## General Comment

Inspection report writing depends on the type of operation being inspected. When inspecting a processor, I usually complete the inspection report onsite and am done with it. If doing smaller farms, I do the report after the inspection and take 1 to 1.5 hours to complete the report. When it comes to very large operations that have processing and crop portions and takes several days the report is partly written during the inspection and the rest is completed after the inspection. This time to complete can be between 5 to 15 hours depending on the complexity of the operation.
