tesla Model 3, as it is capable of 3rd row seating or extended luggage area with a hatchback design, similar to many other SUV on the road today. Regards, Ronald John Leckfor 359 Elizabeth Street
James Bishop	1/4/2023 4:53	This is to demand that you immediately classify the 5 seat Tesla model Y as an SUV since it is. The model Y should obviously receive the $80,000 EV credit cap. To deny the most important electric SUV this support smacks of curruption.
Matthew	1/4/2023 4:56	Dear Treasury, I am writing in regards to proposed tax credits for electric vehicles under the recently passed Inflation Refuction Act. It makes no sense to incentivize plug in hybrid vehicles over pure electric vehicles in the implementation guidelines. Automobiles such as the Tesla Model Y 5 seat configuration and Ford Mustang Mach E should be incentivized for the lower cost (non high performance) specifications. The determining factor for the incentive should be based purely on battery size and not total vehicle weight. To encourage reasonable battery size, the final determination should be made based on a scale of reasonably determined battery sizes in Mwh or battery range in electric miles that can be driven. The purpose of this tax incentive should be to incentivize the purchase of high mileage plug in hybrids and pure electric vehicles from the broadest possible selection of manufacturers. Increased competition is the best way to bring down prices. The goal should be to incentivize as many models as possible - including models that have been well received in the market. Kind regards, Matthew Mouw

aespomobile@gmail.com	1/4/2023 4:56	The SUV/ non SUV classification does not make sense! It penalises lighter (thus more efficient cars)! Car height would be a better parameter, or just common sense
Mark Garlow	1/4/2023 4:57	I am writing to express my disgust and frustration regarding the Inflation Reduction Act and the fact that it includes tax incentives for plug-in hybrid internal combustion engine (ICE) vehicles such as the 5-seat Jeep Grand Cherokee 4xe, while it does not include the 5-seat Tesla Model Y. The Jeep Grand Cherokee 4xe has a fuel efficiency of only 23 miles per gallon equivalent (MPGe), while the Tesla Model Y has a fuel efficiency of 117 MPGe. It is unacceptable that a vehicle with such a low fuel efficiency is being rewarded with tax incentives, while a much more fuel efficient vehicle is not. I urge you to reconsider the inclusion of the Jeep Grand Cherokee 4xe (and similar ICE plug in hybrids) in the Inflation Reduction Act and to consider the inclusion of the Tesla Model Y. We should be encouraging the use of more fuel efficient vehicles, not rewarding those with low fuel efficiency. Sincerely, Mark Garlow Sent from my iPad
Michael	1/4/2023 5:02	Dear IRS, To be blunt. I think it is ridiculous that the best selling car on this entire list is the 5 Seat AWD Model Y, is not eligible for the tax credit at the 80k cap. This is silly considering that there are multiple hybrids that are ridiculously ineffecient compared to the Model Y that are on the list. Please fix this. As a tax payer, I was under the impression that this bill was to help people buy EV's, however in it's current state this will only incentivise people to produce more hybrids. I was very upset to see that. Please include the Model Y and Ford Mach E in the vehicles eligible for up the credits up to 80k.
taylor Hobbs	1/4/2023 5:02	Hello, I think Tesla model Y 5 seater should be included in EV tax credit. Tax credits should promote efficiency. Requiring vehicles to be heavier does the opposite. Regards Taylor Hobbs
Peter Callerfelt	1/4/2023 5:04	Hi, For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Peter Callerfelt, Tallahassee

Carl-Henrik Björck	1/4/2023 5:05	The Tesla Model Y 5 seater should be included for the full 7500 USD tax credit. Anything else doesnt make any sense whatsoever, when you compare it with the other cars. The Tesla Model Y 5 seater is an SUV, and should therefore be classified as a SUV with the 80 000 USD-limit. Not the 55 000 USD. Best regards, Carl-Henrik När du skickar e-post till Täby kommun innebär det att vi behandlar dina personuppgifter. Läs mer på taby.se/personuppgifter<https://www.taby.se/personuppgifter/>
Kalle Björck	1/4/2023 5:05	Hello, The Tesla Model Y 5 seater should be included for the full 7500 USD tax credit. Anything else doesnt make any sense whatsoever, when you compare it with the other cars. The Tesla Model Y 5 seater is an SUV, and should therefore be classified as a SUV with the 80 000 USD-limit. Not the 55 000 USD. Best regards, Kalle Björck
Ravi Palejiya	1/4/2023 5:06	Dear IRS, I am writing to express my frustration and disappointment regarding the fact that the Tesla Model Y is not qualified for the 2023 tax credit while other gas-powered cars are. I have made a conscious decision to invest in a clean and sustainable mode of transportation. Model Y is going to be my next car. I believe that electric vehicles (EVs) like the Model Y have the potential to significantly reduce our reliance on fossil fuels and improve air quality in our communities. However, it seems that the tax credits that are intended to encourage the adoption of EVs are not being applied equally. I understand that the criteria for qualification for tax credits may be complex, but I urge you to reconsider the decision to include the Model Y in qualified vehicles. As a leading manufacturer of EVs, Tesla has played a crucial role in promoting the transition to electric transportation and its most American car company. It is important that the IRS support and encourage the growth of this industry by extending the same benefits to all qualified EVs, regardless of make or model. I hope that you will give my concerns your careful consideration and take the necessary steps to ensure that all qualified EVs are eligible for the 2023 tax credit. Thank you for your attention to this matter. Sincerely,
Adrian	1/4/2023 5:09	I wander what was your reason to declassify the car as an SUV, since it was categorized by the EPA. Clearly wasn't by mistake, since is one of the most sold off or cars. My name is Wilhelm Cazimirovici, I own a part of Tesla trough investments. Elon Musk is one of the best of our employee, even if you like it or not. If you have anything against him, please let it go. Your decisions affect millions, do please do it in a reasonable manner. Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA. Thank you!

Name	DateTimeReceived	Body.TextBody
Mats Gaupset	1/4/2023 5:10	Dear Mr. Garcia, I am writing to express my concern regarding the absurdity of Tesla electric vehicles not being eligible for the $7500 tax credit for electric vehicles. I find it unacceptable that some hybrid vehicles with poor fuel efficiency are able to receive this credit, while some Tesla vehicles are not. As you may be aware, Tesla electric vehicles are not only environmentally friendly, but they are also more American made than many of their peers. For instance the Tesla Model Y has been crowned the most American-made vehicle by several publications. In contrast, many of the hybrid vehicles that do qualify for the tax credit are not only less efficient, but they are also largely imported from other countries. I would also like to point out that Tesla electric vehicles have consistently received high ratings for safety and performance. In fact, the Tesla Model 3 was named the "Top Safety Pick" by the Insurance Institute for Highway Safety in 2020, the Model Y garnered attention for its superb safety as well. Given these points, I believe it is only fair that Tesla electric vehicles be eligible for the tax credit. I urge you to consider the benefits of electric vehicles and the positive impact they can have on our environment and economy. I hope that you will take my concerns into consideration and work towards making Tesla electric vehicles eligible for the tax credit. Sincerely, Mats Gaupset
Jeffrey Jimenez	1/4/2023 5:16	Hello, I think it is imperative to include all Tesla model vehicles as eligible for EV credits. It makes zero sense that a hybrid vehicle, still running fossil fuel, is eligible for EV credits and a Model Y is not. All Tesla vehicles are fully electrified. A concerned citizen, Jeff
Thomas Klei	1/4/2023 5:18	The $7500 dollar subsidy should, in the first place, not be granted to hybrid cars. It is helping sustain a shinking ship. Even so, everyone knows that this is beeing done to keep alive those manufacturers that cannot switch to pure EV fast enough without going bankrupt. Be it as it may, then not granting the TESLA model Y 5 seater the same subsidy, citing it not beeing an SUV, is beyond rediculous. It is the most popular pure electric SUV EV in the current market and specifically does what the IRA intends to support: transitioning into a greener future. By not providing the subsidy for this model, you are going against the IRA mission statement. Please reconsider quickly, also for the sake of your own face. Thomas
Hadi Akharas	1/4/2023 5:18	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you.
MagmaMusen	1/4/2023 5:20	Hi, Could you please explain why the fully electric Tesla model Y SUV doesn’t qualify for the $7500 credit? It makes no sense to me, it seems completely counter to the intent of the bill. Best, Magnus
Dr. Craigh Bryan	1/4/2023 5:22	To Andres Garcia, The current IRS plan that determines vehicles eligible for battery electric vehicle (BEV) credit needs to be immediately amended. The Tesla model Y which the EPA and other entities correctly define as SUV is not recognized as such with the IRS plan. The IRA bill should not be used by the IRS to punish companies making energy efficient cars that are not destroying the environment. The heavier 5 seater VW ID4 which reflects poor engineering is designated as SUV by IRS plan and is to be rewarded with full $7500 credit. Yet you do not give SUV designation to the very efficient 5 seater Tesla model Y which will deny consumers the $7500 credit at current prices. Even more egregious is the IRS plan to reward hybrid vehicles full credit - some which only provide batteries that drive only 20miles! Hybrids are gas cars that never get charged. They are destructive to the environment. They have tiny batteries that can drive only a few miles and owners never charge them therefore they are never used. (The EPA and others have data to support this). In sum, the IRS plan in its current iteration would be rewarding these gas vehicles (hybrids) to pollute even more. I voted for Joe Biden and other Democrats with the assumption they would make responsible and sensible decisions that protect the environment and would not waste my hard-earned tax dollars. I am furious that car manufacturers will be rewarded full $7500 credit for making gas vehicles labeled as hybrid. The IRS has to do better to it’s tax payers! Joe Biden and Democrats must do better or they will loose my vote and support in the next election. Sincerely, Craigh Bryan, MD NJ

Andreas Hoefler	1/4/2023 5:23	Dear IRS, I am writing to express my concern about the current subsidies for electric vehicles. While I understand the intention behind these subsidies, I feel that they should be focused on promoting the adoption of true battery electric vehicles (BEVs) rather than plug-in hybrids. It is also confusing and frustrating that certain models, such as the VW ID.4, are eligible for tax credits while others, like the Tesla Model Y, are not. This does not seem to make sense, as both of these vehicles are electric and should be encouraged. I hope that the IRS will consider revisiting these policies and focusing on supporting the widespread adoption of pure electric vehicles, which have the potential to make a much greater impact on reducing our reliance on fossil fuels and improving air quality. Thank you for your attention to this matter. Sincerely, Andreas Hoefler
Randy Oliver	1/4/2023 5:27	safest car in the world.
San Nguyen	1/4/2023 5:27	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law.
David Glennon	1/4/2023 5:32	Dear Sir, Please include all versions of the Tesla Model Y and Ford Mach E to the SUV category for the IRA $7,500 tax credit. I do not plan to buy either as I own a Model Y already, but Tesla created the modern EV and the Model Y is clearly an SUV. Low weight is a good thing. -David Glennon Melbourne, Florida 617.470.9881
Steve Vergenz	1/4/2023 5:40	To whom it may concern: Please reconsider the criteria for which you are using to determine the IRA tax incentive for vehicles. It is stupid crazy that you give a full incentive of $7,500 for a gas guzzling hybrid vehicle and exclude pure electric vehicles such as certain Tesla Model Y trims. Stupid crazy! Sincerely, a concerned citizen, Steve Vergenz
Thomas Christensen	1/4/2023 5:41	I am writing to express my frustration and distrust with the new tax incentive for electric vehicles. I was disappointed to see that the program includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a proponent of electric vehicles, I strongly believe that the IRS should be promoting the most efficient and environmentally-friendly vehicles on the market. The inclusion of a vehicle with such low fuel efficiency, like the Jeep Wrangler, seems counterintuitive and a step backward in our efforts to combat climate change. I urge the IRS to reconsider the eligibility requirements for this program and ensure that it is aligned with the goals of reducing emissions and promoting sustainable transportation. Sincerely, Thomas Christensen
Lad Chapman	1/4/2023 5:45	Dear IRS, It is my opinion that more Tesla brand vehicles should qualify for the 2023 rebate. The modelY is a SUV even with 5 seats, clearly. If your goal is to get Americans to purchase EV vehicles, Teslas should get the rebate. Regards, Lad Chapman Sent from iPhone (may include brevity and typos)
Marko Zlodi	1/4/2023 5:48	Hello, I think you made mistake by giving EV tax credits to non-EV, gas powered combustion engine cars with tiny battery that cost no more than $1000, and that is promoting slower transition to electric vehicles which is contradictory to the idea of faster electrification. Also, I think that Tesla Model Y is SUV, and it doesn't matter if it has 5 or 7 seats, it's the same vehicle. Please change these things. Thank you. Marko Zlodi.
Ian Gunn	1/4/2023 5:48	Hello, As a taxpayer in the USA, I would like to address your determination of what a SUV is and what isn't. As well as what's an EV and what isn't. 1) SUV. A SUV is a SUV whether it is 5 or 7 seater. Period. Once you classify a vehicle a SUV, a trim line should not change this. Examples: Tesla Model Y and Audi ID.4. Also please be consistent. You have some 5 seater SUVs getting $80K categorization and other SUVs (you categorize as SUVs) with 5 seats in the $55K category. And those 5 seat vehicles by just adding 2 seats magically become a SUV? This isn't right. Please fix. 2) What's an EV? I believe the spirit of the law is to get people driving more EVs. Right? So giving a tax credit to vehicles with < 50 mile electric motors isn't doing that is it? Respectively, I would like your team to re-evaluate the goal of this bill to stop giving ICE vehicles the EV credit please. Thank you for reading. Have a great day. Ian Gunn

Wayland	1/4/2023 5:55	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Sent from my iPhone
Nir Sadkowski	1/4/2023 5:55	Dear IRS, I am writing to express my concerns and lack of confidence regarding the new tax incentive for electric vehicles. I am disappointed to see that plug-in hybrids are included in this incentive, while the highly popular Tesla Model Y is not. In addition, I am surprised to see that the Jeep Wrangler, with a fuel efficiency of 22 MPG, is eligible for this incentive. I strongly believe that this incentive should only be available to fully electric vehicles, as they offer the greatest reduction in greenhouse gas emissions. Allowing hybrids and low fuel efficiency gas-powered vehicles to take advantage of this incentive weakens its intended purpose and hinders the transition to a more sustainable transportation system. I request that the IRS reconsider the eligibility requirements for this tax incentive and ensure that it is only available to fully electric vehicles that truly contribute to environmental sustainability, including the Tesla Model Y. Sincerely, Nir Sadkowski
Michael Cordon	1/4/2023 5:57	While the new legislature is better than nothing, it seems to not be aligned will enough with reducing pollution. A Tesla Model Y with 5 seats is fully electric and much better for the environment than a hybrid vehicle and yet doesn't qualify for the credit despite being a good price. Some need a Model Y because they're tall or have a lot of luggage at times. Please look at Tesla's impact reports to see how good they are for the environment and consider the lower cost of maintenance and cargo capacity and headroom as well. Thank you for your hard work!
Robert Stanek	1/4/2023 5:59	Please make the Tesla model Y, 5 seat vehicle eligible for the $7500 rebate. It is definitely an SUV and is more suitable than the Tesla model 3 and model Y 7 seater for most people. Thank You. Robert E. Stanek 176 Winged Elm Circle Aiken, South Carolina 29803-2731 (803) 341-4109 robertstanek@me.com
jim holt	1/4/2023 6:07	seems oddly capricious. Thanks, Jim Holt Concerned citizen
Ammar Jesri	1/4/2023 6:07	Dear sir / madam, The decision to exclude EV car from tax credit while keeping other big SUV cars getting tax credit is disappointing, politically motivated, and not environmentally friendly and pushing people to do the wrong thing.. If the government did not cut my check this much definitely I would buy an EV car.. Sincerely, Ammar Jesri 18125 Roseate drive, Lutz, FL 33558 Sent from Yahoo Mail for iPhone<https://overview.mail.yahoo.com/?.src=iOS>
clarence ramo	1/4/2023 6:18	To Whom It May Concern, May I request to grant the petition to allow the $7,500 tax credit for the Tesla SUV 5 seater car. I hope for you kind consideration. Sincerely, Clarence
Antony Farag	1/4/2023 6:19	To Whom It May Concern, The Tesla Model Y 5 seat model needs to be included with the other SUV's that are eligible for the $7500 tax credit. If the IRA is going to enact the essence of the law, the most efficient EV's needs to be more available to the middle class. By all metrics, Tesla's EV battery technology is more efficient than other EV's on the market. As an independent voter who cares about the climate crisis, this would send an essential message that this law actually wants to help solve the crisis and was not written to placate certain lobbyists. Thank you and happy new year.
Varnie Tambason	1/4/2023 6:20	against the intent of the law Thank you

Name	DateTimeReceived	Body.TextBody
Elizabeth Mahan	1/4/2023 6:22	I have waited and saved to purchase the Tesla Model Y so that I could take advantage of the Biden Administration support for EVs. Then they left it off the qualifying vehicles due to vehicle weight or some nonsense. That vehicle is the best for overall range, use in rural areas, transport of large families and cargo, and the larger charging network when on the road. The price is expensive but in the range of many other EVs with fewer features and shorter range. It is a full EV, not hybrid. One can only deduce that the Biden Administration is punishing Tesla for political reasons. It is totally unreasonable, unfair and unacceptable for this or any Tesla to be excluded from the rebates. A company in the USA at the forefront of renewable energy should be supported, not blackballed. Please reconsider and include the Tesla Model Y on the list for the $7500 rebate. Elizabeth Mahan 155 Lessner Road Damariscotta, Maine 04543
Ryan Spanjer	1/4/2023 6:22	The current state of this, is simply put unacceptable, was it's purpose not too support the EV transition, why is the bill not assisting with FULL EV cars in favor of hybrids with nearly no EV range? Not only this, but the definition of SUV seems to incentivise heavier, and less efficient vehicles as a whole. Things need to be more clear for consumers and actually target the goal "OMB Control No. 1545-2137" in the first place, please prioritize full EVs vs support hybrids with nearly zero EV range (e.g 330 Miles of range vs a hybrid with only 15 - 30 Miles <- truly absurd) Respectfully, Ryan Spanjer
chris holmes	1/4/2023 6:24	Hello good people. 1) The spirit of the IRA seems to be to incentivize the purchase of American made battery electric vehicles as we reduce our dependency on foreign oil. 2) There are a number of foreign owned companies who make gas burning hybrids that receive the full credit. 3) All Tesla's Model Ys are clearly an SUV according to the EPA. It's also their top selling vehicle as consumer preference has shifted from sedans to SUVs. Please consider including all versions of Tesla Model Ys, the most American made/owned vehicle according to Cars.com (2021 Cars.com American-Made Index: Which Cars Are the Most American? | News | Cars.com<https://www.cars.com/articles/2021-cars-com-american-made-index-which-cars-are-the-most-american-437020/>), as SUVs such that they can receive the full credit. Thank you for your consideration in this matter. Chris Holmes <https://www.cars.com/articles/2021-cars-com-american-made-index-which-cars-are-the-most-american-437020/> 2021 Cars.com American-Made Index: Which Cars Are the Most American? | N... June 23, 2021 - With results directly comparable to those of the 2020 American-Made Index, the 2021 study ranks ...
Petr Šíma	1/4/2023 6:24	In electric cars, lighter means better. Not including Model Y 5-seater on basis of being too light for an SUV is probably the result of corruption somewhere in your organization. Please do the right thing and fix this. Regards, Petr
Vince Garbarino	1/4/2023 6:29	The IRS should implement the law as written, not pick winners and losers. The SUV category should be based on cabin height and volume. Penalizing vehicles for lower weight or efficiency does not make sense. -- Vince Garbarino
enquiries	1/4/2023 6:30	Please adjust the bill to include all Tesla model Y vehicles to qualify as SUV and the 80k subsidy level.
Antony Brooke	1/4/2023 6:30	pure electric model Y SUV with a range in excess of 300 miles does not is an absolute joke. Interesting to note that the best selling EV in the State's by far has been excluded. I wonder why???
Christian & Elvira Berry	1/4/2023 6:31	The recent EV tax credit does not include all Tesla model Ys for rules that are antiquated and do not meet leading industry standards. The rules are having the reverse effect and not promoting consumers to buy electric vehicles in order to help the environment. Instead, the current rules are incentivizing hybrid, gas cars instead of a purely electrical vehicle. Please take action to correct this oversight. One simple way is to categorize the model Y as an SUV in accordance with the Environmental Protection Agency. V/r, Chris Berry

Raj Shanmugam	1/4/2023 6:36	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future.
FREDERICK BRONIAK	1/4/2023 6:37	Dear Sir or Madam, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentives include plug-in hybrids, such as the 22 mpge Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. If the purpose of the inflation in reduction act is to promote clean energy, then plug in hybrid shouldn't be incentivized at all. Please reconsider the classification of the five seat Tesla model Y as an SUV, so that it can qualify for the tax incentive. Sincerely, Frederick Broniak Sent from my iPhone
mendy cole	1/4/2023 6:40	Dear all, I am no Elon or Tesla fan but I am a believer in climate change and I do agree that we need to incentivize the transition to a greener economy. I don't understand how some vehicle models that are totally not climate efficient get the EV tax credit and say a model Y which is totally green efficient does not. This is incentivizing the wrong products and goes against everything that I thought you believed in. This seems to be very political and that is not okay because climate change is serious and should move beyond this. Whatever definitions you need create, it should make sure that true EVs get the tax credit. We the people expect this to be changed ASAP. We look forward to hearing better news. Best regards,
Brandon Foss	1/4/2023 6:42	Tax payer funded IRS, Hybrids that have 20 mpg and 19 mile EV Range shouldn't be included in the EV Tax Credit. Especially if your rules exclude the Model Y 5 seat. The most American made car.
Michele Cortese	1/4/2023 6:45	included slows this process down, rather than speeds it up. Hybrid vehicles should not be included. As for the classification of vehicles as SUV or otherwise, I suggest using the EPA classifications for continuity. Anything otherwise may be seen as over reach and politicized. Regards, Michele Cortese
Roger Todd	1/4/2023 6:46	Publish criteria for what puts a vehicle in the sedan category vs the SUV category, PERHAPS, some weighted points system based on vehicle specifications with a minimum total for being an SUV. EXAMPLE: 3 points for having all wheel drive 3 points for having hatch (not trunk) 2 points for having an off-road traction mode 1 point for ability to purchase with tow hitch 1 point for every 10 mm of chassis ground clearance over 140mm 1 point for every 1000 Liters of 2-passenger cargo capacity Minimum Total defining an SUV = 10.0 Tesla Model 3 LR-AWD gets 3 + 0 + 0 + 0 + 0 + 1.235 = 4.235 -> Sedan Tesla Model Y LR-AWD gets 3 + 3 + 2 + 1 + 3.2 + 2.158 = 14.358 -> SUV The determination is objective and anyone can do it. Thanks, Roger Todd On Jan 3, 2023, at 7:56 PM, Roger Todd <RogerWilsonTodd@gmail.com> wrote: Andres Garcia, Here are my suggestions for improving the IRS document, "Manufacturers and Models for New Qualified Clean Vehicles Purchased in 2023 or After": THREE SUGGESTIONS:

Anthony G. Steiner	1/4/2023 6:46	I am writing this to urge you to reconsider your tax incentives for EV vehicles. Your current decisions regarding vehicles that are eligible seems not to help guide citizens towards a clean future. I believe the reason the incentives were passed is to make America a leader in the fight towards clean/renewable energy. If that is the case then why would the list include hybrids, and disqualify the worlds leading (by far), most popular, fully electric SUV; the Tesla Model Y 5 seat variant? You have it as a sedan only eligible up to $50,000 which prices it out of the incentive. It would seem as this is politically motivated rather than driven by the intent of the incentive as there is no difference between the Model Y 5 seat and 7 seat variant other than 2 additional seats. Seat count does not make a vehicle a SUV over a sedan. Every other organization that maters in the auto industry classifies every variant of the Model Y as an SUV. By the IRS not classifying every variant of the Model Y as a SUV shines a spotlight on the government as a corrupt, politically motivated organization. We can all see that this is an attempt to appease the UAW union by disqualifying the most popular EV in hopes to move potential incentive seekers away from a nonunion company to a unionized company. To best serve the purpose behind the incentive I strongly urge the IRS to reconsider and include every variant of the Model Y as an SUV, eligible up to the full $80,000. The World Is Watching! -Anthony G Steiner
Melvin 0525	1/4/2023 6:48	Excluding Tesla model y from ev tax credit feels like a bad descision. If the point of ev tax credit is for betterment of environment we should give it to all EVs. Also why giving tax credit for hybrids,this is bad for environment.
Doug Folkerth	1/4/2023 6:49	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Paul Douglas Folkerth Gainesville FL
Michael Kaufman	1/4/2023 6:50	Your ruling on the Tesla Model Y SUV not being an SUV is misguided. The tesla Model Y 5 seater should be included in the SUV EV credit. Including hybrids with 21 miles of electric range is also misguided. Mike Kaufman _____ This message and attachments, if any, may contain confidential information. Ryan Schulz	1/4/2023 6:54	To whom it may concern, I am writing to express my concern about the new policy that was implemented regarding electric vehicle tax credits. The way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. The tax credits are designed to encourage the purchase of electric vehicles and should be extended to eligible vehicles consistently and fairly. As an example, the new policy means Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit whilst a Willys Jeep with 20MPG and an electric range of 21 miles, qualifies for the credit - which is clearly not right. I urge you to take action to change this policy and make sure reasonable judgement is applied and appropriate cars are included and that cars that do not meet the requirements are excluded. As a suggestion, please see below Suggestion for Amendments * Remove incentives for all hybrid vehicles and only have them apply to pure EVs. * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to correctly incentivise automakers and the public with the original intent of the bill. The former point can be considered amongst others and potential incentives also offered to hybrids, but the latter for fair rules on SUVs is paramount to ensuring reasonable and fair policy.
Ryan Coleman	1/4/2023 6:54	I have been working in the auto industry for 20 years in Fort Wayne Indiana. I am surrounded by most in my area that hate the idea of EVs. I myself see EVs as progress. I am very in happy the stance the current administration has had against Tesla. They have single handed moved this industry. Our current administration is so beholden to the unions it’s laughable. Under the current guidance we have a jeep that gets $7500 tax credit that only gets 23mpg after the battery is depleted vs a model Y that gets 122 MPG. You have a lot of auto makers very upset upset by these unfair practices. Sent from my iPhone
Chris Hastings	1/4/2023 6:55	To whom it may concern, I am writing to express my concern over the new ev tax credit. If you are going to offer a tax credit to plug in hybrids that have very limited range, you should also offer them for ALL evs, including the Tesla model y and the mustang Mach e. Sincerely Christopher Hastings
Tony C	1/4/2023 6:56	I find your classification of the Tesla Model Y Long Range - 5 seat variant and the Ford Mustang Mach-E classified with the $55,000 limit while the Jeep Grand Cherokee 4xe (a hybrid that get 22mpg) is classified with $80,000. Both the Tesla Model Y and the Ford Mustang Mach-E are classified as an SUV by the EPA. I think this goes against the spirit of the legislation. Where a gas guzzler Jeep will get the $7,500 rebate but the pure electric vehicle Tesla Model Y and the Ford Mustang Mach-e won't. I ask that the IRS reconsider and include the Tesla Model Y 5 seater and the Ford Mustang mach-e as SUVs with an $80,000 limit. Best Regards Tony Carvalho
Salar Yazdjerdi	1/4/2023 6:57	It's simple, the bill needs to incentivize the most efficient forms of transportation in the future, so we can move towards it faster. But actually this bill is handing out OUR money to hybrid vehicles where the technology is not the most efficient since it has 2 different engines and uses gas. And it excludes model Y which is the most efficient SUV out there. The price caps distorts the free market into molding the products to fit the cap. The administration is failing miserably again in fairness and sanity. Get the lobbyists out of the room and make the laws that save nature, the free
Daniel Silion	1/4/2023 6:58	Dear IRS, We are writing to express our concern regarding the Federal Tax Credit for Pure Electric and Hybrid Electric Vehicles. As it stands, the current interpretation of these credits is causing issues for both the public and automakers. One example of this is the Tesla Model Y, which is classified as an SUV by the EPA but not by the IRS, meaning it is not eligible for the $7,500 tax credit. On the other hand, the Jeep Grand Cherokee 4xe, which is a gas-powered vehicle with a very low electric range, is receiving the credit. We believe the best solution to this problem would be to remove incentives for hybrid vehicles and only offer them to pure EVs. Alternatively, the SUV/non-SUV rules should be applied consistently across all vehicles in order to incentivize automakers and the public in line with the original intent of the bill. We implore the IRS and government officials to correct this categorization error and demonstrate to the American taxpayer that these decisions are not negligent or corrupt. Sincerely,

Name	DateTimeReceived	Body.TextBody
John Newland	1/4/2023 7:00	electric-only vehicles like the Tesla Model Y and Ford Mach-E, that are made in the US - do not. If there ever was an example of government malpractice this is it. Do the right thing and include these vehicles. Thank you, John Newland JOMA Construction 706-340-5296
Andre Fisher	1/4/2023 7:03	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Best regards, Andre Fisher
Tony Rosann C	1/4/2023 7:05	4xe 22mpg) is classified at $80,000. The Jeep only gets 22mpg and somehow gets this EV rebate at a MSRP of $80,000, while pure EVs are capped at $55,000. Something is wrong with the classification. I don't believe this was the intent of the law. Please include the Tesla Model Y 5 seater and the Ford Mustang mach-e in the $80,000 limit. Best, Rosann Carvalho
Jeffrey Johnson	1/4/2023 7:06	I believe this definition of incentives is poorly designed. It’s too complex and incentivizes consumer and producer behavior that is the Opposite of what the intention of the law is (accelerate the shift to EV domestic production and purchase). Crazy things that should be changed in the recommended incentives: - Hybrids being included for incentives. Makes no sense. Studies show that most people DO NOT CHARGE their hybrids and just use the gas engine most of the time. This is special interest idiocy that is against the intention of the law. - It’s crazy that a Jeep Hybrid is included for incentive at $80K and the Tesla Model Y (Pure EV - what we want at an affordable price) is not included. - Only incentivizing the Tesla Model Y if it is a 7 seat model (heavier, less efficient). It is clearly an SUV when you compare criteria on size and other vehicles that have been included without 7 seats…… - The incentive model should be: - Only pure EVs included - Inclusion should be on a scale where incentive decreases as price goes up between 50K to 80K. Please simplify the incentives and make them focused on the intention of the law - drive accelerated production and adoption of domestically produced pure EV vehicles…… Thanks Jeff Johnson Brookeville, Md. 20833
BROOKS PAYNE	1/4/2023 7:07	I am writing to ask that the Tesla Model Y 5-seat version be included in the $7,500 tax credit under the rules of the Inflation Reduction Act. The law is intended to promote the adoption of clean energy vehicles by making them more affordable for consumers and incentivizing their purchase. We must support the adoption of clean energy vehicles in order to create a more sustainable future, and we promote our domestic economy by buying American-made products. I live in Boston, MA, where we are working diligently to be at the forefront of the GREEN Revolution. Recently, we were the host city for The Earthshot Prize which uncovers and scales the innovative solutions that will repair our planet within the next ten years. Thank you kindly for your attention. Brooks Payne
Felicia Manhart	1/4/2023 7:08	Trying to do the right thing to save the planet! Bought a moderately priced Tesla Model Y ….when a family member is over six feet tall, buying a tiny EV is a waste of time and money. We are Screwed every which way. No EV credit even tho almost 300 mile range. Clean, clean emissions. The present administration is blowing smoke up our A$$ and we are losing big time. What is the reasoning here 😉?

Name	DateTimeReceived	Body.TextBody
Brent Presley	1/4/2023 7:14	I am writing you to request that you consider your recent release of the list of automobiles that are eligible for the United States $7500 Inflation Reduction Act credit. The list released, while I understand follows the guidelines specified that were historically set in 2009 to delineate an SUV vs. non-SUV, go against the spirit of this law and how it was structured. It does not seem reasonable that a hybrid Jeep Wrangler with a small battery pack, which will still consume fuel at < 30 mpg, is eligible for the tax credit, but efficiently-designed battery-only EVs like the Ford Mach-E and Tesla Model Y (5 seat variant) were excluded from eligibility because they lack either a 3rd row or do not weigh enough (i.e. a weight penalty for designing their cars efficiently). This kind of decision, while I don't believe was intentional, does little to push forward our society in the direction envisioned by the IRA. I request that you re-evaluate this decision with a focus on authorizing additional BEVs that sit on the cusp of meeting the traditional SUV criteria. Thank you for your consideration, Brent Presley, M.D., Ph.D.
Malte Ohlsson	1/4/2023 7:14	It is really bad that terrible cars for the climate like a Jeep Wrangler get the bonus, but not a 5-door Tesla model Y. And that the 7-door Tesla model Y gets it, but not the 5-door.
Cui Jinfeng	1/4/2023 7:15	Hi, Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you.
Balot Herve	1/4/2023 7:15	It is ABSURD to see that the Tesla Model Y 5 seats is NOT considered as a SUV, and is eligible to 0.0 usd as it costs more than 55.000 usd. Tesla Model Y 5 seats Should be considered a SUV with a 80.000 usd max price. Thank you to correct this Typo error Hervé Balot
Ryan Quirk	1/4/2023 7:16	The spirit of the tax credit is to incentivize EV adoption. Excluding the Model Y decreases EV adoption.
Thomas H	1/4/2023 7:17	of government bailout and entities that exert undue influence through their lobbying. The logic for what vehicles qualify should be obvious to anyone and what has been released does not pass the smell test to those who are paying attention. Rules should be based on efficiency and applied consistently rather than forcing mfs to game the system (add weight just to qualify?) Fix the Tesla Model Y qualification issue among all the others.
Srdjan Blum	1/4/2023 7:17	Dear IRS - I am writing to you today in regards to the recent IRA tax incentive clarification that was provided for the EV credit qualifications. I am not sure why the Tesla Model Y five seat version of the SUV was not included as part of the $80,000 exemption - it seems like a technicality that really needs to be fixed. This is the electric vehicle that I want to buy and it does not make sense that it does not qualify for the credit - isn't the whole purpose of this act to encourage me to buy an electric vehicle? I urge you to please consider fixing this issue so that Tesla Model Y 5 seat version qualifies under the 80,000 MSRP exemption. Thank you in advance,
Andrew Ziebarth	1/4/2023 7:18	To whom this may concern, I am a 33 year old American and this is the first time I have ever taken time to engage on any sort of public policy issue. I am disappointed, frustrated, and frankly confused regarding the new tax incentive allegedly for electric vehicles. Firstly, I believe it is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Tesla is spearheading the electric vehicle revolution and building out the domestic supply chain for this critical new technology. We should be supporting and encouraging this innovation, not propping up legacy technology that needs to shift towards the future rather. Sincerely, Andrew Ziebarth
test new windows new ssd	1/4/2023 7:18	We are going to buy the Tesla Model Y soon. I think Tesla Model Y with 5 seaters should be included. It was wrong that the 7-seater model is SUV but 5-seater not. It was silly wrong at the beginning and it needs to be correct. Thanks Clark Fan
Juilene Lauricha	1/4/2023 7:19	Dear IRS, I am writing to you in regards to the EV tax credit. I believe that any vehicle that is a fully electric vehicle should qualify for the tax credit. Especially the model Y which was already classified as an SUV by the environmental protection agency. Personally, it seems odd that every fully electric vehicle regardless of price or seat count doesn't qualify for the EV tax credit. It seems even odder to give the tax credit to hybrid vehicles that have only very limited electric range. Thank you for taking my concerns into consideration.

Name	DateTimeReceived	Body.TextBody
Wu Huang	1/4/2023 7:19	Hello IRS: My name is Wu Huang. I am writing you that we are very concern of the EV tax credits that posted for 2023. Some hybirds that has gas engine and gov't are giving them 7500. They can easily put a very small battery and does not help improve the env at all. Where some cars totally pure EV, like the Tesla Model Y, pure 330 miles SUV that did not has tax credit. Don't make it so complicate of those tax credit. I hope IRS can remove all GAS (include hybirds) off the tax credit and give ALL pure EV the tax credits. Adding incoming limit also impact those people reject the EV, WHY. The goal is to create GREEN environment as fast as we can. So don't stopping people buying EV no matter what their income limitation. Please consider it! Thanks, Wu
Chance Parker	1/4/2023 7:20	Tesla has always referred to the Model Y as an SUV. The EPA classifies the Model Y as an SUV. The IRS does not classify the Model Y as an SUV! This sure looks like a purely political decision! Reverse this decision. Chance Parker Maynard MA
Andrew	1/4/2023 7:20	Tesla model Y 5 seater should be eligible for credits and it’s alarming it was not from the beginning. Please do the right thing.
Joel Ronish	1/4/2023 7:21	The Tesla model Y being exempt from the $7,500 EV tax credit is unacceptable. The Tesla model Y is the most American made vehicle acording to the most recent annual study by Cars.com. Other vehicles that are included require burning gas are, Audi Q5, Ford Escape, BMW X5, Jeep wrangler and Grand Cherokee. Many of these electric range's don't reach the average daily commute in america. This makes no sense why these are included but the Model Y, a pure EV that is most American made isn't. Please correct this. Thank you Joel Ronish PA resident
Bennington, David I.	1/4/2023 7:22	Hello, I wanted to provide some comments on the qualifications for the electric vehicles (EVs). I first wanna start off by saying that I do not think this should qualify for any vehicle (Car, SUV, or Truck) over $60,000 if you were able to afford a vehicle that expensive than you do not need a tax credit. Instead, people like my parents who are middle income can't afford an SUV electric vehicle they should get may be a $15,000 tax refund for buying an electric vehicle. The qualifications to qualify I think should be only vehicles made in the United States. I think additionally, it should be vehicles using more than 50% of the components are manufactured in the United States. lastly, I think one qualification should be that a company cannot increase the price by more than a specific amount, determined by your department and economists, because if you look at last year, when the tax credit went through companies, like Ford increase the price of their vehicle by the same amount, almost as the tax credit in, blamed it on inflation. So it needs to be written in the law that once passed a company cannot raise the price more than 3%. Let's say for the average cost of inflation or regardless if it's made in the United States, it doesn't qualify. I think currently the qualifications are too complex people like myself, who have a professional degree are leery to buy an electric vehicle because we're not for sure if there's a tax incentive or not. I think it should be simplified a little bit, and there should be a pathway for foreign car
Ruke Keragala	1/4/2023 7:24	Dear IRS, I'm frustrated that the Tesla Model Y (5 seat version) is not classified as a SUV and therefore not eligible for the $80k limit. I'm shocked that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests at play. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate credits for foreign-made EVs on lease. It's important to support the adoption of clean energy vehicles and American-made products. Sincerely, Ruke Keragala
성재훈	1/4/2023 7:24	2023. As a Tesla customer, I was eagerly anticipating the opportunity to take advantage of this credit when purchasing my Model Y I understand that the tax credit is subject to change, and that it is not uncommon for certain models to be excluded from time to time. However, I feel that the Model Y 5-seat model is an important and popular option for Tesla customers, and I am disappointed that it will no longer be eligible for this credit. I hope that you will reconsider this decision and include the Model Y 5-seat model in the IRA tax credit as soon as possible. Sincerely, Jaehun Seong [https://mail.naver.com/readReceipt/notify/?img=hqRNWX%2Bv1N3ChARPDNF5KAb%2FMri4KxISFAKwMxU9axblMov%2Fax2XMxKwKoUdtzFXp6UmKxE5W4d5W4pZMLlGWq%2FsbHiC74FTW690WN3qtz0ZbZlNWXM%3D.gif]
Josh Davis	1/4/2023 7:25	Snubbing the Model Y 5 seat configuration from the $80,000 cap is wrong and in bad faith. This vehicle is larger than other vehicles that were given the $80,000 cap. It also has over 10x’s the range of plug in hybrids that were given the $80,000 cap. Do what’s right and fix this by either lowering the others to the $55,000 cap, or raising the model Y 5 seat to the $80,000 cap. Josh Davis
Steven Piazza	1/4/2023 7:27	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. Steven Piazza

Name	DateTimeReceived	Body.TextBody
Hubbs, Richard	1/4/2023 7:29	The Tesla model Y is an obvious SUV and should be classified as such. Giving a Jeep wrangler a tax credit over the model Y variant is rediculous. Richard Hubbs Centerpointenergy.com 812-457-5934
eric wu	1/4/2023 7:30	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. 发自我的 iPhone
Jonathan Slaughter	1/4/2023 7:31	Hello Andrea, I'm writing to inform you that that the weight limits applied to SUVs in order qualify them for the tax rebate is ridiculous. Why would you put a minimum weight limit to qualify a vehicle as an SUV? You are attempting to punish efficient manufacturing practices and reward poor engineering. You'll be incentivizing low quality manufacturing by design which is good for America period. Regards, Jonathan
eric wu	1/4/2023 7:31	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. 发自我的 iPhone
Michael Sabin	1/4/2023 7:31	To whom it may concern, It is very disappointing to see that many SUVs from top American motor manufacturers are being classified as sedans, instead of SUVs. This includes the Ford Mustang Mach-E, Cadillac Lyriq, and Tesla Model Y (5 seat). All three models will be very important in the adoption of EVs in the United States. What is the most baffling about the classifications is that a 7-seat Tesla Model Y will qualify for the 80,000 price cap, but the 5 seat will not. Both cars are identical, except for the fact it has two extra foldable seats. I hope the IRS will reconsider the classification of these vehicles. Thank you, Michael Sabin
Melissa Wood	1/4/2023 7:33	Please reconsider and allow the Tesla Mosel Y to be counted as an SUV and to qualify for the $7500 tax credit. Thank you. Melissa Wood Sent from my iPhone
Noah Beetz	1/4/2023 7:35	Dear Sir or Madam, Thank you so much for letting us have a voice regarding the EV tax credit scheme. I find it rather confusing why only the 7-seat variants of the Tesla Model Y get the rebate to an MSRP of $80,000 USD, while the 5-seat variants don't, or to be exact: only to an MSRP of $55,000 USD. Both of these variants are the exact same in size and are classified as "Small Sport Utility Vehicles" (SUV). Therefore it only makes sense to increase the rebate threshold of the 5-seat variant to $80,000 USD as well. I'm looking forward to seeing the correct and logical changes being made. Sincerely, Noah Beetz
MICHAEL SMITH	1/4/2023 7:35	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). How does the IRS override National Highway Traffic Safety Administration definition of a SUV. If you look at your current definition it appears that you are deliberately targeting Tesla's number one selling vehicle from the EV competition. Also how does a hybrid equipped with a substandard battery and poor range qualify for the EV credit, I'm more than confident that this is a mere oversight on your agency's part. I look forward to your response. Thank you, Michael Smith a United States Taxpayer.
Bill Nugent	1/4/2023 7:37	The rules for the EV incentive created by the Inflation Reduction Act are broken. Why are plug-in hybrid internal combustion vehicles getting an incentive when real-world usage data shows well under 50% of plug-in hybrids are routinely plugged in to be charged? Source: https://theicct.org/publication/real-world-usage-of-plug-in-hybrid-electric-vehicles-fuel-consumption-electric-driving-and-co2-emissions/ Why is the incentive not being given to the Ford Mach-E and Tesla Model Y (5 seat/2 row)? Why does the Jeep Wrangler 4 door 4xe with 21 miles of pure EV range qualify when it has an EPA range combined city/highway MPG of 20 and MPGe of 49? Lastly, it seems strange these rules do not honor the EPA's vehicle class definition of SUV for the incentive. Please fix this. Please save the planet. Thank you, Bill Nugent

Name	DateTimeReceived	Body.TextBody
Aaron	1/4/2023 7:38	Dear Mr. Garcia, the IRA EV incentive of $7,500 is generally welcomed, however, the constraints encode incentives that are contrary to common sense and contrary to the goal of the IRA. For example hybrid cars get the high price limit of $80,000 due to them having two engines/motors plus a battery (that is often miniature), in effect making them very inefficient but that is incentivized over a very efficient BEV that receives a lower limit of $55,000. Ideally it should be the exact opposite, we should incentivize efficiency but the IRA is punishing efficiency. Please also take note of the incentives set by giving some variants that only differ in internal equipment. For example in the case of the Tesla Model Y. The IRA incentivizes to artificially make the vehicle more heavy to get the $80,000 limit instead of the $55,000 limit or to add easily removable seats because the variant that has an internal equipment with 2 more seats is eligible to the higher limit. To make this point very apparent, compare the following: 1. Audi Q5 Quattro: hybrid, 5 seats, 61 MPGe, EV-range: 23 mi, 4,068 lbs, $57,400 Eligible for $7,500 IRA Credit 2. BMW x5 x-drive 45E: hydrid, 5 seats, 50 MPGe, EV-range: 31 mi, 5,646 lbs, $65,525 Eligible for $7,500 IRA Credit 3. Ford Escape plug-in hybrid: hybrid, 5 seats, 40MPGe, EV-range: 37 mi, 3,870 lbs, $38,500 Eligible for $7,500 IRA Credit 4. Jeep grand cherokee 4xe: hydrid, 5 seats, 23 MPGe, EV-range: 25 mi, 5,356 lbs, $60,360 Eligible for $7,500 IRA Credit
Trevor B.	1/4/2023 7:39	Dear Mr. Garcia, Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Ideal fix: * Remove incentives for all hybrid vehicles and only have them apply to pure EVs. * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Next best fix: * Apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. To the IRS and Government officials - please use this chance to prove to the American taxpayer that these categorizations are done in error. Otherwise, it will be yet another reason for the American tax payer to doubt your true intentions. Thank you for your consideration in making these changes to this tax credit.
Erik Schelbert	1/4/2023 7:39	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you, Erik Schelbert, MD, MS
Olof	1/4/2023 7:43	I am writing to express my distrust and frustration regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding one of the most American made and most energy efficient and popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting they use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Olof Henry Tenghoff
Mircea Codreanu	1/4/2023 7:44	Please include the TESLA MODEL Y to the list of electric vehicles that qualify for the 7500 $ tax credit Politics don't belong here. However I will make an effort to support candidates that make the decision to help this matter Thanks Sent from Yahoo Mail for iPad<https://overview.mail.yahoo.com/?.src=iOS>
Colby Carpenter	1/4/2023 7:44	Hi, Please reconsider the requirements for a Tesla Model Y and a Ford Mach-E to be considered for the $7500 tax rebate. I believe your criteria is too stringent or needs to be reevaluated for pure play EVs. These two cars should not need to weigh heavier to be qualified as a SUV to get labeled at $80,000 MSRP to qualify for a full $7500 rebate Thanks, Colby
Josh Kelman	1/4/2023 7:45	I have read the new guidelines for applying incentives to electric cars. Not including the 5 seat Tesla Model Y as an SUV does not make sense (7 seater is the exact same car with 2 small seats added). I see a smaller VW is classed as an SUV. I suggest you use the EPA criteria. Respectfully, Josh Kelman

Richard Lentz	1/4/2023 7:46	To whom it may concern, I am writing to focus attention to the unfair tax credit max MSRP availability for the Tesla Model Y Long Range 5 seat. Currently the IRS has not identified the Model Y 5 seat capacity as qualified for the max 80k. There are however two PHEVs in the same category that do qualify for the max 80k with a 5 seat capacity and less utility . I believe our focus for these incentives should be our environment and clean air. Either we disqualify the Ford Escape and Jeep from the 80k max and set to 55k or we increase the max to 80k for the Model Y Long Range 5 seat. Below is a brief comparison between the vehicles with key features that define a typical SUV and true contributor to the spirit of Clean Vehicles. Data sourced from manufacture web sites and fuleeconomy.gov Nothing by the data below shows the Model Y is a comparable utility vehicle that focuses on the goal of helping our environment. Key advantages in green. Ford Escape Tesla Model Y Jeep 4xe Drive Type Front Wheel All Wheel Four Wheel Max Cargo 60.8 76.2 67.4 Towing 1500 lbs 3500 lbs 3500 lbs Seating 5 5 5 EPA Electric 37 miles 330 miles 21 miles MPGe 105 122 49
Keith Dorschner	1/4/2023 7:47	Tesla Model Y is the most popular electric SUV in the world and the five seat version is definitely an SUV. Even the EPA says so. You must correct your blunder immediately. Also, no car that burns gas should get any Federal support meant for electric cars. The incentive should be for pure electric cars only.
Oleary oleary	1/4/2023 7:48	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Sean You are appreciated
flora wu	1/4/2023 7:50	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you Sent from my iPhone
flora wu	1/4/2023 7:53	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Sent from my iPhone
John Kim	1/4/2023 7:53	RE: IRA 1. The Fossil Fuel Industry is already over-subsidized. Funding PHEV (Hybrids) is further subsidizing fossil fuels, not EVs. PHEVs HYBRIDS ARE FOSSIL FUEL CARS AND SHOULD NOT BE SUBSIDIZED AS EVs. 1. The TESLA MODEL Y 5-SEATER IS CLASSIFIED AN SUV BY EPA. The TESLA MODEL Y 5-SEATER IS CLASSIFIED AN SUV BY TESLA. The TESLA MODEL Y 5-SEATER IS CLASSIFIED AN SUV BY CONUSMERS. The TESLA MODEL Y 5-SEATER IS CLASSIFIED AN SUV BY EVERYONE. CATEGORIZE THE TESLA MODEL Y 5-SEATER AS AN SUV.

Name	DateTimeReceived	Body.TextBody
Stephen Nichols	1/4/2023 7:54	Dear Sirs, The intent of the IRA bill was to promote the adoption of American made EVs in the USA. The current IRS guidance thwarts this by not clasisifing the Tesla Model Y 5 seat version and the Ford Mach E as SUVs. The Tesla Model Y is the most American made car there is. To apparently penalize this 5 seat version because it is not heavy (and thus less efficient) makes absolutely no sense when trying to address climate change. Please change your criteria to match the intent of the bill. Thank you. Sincerely
Rich Belz	1/4/2023 7:55	Dear IRS, I am writing to express my frustration with the new tax incentive for electric vehicles. While I understand the intention behind the incentive is to promote the adoption of EVs, I believe the way it is structured is fundamentally flawed. The incentive uses weight as the primary determinant for price caps, which unfairly promotes poor engineering. In the automotive industry, one of the primary drivers of efficiency is reducing weight. Therefore, this incentive is actually rewarding companies that are not doing enough to optimize the weight of their vehicles. Furthermore, this weight-based approach has led to complicated low mpg plug-in hybrids being incentivized over the world's best-selling EVs, the Ford Mach-e and the made-in-America Tesla Model Y. This seems counterintuitive, as the Model Y has proven itself to be a highly efficient and popular choice among consumers. I am deeply frustrated by this approach and believe that it is not in the best interests of the industry or the environment. I urge the IRS to reconsider this policy and come up with a more effective way of promoting the adoption of EVs. Sincerely, Richard Belz -- Rich Belz rb@rbelz.com<mailto:rb@rbelz.com>
Chris Barberich	1/4/2023 7:55	Hello IRS, I am disappointed and surprised to learn that the 5 seat version of the Tesla Model Y is not considered an SUV by the IRS. The EPA considers it an SUV so it is odd that the IRS has a different classification. I own a 2020 5 seat Model Y and it is very spacious and works great for long road trips with my family of 4. It is the best SUV or car I have ever owned and it would be a shame if people lost out on the $7500 tax break because the IRS incorrectly denies that it is an SUV. Thank you for hearing my comments. Chris Barberich Encinitas CA
Punna Rao Chandra	1/4/2023 7:56	Please include Tesla Model Y all variants including 5 seater for tax credit. Thanks Punna Sent from my iPhone
David Tao	1/4/2023 7:56	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting they use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, David Tao
Tim Buzby	1/4/2023 7:57	We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater and the Ford Mach-E SUV in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. These highly popular SUVs are currently disqualified based on old-style measures for SUVs (weight, ground clearance, # of seats, etc), which are contrary to the efficiency of the vehicle and against the interest of encouraging the wide-scale adoption of EVs. A better metric, in my opinion, would be cargo space for the classification of sedan vs. SUVs ($55K vs. $80K limit), which is a more practical metric used when a customer chooses to purchase an SUV. Your consideration of this matter is highly appreciated. Yours sincerely, Tim Buzby

Name	DateTimeReceived	Body.TextBody
Will Cruz	1/4/2023 7:58	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. V/R, Will Cruz
Raghavendra Bobby	1/4/2023 7:58	I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Regards, Raghavendra.
Diana M. Tierney	1/4/2023 8:00	Thank you for this opportunity. I do not like that some Model Y Teslas and Ford Mustangs-Mach E will not get the tax credit while gas powered vehicles do. By having some all electric vehicles not get the credit, it is in conflict with the country's goal of supporting electric vehicles in order to reduce CO2 in the atmosphere. It is counter-intuitive and sends a mixed message about how serious this country really is on saving the planet from CO2. Diana Tierney 10 Pinewood Road Montpelier, VT 05602 Sent from my iPhone
Luka Savic	1/4/2023 8:00	I'd like to add a comment about new electric vehicle tax credit. It makes no sense that model y 7 seater is capped at $80000 and 5 seater at $55000 for a $7500 tax credit. it's a same vehicle classified as SUV, same thing with mustang Mach-e. Also you have Ford escape PHEB capped at $80000 for full $7500 credit with almost no battery in it. It makes no sense. Please change this so all classified SUV get $7500 at $80000. Thank you -- Luka Savic, 3015005478
James C. Smith	1/4/2023 8:01	SUV electric vehicles should get the credit including the Tesla model Y and the Ford Mustang Mach-E. It is a travesty to let the credit go to hybrids and not go to these full EVs. It is silly to make tesla buyers pay for extra seats to quality for the credit. The government should be incentivizing buying an electric car, not incentivizing buying 7 seats. James C. Smith

Name	DateTimeReceived	Body.TextBody
Sathya S	1/4/2023 8:02	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of the inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, -- Sathya Sayee S Keep smiling :) Smile is a curve that sets a lots of things straight.
Christian Lührs	1/4/2023 8:03	Dear Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224 I would like to see the IRS change their criteria related to EV SUV. The Tesla Model Y 5-seater is not categorised as SUV, although the rest of the world DOES categorise it as SUV, for example the EPA. Also: Other cars with similar dimensions ARE categorised as SUV. Among them Hybrids, which get full benefit of the tax credit, although they are much less efficient than a Tesla Model Y, which is made in the USA. Please correct the categorisation of the Tesla Model Y 5-seater immediately. I am not a US citizen, but a shareholder of Tesla - a great American company, making great American cars. Because Tesla is affected by the IRA, this issue affects me, too. Respectfully, Christian Luehrs
Pranit Lahoty	1/4/2023 8:03	It makes no sense that a model y isn't included in the tax credit. When you think of EV, you think of tesla so why wouldn't you incentivize the main brand for the tax credit. The whole point of the credit is to get more EVs but you are discriminating against the main brand. it's like saying everyone should get new phones through a credit and then banning iPhones and Androids. Sent from my iPhone Makes no sense and shows how out of touch, not self aware, and not common sense based the IRS/govt is.
Jovanni Ruiz	1/4/2023 8:04	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). If weight is the reason the Model Y 5 seater is not qualifying, then it seems that metric is not the most appropriate for an EV bill since it punishes EV's for attempting to lower weight to increase range. Thank you for your time, Jovanni Ruiz

Name	DateTimeReceived	Body.TextBody
Craig Kennedy	1/4/2023 8:05	Dear Sir, Madam, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. In particular, I am referring to the Tesla Model Y 5-seater. According to the IRS it does not classify as an SUV and is therefore only eligible for the tax credit when priced under $55,000 rather than $80,000. I see no reason why the Tesla Model Y 5-seater should not be classified as an SUV. It's of the same size or even larger than many of the other 5 seater cars qualifying as SUVs, and it is classified as an SUV by the US department of Energy. If it is a matter of weight, the model Y does weigh less than many of these cars, but this should not be a factor in deciding if a car is an SUV. The lighter a car is, the more energy efficient it is, therefore Tesla should not be getting penalised for having a more energy efficient car. Furthermore, there are several 5 seater hybrid vehicles that qualify as SUVs and are eligible for the full $7,500 tax credit, while they only have an EV range of 21-37 miles, while the Tesla Model Y has a EV range of 330 miles. [image.png] Does it really make sense that a 5 seater Jeep Wrangler 4xe Hybrid with EV range of 21 miles and only has 20 Miles per Gallon efficiency gets the full $7,500 tax credit, while the Model Y doesn't? In my opinion this is not only nonsensical, but outright corruption. The whole point of the EV credit is to promote energy efficient vehicles, not penalise them. I hope you can take this into consideration and do the right thing by classifying the Tesla Model Y 5 seater as an SUV. Kind Regards, Craig
yang wang	1/4/2023 8:06	Tesla 5 seat SUV should be classified as an SUV in lieu of Sedan. Please correct the mistak.
Jovanni Ruiz	1/4/2023 8:06	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). If weight is the reason the Model Y 5 seater is not qualifying, then it seems that metric is not the most appropriate for an EV bill since it punishes EV's for attempting to lower weight to increase range. Thank you for your time, Jovanni Ruiz
Rahul Shah	1/4/2023 8:06	hello, Why isn't full electric Tesla model Y 5 seater SUV included in the tax credit? I can write more details but I am sure you have tons of emails explaining why. So making this short. Thanks Rahul Shah Sent from my iPhone
Patrick Schumm	1/4/2023 8:08	It's absolutely ridiculous that certain EVs, like the model Y, are excluded from the EV tax credit because it is not classified as an EV. Please apply SUV/Non SUV rules fairly, across the board, with consistency in order to CORRECTLY incentivize automakers and the public with the original intent of the bill. Patrick Schumm 200 Maryland Avenue Edgewater, MD 21037 Sent from my iPhone
Vraj Patel	1/4/2023 8:10	I believe the Tesla Model Y 5 seater should be included in tax credit. What qualifications keep it from being an SUV. It's the best selling car in the USA and US made Thank you,
Alpesh	1/4/2023 8:16	I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y - 5 and 7 seater. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y - both 5 and 7 seater. Sincerely, Alpesh Desai

Tom Green	1/4/2023 8:18	Please reconsider the classification of the Tesla Model Y 5-seat variant as a Sedan instead of a SUV for IRA tax credit purposes. There are many reasons for this: 1. It is considered a SUV by the EPA 2. Other vehicles with less "SUV" capability qualify for the SUV credit (e.g. VW ID4 Pro AWD) 3. It has more cargo space than many other vehicles qualifying as SUV in the IRA (e.g. VW ID4 Pro AWD) 4. It is one of the most efficient electric vehicles on the road 5. It the safest vehicle ever tested 6. It is the most American-made of ALL vehicles currently in production I read that it was not classified as a SUV since it was just under the weight of what is typically classified as a SUV. If this is true, it doesn't make sense. The determination should be based on functionality (AWD, towing capability, cargo room, etc) rather than weight. Tesla's engineers have worked incredibly hard to design and build the most efficient vehicles possible. This should be rewarded, not penalized. Below is a chart showing HYBRID vehicles qualifying for the SUV credit, while the Model Y 5 seater does not. It is impossible to look at this comparison and conclude that it is justified to exclude the Model Y when the whole point of the IRA tax credits is to incentivize electric vehicles. [https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/7030a68c-9d90-499b-a4b7-b6aa8ca7e046.jpeg] Please consider these factors and issue revised guidance that includes the Tesla Model Y 5-seat variants in the list of SUVs qualifying for the IRA tax credit with the $80,000 MSRP threshold. Thank you.
Peter Morgan	1/4/2023 8:19	Dear Sirs, I'd like to ask the question why the Tesla Model Y 5 seater is not included in the 2023 EV $7,500 tax credit? It is more of an EV and fits the spec better than majority of the cars that do qualify! You have ICE vehicles that have 30 EV miles strapped on to them qualifying, and not a model Y fully electric with over 300 mile range qualifying? Make it make sense please. Right your wrongs. Thanks, Peter Morgan
Jim	1/4/2023 8:19	Please review your list of EV vehicles that qualify for the $80000 SUV category tax credits of $7500. American made EV's that should be included as they are SUV`s models are:  Tesla model Y 5 seat SUV Ford Mustang Mach E SUV.  The Ford escape and other 5 seat SUV `s are included. Thank you for you consideration of these AMERICAN MADE SUV`s James Griffiths
sung choe	1/4/2023 8:20	Dear. Tesla Model Y 5 seater which is fully electric car and made in USA should be included and silly that it's not included unfairly. I fear USA losing electric car market to other country in future. IRS should change immediately and apologize right now to public. Hope listen to the public.!!! Sent from my iPhone
Christopher Toohey	1/4/2023 8:22	The proof is in the pudding: Any system that gives an $80K limit to smaller vehicles than the 5 seat Model Y, but not the Model Y, is wrong. This error is even more egregious when those smaller vehicles are HYBRIDS!!! The purpose of the credit is to encourage EV adoption. You should not be using it to help legacy auto makers delay that adoption, which precisely what hybrids are meant for. Chris Toohey 10385 Sandtrap Drive Spring Hill, FL 34608
Andrew Cooke	1/4/2023 8:23	I worry that the initial guidance decision made regarding the Tesla Model Y 5 seater is an example of why Americans become frustrated with bureaucratic inertia or the administrative state imperiling the success of a legislative accomplishment. Please re-evaluate the guidance. Sent from my iPad

Name	DateTimeReceived	Body.TextBody
Marco Ramonda	1/4/2023 8:23	I feel that the SUV that is classified as an SUV via EPA should be considered one with any other federal agency. When our federal agencies lack in consistency we can imagine our systems and processes our country has developed over the last century could become compromised. The agencies share the same definitions when it comes to wastewater control and or enforcement. Thank you for taking the time to read my short opinion. Sincerely, Marco Sent from my Verizon, Samsung Galaxy smartphone Get Outlook for Android<https://aka.ms/AAb9ysg>
Austin Plocher	1/4/2023 8:23	Please revise EV tax credit rules these new ones are awful and confusing, especially regarding what does and doesn’t qualify as an SUV. -concerned consumer, Austin Plocher Kingston, NY
ymei74@gmail.com	1/4/2023 8:23	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you! Sent from my iPhone
Jerry Du	1/4/2023 8:25	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Sending From my iPhone
Wesley Tadlock	1/4/2023 8:25	Andrea, I’d suggest the IRS reconsider its guidelines on what qualifies for the EV tax credit. How can a (clearly) entirely Electric SUV not qualify but a car with a gas engine and only 21 miles or electric range qualify? This will cause a lot of folks to buy ICE engine cars that would otherwise have bought an EV. Thank you!
Chase G	1/4/2023 8:26	Hello, I was really looking forward to buying an all electric vehicle this year. I had a long range Tesla model y all lined up. When I found out that it didn't qualify for the clean vehicle credit I had to cancel the order. I then started looking at the Ford Mach-e. I really liked the long range eawd version. Once again I'm not going to buy it because it doesn't qualify. I don't think the clean vehicle credit being available for cars that are putting pollutants in the air and not available for cars that are actually clean is right. Because of that I'm going to continue to drive my ICE car and not help save the world from climate change. Please change the tax credit to not have a cap on the MSRP. You're really doing the opposite with this law than it was intended for. Sincerely, Chase Gollubske
Timothy Willock	1/4/2023 8:27	I have reviewed the listings of vehicles included in the IRA tax incentives. The Tesla Model Y in all forms is considered an SUV by other government agencies and should be considered an SUV in this instance as well. Thank you for your consideration. Sincerely, Tim

Name	DateTimeReceived	Body.TextBody
Tyner, James	1/4/2023 8:30	Thank you for the opportunity to comment on this important program. There are certain aspects of this law that make sense and I fully support: * Income limits * Price limits * The format of it being a credit versus a deduction Then there are aspects that I am sure you are hearing about that do not make sense: * Any vehicle that operates with less mileage than the average gasoline car in America (the Jeep Wrangler hybrid – 20 mpg) regardless of it being a hybrid, is not achieving the intended result of promoting the adoption of cleaner vehicles. There are other examples in the program that qualify for a credit. * The methods of determining which vehicle is subject to which price limit is not clear. Is it weight? Is it size? What is it? This should be transparent so as to assist manufacturers to design/equip their offerings so as to help achieve the goal. * The tax credit applying equally to a hybrid vehicle and a pure EV does not make sense. Clearly the EV does more to achieve the goal. * The classification of some vehicles as an SUV (Ford Escape, certain VW ID.4 variants) when others are classified as "Other Vehicles" (some Tesla Model Y variants, Ford Mach E) does not make sense. Perhaps this would make sense if the second bullet above was addressed. Essentially, please just use common sense! This is an opportunity to change Americans' choices to make a real difference in our air quality! Sincerely, James Tyner Orlando, FL
William Dean	1/4/2023 8:31	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version) As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentive consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely
Andrew Metcalfe	1/4/2023 8:36	These terms exclude the Tesla Model Y in the acceptable list of EVs, but include a Jeep Wrangler that gets 23 MPG, which is not even an electric vehicle but instead a Hybrid. Given the market leading position of Tesla, the only reasonable conclusion one can draw is that this definition is the worst of political meddling. Americans deserve better.
Connie Micklavzina	1/4/2023 8:36	I think all of the Tesla models should be included in the tax break. Also it should be taken directly off the taxes even if you don't itemize deductions and tesla Model Y 5 seater should be included . A lot of older retirees would love to drive Tesla cars, but can't afford the big sticker shock. They have regular fixed income and drive shorter distances. They are good candidates for self driving vehicles. If the goal is cleaner air, then let all of us be able to do our part. Sent from my iPhone
Cameron Paulk	1/4/2023 8:37	All variants of the Tesla Model Y deserve access to the credits. The Tesla Model Y is a crossover SUV and should have the same access to the credits as the other approved crossover SUVS. -- Cameron Paulk Cameron.Paulk@gmail.com<mailto:Cameron.Paulk@gmail.com>
Travis Burgess	1/4/2023 8:37	I am writing to express my strong objection to the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure, specifically the exclusion of the US-manufactured Tesla Model Y 5 seat from the SUV category due to its vehicle weight. I am extremely disappointed to see that vehicles largely manufactured outside of the US and with much worse environmental profiles are being allowed for this credit, while the Tesla Model Y 5 seat, which is manufactured in the US and has a significantly better environmental profile, is being excluded. This seems completely arbitrary and unfair. I urge the IRS to reconsider this decision and include the Tesla Model Y 5 seat in the SUV category for the Qualified Plug-in Electric Drive Motor Vehicle Credit. As a taxpayer and a concerned citizen, I strongly believe that we should be supporting and incentivizing the production of environmentally-friendly vehicles, especially those made in the US. Sincerely, Travis Burgess

Name	DateTimeReceived	Body.TextBody
Sean Tobler	1/4/2023 8:38	Tesla Model Y 5 seater should be included and it's silly that it's not from the beginning. Sincerely Sean Tobler Mit freundlichen Grüssen Sean Tobler M +41 79 209 48 51<tel:+41792094851> PHANTASYA Head office Landstrasse 99 5430 Wettingen SWITZERLAND UID.: CHE-109.233.189
Mircea Codreanu	1/4/2023 8:39	Please include the TESLA MODEL Y to the list of electric vehicles that qualify for the 7500 $ tax credit Politics don't belong here. However I will make an effort to support candidates that make the decision to help this matter Thanks Sent from Yahoo Mail for iPad<https://overview.mail.yahoo.com/?.src=iOS>
Robbie Fennell	1/4/2023 8:40	efficiency, the Model Y is an SUV. This classification is in line with the traditional understanding of SUVs as vehicles with certain characteristics, such as weight and ride height. If the Model Y were to be reclassified as something other than an SUV, it would potentially have to make modifications, such as increasing weight or ride height, in order to meet the requirements for that classification. These changes could negatively impact the vehicle's efficiency, which is counter to the goals of the legislation being discussed. It is important to correctly classify the Model Y as an SUV, as it is already widely understood to be one.
Matthew Stein	1/4/2023 8:40	Dear Mr. Garcia, or Whom it may concern, Hello, I am writing in support of applying tax rebate to the Tesla Model Y all-wheel drive, long-range, and performance five-seat variants. These currently do not qualify for the tax rebate because their MSRP exceeds the IRS $55,000 threshold. It is a full electric vehicle and much more efficient than other vehicles that are getting the tax credit. Thank you very much for your time and consideration. Best regards, Matt Matthew Stein
sophie chen	1/4/2023 8:41	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Sent from my iPhone
Andrew Vaught	1/4/2023 8:41	The Tesla Model Y 5 seat version should qualify for the full electronic vehicle tax credit. Furthermore, any vehicle currently qualified for the credit that also uses gasoline in any way should be removed.
luisangel824@gmail.com	1/4/2023 8:43	OMB Control No. 1545-2137 To whom it may concern: Hello, Below are my comments. Comments: 1. Model Y should be added to the list of vehicles that are allowed to receive the 7500 credit. The goverment should not be picking favorites in companies. Going green is all about being efficient. The model y is one of the most efficient vehicles around and for it being disqualified over weight does not look good on our goverment. 2. Can you please make the credits instant. Having to wait until the end of the year in the midst of a potential recession is burdensome on some americans. Thank you for taking the time to review my comments. Best Regards, Luis Escobar

Name	DateTimeReceived	Body.TextBody
Nick Xu	1/4/2023 8:43	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Model Y is SUV. Thank you, Happy new year! Nick Xu Mobile: 614-226-8788 Buckeye Micro / ACD Computer 1-855-MY-IT-HELP Office in New Jersey, Chicago, Columbus and Toledo.
Joe King	1/4/2023 8:45	Andres Garcia, First, I would like to thank you for requesting comments from the public. Regarding the requirements for the plug-in/EV credit, I think it is a huge mistake to incentivise cars that are way less efficient than cars that are fully electric. It is absurd that Ford Mach-E and Tesla Model Y, which the EPA classifies as SUVs, are not classified as an SUV by the IRS and therefore misses out on the EV credit. Both of these vehicles are way more efficient than ALL other plug-in vehicles. Why should they be penalized for being more efficient because they weigh less than the minimum weight requirement for a SUV defined by the IRS, which makes no sense. The lighter the vehicle, the more efficient it is. Thank you,
Albert Cascio	1/4/2023 8:45	Please reconsider your position on the Tesla Model Y not being classified as an SUV and not receiving the tax credit. Obviously these cars are fulfilling the mission you are trying to support. Best, Albert Cascio
Tomas Hamudis	1/4/2023 8:45	I believe a fairness principle should be applied and make Tesla Model Y eligible for SUV 7,500 consumer credit despite the weight limitation. It's the most energy efficient vehicle in its class- that's the spirit of what we taxpayers should be subsidizing Tomas Hamudis M: (305) 343-8429
Chris Haley	1/4/2023 8:46	and drivetrain. Meaning all vehicles with an interior volume exceeding some predetermined threshold and have AWD or 4WD would qualify as an SUV. However, I would also add a minimum MPGe requirement or a ramp up. The more efficient, the more the credit. Anything below the predetermined minimum interior volume or without AWD or 4WD would be classified as a sedan. The same increasing efficiency scale could be used to increase the credit with the efficiency. Although this may be a slightly different scale, given that sedan are generally more efficient to begin with. Thank You, Chris Haley – Director, Real Estate Industries CHaley@YourPremierBank.com<mailto:CHaley@YourPremierBank.com> | c: 513-849-6335 Premier Bank, 9435 Waterstone Blvd. Suite 140, Cincinnati, OH 45249 [cid:image005.png@01D8863B.E6E04700] [cid:image006.jpg@01D8863B.E6E04700] CLASSIFIED AND PROPRIETARY: Notice: The information contained in this message may be privileged, classified, and protected from disclosure. Thomas Simone	1/4/2023 8:47	The Inflation Reduction Act has a stipulation where Pure Electric Vehicles and Hybrid Electric Vehicles are able to take advantage of up to $7,500 as Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. However, the way these are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even thou the EPA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. At best, this is a pretty severe lack of negligence by the IRS to properly categorize vehicles. At worst, it's corruption against companies like Tesla in order to benefit a dying legacy auto industry by giving them EV tax credits for vehicles that are anything but EVs. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross miss use of taxpayer dollars. Ideal fix: * Remove incentives for all hybrid vehicles and only have them apply to pure EVs.
Jannis Küster	1/4/2023 8:49	the qualification of the SUVs is messed up because efficient and light full Electric SUVs with around 330 miles of Range (e.g. Tesla Model Y, 5 Seat) are not categorized as an SUV ($80.000 cap) but heavier Plug-In Hybrids with a battery range of around 21 miles are qualified. This is against the purpose of the Inflation reduction act. In the case of the Tesla Model Y 5 Seat it is even the most american-made car in the USA, which is exactly what the inflation reduction act wants to promote, but it gets punished by your qualifications. Again in the case of the Model Y 5 Seat, it is recognised by the EPA as an SUV, why not follow the EPA as qualification guideline? -- Best regards [https://ci3.googleusercontent.com/mail-sig/AIorK4yc22foEuEx59ptKU4TmwImitCzTFHXD8mdi2R4kou3bhwN6LNRXyUjHjCLavOKqO3lYjAp3II] Jannis Küster
Daniel Zajic	1/4/2023 8:52	Dear Andres Garcia, I am writing to express my dissatisfaction with the Inflation Reduction Act's EV tax credit rules. Specifically, I am disappointed to learn that the Tesla Model Y, a 5-seat SUV, is not eligible for the credit with the$80,000 cap, despite the fact that other SUVs like the Ford Escape PHEV and the Jeep PHEV are. The Ford Mustang Mach E should also be eligible, as well as the VW ID.4. The Tesla Model Y has the same utility but it is the most American car available on the market, and the most efficient EV. If the goal of the incentive is to increase EV adoption, reduce emissions and support American manufacturing, this is exactly the kind of car that should be incentivized. Thank you for your attention to this matter. Sincerely, Daniel Zajic 491 Main St, Franconia, NH 03580
Greg Kniffin	1/4/2023 8:53	Dear Internal Revenue Service, I am writing to bring to your attention the new tax incentives for electric vehicles that have recently been implemented. While I appreciate the efforts to encourage the use of more environmentally-friendly transportation options, I am disappointed to see that the incentives apply to some hybrid vehicles and not to all fully electric vehicles such as the Tesla Model Y 5-seater. As you may know, all-electric vehicles have a number of advantages over hybrid vehicles when it comes to reducing carbon emissions and improving air quality. All-electric vehicles do not emit any tailpipe pollutants, whereas hybrid vehicles still rely on internal combustion engines for most of their power. Additionally, allowing the full incentives for vehicles achieving less than 50 mpge go against the goals of transitioning to zero emissions transportation. Given these considerations, I believe that it would be more effective to extend the tax incentives to all fully electric vehicles as well. This would provide a stronger incentive for consumers to choose the most environmentally-friendly transportation options, and it would more effectively support the transition to a low-carbon economy. I understand that there may be challenges in implementing this change, but I hope that you will give it careful consideration. Thank you for your attention to this matter.

Name	DateTimeReceived	Body.TextBody
Mike Muv	1/4/2023 8:53	Dear IRS, I am writing to express my strong feelings with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with smaller batteries (21mi electric range) are eligible for the full $7.5k credit. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely,
Kelly Geisler	1/4/2023 8:54	Hello. I'd like to comment on the EV Tax Credit Qualifications. I believe the purpose of the tax credit is to help our nation transition away from fossil fuels to electric vehicles - that's great. What I don't understand is why certain vehicles, like the Tesla Model Y 5 seater is not considered an SUV (for the full tax credit) but the same car in a 7-seater is? I've read that it is not heavy enough. Being heavier only increases inefficiency. Even hybrids were provided the full tax credit. The Qualifications should be updated so the Tesla Model Y 5 Seater and any other EV is a similar position be afforded the full tax credit. I purchased a 5 Seater Tesla Model Y a few months ago, so it doesn't effect me, I would just like to see the qualifications make sense and actually provide the incentive as intended. Thank you, Kelly Geisler
Carlson Five	1/4/2023 8:55	Please consider changing the Tesla Model Y and Ford Mach E to SUV status in the IRA vehicle requirements. The Carlsons -- Aaron & Jennifer Carlson Hilbert, WI
Jesse Doe	1/4/2023 8:55	Why is the U.S. government NOT including the Tesla Model Y 5 seater in the $7,500 discount, when it's including heavier cars that aren't nearly as efficient as the Model Y. We're also seeing this with some trims of the Mach E. It's important that we actually incentivize cars that are going to make a difference towards climate change, but that's NOT what we're seeing. Also, cars that don't meet sourcing requirements can be leased and still count? How is this helping accomplish the goals of this act? Who is doing such a poor job with making these decisions? I tell you what, I voted for Hillary and Joe Biden but if this is the kind of stuff that's going to take place under democratic leadership, I'm done with the party. Please correct this gross negligence right now. Thanks in advance for your help. Jesse Dow 6055954749
xiaohui wang	1/4/2023 8:56	Dear IRS, I am shocked when I read the recent published list of sedens and SUVs qualify the new EV credit. The bill passed to encourage Americans to move away from a gas guzzlers to cars use clean electric energy. So, it is shocking the IRS uses a standard that rewards gas guzzlers adding a tiny electric battery pack and engine that can only sustain the SUV 20ish miles, while penalize the SUV uses pure electricity in a most efficient way, thus less the heavy battery packs nor the ICE system, with less weight. As a diligent tax payer, I would like to ask you kindly reconsider the standard to make it encouraging the vehicle manufacturer to produce more effecient vehicles using less energy, while still praticle and fun to drive. Best regards, Xiaohui Wang from NJ
Dave Gowans	1/4/2023 8:56	If the purpose of the credit is to accelerate EV adoption, it is completely nonsensical to me that hybrid vehicles that largely run on fossil fuels qualify for the full $7500 credit. In addition, I don't understand at all how a 7 seat configuration of a Tesla Model Y is classified as an SUV while a 5 seat version is not. This is especially so considering that a Ford Escape hybrid is classified as an SUV (reinforcing my first point). Thank you, Dave Gowans

Michael Schulz	1/4/2023 8:58	Dear IRS, Please change your egregious categorization of Tesla Model Y 5 seat version as not qualifying for the EV tax credit. It's just stupid, or something darker. Mike Schulz
Siva Gandi	1/4/2023 8:59	It does not make sense for ICE SUVs that adds only a range of about 25 MPG still get full rebate, while Tesla model Y with a full electric with 320 mile range is not eligible. Not sure what your policy is solving for the environment. Please fix this.
Peter Tymbel	1/4/2023 9:03	Dear IRS, Tesla Model Y 5 seater should be included in the IRS Tax Credit qualifications. The credit should only apply to pure EVs, not Hybrids. -- Peter,
Ashwin Ramachandrappa	1/4/2023 9:03	2022. The SUV classification is very subjective, this interpretation undermines the intent of Congress when they pass legislation to provide tax credit to electric vehicles. The IRS should use the SUV classification that the EPA and the manufacturer claims. A vehicle that has all wheel drive and capable of off-roading and with a common cargo compartment extending to the passenger area with foldable seats, should be considered an SUV not subjective weight requirements. The whole intent of regulation from IRS is to uphold the intent of the legislatures creating the law. Please revise your notice. Ashwin Ram Phoenix, AZ Sent from my iPhone
naveed somani	1/4/2023 9:03	I think tesla Model Y 5 seater should be included and silly that it's not from the beginning [image.png]
chetansaip@gmail.com	1/4/2023 9:03	Need tax credits to Model Y 5 seater car.
Brett Russell	1/4/2023 9:04	Hello Concerning classification of vehicles as: A) van, pickup, SUV B) other I suggest the IRS harmonize SUV classification of specific make/models with other US government agencies, such as EPA and NTSA. As the IRS classification of which models/makes are considered SUV are different than those agencies, and the IRS criteria of classification not readily apparent, this gives the public an impression of bias which favors certain manufacturers. If a criterion is vehicle weight, this also encourages manufacturers to increase weight in order to change classification. This discourages the goal of manufacturers striving for efficiency. Best, Brett Russell
Eswar	1/4/2023 9:05	This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the spirit of the relevant law. ~Eswar
Hong Pan	1/4/2023 9:06	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Hong

Eddie Tantoco	1/4/2023 9:06	Hi, I heard that certain EVs may not qualify for the EV tax credit which would significantly impact our families decision to purchase. I have recently installed solar on our home, partially for the benefit of replacing one of our two more than a decade old vehicles with an EV in the next 3-5 years. With a family of 5 our options are limited, and reputation and reliability are important in our decision making. The Tesla Model Y is a top contender to meet this criteria, as such we would like to provide our feedback that it is very important financially that the EV tax credit be available for this vehicle. I can personally say incentives work, as we already made the decision to install solar due to the Investment Tax Credit. Thank you for the opportunity to share our personal experience and feedback. Best regards,
Sampuran Khalsa	1/4/2023 9:07	I am quite disappointed to read the new details of which cars will qualify for the $7500 tax credit under the IRA bill. To specifically exclude the Tesla Model Y SUV smacks of government corruption. I am certainly no tinfoil hat wearing conspiracy theorist, just a normal citizen however this exclusion appears to be politicians attempting to get revenge on Elon Musk for his recent political Tweets Or perhaps it was an attempt to give a competitive advantage to companies whos workers are part of the United Auto Workers Union. Either motivation works against the stated goal of shifting our country towards sustainable energy. Please correct this glaring error. Sincerely Sampuran Khalsa
Brule River Canoe and Kayak	1/4/2023 9:08	Please change the Tesla Model Y 5 seater as well as the Ford Mach E to an SUV status in the IRA requirements. Thanks The crew at BRCR
Ash Hornbeck	1/4/2023 9:10	Not having pure EVs quality as a SUV while a hybrid with 21 miles of electric range does, reeks of corruption. The Tesla Model Y - all variants - are SUVs and qualify for the IRA $7,500 credit @ the $80k limit. Help the people regain a little trust in the IRS, recategorize all Model Y variants to they qualify at the $80k level. Thank you
Mark Jurista	1/4/2023 9:11	I am writing to recommend that vehicles such as the Tesla Model Y (5-Seat Variant) and Ford Mustang Mach-E be classified as SUVs in the electric vehicle tax credit and have an $80,000 price cap. The fact that fully electric SUVs as classified by the EPA with over 300 miles of range do not receive a tax credit, but hybrid models such as the Jeep 4xe with a range of 21 miles do. This is an outrage when considering the intention of the credit and is clearly not what was intended by congress when crafting the language of the bill. Both the Model Y and Mustang Mach-E should be classified as SUVs due to their size, capabilities, and classifications by other government agencies as SUVs. The Model Y has a spacious interior, and a large cargo area, making it well-suited for families and those who need a vehicle with plenty of room for hauling gear. The fact that the 7-seat variant is considered an SUV, but the 5-seat version misses out is ridiculous. The Mustang Mach-E also has a spacious interior and ample cargo space, as well as impressive off-road capabilities. Including these vehicles in the electric vehicle tax credit as SUVs would help to make them more accessible to a broader range of consumers, and would encourage the adoption of electric vehicles in the SUV market. It would also help to promote the use of clean, efficient transportation options, which is in line with the goals of the tax credit program. I urge you to consider this request and classify the Model Y and Mustang Mach-E as SUVs for the purposes of the electric vehicle tax credit. Thank you for your attention to this matter. Sincerely, Mark Jurista
Jeff Pyatt	1/4/2023 9:11	I am writing to express my concern and confusion over the fact that the 5-seat Tesla Model Y does not qualify for the $7,500 SUV EV tax credit, despite the fact that it is classified as an SUV by the EPA. I find it strange that the Model Y would not qualify as an SUV under your criteria, especially considering the fact that it is classified as such by a trusted and reputable source like the EPA. This situation has created a perception of corruption and has eroded my trust in the IRS and the United States government more generally. I understand that it is important for the IRS to have clear and consistent guidelines for tax credits, but I also believe that it is important for those guidelines to be fair and reasonable. I urge the IRS to reexamine this situation and consider granting the Model Y the tax credit it deserves. Sincerely, Jeff Pyatt

Name	DateTimeReceived	Body.TextBody
J bean	1/4/2023 9:11	Hello, I am the owner of a 2022 Tesla Model Y, which under these tax incentives would not qualify for any tax credit, direct payment (incentive) for my purchase. The main reason I bought an electric vehicle was, In only 6 years of driving, I have had 3 “used car” purchases of ICE vehicles which have all had multiple major either transmission or engine failures and I was sick of shelling out money. Looking for further options I realized it would be much more efficient for cost of repairs, fuel, and for my high mileage to switch to an electric vehicle. I refused to go hybrid as I wanted to make as big a positive impact towards the environment as I could. If I was going to do this it must be top of the line. I decided to purchase a Tesla, and my preference was for a family car or an “SUV” however the Model X was far out of my budget and so a crossover SUV would suffice. I strongly believe hybrids are a great alternative but should not be granted incentives over a fully electric vehicle. This is ignorant. The goal is to push EV’s and for bettering global climate standings, so why should hybrids that are in large gas powered get better incentives than a fully electric vehicle that has zero emissions? Another big issue with this bill is fully electric vehicles such as Teslas should have the benefit of being a retroactive bill. As Tesla and the owners who have purchased prior to this bill are the real pioneers towards a cleaner future and clean transport. As someone who took delivery in 2022 with a tax credit I plan to put the money towards; at home electric charging station, & solar panels. Strong consideration needs to be made in this bill on who should qualify for a credit (Tesla) and for it to be retroactive at least back into 2021. Thank you for your time,
Keith A Franklin	1/4/2023 9:12	encourage the adoption of alternative fuel vehicles, I believe it is misguided to offer this credit to vehicles that are not as efficient as battery electric vehicles. For example, the Jeep Wrangler plug-in hybrid is currently eligible for this credit, yet it can only go a maximum of 21 miles on electricity before the gasoline engine kicks in. This means that for the majority of its driving, it relies on fossil fuels and produces emissions just like a traditional gasoline vehicle. I also want to bring to your attention the issue of certain highly efficient battery electric vehicles being excluded from this credit because they have been able to keep their weight down, which has caused them to not be classified as SUVs. However, lighter weight vehicles are generally more efficient and produce fewer emissions. Therefore, it seems counterintuitive to exclude these types of vehicles from the tax credit program. Excluding highly efficient, low-emitting vehicles from the tax credit program sends the wrong message and does not effectively encourage the transition to cleaner transportation. I urge the IRS to reconsider the eligibility criteria for this credit and include all highly efficient battery electric vehicles, regardless of their weight or classification, in order to truly promote the adoption of alternative fuel vehicles. In the end inefficient vehicles which add a small battery electric vehicles may have to be included because of the language of the law. If there is any way to exclude those then that should be done. Conversely if cars in the same category that both go 100s of miles on a single charge shouldn’t have 1 excluded because the less efficient model weights more while the more efficient model weights less. Doesn’t make sense to reward the less efficient vehicles while excluding the more efficient vehicles.
Orrey Nell	1/4/2023 9:13	model Y is labeled and designed as an SUV. Doesn't matter if it is 5 seat or 7 seat. This is a blatant power trip because one political party doesn't like Elon and is upset that Tesla doesn't use union workers. Even though most Tesla employees make more money then they would if they were part of the UAW. Fix this and quit showing so much bias.
Trevor Clark	1/4/2023 9:13	To whom it may concern, I have been eagerly waiting for the price of EV’s to come down so I could afford one. It seemed like the IRS bill was the stimulus that would allow me to finally purchase one to replace my Acura RDX. I have been considering both the Tesla Model Y and the Ford Mustang Mach E. After waiting for months until 2023, I am finally ready to finalize a purchase. Except the $7,500 tax credit does not apply to either vehicle for some inexplicable reason. I heard there was a technicality on ground clearance that prevented the IRS from classifying these as SUV’s like the EPA and other organizations do. But isn’t that inherently the nature of EV’s given how important aerodynamics are? I don’t believe it’s intentional, but the technicality is preventing the purchase of EVs over hybrids and other less environmentally friendly options such as the Ford Escape or Jeep Wrangler 4xe. Please revisit these classifications to comply with the spirit of the law rather than whatever technical narrative has led you to exclude the most relevant EV’s on the market. I don’t know if this is about corruption or just an oversight, but it needs to be fixed and fixed quickly. Trevor Clark Thetrev68@hotmail.com<mailto:Thetrev68@hotmail.com> 5411 Little Creek Ct Fulshear, TX 77441
Amy Jiang	1/4/2023 9:13	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you.

Name	DateTimeReceived	Body.TextBody
Tim Daugherty	1/4/2023 9:14	Hello, The Tesla Model Y 5-seater should be available for tax credits. I understand the goal of price limits, and trying to separate sedan and SUV, but it would not make any sense to exclude this car. Thank you for your efforts to make this program work. Tim Daugherty
Cole, Peter	1/4/2023 9:14	I would like to make a formal complaint about the Tesla Model Y 5 seater over $55k being excluded from the IRA $7,500 Tax credit, the Model Y 5 seater is clearly and SUV and should be treated the same as other SUVs with limit upto $80k. Many of same size and type of car from other auto manufacturers are included upto $80k limit. The IRA act was supposed to support cars made in US by US Company and US employees. I hope this is just a simple admin error which can quickly be corrected. Yours sincerely, Pete Cole
bin wu	1/4/2023 9:15	All tesla model Y under $80000 should qualify for the $7500 credit. It should be obvious.
David Rocheleau	1/4/2023 9:15	The models that qualify and those that don't make no sense. A jeep hybrid gets the credit and the model y specifically. Sent from my iPhone
Sampuran Khalsa	1/4/2023 9:16	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). Please correct this error Sincerely Sampuran Singh Khalsa
Justin Wilson	1/4/2023 9:18	Hello, Please include the Model Y SUV and Mustang Mach E SUV into the list of eligible vehicles. They are both fully electric SUVs and should qualify as such. The times have changed and fully electric vehicles don't have as many parts as ICE vehicles and are lighter to increase efficiency. Penalizing modern SUVs that are fully electric and classifying them as sedans is absurd. I also think ALL hybrid vehicles should NOT qualify for this EV tax credit. I thought this tax credit's purpose was to increase electric vehicle adoption for the sake of reducing carbon emissions and providing a safe/livable planet for our children and future generations. I also think the income limit is enough to stop the ultra rich from taking advantage of the tax credit. I don't think there should be any limit on the purchase price of the vehicle for it to qualify. I think all fully electric vehicles should qualify. If a purchase cap is absolutely necessary, I think a blanket $100K purchase price limit across all fully electric vehicles should be sufficient. We need more fully electric/clean air vehicles on the road so making it easier to qualify is the best option. Rewarding vehicles that use gasoline does not help solve the problem that the EV tax credit is trying fix which is reducing carbon emissions. Please fix this as soon as possible. Thank you, Justin Wilson
Dave Maccaferri	1/4/2023 9:18	Dear Internal Revenue Service, We are writing to request that the Tesla Model Y 5 seat vehicle be included in the electric vehicle (EV) tax credit. While we understand that the gross weight of the Model Y may be lighter than some other qualifying vehicles, we believe that this should not exclude it from the credit. The Model Y is a highly efficient electric vehicle with a range of up to 326 miles on a single charge. Its advanced technology and zero emissions make it a valuable contributor to the reduction of greenhouse gases and the promotion of clean energy. In addition, the Model Y is popular among consumers and has received positive reviews for its performance and features. Excluding it from the EV tax credit would discourage its purchase and adoption, which would be counter to the goals of the credit. We respectfully request that the IRS reconsider its decision to exclude the Tesla Model Y 5 seat vehicle from the EV tax credit and include it in the list of eligible vehicles. Thank you for your time and consideration. Sincerely, David Maccaferri Sent from my iPhone

Name	DateTimeReceived	Body.TextBody
Emmanuel Poirier	1/4/2023 9:19	Hello there, I'm sending an email to share my feedback about the new tax credit qualification for the electric vehicles in the US. I've seen some electric vehicles such as Tesla Model Y that were not eligible to the 7,500$ tax credit, but an hybrid vehicles such as Jeep Grand Cherokee being eligible for the 7,500$ tax credit. I understand the rules for being eligible, but the classification still does not make sense to me. I believe the new tax credit qualification should be an incentive to all US manufacture automakers, legacy and new, to start focusing more on producing and selling vehicles that are positively impacting climate change. Unfortunately, the current state of the new tax credit qualification isn't fully align with my above statement and some very popular electric vehicles such as Tesla Model Y is not qualifying to the tax credit which will force a future generation car automaker, Tesla, to cut prices and reduced their future margins, and thus reduce their growth rate expectation and operation investment, to be competitive agaisn't its competitor that are qualified to the tax credit. It might be a good thing for the US economy to force competitiveness in such an industry, but I believe it is not align with the incentive to the automakers to invest and to focus more on vehicles that impact positively climate change. Also, enhancing competition in the US in the electric vehicles industry and align with the intention to positively influence climate change is still achievable if the IRS at least review the qualification of electric vehicles such as Tesla Model Y to be eligible to the tax credit and removing the inefficient electric/hybrid vehicles that aren't significantly positively impacting climate change based on projection scenarios and deterministic threshold.
gary switzer	1/4/2023 9:19	Please reconsider classifying the Tesla Model Y 5 seat option as a SUV for the IRA tax credit cap of 80,000. It is the perfect SUV for today's smaller families. Very few families have more than 3 children and the 7 seat version is unnecessary and impractical for them. In addition I find the inclusion of hybrid vehicles with small batteries in violation of the purpose of the IRA. Thank you for your consideration of this concern. Gary Switzer, 940 Carnes School Road, Seneca, Pa. 16346. Sent from Yahoo Mail for iPad<https://overview.mail.yahoo.com/?.src=iOS>
John Moriarty	1/4/2023 9:20	Dear IRS, I am writing to express my confusion regarding the new tax incentive for electric vehicles. I have noticed that the incentive includes plug-in hybrids, but it excludes the most popular EV in the world, the Tesla Model Y, which is American made. I understand the importance of incentives in encouraging the adoption of electric vehicles and reducing greenhouse gas emissions. However, it seems counterintuitive to exclude a popular and American-made EV like the Tesla Model Y from the incentive while including plug-in hybrids. I am writing to urge you to reconsider this decision. Thank you for your attention to this matter. Sincerely, John Moriarty
Bradley Johnson	1/4/2023 9:20	Please support our American company, Tesla, by adding its best selling car, the Model Y, to the IRA without any stipulations. The Model Y may not have the ride-height to qualify for an SUV, but it has more internal storage space and double the efficiency of, say, the Jeep 4xe. Excluding the Model Y diminishes the effect of the IRA by incentivizing buyers to select less efficient vehicles over more efficient ones. This does not help bring down inflationary pressures. All pure EVs, like the Ford Mach-E, should be included in the IRA, or, better yet, just scrap the IRA entirely. It is a waste of taxpayer money. Sincerely, Brad Johnson Flagstaff, AZ
Andrew Barnett	1/4/2023 9:20	Good morning, I am very familiar with electric cars and have owned several different brands of electric cars. The US government should encourage purchasing sedans over SUVs. Thus the gap for max MSRP for SUV vs sedan should be smaller. Considering most electric cars are now a mix of sedans and SUVS (crossovers), a 3rd category for crossovers would be wise, and considering some trucks will need to be much more heavy duty, and separate category for heavy duty trucks would be smart. My recommendation Sedan 55k Crossover 65k True SUV, van or small truck 75k Heavy duty truck 90k Andrew Barnett, MD Spokane, WA
snowybikeride	1/4/2023 9:21	Please support our American company, Tesla, by adding its best selling car, the Model Y, to the IRA without any stipulations. Rodney Buckingham	1/4/2023 9:21	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, I would like to add my voice to the requests for inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Yours sincerely, Rodney Buckingham
AustinS.Ellis	1/4/2023 9:21	Tesla Model Y, a pure EV with a 330-mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit but it should be when considering that there are cars on the list that barely use electricity at all. Sent from ProtonMail Mobile
John W	1/4/2023 9:21	Dear IRS, I believe the Mustang mach-e should qualify as an SUV (sport utility vehicle) because it sporty and it is a utility vehicle having 4 doors and a hatch back. It is also available with all wheel drive. Thank you for your consideration, John Weber 609 Naples St Corpus Christi, TX 78404 PS- On another subject, I have been trying to call the IRS for over 6 months and I cannot even be put on hold because of how busy you are. Please find a way I can communicate with you be hiring more staff or setting up a call back system. Thank you!
denaliguides@gmail.com	1/4/2023 9:21	Giving a tax credit to the inefficient hybrids and other small battery vehicles directly contradicts the point of the EV tax credit. Please remove all hybrids from receiving the credit, and use EPA standards for the definition of SUV. Sent from my iPhone
Brian Merlen	1/4/2023 9:21	Hi, Model Y 5 seater is the kind of vehicle this bill was supposed to incentivize to prevent global warming. It makes no sense to exclude the 5 seater Y when the 7 seater qualifies and is identical hardware. Such strange determinations undermine the intentions of this bill, particularly when far less efficient vehicles that are plug ins are getting subsidies while still emitting more emissions than an average vehicle. Please can you at least add the model Y 5 seater on the subsidy list? It's obviously more efficient then many plugins your team included in the tax subsidy program Brian Merlen 203 559 4530 Sent from my iPhone
Ryan Leeper	1/4/2023 9:22	Mr Garcia, I'm writing express my feelings regarding the implementation of qualified electric vehicles. More importantly, exclusion of some. EVs of all shapes, sizes, weight, and use case are needed for individuals. Excluding some models due to tiny differences confuses the buyers. For example, including the id4 and excluding the model Y makes little sense to me. They're essentially the same vehicle. Giving a competitive advantage to a foreign company while a disadvantage to an American one doesn't make sense. Also, retroactively applying purchases would help many early adopters. Myself included. I purchased an EV last year from a manufacturer that had reached their limit. I had to stretch financially to make it happen, but I believe that EVs are essential in leaving my children a better world than I was. I appreciate your time reading my thoughts. Respectfully, Ryan Leeper 1733 E Messner Rd Wooster, OH 44691

ccrowley@mccrowley.com	1/4/2023 9:22	Dear IRS Policy Folks, It appears that the most energy efficient BEV the Tesla Model Y has been deemed not an SUV when the EPA, NHTSA, and even ChatGPT3 agrees the Model Y is an SUV. Specifically, it appears a mistake has been made in the classification of the Model Y 5-seater as a sedan. You also classified the Ford Mach E as a sedan. ChatGPT definition Yes, the Tesla Model Y is a mid-size all-electric SUV. It was designed to be spacious and versatile, with seating for up to five people and a generous amount of cargo space. The Model Y has a sleek and modern design, with a low profile and a panoramic glass roof that provides an airy and open feel to the interior. The Tesla Model Y is available with either rear-wheel drive (single motor) or dual motor all-wheel drive. It is not available with a triple motor configuration. The single motor Model Y has a range of up to 326 miles on a single charge, while the dual motor Model Y has a range of up to 358 miles. Both versions of the Model Y offer impressive acceleration, with the dual motor version being slightly faster due to its additional motor. I do not agree with providing a 7,500 tax incentive for Hybrid gas powered vehicles with EV only range of between 20 and 37 MPGe, while at the same time disallowing the Tesla Model Y 5-seater. The optics on this are extremely troubling. Many are claiming this is something more than a bureaucratic mistake. The simplest explanation is usually correct, In most cases, so I am sure this was just an oversight with an overzealous new hire who was able to pull something out of the context from the past. I am sure you can understand our position and would most definitely agree that Incentivizing Gas vehicles with EV tax credits is not the purpose of the legislation. Thank you for your quick handling of this matter. (just kidding I work for the government too).
Leif	1/4/2023 9:22	I am very confused as to why some of Teslas Model Y are not going to be included in the IRA $7500 tax credit. That's makes zero sense.
Eric Nygaard	1/4/2023 9:22	The categorizations of VW ID 4 AWD, Ford Mach-E, and Tesla Model Y are arbitrary and capricious. Categorization of these vehicles as SUVs should be based on clear, consistent, and well-established criteria, and align with the EPA categorizations. These vehicles should all be categorized as SUVs regardless of seat count or awd configuration. Eric
Alan Dalmon	1/4/2023 9:23	Dear Sir/Madam, I must object most strongly to the unfair treatment of Tesla vehicles in the inflation reduction Act. The model Y is clearly an SUV and should be eligible for the full 7500 USD credit. Regards, Alan Dalmon
Bee, Adam	1/4/2023 9:23	To whom it may concerned, The Tesla Model Y is one of the most efficient all electric vehicles. I am very disappointed that the 5 seat standard variant, which is a small SUV, does not get a tax credit, despite the fact it is made in America. This is a serious oversight I would like to see corrected. Thank you. Adam Bee Get Outlook for iOS<https://aka.ms/o0ukef> [cid:image512973.png@F1A05E77.548F3E1C] Adam Bee , Vice President of Business Development BAC Jessup, 7600 Dorsey Run Rd, Jessup, MD 20794, United States ABee@baltimoreaircoil.com<mailto:ABee@baltimoreaircoil.com> Mobile +1 443 790 7373 www.baltimoreaircoil.com<http://www.baltimoreaircoil.com/> [LinkedIn]<http://www.linkedin.com/company/baltimore-aircoil-company> [Facebook]<https://www.facebook.com/BaltimoreAircoilCompany> [Twitter]<http://twitter.com/CoolingIsBAC> This message contains confidential information and is intended only for the individual named. James McGrath	1/4/2023 9:23	I'm writing to express my dissatisfaction with the decision to exclude the Tesla Model Y SUV 5-seat configuration from the $7,500 EV tax credit. The Tesla model Y is an American made EV with an EPA range of over 300 miles. It makes no logical sense to exclude this vehicle from the tax credit while awarding a $7,500 tax credit to the Jeep PHEV which has 21 miles of electric range. In fact, the decision to award $7,500 tax credits for a broad range of PHEV's while excluding the all electric Tesla Model Y defies all logic. Please add the Tesla Model Y SUV 5-seat configuration to the list of vehicles eligible for the $7,500 tax credit. Thank you, Jim McGrath [https://docs.google.com/uc?export=download&id=16Reobhm-U8jc1VQEwtEXTK6NVSHgpPf3&revid=0B9ZLhkmW7gcMbnErdUxPbkpPL0FtTVZyZVFscmFZakFZVGJnPQ] Jim McGrath Co-Founder, SevenPoints Consulting Inc. Jim Marchbank	1/4/2023 9:23	Thank you for allowing me to submit my comments. First, I don’t think a hybrid vehicle that uses Gasoline or diesel should be allowed in the program. Secondly, I think the Tesla model Y and the Mach E should qualify for a discount. Sent from my iPhone
Charlie P Mayer	1/4/2023 9:24	Please include all variants of Mustang Mach E, Tesla Model 3 and Tesla Model Y in the vehicles allowed the full $7,500 EV Tax Credit. You know why. Thank you, Charlie P Mayer
Denis He	1/4/2023 9:24	Hi, It's insane that currently Model Y is not considered a SUV and that it's "other". Tesla is the leading EV company that right now owns more than 75% marketshare. This is the best selling vehicle of that group and it will hurt Americans if it doesn't qualify. It's literally saving lives. The purpose of the bill is to save Americans money for good American made products. Tesla has always been American focused instead of other companies that put their factories offshore. Give Model Y the SUV status it deserves. Save American lives and save American money. Bring jobs back by giving this classification. Regards, Denis
tucsonhybrid@gmail.com	1/4/2023 9:24	I am writing this as a current Tesla owner who will not be impacted by this particular rebate for the Tesla Y but I will be purchasing future Tesla Models and I would like to express my dismay at the leaving out of Tesla Y from the SUV class because of its failing to weigh a bit less that other SUVs. My vehicle travels 330 miles one charge and does not use gas at all. I charge primarily at home using Tesla PV panels on my roof and I have Tesla Powerwall to store the energy I use. I connect to the electric grid in Tucson only to be secure enough to have additional electricity for it and when the sun does not provide enough electricity for my home and that is rare. I usually send extra electricity to the grid. I am dismayed that Congress and the IRS and the President, all of whom I have voted for as a Democrat have missed the point with this IRA by leaving Tesla out when Tesla had led the way with the EV roll out. I will never buy another vehicle other than Tesla because I have searched, driven them and believe they are all inferior with or without a rebate and find it very unfair that the government is not including them in the rebate program. I am 66 and retired. I was a Lieutenant in the NYPD and was and still am in a union and am very disappointed that my government has unfairly done this. Carol Sciannameo
David Griffin	1/4/2023 9:24	Dear Andres Garcia, I was disappointed to learn that Tesla's most popular vehicle, the Model Y 5-seat SUV, is NOT being categorized as an SUV as it is by virtually every other organization, including the EPA and NHTSA sites. This excludes it from the $7,500 tax credit due to the different price caps for SUV vs non-SUV. The fact that the 7-seat version does quality is odd, as it's the same exact vehicle with an additional option. Meanwhile, other 5-seat cars of similar size *ARE* included, and worse, other cars that only get 20 miles of electric range, like the Jeep Wrangler, are also included. To me it makes no sense that the government would incentivize the purchase of a 20-mile range Jeep Wrangler over the 320 mileModel Y, the safest and most efficient family SUV on the market. Please revise the tax code to classify ALL Model Y as SUV, whether that means decreasing the weight requirement, or using some other metric to classify SUV vs non-SUV. Thank you kindly. Sincerely, David Griffin 6123 MetroWest Blvd Unit 108 Orlando FL 32835

Josh Archer	1/4/2023 9:24	I am writing about your designations of SUVs for the EV tax credit. It does not seem like you have a rhyme or reason on why something was designated SUV or not. Tesla's are merely designated SUV by number of seats, but others are not. Having large number of seats doesn't make a vehicle a SUV. Thank you, Josh Archer
Maurice E.	1/4/2023 9:24	Dear sirs, I'm writing to express my concern that the Tesla Model Y 5 seater is not included in the $7500 IRA incentive. Please add the Tesla Model Y 5 seater to be included and qualified for the IRA $7500 tax credit. It's absurd to me that hybrids with only 20 miles range qualify but Tesla being the most efficient EV doesn't qualify for the $7500 tax credit. Please add Tesla Model Y to qualify for the tax credit. Thank you, Maurice Emma
Tom Douglas	1/4/2023 9:24	Please allow the Tesla model Y the entire vehicle tax credit up to the SUV MSRP maximum. To not do so punishes innovation and the use of lightweight, efficient materials in vehicle construction. -Tom Douglas
MARY LOVE	1/4/2023 9:24	To whom it may concern: It makes no sense to me that the Tesla model Y 7-seat configuration qualifies for a tax credit while the 5-seat configuration doesn't. It's the same car with two extra seats crammed in. Not any larger and no more an "SUV" than the 5-seater. How do you define an SUV anyway? The government should be transparent about how and why they make their rules. Such vagaries leave most of us to suspect that special interests are controlling the decisions. Thanks much, Mary Love Mary Herbert Love Charlotte, NC 704-287-9042 mhlove@me.com<mailto:mhlove@me.com>
Youlan Rousseau	1/4/2023 9:24	Dear IRS, I think the Tesla model Y should be able to qualify the full $7.5k credit base on the comparison between the Model Y and the less GREEN, hybrid Ford Escape PHEV and Jeep PHEV that do qualify for the full credit. [cid:0c90OCiehKtdCWerXPaz] [cid:00d115dc-6c0f-46e6-b157-b18e5351aae1] Best regards, Youlan Rousseau Sent from Yahoo Mail on Android<https://go.onelink.me/107872968?pid=InProduct&c=Global_Internal_YGrowth_AndroidEmailSig__AndroidUsers&af_wl=ym&af_sub1=Internal&af_sub2=Global_YGrowth&af_sub3=EmailSignature>
Tim Quick	1/4/2023 9:25	Dear IRS, I am writing to express my disappointment with the decision to remove the Tesla Model Y 5 seater from the planned EV tax credit. As a consumer who has been considering purchasing this vehicle, I was counting on the tax credit as an important factor in my decision to buy electric. The removal of the Model Y from the credit list significantly changes the financial calculations for me and many other potential buyers. It undermines the incentive for consumers to switch to electric vehicles and hinders the progress towards a cleaner, more sustainable transportation future. I understand that the tax credits must be administered fairly and within the confines of the law. However, I urge the IRS to reconsider this decision and to find a way to include the Model Y in the EV tax credit program. Thank you for your attention to this matter. Sincerely, Tim Quick

Stephen Randall	1/4/2023 9:25	ATTN: Andres Garcia Internal Revenue Service Room 6526 - 1111 Constitution Avenue NW Washington, DC 20224 Re: Qualified Plug-in Electric Vehicle Credit and Rev. Proc 2022-46. OMB Number: 1545-2137. Form Number: 8936, 8936-A and Schedule 1 (Form 8936-A). As a taxpaying citizen of the USA, I would like to kindly encourage you and your colleagues to reconsider your initial evaluation of the vehicles that qualify for the new electric vehicle credit. At a minimum, information should be shared with the public as to the exact criteria used to determine which vehicles qualify and which do not. There are some extreme examples of perceived inequalities in the selection of qualified vehicles published by the IRS. For example, the Jeep Wrangler which uses an ICE engine gets only 20mpge and has only ~21 miles of range on electric power qualifies, while vehicles like certain models of the Ford Mach E and Tesla Model Y which are true EVs with hundreds of models of range do not qualify. There are other examples like this that show me as a taxpayer that the true nature of the tax inventive bill is not being followed as intended. This is not encouraging a shift from Gas Power to Electric Power nor is it providing an incentive to car manufactures to produce better and more efficient alternative fuel vehicles. I would like to understand why I can buy a five-seat version of the gas-guzzling Jeep Wrangler and get a tax credit but if I buy the highly efficient five-seat version of the Tesla Model Y I get no credit. Our planet needs you to get this right. I appreciate your time and humbly hope you will reevaluate the application of this tax credit so that it meets the true intent of the use of our tax money.
Doug	1/4/2023 9:25	I am writing to you today because I think it is ridiculous that full EVs like the Tesla Model Y & Ford Mach E do not qualify for the EV tax credit while inefficient plug in hybrids like the Jeep & Ford Escape, with tiny batteries do qualify.
Chetan Sai	1/4/2023 9:26	Need tax credits to Model Y 5 seater car. Thanks Sai Chetan Pothula (408) 203-3323
GMail	1/4/2023 9:27	Tesla Model Y 5 seater should be classified as an SUV. Best, Chase Heibel
Chas Evans	1/4/2023 9:27	Dear IRS, I'm writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It's unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y (5 seater). As a taxpayer and concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRA to reconsider this decision and ensure that the tax incentive is fairly applied to all elective vehicles, including the Tesla Model Y. One way to do this would be to categorize vehicles using the same criteria as the EPA and NHTSA, which would classify the Tesla Model Y (5 seater) as a SUV, making it eligible for the tax credit. Sincerely,
Kody Duck	1/4/2023 9:27	Tesla Model Y 5 seaters should be included in tax credits or no electric vehicle should be. The distinction here to try to punish Elon is disgusting. That or better yet, get rid of tax credits for cars all together and give the tax payers their rightful money back so they can vote with their dollars. -- Kody Duckwitz 208-521-1587 kaduckwitz@gmail.com<mailto:kaduckwitz@gmail.com>

Name	DateTimeReceived	Body.TextBody
B hollar	1/4/2023 9:27	Dear IRS, I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, William Hollar
hohyuk lim	1/4/2023 9:27	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerened citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including Tesla Model Y. Sincerely, David Lim
Ryan	1/4/2023 9:27	I find the guidelines posted regarded tax incentives for EVs to be completely irrational. A hybrid should not receive the same incentive as an EV. Furthermore, the Tesla Model Y should be considered an SUV. Since when was making a mass-efficient, and thus energy-efficient vehicle something to punish? A hybrid jeep with 21 miles of electric range gets a $7500 tax credit while a Tesla model Y with 330 miles of electric range gets nothing. How does this make sense within the stated goals of the IRA which is to reduce our overall carbon emissions and make a push towards all-electric vehicles? Please make reasonable changes to this policy that align with the act's intended purpose. Thank you
Levon Karayan	1/4/2023 9:27	Please reconsider current distribution. All Tesla Model 3/Y should be included.Model Y should have max grant. None of the hybrids should be included. Levon Karayan US Citizen
Rolando Velez	1/4/2023 9:28	I hope this letter finds you well. I am writing to politely request that the Tesla Model Y 5 seats (Long Range and Performance versions) be considered for the 7500 tax credit. According to the IRS guidelines, the following Tesla Model Y variants are qualified for the 7500 tax credit if their Manufacturer's Suggested Retail Price (MSRP) is under $80000: #1 Tesla Model Y All-Wheel Drive - 7 seat variant (3-rows) #2 Tesla Model Y Long Range - 7 seat variant (3-rows) #3 Tesla Model Y Performance - 7 seat variant (3-rows) However, it appears that #1 and #3 do not exist. The following Tesla Model Y variants are also qualified for the $7,500 tax credit if their MSRP is under $55,000: #4 Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) #5 Tesla Model Y Long Range - 5 seat variant (2-rows) #6 Tesla Model Y Performance - 5 seat variant (2-rows) However, it appears that #4 does not exist, and #5 and #6 are priced at $65,990 and $69,990, respectively, which may disqualify them from the tax credit.

Name	DateTimeReceived	Body.TextBody
neal.terpstra@gmail.com	1/4/2023 9:28	I believe that you should immediately change the seemingly arbitrary rules about what qualifies for the $7500 tax credit. Tesla's Model Y 5-seater currently is not considered an SUV by the IRS (even though it is an SUV according to the EPA) and therefore gets no tax credit due to it being over the $55k cutoff as a sedan. This makes no sense and should be changed. The claimed purpose of this tax credit was to incentivise electric vehicle adoption for the good of the environment. You fail to do that when one of the most efficient, most American EVs gets excluded. Respectively, Neal Terpstra Littleton, CO
Ray Chen	1/4/2023 9:28	For the attention of Mr. Andres Garcia Internal Revenue Service Room 6526 1111 Constitution Avenue NW Washington, DC 20224 Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles for the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle(model Y is one of the most efficient EV in the market) and against consumers' interests and intention of the tax credit. Your consideration of this matter is highly valued. Yours sincerely, Yi Wei -- Best regards, Yi Wei
Pickett, Matthew	1/4/2023 9:29	Guys, I think the Tesla Model Y 5 seater should be included in the IRA. It seems crazy that a PURE SUV BEV is not included at this point. Please amend. Thank you. Regards, [cid:image012.png@01D64A11.364F1460]<mailto:matthew.pickett@stifel.com> [cid:image013.png@01D64A11.364F1460]<http://www.stifel.com/> [cid:image014.png@01D64A11.364F1460]<http://www.kpmcwealthadvisorygroup.com/> This message, and any of its attachments, is for the intended recipient(s) only, and it may contain information that is privileged, confidential, and/or proprietary and subject to important terms and conditions available at http://www.stifel.com/disclosures/emaildisclaimers/. If you are not the intended recipient, please delete this message and immediately notify the sender. No confidentiality, privilege, or property rights are waived or lost
Ling Zhong	1/4/2023 9:30	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Sent from Yahoo Mail on Android<https://go.onelink.me/107872968?pid=InProduct&c=Global_Internal_YGrowth_AndroidEmailSig__AndroidUsers&af_wl=ym&af_sub1=Internal&af_sub2=Global_YGrowth&af_sub3=EmailSignature>
Barry and Jackie Schiff	1/4/2023 9:30	Seems to me your interpretations goes against common sense, the spirit of the law, global environmental and American interests. Having Tesla model y's excluded from 80k limit (except for seven seat config) while made in Mexico phevs are included is completely wrong on so many fronts. This sure looks like a buddy subsidy system vs. a cohesive coherent policy. Barry Schiff
Shawn LeBaron	1/4/2023 9:30	Thank you for taking comments. In the simplest of terms, the bill is designed to increase electric car use to help reduce pollution from gas cars by encouraging the shift to more efficient vehicles. However, by calling one car a SUV and not another car a SUV which is clearly a SUV because of ground height is having the exact opposite effect. The Jeep hybrid will get a $7500 rebate to encourage people to buy a vehicle which is not helping reduce pollution. Meanwhile the Tesla Model Y with 5 seats and the Mach E are given the Non SUV rebate cap, even though they are exactly what the bill was trying to encourage people to transition to. If both cars simply raise the cars up by an inch or so, they would quality as a SUV, but get less millage. Makes no sense. At the end of the day, something so simple should be able to get done for the American people. We are watching in amazement that our government continues to do such stupid things at our expense. Thank you for taking time to hear me. Shawn [https://s3.amazonaws.com/uploads.wisestamp.com/42566d81e64f0b16699236b546c5e7e1/1351977289.png] Shawn LeBaron Contact me: [Skype] shawn.lebaron

Colin	1/4/2023 9:30	I am writing to comment on electric vehicle tax credit qualifications. Many popular and modestly priced EV's are ineligible for the credit due to them not being classed as SUV's. The IRS should not be encouraging consumers to buy SUV's when sedans are suitable. The major goal of EV adoption is to reduce carbon emissions and driving sedans over SUV's is a major part of this. In addition many vehicles have some trim levels classed as SUV's and some not even though the trims are physically identical and the only difference is software, seating surfaces etc. I would like to see a flat $80,000 limit for every ALL-electric vehicle. Hybrid vehicles should be given a lower tax credit. For example the Jeep hybrid has a paltry 21 miles of electric range and gets only 20mpg from the gasoline engine. Vehicles like this should not be classed the same way as all-electric vehicles. Thank you for your consideration. Regards, Colin MacLean
Jeff Anderson	1/4/2023 9:31	As I read the ruling regarding the Inflation Reduction Act's EV tax credit information available on the IRS website (https://www.irs.gov/credits-deductions/credits-for-new-clean-vehicles-purchased-in-2023-or-after and https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after), I was astonished that 100% battery-electric vehicles such as the Ford Mustang Mach-E and Tesla Model Y do not meet the criteria for a $7500 tax credit. They are marketed and sold as "Sport Utility Vehicles," yet the 5-seat variant of the Model Y and all variants of the Mach-E are considered "other vehicles" rather than SUVs. NHTSA's website also categorizes the Tesla Model Y 5-Seat variant and Ford Mustang Mach-E as SUVs. So, on one hand the government is stating that these two vehicles are considered SUVs when they perform safety testing upon them; tests that also then determine the cost of state-mandated private insurance coverage, yet do not consider them as "EV" enough to qualify for the $7500 EV tax credit. Please explain this. Either they are Electric Vehicle SUVs and therefore qualify at the $80,000 limit, or they are 'Other' Electric Vehicles are therefore are NOT considered SUVs. NHTSA will need to retract their safety rating, retest them as sedans, and have private insurance recalculate their actuary tables. Which is it? Furthermore, the spirit of the IRA's EV tax credit should not be to give Gasoline-powered vehicle purchases any credit, yet plenty of Hybrid-powertrain vehicles qualify. Hybrid vehicles have gasoline tanks that require refined petroleum products to achieve their advertised range. These hybrid vehicles, which require gasoline, contain only a fraction of the battery capacity of 100%-battery electric vehicles, like the Tesla Model Y and Ford Mustang Mach-E. Please explain this as well. Why would a tax credit specific to Electric Vehicles provide ANY incentive for a hybrid? I don't believe this to be in the spirit of the IRA EV credit. I could put a tin-foil hat on and posit that the "American" auto industry has lobbied against including Tesla's vehicles (which, ironically, are the most American-made vehicles of 2022) and lobbied for including hybrid powertrains because the manufacturers believe they will sell more vehicles to consumers who do not wish to go all-electric but wish to cash in on a tax credit not meant for them. I will give this the benefit of the doubt, as I realize this could be a misunderstanding, and revisions to the list of applicable vehicles could be altered in the next several days. I certainly hope it is; the future of American Automobiles is Electric, whether oil-and-gas lobbyists or "Legacy" automotive manufacturers want to admit it. Since I brought up that the Tesla Model Y is the #1 American-Made Car according to cars.com<http://cars.com> (https://www.cars.com/articles/2021-cars-com-american-made-index-which-cars-are-the-most-american-437020/), I would also like to see an independent report published stating how each vehicle in the list gained status for either full or partial credit. Because taxpayer money is being used to fund this credit, it is essential to show transparency into why this credit is being given out and on what grounds it should be included and excluded during a purchase.
Charles Florence	1/4/2023 9:31	Tesla model Y should qualify for EV tax credits, the government should not be in the business of picking winners and losers. Respectfully, Charles Florence
Harrison G	1/4/2023 9:31	Dear Mr. Garcia, I am writing to express my deep concern and disappointment regarding the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure. Specifically, I object to the seemingly arbitrary exclusion of the US-manufactured Tesla Model Y from the SUV category. I understand that the purpose of this credit is to incentivize the purchase of vehicles that are environmentally friendly and promote energy independence. However, it seems that the exclusion of the Model Y from the SUV category does not align with these goals. The Model Y is a highly efficient and environmentally friendly vehicle, and it is produced by a US-based company. On the other hand, many of the vehicles that are currently eligible for the credit are largely manufactured outside of the US and have much worse environmental profiles. I urge you to reconsider the exclusion of the Model Y from the SUV category and to align the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure with the stated goals of promoting energy independence and environmental sustainability. Thank you for your attention to this matter. Harrison Gold
Q L	1/4/2023 9:31	Dear IRS, I am writing to express my concern about the Inflation Reduction Act EV and its impact on the Tesla Model Y. While the EPA and NHTSA classify the Model Y as a SUV, it is currently not being treated as such under the Act's $80,000 cap. I believe this is unfair to the taxpayers who want to purchase this vehicle, as it does not accurately reflect the true value of the Model Y. There are 2.5 millions car accidents happening every year and a lot of people die, get injured, disabled and all I want is to keep my family safe on the road. The Model Y has numerous safety features that make it highly desirable to many consumers. In fact, it recently saved the lives of a family of four when the car fell off a 250-foot cliff. This demonstrates the value and importance of this vehicle, and it should be treated as such under the Act. I urge the IRS to reconsider its classification of the Model Y and to include it under the $80,000 cap. This would be fair to the taxpayers who have invested in this vehicle and would more accurately reflect its true value. Thank you for considering my concerns. Sincerely, Levi Le

Name	DateTimeReceived	Body.TextBody
Eric Stuedemann	1/4/2023 9:32	I am writing to you to express feedback on the recent Inflation Reduction Act EV tax credit. Like many others I have issues with the eligibility of certain vehicles that qualify for this tax credit. The methodology used feels inconsistent. Why is a five seat Tesla Model Y not considered an SUV when a similar sized PHEV Ford Escape that also seats five is eligible for the SUV credit price limits? Also why adding two extra seats magically make the Model Y an SUV when it's literally the same sized car? This tax credit is designed to encourage EV ownership and it should have mechanisms to encourage pure EV purchasing vs PHEV that have extremely limited electric ranges. Please reconsider the eligibility of vehicles to make it easier to understand and fair across the board. Thank you.
beBackLater	1/4/2023 9:32	Dear IRS, I am writing to express my concern about the fairness of the Inflation Reduction Act (IRA) and its treatment of electric vehicles like Tesla's Model Y. It does not make sense that a gasoline hybrid Jeep can qualify for a tax credit under the IRA while the Model Y, which is a fully electric vehicle, does not. This seems to be a clear example of the IRA unfairly favoring traditional fossil fuel-powered vehicles over electric ones. Also, the fact that the 7 seater Model Y qualifies because it's heavier & less efficient, just shows how poorly thought out the rules for qualifying for an SUV are. The model Y needs to be ~250lb heavier to qualify, so should companies like Tesla add a few cement blocks to the bottom of the car so they qualify? Of course not but this illustrates the insanity of it all. The Model Y is a highly efficient and environmentally friendly vehicle, and it should be recognized and incentivized as such through the IRA. On the other hand, gasoline hybrid vehicles, while somewhat more efficient than traditional gasoline vehicles, still contribute to air pollution and carbon emissions. I urge the IRS to reconsider its treatment of electric vehicles in the IRA and to consider the environmental and public health benefits of promoting their adoption.I fear the U.S. is falling behind & it's partially because of silly rules like this. Thank you for considering my concerns. Sincerely, Brian Baccarella
David Schlachter	1/4/2023 9:32	Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This car is clearly an SUV, is categorized as such by the EPA, and is a highly efficient fully electric vehicle, and thus deserves the full tax credit in the
Blaze Fabry	1/4/2023 9:33	I think US taxpayers money should be spent on helping DOMESTIC companies not foreign imports. Don't subsidize foreign car manufacturers using US taxpayers dollars. Also, it's not right that a Tesla Model Y or Model 3 is not qualified. These cars are made in the USA, designed in the USA, great for the environment. Pure EVs, no carbon footprint! Please help Ford, GM and Tesla, Rivian and Lucid not VW, KIA or Hyundai. Thank you, A US Taxpayer.
Chirag Patel	1/4/2023 9:34	https://www.change.org/p/fix-the-inflation-reduction-act-ev-tax-credit?recruiter=1290758235 I understand the IRS has generally viewed GVWR as a way to delineate vehicle classes. But with the advent of EVs, the goal is to actually reduce the Vehicle Weight, which is a large part of the GVWR. Here, I think the IRS should dispense with GVWRs and consider Crossovers as SUVs similar to the list of approved vehicles like the Audi Q5 PHEV, Ford Escape Hybrid Plug-In, etc. In return, Plug-In Hybrids are not EVs. They should NOT qualify for the EV rebate. These should be Battery Electric Vehicles ONLY. Here, if the IRS wishes to use the Cubic Volume of space inside the vehicle and Occupant Load as a way to define classes, it can. IE 76.2 cubic feet of cargo space behind the front seats for the Tesla Model Y and up to 7 passengers. These should qualify as SUVs.the VW ID.4 has 64.2 cubic feet, these should qualify as an SUV. The Ford Mustang Mach-E has 59.7 cubic feet of cargo volume behind the first row. This should qualify as an SUV. The Tesla Model 3 due to its dedicated trunk is considered a Sedan and has a maximum Cargo Volume of only 22.9 cubic feet. These are limited to $55,000. Plainly speaking, if it has a hatch it's a CUV/SUV. If it has a trunk, it is a Sedan. No one cares about GVWR in a world where cars are more efficient with less weight and safer for everyone on the road in an accident with less mass. These IRS rules should incentivize the proper things, not manufacturers

W K	1/4/2023 9:37	To whoon it may concern, Why are hybrids receiving an EV tax credit that have 5 seats and similar square footage interior room and width and length as the 5 seater Tesla model Y pure EV that gets 330 miles of range at 117 mpge? Everyone knows that the model 3 is the sedan and the Model Y is the crossover SUV even the EPA. I've voted democrat my entire life but this is the final straw. I'm no longer a Democrat and won't vote for any Democrat in the future. If the Democrats actually cared about climate change and America, they'd wouldn't do everything they could to keep screwing with Tesla, the one company that has done the most to combat climate change and it's vehicles are the most American made cars. Please reverse this decision and I might reconsider not voting Republican. Or email me the reasons why. Call or mail a response please, I'm shaken and so infuriated and need a response. Very respectfully, William Kelly 19 Glenview Ln, Belfast ME 04915 (213) 261-0388
Brandon Lewis	1/4/2023 9:38	Why does adding a 3rd row of Seats to the Model Y qualify it for SUV credits? Isn't it the same car as 2 row Model Y? Is this tax bill just made to exclude most of the affordable Tesla cars? Is there a way to fix this?
Robby Donaldson	1/4/2023 9:38	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Robby Donaldson
Micah Schehl	1/4/2023 9:38	want it to qualify for tax credits. The tax credit will do much more good for everybody if it does not apply to luxury cars, such as the Tesla Model Y 5-seater. People who want to buy much more expensive cars do not need the tax credit. Elon Musk is asking his fan base to make comments in support of the tax credit applying to his company, which, is just to help himself, but the point of the tax credit is to help Earth. One adjustment compromise would be to give full tax credit at $55,000 for a 5 seater, and then linearly reduce it to $0 tax credit at around $70k. This can help motivate Tesla, and any other, luxury 5 seater EVs manufacturers to find ways to lower their price. The other adjustment compromise would be to create a formula based on msrp of car versus its efficiency, with an extra incentive for not using rare earth elements, also factoring in the expected life of the car and batteries. If a luxury car can make their car’s efficient enough to justify their high msrp, then the tax credits should apply to them. Thanks, Micah Schehl
Yun-Ta Tsai	1/4/2023 9:38	The decision of excluding Tesla Model Y Five Seater from EV tax credit seems to be arbitrary and defeat the purpose of the original IRS bill — encouraging transition to EV, supporting American job — while sending the tax payer to bail out other auto makers who makes polluted hybrids that only runs 30miles on the battery. This is not the tax credit to encourage EV competition. Frankly, it disgusted me. Please grant Tesla Model Y five seater, the most American made SUV full tax credit. Yun-Ta Tsai 124 Craig Way, Los Gatos, CA
Christopher Shea	1/4/2023 9:38	Dear IRS, I am writing to request that you reconsider the classification of the Tesla Mdel Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, Christopher Shea

Kevin Morris	1/4/2023 9:38	Dear IRA, I'm very disappointed with the way the new IRA is handled. I do not understand why or how the most built car in America, Tesla Model Y, an electric SUV, is not getting the tax credit for an SUV as a five-seater when other SUVs are as 5 seaters. It is rumored that this is due to weight, as the Telsa Y is too light. Lighter is more efficient and is better for the environment. There is no definition of an SUV that includes it must be over 6000 gross that I know of. Per IRA below you should follow the EPA which has the Y as a small SUV. Why we are subsiding less efficient cars made in Mexico more the America is truly terrible. (11) Manufacturer's suggested retail price limitation.-- ``(A) In general.--No credit shall be allowed under subsection (a) for a vehicle with a manufacturer's suggested retail price in excess of the applicable limitation. ``(B) Applicable limitation.--For purposes of subparagraph (A), the applicable limitation for each vehicle classification is as follows: ``(i) Vans.--In the case of a van, $80,000. ``(ii) Sport utility vehicles.--In the case of a sport utility vehicle, $80,000. ``(iii) Pickup trucks.--In the case of a pickup truck, $80,000. ``(iv) Other.--In the case of any other vehicle, $55,000. ``(C) <> Regulations and guidance.--For purposes of this paragraph, the Secretary shall prescribe such regulations or other guidance as the Secretary determines necessary for determining vehicle classifications using criteria similar to that
Saunak Shah	1/4/2023 9:38	Good Evening, I'm writing to get clarity on the claim that Plug in hybrids that only have 20ish electronic range are receiving the new $7500 EV credit. (I.E. Jeep). I hope this is false, but if true, I presume IRS will correct. This would be just another abuse of a tax credit if not corrected. Additionally, I understand Tesla Model Y SUV will not qualify for SUV range due to 200ish pounds lighter than guidelines (same goes for Ford Mach E). I presume this is also made an error and SUV vs Sedan classification should meet made on useful space and body type and not being more efficient with less weight. Thanks for opportunity to comment, and I hope to see corrections if above statements are accurate. Sincerely, Concerned US citizen Saunak Shah Sent from Yahoo Mail for iPhone<https://overview.mail.yahoo.com/?.src=iOS>
martin russell	1/4/2023 9:38	Fix this corruption that doesn't include the model y
Jon Swenson	1/4/2023 9:39	I just wanted to voice my concern about the way the requirements for which vehicles get classified as an SUV or a passenger car, and what cars qualify. Tesla Model Y is and SUV. I do not believe a 7 seater should be classified as an SUV and a 5 seater of the same vehicle should be classified differently. They are both SUVs and should qualify for $7500 with a vehicle cost of $80,000 or less. There are many other SUVs that only have 5 seats that are qualified if under $80,000. Many of those appear to qualify based on ground clearance??? Seems like different rules for different brands... It should be equal across the board. Also, I don't agree with all the hybrids getting the full credit. I would support a smaller credit of maybe $2000 to $3500. Vehicles getting 20 to even 60 mpg should not be getting the same or more that those getting over 100 mpge. These hybrid models also waste much needed battery resources that could be helping the USA transition faster away from fossil fuels if they were incorporated into pure EVs.
Bret Tucker	1/4/2023 9:40	I am writing as a concerned citizen to request you reconsider how the automobile qualification criteria for IRA tax credits. Of note, it is most concerning that neither the Tesla Model Y (5 seat) or Ford Mach-E SUV's are not qualified as SUV's according to the IRS specifications; while both are categorized as SUV's by the EPA and NHTSA. As frustrating as the omission of the Ford and Tesla vehicles; is the inclusion of Plug-in Hybrid Vehicles. These vehicles offer substantially less electric driven range than their Battery EV counterparts and do little to transition the public to the future of electric vehicles. This truly seems like a misplaced allocation of taxpayer funds and inconsistent with the original intent of the IRA. As a concerned citizen I urge you, at a minimum, to include the aforementioned vehicles in the list of qualified vehicles to ensure the public has all options on the table when considering the purchase of their next vehicle. Thanks Bret Tucker
Potato Peeps	1/4/2023 9:40	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. 发自我的 iPhone
Frank Hedges	1/4/2023 9:40	specifically request that an all electric SUV tesla Model Y 5 seater qualify for the tax credit. I do not want to purchase a gas vehicle and this vehicle is what I am interested in purchasing. Thank you, Frank Hedges

Name	DateTimeReceived	Body.TextBody
Duncan Aronstein	1/4/2023 9:42	E, are not qualifying due to not being considered SUVs. Moreover, something as small as opting for the third row option on a Tesla Model Y puts it in the SUV category and makes it eligible for the tax credit. I believe that these two models, which most consider small/midsize SUVs, along with other fully electric vehicles in this class, should be eligible for the tax credit up to the SUV price limit of $80,000. Fully electric cars are still quite expensive to produce and it is my understanding that this tax credit exists to help manufacturers push through the more expensive esrly stages of EV adoption. Therefore this bill should prioritize all-electric vehicles and accommodate them, within reason, as much as possible. Thanks for considering my thoughts, -Duncan Aronstein
Luis Vargas	1/4/2023 9:42	Dear Mr. Andres Garcia, I have been trying to understand the rationale behind the fact that some variants of the Ford Mustang Mach-E and the Tesla Model Y do not qualify for any incentives from the Inflation Reduction Act. As a citizen who worries about about climate change and the future of our economy, I am frankly upset to see some vehicles that use fossil fuels will benefit from the IRA, while the two I have pointed out - which are 100% electric and emissions free - will not. Please correct this evident mistake as soon as possible or enlighten me on the fundamentals behind this blatant injustice. Sincerely,
Jingying zhang	1/4/2023 9:42	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you.
Hardik Desai	1/4/2023 9:43	Hi, Ford Mach E & Tesla Model Y are two of best BEV SUV one can buy today. The way electric cars are made efficient is by reducing weight of the car. This increases the efficiency of the battery and the range. Not qualifying Ford Mach E & Tesla Model Y due to weight limit is absurd application of the IRA credits when these credits would be made available to hybrid SUV with minimal battery size which in fact pollute the air. Additionally, EPA classifies both of these cars as SUV for additional reference. Thanks, Hardik
Charles Scott	1/4/2023 9:43	The Inflation Reduction Act has a stipulation where Full Electric Vehicles and Hybrid Electric Vehicles are able to take advantage of up to $7,500 in Federal Tax Credits when purchasing these types of vehicles. This was crafted so that the US would become a powerhouse in electric vehicle manufacturing and secure a local supply chain in order to advance the advent of sustainable transport built by American workers. However, the way these rules are currently being interpreted, it has created a host of issues and incorrect incentives, both for the public and for automakers. Some automakers are being unfairly treated, while others are getting a benefit they do not deserve. Here's an example of the broken nature of this incentive in its current form: [https://change-production.s3.amazonaws.com/fe/sap-rich-media-user-uploads/2023/01/01/7030a68c-9d90-499b-a4b7-b6aa8ca7e046.jpeg] Two main issues that are causing this: * The IRS is not categorizing the Tesla Model Y as an SUV, even though the EPA and NHTSA does. This means Tesla Model Y, a pure EV with 330 mile range, 117 MPGe (very efficient), and SUV form factor is not eligible for the $7,500 tax credit. This error not only impacts Tesla but other automakers as well - Ford for example. * On the other hand as an example, you have a Jeep Grand Cherokee 4xe, with a Gas engine, getting 23 MPG (very inefficient), and 25 miles of electric range, that gets the $7,500 tax credit. Instead of funding the next generation of the American economy, tax payers are now funding old technology in large, inefficient gas vehicle auto makers. This is a gross misuse of taxpayer dollars. Proposed Solution:
Jarek Waldron	1/4/2023 9:43	As a tax payer I am not okay with subsidizing Hybrid vehicles. Hybrid vehicles should be removed from the tax credit altogether. Also, the Tesla Model Y 5 seater does not qualify. Why? Because Tesla made and efficient vehicle under 6,000lbs? The current conditions of the tax credit does not incentivize building an efficient fully electric vehicle and actually incentivizes a less efficient one.
jackwlam@gmail.com	1/4/2023 9:44	I am writing to request that you reconsider the classification of the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. The Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Model Y 5 seat option is a highly efficient fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, Jack W. Lam

Trystan Magnuson	1/4/2023 9:45	Andres Garcia, Considering the purpose of the plug-in electric vehicle credit, it seems most helpful to promote smaller, more efficient vehicles such as the Ford Mustang Mach-E and the Tesla Model Y using the credit than it does larger vehicles such as the Rivian R1S or larger 3 row SUVs. If we could use the credit to promote smaller, more aerodynamic, more efficient vehicles, this will: * Keep the average American more financially secure as less spending is directed towards energy, maintenance, and initial purchase price. * Reduce the required energy production required to live a great American life, which reduces the impact upon our natural resources as well as aiding energy security. * Promote American manufacturers to build vehicles that will be meaningful to sell overseas, thereby increasing American competitiveness and reducing the trade deficit. (Most countries overseas are not interested in larger vehicles such as the F-150 or Rivian R1S because of the cost and the size). Please reconsider what vehicles should qualify for the tax rebate to promote American security and ideals. I appreciate the time you have taken to read this note. Trystan Magnuson Engineer
Joe Q	1/4/2023 9:45	To whom it may concern: To help folks into EV's, can you please include tax breaks for those willing to invest in the future and spend more on ANY new electric vehicle? Why make it so confising and difficult. Disqualifying Model Y and Mach E doesn't make sense at all. Please review this again!!! Thank you. Joseph Q.
William Gallagher	1/4/2023 9:45	Hi – I am emailing you in regards to the EV incentives that began at the beginning of this year. As a current Tesla Model Y owner I find it unfair that other vehicles are getting a tax credit for a higher MSRP limit when all the vehicles listed below are roughly the same size. I am an EV enthusiasts and am constantly looking into all the new cars that companies are coming out with to help the world transition to clean energy. I feel this lower limits placed on Tesla is only going to hinder the transition for a clean future. I would advise the IRS to serious reevaluate their criteria in regards to setting MSRP Limits. Just based off the current limits below I would support the Tesla Model Y limits being raised to $80,000 across the board on all vehicles. [cid:image002.png@01D92013.8ACBCDA0] [cid:image003.png@01D92013.8ACBCDA0] [cid:image004.png@01D92013.8ACBCDA0] [cid:image005.png@01D92013.8ACBCDA0] [cid:image006.png@01D92013.8ACBCDA0] Will Gallagher Vice President of Construction Gallagher Asphalt Corporation www.gallagherasphalt.com<http://www.gallagherasphalt.com/> 18100 S. Brian David Bruns	1/4/2023 9:45	incentivize electric cars. Hybrids are not electric cars. When a Jeep that gets maybe twenty miles of electric propulsion gets $7500 off, but a Tesla Model Y with hundreds of miles of electric does not, something is wrong. I understand that hybrids might be included to help legacy automakers transition to all electric, and that's great, but if a car is fully electric with massive range, it should be included! I can think of no tangible reason whatsoever why a fully electric car is not included. Indeed, regarding Tesla's Model Y, many five seat options are exempt, but a seven seat option is not. This appears to be an issue regarding categories perhaps based on total weight. If so, that's a poor decision. A five seater with low range gets the incentive, but not the five seat with longer range. Yet the seven seater with whatever range gets the incentive. It's confusing and undercuts the entire purpose of the incentive. In summary, it's simple: an all electric car should get the incentive for electric cars. Brian David Bruns Bestselling Author
Jeremy Eaton	1/4/2023 9:46	Hello, Please reconsider including all Tesla Model Y vehicles as being classified as an SUV regardless of number of seats. The model Y was designed and built as an SUV version of Tesla's sedan - the Model 3. The intent of this tax incentive is to help America transition to sustainable transportation and what better way than to provide increased access to a 300+ mile, all electric, made in America vehicle such as the Model Y. Thank you, Jeremy
Steven	1/4/2023 9:46	Dear Andres Garcia, I am writing to request that the Tesla Model Y 5-seat variant be eligible for the $7,500 tax credit. As you know, there are many hybrid vehicles on the market today with barely any electric range that are eligible for a tax credit. By comparison, the Model Y is a more advanced vehicle with an electric range of up to 315 miles, and it has superior performance and safety features. It would be unjust to exclude the Model Y from receiving the same tax credit as less advanced hybrid vehicles. The Model Y is a more efficient and sustainable vehicle that would benefit from a tax credit in order to encourage more people to make the switch to electric vehicles. Thank you for your consideration. Sincerely, Steven Zvonek

jnf353@126.com	1/4/2023 9:48	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Best regards, Mingyue Mi
Michael Cooning	1/4/2023 9:49	I don't feel in it's current form it is not fair in its application of the credits. Definitely not right when a Ford Mustang Mach E and Tesla Model Y, 5 seat get no credit and Plug in hybrids like Jeep who have gas motors plus minimal battery range get the full $7500 credit. Don't think that's keeping with the intent of the IRA to encourage conversion to electric vehicles. The EPA considers both the Ford Mustang Mach E and the Tesla Model Y SUV's and therefore should come under the $80,000 cap and not $55,000. Thanks, Michael J. Cooning mcooning@gmail.com<mailto:mcooning@gmail.com> 704 608-1084
cebailey00@gmail.com	1/4/2023 9:50	To whom it may concern, I would like to point out some issues/inconsistencies with the new ERV tax credit. As it stands the price cap on SUVs incentivizes the purchase of less efficient vehicles. The price cap should not be based on vehicle class. I would suggest the credit reflect the efficiency of the vehicle, as efficiency goes up the credit increases. Additionaly the limitation of only including four wheeled vehicles is going to eliminate the most efficient car on the Planet, the Aptera. This is a car being built in the USA, by a newly formed domestic manufacturer. It would be a shame to steer someone from a solar powered EV to a Jeep with battery. Please reconsider the classification requirements and include three wheeled vehicles. Thank You Chris Bailey
Nick Kelischek	1/4/2023 9:50	The incentives for BEV's should not exclude the five seat Tesla Model Y (SUV) $80k limit or the Ford Mach E. These vehicles do more to help reduce emissions than the bloated PHEVs that DO qualify. In my opinion NONE of the PHEV's (Plug-in Hybrid) vehicles should qualify at all. Fix this. Get it
Robert	1/4/2023 9:50	First of all, wishing you all a safe and good 2023. And I'll just get to the point on OMB Control No. 1545-2137 1. Absolutely shocking that in these inflationary times these credits are given to hybrids, many of which will never be used in that hybrid mode, and will simply continue to make climate change even worse, and will simply appeal to customers to buy huge fuel inefficient SUVs, rather than pure BEVs. This is simply make inflation worse since manufactures are putting these very mild hybrids out to take advantage of this credit. This is a total giveaway to the auto industry lobby group and auto manufacturers that are not committing to BEV productions (e.g. Toyota and others). 2. If we really want to impact global warming ONLY, ABSOLUTELY ONLY, fully electric vehicles should qualify irrespective of classification - sedan, suv, pick-up, etc. Please please please. Reconsider and fix this IRA. Either take it completely away (Not a bad idea given inflation) or only offer it for pure electric vehicles that do not burn any gas. Thank you for your consideration. Sincerely, Robert Inchausti 510-384-0950
Scott Gill	1/4/2023 9:51	Please find the following feedback regarding electric vehicle tax credit qualifications: Purpose The purpose of the EV tax credit is, or should be, to expedite the transition to electric vehicles in the US. BEV vs PHEV In my opinion, these different types of vehicles should never have been lumped together in the first place. While PHEVs are still better than ICE vehicles, these vehicles only have a small portion of the battery power compared to EVs, so should also only receive a small portion of the tax credit. It is probably too late to change this now, but I think something should be implemented to where the incentives for PHEVs grows smaller over time. It is absolutely ridiculous that ANY PHEV would qualify for a credit while an EV does not... Price Caps First, I understand that it is important for the US government to make certain that the tax credit is benefitting the consumer and not lining the manufactures' pockets. However, I think the arbitrary price caps placed on vehicles for the tax credit will inhibit this bill from fulfilling its Purpose. There must be a better solution. Perhaps, to ensure that manufacturers aren't taking advantage of the credit, they should not be allowed to further raise the price of a vehicle by a certain percentage or dollar amount per year? Second, if the price caps aren't negotiable, the fact that different trims of a vehicle model are subject to different price caps is confusing and ridiculous. A consumer should not be punished for not wanting AWD (VW ID.4) or not wanting additional seats (Tesla Model Y). If you live in a hot, dry climate, having AWD makes your car less efficient, which means you would get less range. If you purchase a 7-seater car to receive credit, you are sacrificing range and trunk space, even if the seats fold down. It's the SAME vehicle! Consumers should not be punished because they prefer a certain style over another. Please make it SIMPLE. If the vehicle model is sold as an SUV, then it should receive the SUV price cap under the EV tax credit. Thank you for your time.

Dan Gallagher	1/4/2023 9:52	I am emailing you in regards to the EV incentives that began at the beginning of this year. As a current Tesla Model Y owner I find it unfair that other vehicles are getting a tax credit for a higher MSRP limit when all the vehicles listed below are roughly the same size. I am an EV enthusiasts and am constantly looking into all the new cars that companies are coming out with to help the world transition to clean energy. I feel this lower limits placed on Tesla is only going to hinder the transition for a clean future. I would advise the IRS to serious reevaluate their criteria in regards to setting MSRP Limits. Just based off the current limits below I would support the Tesla Model Y limits being raised to $80,000 across the board on all vehicles. [cid:image001.png@01D92019.DF8F1DF0] [cid:image002.png@01D92019.DF8F1DF0] [cid:image003.png@01D92019.DF8F1DF0] [cid:image004.png@01D92019.DF8F1DF0] [cid:image005.png@01D92019.DF8F1DF0] Dan Gallagher President Gallagher Asphalt Corporation 18100 South Indiana Ave. Thornton, Illinois 60476 708-799-3558 direct 708-877-7160 office Gallagher Asphalt Corporation is an Equal Opportunity Employer with core values of dedication, relationships, integrity, vision and excellence (D.R.I.V.E.)
Alexander Johnson	1/4/2023 9:53	Dear Mr. Garcia, I am writing to express my strong objection to the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure, specifically the exclusion of the US-manufactured Tesla Model Y from the SUV category. I am extremely disappointed to see that vehicles largely manufactured outside of the US (Tesla Model Y is THE MOST American car: https://www.cars.com/american-made-index/) and with much worse environmental profiles (like hybrids with 30 miles of electric range) are being allowed for this credit, while the Tesla Model Y, which is manufactured in the US and has a significantly better environmental profile, is being excluded. This seems completely arbitrary, unfair and potentially intentionally disadvantageous against Tesla for political reasons and further causes concern that 3 letter agencies are acting politically in favor of a certain political party. Otherwise how could such a completely backwards set of policies be even considered? Excluding the best selling most American vehicle must have some other really good reason I'm just not seeing. I urge the IRS to reconsider this decision and include the Tesla Model Y in the SUV category for the Qualified Plug-in Electric Drive Motor Vehicle Credit. As a taxpayer, retired veteran, and a concerned citizen, I strongly believe that we should be supporting and incentivizing the production of environmentally-friendly vehicles, especially those made in the US. Sincerely, Alexander Johnson
Miles Wilkins	1/4/2023 9:53	Hello, I am writing you to let you know that I strongly disagree on your classification of the Tesla model Y in the Inflation Reduction Act. Vehicles that still use fossil fuels are receiving a much higher EV tax credit than Tesla vehicles that are 100% electric. I am in full disagreement of the current standing of this act and would like to see it changed to a more balanced approach where 100% electric cars receive a higher EV tax credit then the vehicle that still use partial fossil fuel. Thank you,
Matt Hallett	1/4/2023 9:53	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery is (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future. Sincerely, Matt Hallett Matthallett@gmail.com<mailto:Matthallett@gmail.com> 206-349-6288 -- Thanks,

Ajay Nagdev	1/4/2023 9:54	IRS - I am writing this email to express my desire to have the base Tesla Model Y included as part of the SUV $7,500 credit. I am a long time full EV driver, I believe this is the future of transportation. I have been waiting over a year to purchase the model Y given the anticipation of the $7,500 credit. I don't believe in hybrid vehicles and giving credit to hybrids seems odd and against what the incentive is for. A 7 seater Tesla wouldn't make practical sense. It seems as though Tesla is being punished for making their Model Y more mass efficient. Tesla has the best technology out there, I would appreciate the IRS to reconsider the Tesla Model Y in the $80,000 cap so we can continue to create a better environment for our future. Thank You
miranda steinhauser	1/4/2023 9:55	Dear Mr. Garcia, I am writing to voice my objection to the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure, specifically the exclusion of the US-manufactured Tesla Model Y from the SUV category. I am a vehicle designer for General Motors and the list of some of these vehicles compared to those that are excluded is simply ridiculous. The SUV qualifications in general I find are absurd and arbitrary. I am very concerned to see that vehicles largely manufactured outside of the US and and even hybrid vehicles that offer nearly no EV range such as the Wrangler plug-in hybrid (which gets barely 20 miles of EV range and only in the best case weather and driving conditions) are being allowed for this full credit, while the Tesla Model Y, which is manufactured in the US and is one of the most energy efficient vehicles ever made, is being excluded. This seems like a completely arbitrary and unfair choice. I urge the IRS to reconsider this decision and include the Tesla Model Y in the SUV category for the Qualified Plug-in Electric Drive Motor Vehicle Credit. As a taxpayer and a concerned citizen, I strongly believe that we should be supporting and incentivizing the production of environmentally-friendly vehicles, especially those made in the US. Sincerely, Miranda Suman (Steinhauser) miranda.s@me.com | Detroit, MI
Tom Fabbricante	1/4/2023 9:55	The tax credit limit for the Tesla Model Y 5 seat should be raised to the $80,000 value. The car is the same except for the seats and it's more efficient. The current limit seems like a hack job against Tesla; the most American made car manufacturer, and the leader in moving the industry to a more sustainable future.
Ryan Metcalf	1/4/2023 9:55	Dear IRS, Please reconsider the application of credits for EV's. As they stand, people are already planning to get around the inconsistent application of credits on the Model Y by ordering the 7-seat Model Y, even though they want the lighter, more efficient 5-seat. This will only result in making less efficient EVs that cost the consumer more and slow the adoption of moving to sustainable energy. Sincerely, Ryan
Ladinu Chandrasinghe	1/4/2023 9:56	Hello, I'm writing this email because the incentives offered to hybrid vehicles by the Inflation reduction act (IRA) is complete nonsense. Hybrids are like a CD player with an mp3 player. Why not just have an mp3 player? Please offer the $7.5k credit to all fully electric vehicles including all variants of Tesla Model Y and Ford Mustang MachE. Thanks, Ladinu
Amable Colon	1/4/2023 9:57	To whom it may concern. I recently learned that the new tax incentive bill for electric vehicles includes plug-in hybrids while excluding pure battery electric vehicles. It is my understanding that a Jeep Wrangler that gets 22mpg while a battery only SUV like the Tesla Model Y which gets over 300 miles of rated range is excluded. The Model Y is bigger, heavier, and more spacious than other vehicles considered an SUV by the IRA. According to several regulatory agencies, the Tesla Model Y is a SUV in both the 5 seat and 7 seat configuration and this is the most popular electric vehicle in the world. The incentives should be directed to promote the transition to electric vehicles. Taxpayer money should be allocated in this case to promote the transition to EVs and not to be used on vehicles with gasoline/diesel engines. The IRS should ensure that the tax credit is fairly applied to all electric vehicles including the Tesla Model Y which is a SUV. Sincerely, Amable Colon
Steve Lane	1/4/2023 9:57	Please include the Model Y as a car that warrants the $7500 subsidy. Thanks, Steve Sent from my iPad

Name	DateTimeReceived	Body.TextBody
Matthew Hoover	1/4/2023 9:57	Please consider adding all variants of the Tesla Model Y to the $80,000 MSRP limit for the EV tax credit. It makes no sense that a gasoline burning, Hybrid Jeep qualifies for the $7,500 credit when a fully electric, 113+ MPGe Tesla Model Y does not. Please raise the MSRP limit for all Tesla Model Y's to the $80,000 MSRP limit. Thank you, Matthew Hoover
Chris Johnson	1/4/2023 9:59	Dear IRS, I'm frankly embarrassed and quite upset at my own government at how they have handled the new IRA EV rebate. The current list of vehicles includes many plug-in hybrid vehicles that have less than 30 miles of all electric range, at a price cap of 80K, while setting the price cap at 55K for the Tesla Model Y 5 seat configurations. The Model Y 7 seat configs have the 80K price cap though. It's ridiculous that one set of very small seats is what is differentiating between the 55K and 80K price limits. Those plug-in hybrids will do next to nothing to help with climate change and pollution, while ALL Teslas are having a HUGE impact on those things. So, incentivizing people to buy a 20-30 mile PHV vs an all-electric 300+ mile vehicle is embarrassing, a waste of money and just makes zero sense at all. The qualifications should strictly come down to the environmental impact of the vehicle, period. There should be no price caps at all, which would then allow ALL Tesla vehicles to be included. A price cap makes no sense if we are truly trying to get polluting cars off the road. If that's the goal (which it should be), then any full EV you want to buy should be included, regardless of price. Why should a person that wants, and can afford to, buy a $100K EV not get the credit?!?!?!?!? That is asinine. Who cares how much the car costs? Just because that person might be able to afford a more expensive car doesn't make them less deserving of a rebate. That's just ridiculous. That person works just as hard, and maybe harder, for their money. Why shouldn't they get a rebate too???? Also, if the only criteria was environmental impact, then PHV's or any hybrids should get next to no rebate. They still have a gas engine and far too short of all-electric range to many any meaningful difference. Please revisit this total travesty of justice, common sense and lack of regard for the real goal here.
Bert Hess	1/4/2023 9:59	I vote yes. On Tue, Jan 3, 2023 at 8:48 PM Robert F <rsfdmd@gmail.com<mailto:rsfdmd@gmail.com>> wrote: I'm writing to request a review of the Model Y 5 seat configuration to be evaluated as an SUV the same as the 7 seat version to be eligible for the $7500 credit. Having minimum criteria for an electric SUV based on the weight and ride height of the vehicle is the opposite of an optimized fully electric vehicle. Reducing the ride height and lowering the weight of a vehicle increases the range, especially at highway speeds. Range is a key metric for purchasing an EV. More EV's can be produced using the same quantity of battery cells if they are lower to the ground and weigh less. Currently and for the transition period to 100% EV's, the limiting factor on their production is the availability of battery cells. The intention of this bill is to support the EV transition and in that spirit I ask that for fully electric vehicles for the ride height and weight limits be removed for the criteria of determining an SUV with respect to this credit. Thank you, Dr Robert Fridlind
Paul Danek	1/4/2023 9:59	interests and livelihood. Thank you. Pavel Danek.
Nathan Blaine	1/4/2023 9:59	manufacturing especially when not under the bondage of a suffocating labor union. Labor unions are easy on company management and hard on high performing employees, and in the end make work less productive without benefit to anyone. I prefer maximum choice/liberty and employees at Tesla have that. Please support them by classifying every type of Model Y as an SUV as they should be. This would make the full $7500 credit available to all Model Y's. From a fuel transition perspective a 20 mile range Jeep Wrangler (20MPG after initial EV range) gets the full credit while a 330 mile range Tesla Model Y gets no tax credit. The Model Y classifications goes against the intention and wording of the Inflation Reduction Act and appears to be an illegal use of the funds in the bill. Please reconsider and classify all Model Y configurations as a SUV. Thanks, Nathan Blaine 162 E Fish Hatchery Rd Mantua, UT 84324 Cell: 435-740-0025
Brad Graff	1/4/2023 10:00	my wife and I have been looking at EVs for 2 years... After the IRA, we planned to buy in early 2023. The IRS had made a huge mess of the deductions (which we need in order to afford the vehicle). 1) the battery requirements are a mess. Delaying until March, but not saying officially that the Bolt EUV DOES qualify (at least for now) is a hassle 2) manufacturing in the US doesn't allow great EVs like the Hyundai Ioniq 5 to qualify... WHAT???? 3) the $55k cap for the Mach E even though it is an SUV is crazy. seriously, to understand the rules and what qualifies and doesnt requires a PHD. Brad Graff 13610 NW Skyline Blvd Portland OR 97231 2532193420

Michael Grenier	1/4/2023 10:00	Please explain exactly how Tesla model Y is not recieving an EV tax credit while other carbon producing hybrids do. This does not compute for me. Respectfully, Michael Grenier
Nils Hayat	1/4/2023 10:01	Hello, I wanted to let you know that Tesla model Y 5 seater should really be included! It's really silly that it isn't. Thank you -- Nils Hayat Sent from my iPhone
david.cawley@cawleyconsulting.co	1/4/2023 10:02	I agree that Tesla Model Y is not an SUV. It does not deserve any special treatment and higher price limit. If Tesla wants to qualify for these, they need to lower prices. We have Chevrolet building fully EV cars that easily meet the limits, plus the Jeep that people are complaining about in comparison to the Model Y will often be just as beneficial for the environment due to so many people driving short trips. Also, this will get a demographic who may be resistant to EV's into them. Great Work IRS, keep it up! Thank you, David Cawley
STEPHEN WEBER	1/4/2023 10:02	Dear Sir, I am shocked and dismayed that the Tesla model y five seat variation does not qualify as an SUV, but the seven seat variation does qualify. I have been waiting for 2023 and the $7,500 tax credit to do my part to help our country battle climate change, but the government is actually discouraging people from buying an ev. I hope the government re-thinks this classification. I will be needing a new car in 2023, but can't afford the ev I want without the tax incentive. Unfortunately, I will be forced to buy an affordable ICE car which will not help the environment. If the government really wants to help the environment, it will not eliminate the best selling ev from a tax break. Sincerely, Stephen Weber
Jeff Campbell	1/4/2023 10:03	I am writing to formally complain about the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure. Specifically, I am concerned about the exclusion of the US-manufactured Tesla Model Y from the SUV category. I find it unacceptable that vehicles largely manufactured outside of the US and with much worse environmental profiles are being allowed in this category, while the Model Y is being excluded. This seems to be a completely arbitrary decision, and I strongly object to it. I urge the IRS to reconsider this decision and to include the Model Y in the SUV category. The exclusion of this vehicle is not in line with the stated goals of the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure, which is supposed to incentivize the use of environmentally friendly vehicles. Thank you for your attention to this matter. Sincerely, Jeff Campbell
David Ng	1/4/2023 10:04	Hi, nobody seems to understand why certain vehicles like the Tesla model Y does not fall into the SUV category like other vehicles. This vehicle is more energy efficient than many of the other vehicles that qualify including the hybrid vehicles. Please consider changing the guidelines to include popular and efficient electric vehicles and make the guidelines more clear. It seems like nobody understand why some cars are accepted and some aren't.
Robert	1/4/2023 10:04	Please consider the Tesla Model Y 5 seater version to be included in the $7500 tax credit. Sincerely, Robert Drummond

Name	DateTimeReceived	Body.TextBody
Jakob Berzins	1/4/2023 10:04	Dear IRS, I am writing to bring to your attention an issue with the recent announcement of the vehicles that qualify for the 2023 EV tax credit. Specifically, it appears that the Tesla Model Y five-seat variants have been excluded from the credit due to their MSRP exceeding the $55,000 threshold, despite being classified as an SUV by the Environmental Protection Agency. I understand that the IRS has established certain criteria for determining which vehicles are eligible for the credit, including a maximum MSRP limit. However, I believe it is unfair to exclude the Model Y five-seat variants from the credit simply because they exceed this threshold, especially given that the seven-seat varieties of the Model Y are included. I urge the IRS to reconsider this decision and to consider the Model Y five-seat variants for the EV tax credit. As a pure EV with a range of 330 miles and high fuel efficiency, the Model Y meets many of the criteria for the credit and should not be unfairly excluded simply due to its MSRP. Thank you for your attention to this matter. Sincerely, Jakob Berzins
RW German	1/4/2023 10:05	Dear IRS I am writing to express my strong opposition to the Inflation Reduction Act's classification of the Tesla Model Y 5-seater as not being a SUV. Who on earth would say such a thing? Seriously. The NHTSA says it is a SUV! Meanwhile, such crap hybrids as the Jeep Wrangler qualify, despite it only getting 22 miles of electric range. This insanity is going to harm humanity for generations. I don't want MY tax dollars subsidizing such corruption! Sincerely, Robert German Fountain, CO
Chris Rogers	1/4/2023 10:05	With regard to the 2023 EV incentives, The IRS needs to take a serious look at how the incentives were structured and whether the incentives are designed to actually meet the goals of the incentive, which is to transition people away from gasoline vehicles. Plug in hybrids are not a solution to the problem and thus should not be getting favored status on these incentives. The fact that a Tesla Model Y is not eligible for the EV credit when it is one of the most capable, safe, and reliable vehicles on the road today is ludicrous, particularly when the Jeep Wrangler hybrid does qualify. Please take a moment and re-evaluate the qualifications for the EV incentive such that the fully electric EVs all get the incentive. Chris Rogers All communications are considered confidential and are not to be forwarded without the express consent of Chris Rogers.
Drew Reger	1/4/2023 10:05	American made SUV It should be classified as an SUV because it is an SUV and should qualify for the tax credit. Thank you, Drew Reger
John Clark	1/4/2023 10:06	I recommend you do not discriminate between a model Tesla Y seven seater and model Y five seater. They are both SUV's except my five seater allows me to sleep in the back and transport more stuff when in camping mode John Clark 918 787 6694
Jaimin Patel	1/4/2023 10:07	Dear IRA officer, With due respect, I would like to suggest that the Tesla Model 5 should be included as SUV and should have a cap of 80000 so that it is eligible for the EV tax credit. I believe it is the most American made SUV and it is silly that the other Hybrid cars are getting such credits while the full electric car have a cap of 55000. Please put aside what you hear in media and do the right thing!
Christos Patriotis	1/4/2023 10:07	Dear IRS, I am writing to request that you consider the classification of the Tesla Model Y 5 seat option as an SUV for the IRS tax credit cap of $80,000. The Tesla Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Tesla Model Y 5 seat option is a highly efficient, fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Tesla Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely, Christos Patriotis

Name	DateTimeReceived	Body.TextBody
jian peng	1/4/2023 10:08	Dear IRS, I have followed IRS' recent Please include all trims of Tesla Model Y 5-seaters in the SUV category with a 80k price cap not $55k. It does not make sense to deviate the common-sense definition of an SUV, which should be unrelated to whether they are 5-seater or 7-seater. I have been planning to buy a 5-seat Tesla Y and this impacts my plan, and it is not reasonable. Please reconsider. Thank you. -Jian
Daniel Basch	1/4/2023 10:08	I hope you consider changing the EV tax credit to include Tesla Model Y five seater. I was hoping to purchase one for my family this year, with the vehicles high safety scores being of utmost importance for me as I consider a vehicle for my family. Thank you. Best, Daniel
vishal rana	1/4/2023 10:11	I am writing to strongly request that the EV tax credit be extended to all Tesla Model Y models. As you may know, the federal government offers a tax credit for certain electric vehicles that are purchased new. The credit amount is based on the size of the vehicle's battery pack and the vehicle's manufacturer. Per this rule, some vehicles are currently eligible for a tax credit of up to $7,500. However, this credit is subject to certain restrictions and limitations, such as the requirement that the vehicle be purchased for use in the United States. Additionally, the credit begins to phase out for a particular manufacturer once that manufacturer has sold a certain number of qualifying vehicles. I believe that it is important for the government to encourage the adoption of electric vehicles, which have many benefits for the environment and for public health. Also, there are other cars like wrangler 4xe that quality over a Tesla model Y simply because they are over a certain weight threshold, despite having a much lower mpge. Tesla model Y is the most American-made car you can buy. The US says it's NOT eligible for the $7,500 EV Tax Credit. Extending the EV tax credit to all Tesla Model Y models would be an important step in this direction, and I hope that you will consider this request seriously. Tesla has single handidly transited the EV landscape around the world and for US to be a global auto leader, it is important to encourage the manufacturers and models that are most safe and 'fuel' efficient. Helping lower the cost would encourage more widespread EV adoption and establishe USA's leadership in the world market. Thank you for your attention to this matter. Sincerely,
James cai	1/4/2023 10:12	Dear IRS, Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. James
Vidya Sagar Avadutala	1/4/2023 10:12	After going though the qualified vehicles list of 2023 EV tax credit. I found that some of the ALL electric vehicles such as Ford Mustang Mach-E and Tesla Model Y 5 seat configurations are not eligible for this tax credit and some of the hybrid vehicles which uses internal combustion engine such as Jeep Wrangler qualifies for the credit. If the whole idea of EV tax credits is to encourage customers to buy EVs and reduce dependence of the gas and help environment then why this discrepancy in the bill that excludes some of the best selling EVs in North American market? I strongly recommend IRA to amend/update the vehicle list to make the spending of tax payers money in a meaningful way. Thank you Vidya Sagar Avadutala USA tax payer EV vehicle owner Green future believer

Kevin Li	1/4/2023 10:14	IRS, Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. The main goal of the bill is to use tax payers's money to accelerate EV adoption and buildup leading position of USEV manufacturing to help climate change. That said, here are myconcerns and disappointments about the bill: 1. Hybrids are qualified for $7500. I believe not a single one of them should because they do very little if any for the goal. 2. All Tesla Model Y should qualify for $7500 because all Model Y are the same size. It is absurd that Model Y 7 seaters are qualified but not others. I have a strongfeeling that this is accurately targeting Tesla driven heavily by OEMs' influences, because Model Y is the best selling modeland is the biggest threat to OEMs. 3. Tesla is the best EV company in the world hands down. US gov should be proud of Tesla. Tesla deserved to be treated correctly. I strongly request IRS to amend the OMB Control No. 1545-2137<tel:1545-2137> including all model Y trims. Best Regard,
Tom O'Dea	1/4/2023 10:16	It’s inexcusable that the new tax credit gives $7,500 for a vehicle like the Jeep Cherokee 4xe and not the Tesla Model Y or Mustang Mach-E. These vehicles are SUVs! The main thing people define a SUV by is their utility aspect. The Model Y actually has 100 liters more cargo space than the Cherokee 4xe. Model Y also has an efficiency of 115 MPGe versus 56 MPGe for the Cherokee 4xe. It makes no sense that the Tesla Y doesn’t get access to the credit but the Jeep does. Tom
Aaron Walker	1/4/2023 10:16	To Whom It May Concern: The price limit caps currently proposed in the IRS guidelines inadvertently disqualify versions of different vehicles that would otherwise make sense to incentivize through this program. The Mach-E is one such example where by ordering one with a longer range battery will exclude it based on the 55k limit. If in fact it does not get categorized as an SUV. Why disincentivize on this manner? It doesn’t make sense to those pursuing EVs as a viable alternative to ICE vehicles. Please consider revising these rules in a way that clearly moves the needle on consumer behavior. Right now it’s just confusing and makes a fragile market even more uncertain. Thanks,
A.J. Spaudie	1/4/2023 10:17	And denying a fully electric model Y? You guys are a bunch of total dipshits. Or you just hate musk so much you're shamelessly abusing your power. Only fully electric vehicles should get tax credits. Andrew Spaudie

Name	DateTimeReceived	Body.TextBody
Hitesh Kapupara, MD	1/4/2023 10:17	If my tax money will be used on EV tax credit - then please don't waste on low mpg hybrid cars - if won't give it to 100 % EV model Y with very high mpg. I don't support it as it's not fair and waste. Thank you Dr Hitesh Kapupara Florida Kidney Physicians llc https://www.FLKidney.com<https://www.flkidney.com/> _____ STATEMENT OF CONFIDENTIALITY: The information contained in this electronic message and any attachments to this message are intended for the exclusive use of the addressee(s) and may contain proprietary, confidential or privileged information. Marko Nikolic	1/4/2023 10:17	Hello, I think the Tesla Model Y 5 seater should be included as part of the EV tax credit. The government continues to favor these legacy auto makers and gives credit to vehicles that are hybrids and barely do anything to move the US to a more sustainable future. Any vehicle still using fossil fuels should be cut from this credit, plain and simple. I don't want my tax dollars propping up these types of vehicles and companies. I implore you to stop incentivizing companies to do the bare minimum by putting a tiny electric engine on these cars to qualify for a credit when they're almost entirely powered by a fossil fuel engine. These companies need to adapt or die, stop using our money to prop them up. Thank you, Marko Nikolic (760) 272-5094
Michele Clark	1/4/2023 10:17	To whom it may concern, I wanted to express my concern for the way the EV Tax credits have been allocated. There are several vehicles on the list that are plug in hybrids that have very limited all electric range and combined MPG that is very poor compred to the pure EV cars on the list. These vehicles for one still get a full $7500 tax credit where some EV's don't get any. The Ford Mustang Mach e doesn't qualify as a SUV and as such is limited to the $55k price cap of a sedan. It is listed as a SUV on the NITSA website and I'm wondering why a VW ID4 meets the SUV requirement and a $80k price cap and the Mach e does not? Also the Tesla Model Y with 7 seats is an SUV ($80k cap) and the 5 seat Model Y isn't an SUV ($55k cap). Please consider adjusting the credits to apply especially to pure EVs since this was the original reason for the credit and will furthur drive change away from fossil fuels. Sincerely, Bryan Tyler Clark
Riley Ellis	1/4/2023 10:19	I'm writing because the ev tax credit doesn't seem to make sense. I was interested in getting a Tesla model Y but it doesn't qualify for some reason although the 7 seat version does. I see many other "EVs" which apparently is a lose term, that have the full tax credit available despite being terribly inefficient. Please fix this. Riley
Jonathan Riddle	1/4/2023 10:19	I'm writing to comment on the electric vehicle tax credit qualifications included in the Inflation Reduction Act. - It seems extremely unfair that the 5 seat Tesla Model Y isn't classified as an SUV when consumers (esp. families) choose to purchase it because of its classification as an SUV. We aren't choosing it over a model 3 or another sedan or compact car. - Weight doesn't seem to be a fair way to assess whether or not a vehicle is an SUV. - The 5 seat and the 7 seat model Y are the same size vehicle. How can one be classified as an SUV and the other not? - Shouldn't the qualifications be incentivizing greater fuel efficiency? The 5 seater Model Y is arguably one of the most fuel efficient vehicles on the planet yet is getting zero support. - Other automobiles that aren't even manufactured in the USA qualify when the 5 seat Model Y is manufactured in the states The reasons above and many more obvious reasons make this seem like an extremely unfair and either poorly thought out incentive or simply unfair treatment of Tesla which is simply wrong. Thank you. My wife, son and I would love to move to transition to an EV, but this is the only vehicle we're willing to transition to. Please focus on incentivising the right things (long term fuel efficiency) and being fair to all. Jonathan Riddle (616) 219-4451 riddlej3@gmail.com<mailto:riddlej3@gmail.com>
Peter Habein	1/4/2023 10:19	Please accept these two, brief comments: 1. The distinction between "sedan" and "SUV" is increasingly arbitrary and meaningless one, given the (a) concerted efforts of car designers to blur the distinction while riding the unmistakable market trend toward SUV's and (b) the entirely proper policy objective of "nudging" adoption of more efficient hybrid and BEV vehicles. Indeed, if efficiency were as it should be the principal objective, the proposed tax credit price caps ought to be reversed to favor "sedans" over inherently less efficient (because of size and weight) SUV's. The next best approach would be to eliminate the sedan/SUV distinction altogether and adopt a single cap of $70,000.00 . 2. If there must be a distinction between sedans and SUV's based on arbitrary characteristics that might be said to distinguish them, then the two that stand out in combination, despite the efforts of designers to blur the categories, are (a) the higher SUV seating position commonly measured at the driver's hip and called the "h point" and (b) the rear "hatch" or "lift gate" as opposed to a "trunk lid." Thank you.

MCCORMICK Tommy	1/4/2023 10:20	My understanding is this EV tax credit incentive was to speed the transition of the USA to renewable energy and promote manufacturing of EVs and batteries in the USA. There is no auto manufacturer that has done this more than Tesla. Tesla is by far the most American made when it comes to EVs and batteries and now we find out Tesla's most popular EV SUV the Model Y Long Range 5 seat does not qualify and the Model Y Long Range 7 seat does qualify. It is the exact same vehicle with two extra seats! This makes absolutely no sense. It would appear the guidelines were written in such a way as to specifically hurt Tesla and help other legacy auto manufacturers. Hopefully that is not the case and is instead an oversight that can be corrected. We purchased the Model Y Long Range 5 seat in November which had been on order since April so we will not benefit from the tax credit, but we do feel moving to renewable energy and transitioning to EVs is very important for the USA and for the world. Please do the right thing and rectify this blatant inconsistency in the IRA EV tax incentive. Thank you, Tommy McCormick 2348 Carouth Ct. Nolensville, TN 37135 Cell: 615.406.1755
Claudine D	1/4/2023 10:21	To whom it may concern: Please reconsider including Tesla's Model Y (5 passenger) SUV in the $7500 tax credit. Greatly appreciate your time and effort in this matter. Best regards, Claudine Drummond
Sul	1/4/2023 10:21	Please add the Tesla model Y to the list of federal tax credits. Please remove any and all hybrid models. The planet is on fire and more gas is more fire plain and simple. I use 7 solar panels to push my EV 12k miles each year. Thank you Corey Sullivan Sent from my iPhone
Jeff Knipe	1/4/2023 10:22	Jeffrey D. Knipe 407-257-3438 Begin forwarded message: From: Jeff Knipe <jdknipe@gmail.com> Date: January 3, 2023 at 7:58:52 PM EST To: pra.comments@irs.gov Subject: OMB Control Number 1545 - 2137 Please see below, which is an excusable to not have the Tesla model Y for the EV credit of $7500. This shows an obvious bias against Tesla by the government. [image0.jpeg] Jeffrey D. Knipe 407-257-3438
Feng Huang	1/4/2023 10:22	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Sent from my iPhone
Travis Gibson	1/4/2023 10:23	IRS representative, We were waiting for the EV Tax credit to purchase a Tesla Model Y. I feel it is definitely unfair that the Model Y does not qualify for tax credit. If the idea is to increase the amount of EVs and reduce the carbon emission then please reconsider this discussion. Regards, Travis Gibson 916-538-2216

Name	DateTimeReceived	Body.TextBody
Brian Banko	1/4/2023 10:23	RE: Request for change to the MSRP limits on the Tesla Model Y 5 seat variant Under the current Credits for New Clean Vehicles Purchased in 2023 or After the program, there is an inconsistency that I am requesting reconsideration and change. The stated MSRP is stated for the below Tesla models are set at $55,000: * Tesla Model Y All-Wheel Drive - 5 seat variant (2-rows) * Tesla Model Y Long Range - 5 seat variant (2-rows) * Tesla Model Y Performance - 5 seat variant (2-rows) These models are 100% electric with ranges in excess of 300 miles. However, they are assigned the same lower MSRP as much smaller, less efficient, and far less environmentally friendly models from other manufacturers. Additionally, Tesla is made in the U.S.A. with additional safety and other significant consumer benefits. The inconsistency is when compared to models from other manufacturers that are not 100% electric -- i.e. Hybrids; and, models with much shorter ranges are offered the higher MSRP limit of $80,000. Some of these models include: * Ford Escape Plug-In Hybrid -- 5 seat variant (2-rows) - 37 mile EV range * Volkswagen ID.4 AWD Pro -- 5 seat variant (2-rows) - 275 mile EV range * Volkswagen ID.4 AWD Pro S -- 5 seat variant (2-rows) - 275 mile EV range Please change the MSRP on the above-listed Tesla Model Y 5-seat variants to $80,000 from $55,000. Thank you.
radka stoyanova	1/4/2023 10:23	Dear IRS, I am writing to request that you consider the classification of the Tesla Model Y 5 seat option as an SUV for the IRS tax credit cap of $80,000. The Tesla Model Y 5 seat option meets all the criteria to be considered an SUV. It is clearly an SUV, as it has the size and functionality of a traditional SUV, and is also categorized as such by the Environmental Protection Agency (EPA). Furthermore, the Tesla Model Y 5 seat option is a highly efficient, fully electric vehicle, which aligns with the IRS's goal of promoting the use of cleaner and more sustainable transportation options. As such, I believe that it deserves the full tax credit available to SUVs. I hope that you will take my request into consideration and reconsider the classification of the Tesla Model Y 5 seat option as an SUV. Thank you for your time and consideration. Sincerely,
Nathan Brown	1/4/2023 10:23	To Whom It May Concern, I do not understand the logic behind the categories assigned to vehicles for the implementation of the Qualified Plug-in Electric Vehicle Credit. I cannot fathom why a Model Y, regardless of the number of installed seats, does not fall under the SUV category while a Ford Escape Hybrid that only has seating for 5 and has a much lower gross vehicle weight qualifies as an SUV. The distinction between some of these vehicle categories seems completely arbitrary. In fact, it feels like they were mostly designed around which automaker lobbied the most for inclusion rather than any actual metric. Please publish the exact metrics that are used to classify each vehicle and how the IRS arrived at that decision. Nathan Brown zybron@gmail.com<mailto:zybron@gmail.com>
bao nguyen	1/4/2023 10:24	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). As a consumer interested in purchasing a clean energy vehicle, I am frustrated that this vehicle is not classified as a SUV and therefore not eligible for the $80k limit. Furthermore, I am shocked to learn that a hybrid Ford Escape PHEV and Jeep PHEV with a tiny battery (21mi electric range) are eligible for the full $7.5k credit. This seems to be a clear example of special interests and political motivation at play, as it appears that the UAW and legacy auto lobby may have had a hand in writing these rules. The spirit of the law was meant to promote the adoption of clean energy vehicles by making them more affordable for consumers. Allowing foreign-made EVs on lease to receive this credit goes against this goal, as it does not support American-made EVs and does not incentivize consumers to purchase domestic products. I strongly urge the IRS to reconsider these rules and classify the Tesla Model Y (5 seat version) as a SUV, as well as reevaluate the eligibility for credits for foreign-made EVs on lease. It is important to support the adoption of clean energy vehicles and American-made products in order to create a more sustainable future.

Joseph Benzschawel	1/4/2023 10:24	To Whom it May Concern: I am writing to express my concern regarding what appears to be the inconsistent manner in which the vehicle qualifications are being created for the qualified plug-in electric vehicle credit (OMB Control No. 1545-2137). It appears that an oversight has been made in which some vehicles are being classified as an SUV and others are not. I would encourage you to look at these and consistently apply the classifications created by government agencies that govern vehicle regulations such as NHTSA and the EPA. It is truly disheartening to see politics being played with a tax credit designed to spur American innovation and manufacturing. Especially, when it is being misapplied against a manufacturer who has the most American made vehicles and the majority of the benefits of this tax credit will stay in the United States. I would encourage the IRS to follow the government agencies whose job it is to govern auto manufacturers and not enact new classifications for the sake of politics. Thanks,
Michael Mallner	1/4/2023 10:24	Hello, "Proposed Collection; Requesting Comments on Form 8936, Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure 2022-42" excludes the Tesla Model Y. This seems like an oversight given that the intention of the rule is to encourage the public to adopt electric vehicles, and many similar vehicles, such as the Jeep Cherokee, that are included. Please modify the rule to include the Tesla Model Y. Thank you, Michael Mallner
Jay Van Sciver	1/4/2023 10:26	The Federal Government should subsidize new car purchases, EV or other ones, but the income, type, and price limits are good. Exclusion of subsidies for hatchbacks pretending to be SUVs are an excellent limitation – a Mach E is NOT an offroad vehicle. Jay Van Sciver HEDGEYE RISK MANAGEMENT 1 High Ridge Park Stamford, CT 06905 (O) 203-562-6500<tel:203-562-6500> www.hedgeye.com<http://www.hedgeye.com/> www.twitter.com/hedgeye<http://www.twitter.com/hedgeye> www.youtube.com/hedgeye<http://www.youtube.com/hedgeye> This electronic mail transmission contains confidential information intended only for the person(s) named and may contain, or provide via attachment, Hedgeye intellectual property that is protected by U.S. and foreign copyright laws. Jakub Bortel	1/4/2023 10:27	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the fully electric Tesla Model Y (5 seat version). Best regards Jakub Bortel
Ralph Pearlman	1/4/2023 10:27	The Model Y 5 seater has opened to EV market to SUV buyers like me. It’s a fabulous SUV. It should receive the full EV tax credit in the Inflation Reduction Act. Politics should not punish Tesla. Yours, Ralph D Pearlman, MD Detroit, Mi Sent from my iPhone
Bruce Hammon	1/4/2023 10:27	Dear IRS, I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version).

Name	DateTimeReceived	Body.TextBody
Anas Patel	1/4/2023 10:28	Hello, I'm writing this email to ask that you reconsider including the 5 seater Tesla Model Y for the 7500 tax credit. I don't think it makes sense to exclude it. 1. It goes against the overall goal of promoting adoption of EVs. 2. Somehow a 20mpg Jeep SUV with smaller cargo space (than the Model Y) is included. 3. Tesla is the most American made car. It should be rewarded for that. I want to buy domestic. Please, please reconsider as I am holding my order until I know I'll get this credit. --Anas
Derrel Shaffer	1/4/2023 10:30	Dear Sir, I'm sending this email to encourage a review and modify the requirements to qualify as an SUV in the new US Federal EV Incentive Program Vehicle Classification. FYI - I already own a 2022 Tesla Model Y, so I will not benefit from this program. I am honestly bewildered why the Tesla Model Y and Ford Mustang Mach-E are not currently classified as SUVs? Both vehicles, in every way, are considered to be SUVs in the market and are sold that way by the manufacturers. The additional confusing thing is if a customer adds a 3rd-row seat to a Tesla Model Y purchase, it then moves to be classified as an SUV. This makes me assume that adding additional weight, making the vehicle less energy efficient, is one of the determining factors, which makes absolutely no sense. I would encourage the IRS to reevaluate the current vehicle classification type criteria and correct the program criteria to recognize both these vehicles, among others that fall into similar circumstances, to SUV status in the new US clean energy incentive program. Sincerely, Derrel Shaffer Pelham, Alabama, US.
Ben G	1/4/2023 10:32	Dear IRS, Please reconsider classifying the Tesla Model Y 5 seat option as an SUV for the IRA tax credit cap of $80,000. This vehicle is clearly an SUV, and is a highly efficient fully electric vehicle. Thanks, Ben Green
Kiz McLeod	1/4/2023 10:34	You need to review your processes. Several times Tesla is left of the qualified list for things like not weighing enough (SUV). Because a vehicles is weight efficient shouldn't disqualify it from the incentives. vehicles with all electric motors should qualify for the credit. Skip all the other hoops.
Robert Dangel	1/4/2023 10:34	I would like to comment on the EV tax incentives as outlined. There's a lot of inconsistent rules for electric vehicles, with some making the cut for the incentive and some not. First off, you should not be allowing incentives for "compliance" cars, those cars that are still gas guzzlers and have the smallest battery possible (IE jeep wrangler, Toyota ram 4 prime etc) A minimum KWH of battery pack or range on full electric should be enforced. (Minimum 125 miles and not the 2 digit limit right now) Any car that is full electric under 100,000$ should be allowed provided it meets the agreed upon US or NAFTA assembly requirements. No $$$ should go to a car assembled outside the USA Cars such as the model Y should be allowed particularly the lighter and more efficient versions such as the 5 seater. ALL BEV vehicles should have flexibility to waive a percentage of the US assembly requirements provided they are sourced/assembled in North America. No Chinese owned companies, should be allowed for any incentives if the companies have any ownership or source more than 50% of their components from China. The $$ amounts that the current law sets seems arbitrary and excludes many us based startups that employ US workers such as rivian and Tesla. We want to encourage the design, build and sourcing from the US, and these two companies are meeting that requirement today. Thank you Rob Dangel
Mark Moffitt	1/4/2023 10:35	I believe electric vehicles are a positive move in the transition to renewal energy for transportation. I was therefore excited to see the IRA become law. However, after looking at the vehicles specified, I believe there has been several errors. For example, the rating for the Tesla Model Y seems to be inconsistent in general and even when compared to the EPA size/type ratings. Please review the qualified vehicles list and rerate using a consistent methodology. A level playing field is all anyone is hoping to see. Thanks, Mark Moffitt
karl fenner	1/4/2023 10:35	Dear IRS, Thank you for the opportunity to hear the people speak on this matter. I feel that there is at least one big mistake being made on your part in the way things are being handled here, which is the fact that... You are penalizing a company (Tesla) for doing exactly what this law wants them to do. I'm referring to the fact that a lighter (in weight) vehicle, which is therefore more efficient (which is what we all want) should MORE qualify for a credit, but YOU are making it the opposite! This makes NO sense! Specifically the ALL-electric SUV made by Tesla known as the Model Y, which is widely considered to be the best electric vehicle in the world, is not qualifying for the full credit (or any credit at all for that matter), whereas a very inefficient FORD hybrid does qualify. This is insane, and must be corrected! -- please!!! Thank you, Karl Fenner, Denver CO, USA

Name	DateTimeReceived	Body.TextBody
Andy Chung	1/4/2023 10:35	Come on guys... you and I both know the current administration is against Tesla and for GM/Ford/etc. Do you really wanna live in a world like that? What happens if your "side" doesn't win in 2024? Living in a fair and just world is far better. Please make the Model Y 5 seater as a part of the EV tax credit qualifications, it's ridiculous it's not already in there to begin with. -- Andy Chung S.D.G
Jim Krisovitch	1/4/2023 10:36	I am writing to express my frustration with your exclustion of the Tesla Model Y 5-seat version in the tax credit program. While I understand that other vehicles such as the Jeep Plug-in Hybrid may also be eligible for this program, I strongly believe that the Model Y should be given special consideration over it for the following reasons: 1. Environmental benefits: The Model Y is a fully electric vehicle that has the potential to significantly reduce our dependence on fossil fuels and decrease air pollution. Its inclusion in the tax credit program would encourage more individuals to make the switch to electric vehicles, ultimately leading to a reduction in carbon emissions. In contrast, hybrid vehicles such as the Jeep Plug-in Hybrid still rely on gasoline and contribute to air pollution and climate change. 2. Advanced technology: The Model Y features state-of-the-art technology that sets it apart from other vehicles, including a range of up to 326 miles on a single charge, advanced safety features, and a sleek design. These features make it a practical and reliable choice for long distance travel, as well as a desirable vehicle for both personal and commercial use. 3. Economic benefits: The growing demand for electric vehicles is creating new jobs and contributing to the growth of the automotive industry. The inclusion of the Model Y in the tax credit program would further support this trend and help to stimulate the economy. Additionally, the 5-seat version of the Model Y is a more practical choice for families or individuals who need additional seating capacity. Its inclusion in the tax credit program would make it more accessible for these consumers and encourage them to choose a more environmentally friendly transportation option. Overall, the inclusion of the Tesla Model Y in the tax credit program would be a win-win for the environment, the economy, and the automotive industry. I strongly urge the IRS to give this request careful consideration. Sincerely,
Tabraiz Mirza	1/4/2023 10:36	Dear IRS, I pay approximately $3500 in state and federal taxes a month, totaling to about $42,000 a year. Please explain to me why my hard earned tax paid dollars are going as “EV Credits” to auto companies that dont even make an EV? A combustion engine car with a hybrid motor that supports 23 miles in EV miles is not a EV and should not be getting EV credits. If your EV standards are that low, then please explain why tesla model Y, a car that is a 100% EV not getting the EV credit? I am very disturbed and disappointed to know that i wont be able to use MY tax paid money towards my purchase of the a model Y due to lord know what reason. A change in your process should be made immediately, and if not, please get to me with the department’s reason to not make the change as well as answering my question above. Have a pleasant day.
Susan Dickey	1/4/2023 10:37	Please revise OMB Control No. 1545-2137 to include Mach E and Tesla Model Y! EV TAX CREDITS should go only to 100% electric vehicles! Assuming that you must negotiate with businesses due to your dependence on their financial support… You must at least INCLUDE ALL 100% electric passenger vehicles, and APPLY LIMITS ONLY to vehicles that are NOT 100% electric! OMB Control No. 1545-2137 Susan Dickey
Doug LaMont	1/4/2023 10:37	Hello, I'd like to comment on the electric vehicle tax credit qualifications. All variants of the Tesla Model Y should be in the SUV category with the $80,000 applicable MSRP limit. This would be consistent with many other vehicles placed in this category, and the Model Y is much more in the spirit of this tax credit than many of the other vehicle that currently qualify. Thank you, Douglas LaMont
谢林	1/4/2023 10:37	Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you.

Name	DateTimeReceived	Body.TextBody
Sue mccreary	1/4/2023 10:37	Dear Sir, We would appreciate the consideration of inclusion of the Tesla Model Y Five-Seater in the list of Qualified Plug-in Electric Vehicles of the Inflation Reduction Act Tax Credit with a maximum limit of $80,000. This highly popular family SUV is currently disqualified based on old-style measures for SUVs, which are contrary to the efficiency of the vehicle and against consumers' interests. Your consideration of this matter is highly valued. Sue MCCreary Sent from my iPhone
Bastian Stoess	1/4/2023 10:38	I want to provide some feedback on the draft of the IRA EV incentives. I find the selection of what vehicles qualify for the credit a bit strange. For instance, I find it difficult to justify the amount of hybrid vehicles that seem to receive the full 7,500 $ credit, despite having very low electric range. For example the Jeep which only has 21 miles of electric range. There are many studies that show how hybrid vehicles are mostly only used for their gas range, and not the electrical one, meaning I am not fond of these vehicles receiving a tax credit that is supposed to support sustainable transport. Additionally, it seems odd that the Tesla Model Y, a fully electric vehicle with over 300 miles of electric range, which is worldwide one of the best selling EV's, doesn't seem to be supported. The Ford Mustang E falls in a similar situation. Since the Model Y is classified as an SUV by both NHTSA and the EPA, and comparing the Model Y and the Ford Mustang E by size to other SUVs that qualify for the 80,000 $ cap, the selection methodology seems a bit random to me. Sincerely, Bastian
Eric Larke	1/4/2023 10:38	To whom it may concern, I write to express my disappointment and concern with the IRS's recently published electric vehicle tax credit qualifications. As an electric vehicle owner and “environmentalist”, I can’t understand how the IRS would classify numerous “gas-guzzling” extremely low electric range plug-In Hybrids (Jeep Wrangler, BMW X-5, Audi Q-5, and Ford Escape), to name but a few, as meeting the criteria for a $7,500.00 tax credit. Conversely, the best selling, 5 seat, all electric 330 mile range Tesla Model Y does not meet the criteria for a $7,500.00 tax credit. Obviously, something is rotten in Denmark as this situation reeks of political corruption. I thought the EV-tax credit was designed to encourage the rapid adoption of electric vehicles in the United States. Sadly, this bill is currently constructed to provide legacy automakers (responsible for global warming) an opportunity to continue manufacturing internal combustion vehicles with the benefit of huge tax stipends thereby delaying our transition to sustainable energy. Moreover, by removing the 5 seat Tesla Model Y (Most Popular Electric Vehicle in the World!) from the $7,500.00 tax credit qualification list, places Tesla (Largest producer of pure EVs in the world) in a distinct disadvantage with traditional ICE vehicle manufacturers. What is the rationale behind these absolutely bizarre electric vehicle tax qualifications? Thank you for your attention to this matter. Sincerely, Eric R. Larke 101 Blueberry Lane Shelton, CT 06484 ericlarke@me.com
shane hatfield	1/4/2023 10:39	Hello I’m writing today to express my concern with the ev tax credit that is starting this year. Some of the vehicles that are left out of the “suv” category that are clearly SUV’s (tesla model y 5 seater, Cadillac lyriq and ford mustang Mach e) were all viable options for my family if we got the $7500 credit. It’s also confusing how vehicles such as the ford escape hybrid and the jeep wrangler both qualify for the credit (the jeep is basically not electric at all) but 3 all electric vehicles (some that are larger than the escape) are not considered/exempt from the category. Hopefully things will be corrected to include actual SUV’s that are full electric in the proper categories. The goal of this credit was to help make ev’s affordable and ensure they’re made in the US. by excluding American made all electric SUV’s it doesn’t exactly send a good message. Thank you for your time. Shane Hatfield
Charles Seehafer	1/4/2023 10:39	I strongly feel the Tesla Model Y 5 seater version should be eligible for the $7500 tax credit. It is bigger, heavier than the VW iD4 which is included. Please reconsider your decision making logic. Sent from my iPhone
Katie Wilson	1/4/2023 10:40	subsidy despite only having between 18-31 miles of electric range. Meanwhile, fully electric vehicles- specifically SUVs such as the Ford Mach-E and variants of the Tesla Model Y do not qualify at all. The EPA has classified both of these fully electric vehicles from AMERICAN carmakers as SUVs since both hit the market. The Inflation Recovery Act was sold to the American people as a green energy bill, but in practice it appears that the administration appears far more concerned about oil company profits than a greener future. I am one of many conservation-minded voters disgusted by the way the IRS and Treasury Department are acting to preserve cars that use gasoline at the expense of carmakers such as Ford and Tesla that are courageously making fully electric vehicles. Please stop incentivizing a dirtier future. Thank you, Katie Wilson Sent from Yahoo Mail for iPad<https://overview.mail.yahoo.com/?.src=iOS>

Gmail	1/4/2023 10:42	Hi, I decide to buy Tesla 5 seat long range Model Y this year. Unfortunately it is not qualify for $7500 EV reduction plan. Please include all trims of Tesla Model Y 5 seater in the SUV category with a $80K price cap, not $55K. Thank you. Warmest regard Wei H
Andrew Peppin	1/4/2023 10:43	Hi there, Just voicing my support for reconsideration of the status of the SUV model Y from Tesla for the IRA tax credit. Should be considered an SUV like other similar qualifying vehicles. Please add my name to the list of concerned citizens. Andrew Peppin. Sent from my iPhone using voice recognition (sorry for any typos)
Gabor J. Szabo	1/4/2023 10:43	Dear IRS, Please update your qualification for the EV tax credit. The Tesla Model Y, as well as a version of Ford Mustang EV, qualify more for the tax credit than any hybrid with a gas engine. Sent from my primitive concordation device powered by electro-magnetism.
jennifer	1/4/2023 10:43	I am writing to express my strong objection to the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure, specifically the exclusion of the US-manufactured Tesla Model Y 5 seat from the SUV category due to its vehicle weight. I am extremely disappointed to see that vehicles largely manufactured outside of the US and with much worse environmental profiles are being allowed for this credit, while the Tesla Model Y 5 seat, which is manufactured in the US and has a significantly better environmental profile, is being excluded. This seems completely arbitrary and unfair. I urge the IRS to reconsider this decision and include the Tesla Model Y 5 seat in the SUV category for the Qualified Plug-in Electric Drive Motor Vehicle Credit. As a taxpayer and a concerned citizen, I strongly believe that we should be supporting and incentivizing the production of environmentally-friendly vehicles, especially those made in the US. Sincerely, Jennifer M. Burgess Sent from my iPhone
Eric Smith	1/4/2023 10:44	The Ford Escape Hybrid, Ford Mach-e, and Tesla Model Y all serve the same demographic - 5 passenger vehicles with more storage than a sedan. They all belong in the same category.
Chaitanya V	1/4/2023 10:44	I am writing to bring to your attention my belief that the Tesla Model Y 5 seater should be included on the list of vehicles eligible for reduced inflation under the Act. It seems nonsensical to me that this model was not included from the beginning. I understand the importance of encouraging the use of electric vehicles and the Model Y 5 seater is a highly efficient and environmentally friendly option. Its exclusion from the list of eligible vehicles under the Act is a disservice to those who are looking to make a responsible and sustainable choice in their transportation. I urge you to reconsider and include the Model Y 5 seater on the list as soon as possible. Thank you for your attention to this matter. Sincerely, Chaitanya

Chris Pierce	1/4/2023 10:44	Dear IRS, I am writing to express my frustration and distrust regarding the new tax incentive for electric vehicles. It is unacceptable that the incentive includes plug-in hybrids, such as the 22 mpg Jeep Wrangler, while excluding the most popular electric vehicle in the world, the Tesla Model Y. As a taxpayer and a concerned citizen, I believe that incentives should be directed towards promoting the use of the most efficient and environmentally-friendly vehicles. The inclusion of a vehicle with such low fuel efficiency as the Jeep Wrangler undermines the purpose of the incentive and calls into question the motivations behind its design. I urge the IRS to reconsider this decision and ensure that the tax incentive is fairly applied to all electric vehicles, including the Tesla Model Y. Sincerely, Chris Pierce
David Eulau	1/4/2023 10:44	$7500 credit. There needs to be much better consistency with regards to the vehicles qualifying and also more honesty as to how these credits are applicable given that the purpose of this $7500 is to accelerate the transition to sustainable energy while eliminating dependence on petroleum. You can't have some SUVs be penalized or ineligible just because of how many seats they have. If a Tesla model Y SUV has 5 seats, it is the same SUV when it has 7 seats and should qualify for the $7500 under the $80,000 income qualifying rule. Likewise, a Ford Mustang Mach E should qualify as an SUV because it is an SUV. It also makes no sense to allow a 20mpg Jeep Wrangler Hybrid to qualify for the $7500 and not and electric vehicle that is far more efficient and in line with the purpose of IRA tax credit which is aforementioned. The government needs to fix these issues immediately and with fairness and transparency. No party politics should be present. Sent from my iPhone
Michael Moynihan	1/4/2023 10:45	Why government should stay out of the free market. subsidies are mostly used for corruption and almost never achieve their stated goals. Many states have banned the sale of new gasoline vehicles starting in 2035. 1000 battery cycles on the Jeep 4xe gets 21,000 electric miles while 1000 battery cycles on the Tesla Model Y gets 330,000 electric miles. How does anything the US Government does make sense? The Tesla Model Y is an SUV with all wheel drive. It's been deemed an SUV by the EPA. It's238lbs lighter because Tesla innovated and shaved weight off for efficiency. No ICE vehicle should be getting an EV credit.
JT	1/4/2023 10:46	The intended concept is to both encourage electric vehicle adoption, as well as promote production in North America (and trade allies, to an extent). It makes sense to have some financial limits. Someone buying a $180k Porsche EV probably doesn't need that EV credit. :) However, the manner in which this is being done currently is ... unclear and confusing at best. Case in point are some SUVs. The Ford Mach E and Tesla Model Y (5 seat) are good examples. These are both full EV SUVs and neither qualify in the SUV price limit, but as sedan. The Model Y (7 seat variant) does qualify. This of course makes no sense. I've seen speculation that this SUV definition may be based upon a certain weight requirement? (there are no real differences between the 5 and 7 seat variants, you see) The first issue is that it is unclear ... these things should be defined for people to see. The second is that weight either shouldn't be there or it needs to be heavily changed. It gives incentive to have less efficient, heavier vehicles. NOT what we want. To further the crazy ... there are a number of other 5 passenger SUVs that do qualify for the SUV limit, presumably just because they do simply weigh more. And worse ... for something intended to promote electrification ... there are many hybrids, which offer but a few miles on EV mode, which also have rather poor fuel economy when not in EV mode (which will be most of the time) and they DO qualify. So we're looking to help people buy a very fuel inefficient hybrid and not a very good EV ... and with money that is marked specifically for EV growth? That is madness. In summary ... hybrids probably shouldn't qualify at all. If they must, it should be 1/2 the amount and only for hybrids which offer genuine, meaningful efficiency improvements over their normal counterparts. Next, if the vehicle is broadly accepted as an SUV, then it should be an SUV. I hope someone will actually read these vs just count # of emails or something. For the reader ... thanks for taking the time to do this. - JT
Frank Auer	1/4/2023 10:47	It is crazy that a Partial EV like the Jeep gets full EV credit of $7500 while a those full EVs do not because of how much they weigh or other absurd spec? I already have an EV, but my wife is in the specific market for an SUV EV and you are essentially rewarding her for buying a hybrid instead of a pure EV with this approach (she is specifically looking at a Y or Mustang).
Keeth Brown	1/4/2023 10:47	Dear IRS, These rules make it hard to believe the Inflation Reduction Act (IRA) is nothing more than a way for taxpayers to subsidize gas cars. Which I do not support! The spirit of incentivizing battery production in the U.S. was palpable. I'm not pro incentive but reducing reliance on China battery production seemed worthwhile. Sadly that was clearly just lip service. The most egregious example is the Jeep Wrangler 4xe. Which gets a higher MSRP than the Ford Mustang Mach-E, and Tesla Model 3 & Model Y. Unless the IRS has advanced knowledge of Tesla Models, Tesla doesn't make a Model Y Performance with 7 seats. It only comes in the 5 seat variety. However a Tesla Model Y Performance with 7 seats is listed on https://www.irs.gov/credits-deductions/manufacturers-and-models-for-new-qualified-clean-vehicles-purchased-in-2023-or-after. Please include all Tesla Models of the Model 3 & Y as well as all models of the Ford Mustang Mach-E and any other EV's which were obviously discriminated against. VW springs to mind. If the IRS doesn't do this I will petition my congressman and senators to change the law. I will also vote agains any official Republican or Democrat that supports this crony capitalism. This reeks of picking winners and paying off political donors rather than encouraging consumers to purchase EV's. In its present form it's just Solyndra by another name. Please don't think the taxpayers haven't noticed how crooked this looks. Much like the FBI and OGA censoring the citizens on multiple social media platforms.

Dan Peters	1/4/2023 10:48	The qualifications for SUV EV tax credits are silly, I'm not sure if they are intentionally biased or just poorly designed. Multiple pure EV cars like the Mustang mach-E and Tesla model Y 5 seat do not qualify for tax credits while gas only hybrids like the Jeep Rubikon qualify. This goes against the stated intent of the tax credit. The EPA classifies these cars as SUVs. Please reconsider these tax credit exceptions based on this statement alone from the IRA "For purposes of this paragraph, the Secretary shall prescribe such regulations or other guidance… using criteria similar to that employed by [EPA] and [DOE] to determine size and class of vehicles." The spirit of the law implies that all fully electric EVs should get tax credits.
rmdesantis55@gmail.com	1/4/2023 10:50	I am writing to comment on the proposed EV tax credits. You are proposing a Tesla Model Y 5 seat at $55,000, which is the amount for a sedan. It is not a sedan, but an SUV. The same vehicle, in your scheme, with 7 seats you show as an SUV with an $80,000 limit, which makes no sense at all (it is the same car – there is no lengthening of the vehicle, it just adds seats where currently there is storage in the 5 seat version). You show the VW PRO S, which also has 5 seats, as an $80,000 limit. I respectfully suggest that you correct this oversight and allow all Tesla Model Ys, regardless of the number of seats, at $80,000. Ralph DeSantis 14204 Moonlit Way Estero, FL 33928
Karl Gesslein	1/4/2023 10:51	with 5 seats is not classified as a SUV and the Jeep Wrangler Plug in Hybrid which gets 20mpg does qualify. Also the fact that the ID.4 (classified as a SUV) which is lighter than the Ford Mustang Mach E extended range (not a SUV) and much smaller in size than the Model Y. I understand the difficulty in classification of what is a SUV but your definitions make no sense. If you are going to call the ID4 a SUV then the Mustang and the 5 seat model Y should also qualify. If you're going to disqualify the Model Y 5 seater and the Mach E then the ID4 should not qualify. When there is no consistency it makes the government look like they are playing favorites. My personal opinion is that there should be no Tax subsidies for EVs or Plug in Hybrids. There is no longer any need for it. Karl
Thomas Boettcher	1/4/2023 10:51	RE: Classification of Tesla Model Y 5-seat as a sedan Dear Mr. Garcia, I am writing to express my strong objection to the Qualified Plug-in Electric Drive Motor Vehicle Credit and Revenue Procedure, specifically the exclusion of the US-manufactured Tesla Model Y 5-seat from the SUV category. I am extremely disappointed to see that vehicles largely manufactured outside of the US and with much worse environmental profiles are being allowed for this credit, while the Tesla Model Y, which is manufactured in the US and has a significantly better environmental profile, is being excluded from the SUV category. This seems completely arbitrary and ill-informed. I urge the IRS to reconsider this decision and include the Tesla Model Y 5-seat in the SUV category for the Qualified Plug-in Electric Drive Motor Vehicle Credit. As a taxpayer and a concerned citizen, I strongly believe that we should be supporting and incentivizing the production and purchase of environmentally-friendly vehicles, especially those made in the US. Sincerely, Thomas Boettcher Evansville, IN
Cameron Covey	1/4/2023 10:51	I am writing to express my strong dissatisfaction with the Inflation Reduction Act rules on how vehicles are classified, specifically the classification of the Tesla Model Y (5 seat version). And also the Ford Mustang Mach-E. The Tesla Model Y 5 seat option (and the Ford Mustang Mach-E) meets all the criteria to be considered a SUV. The EPA even categorized the Tesla Model Y (5 seat version) as an SUV. The Model y 5 seat is a highly efficient electric vehicle and aligns with the IRS goal of promoting the use of cleaner and more sustainable transportation options. It deserves the full tax credit. I hope the IRS takes my request seriously and considers allowing the SUV classification and tax credit for Tesla Model Y (5 seat version) and the Ford Mustang Mach-E. Thanks, Cameron Covey
