Re: Proposed Form ETA-790A; 790A Addendum A; Form ETA 9142A; 9142A Appendix A

Dear Sir:

Florida Fruit & Vegetable Association (FFVA), located at 800 Trafalgar Ct, Suite 200, Maitland, FL 32751, is an agricultural association that serves as an agent for its members in filing H-2A applications in Florida and 15 other states. FFVA offers the following comments on the proposed Forms ETA 790A General Instructions, ETA 790A, 790A Addendum A, ETA 9142A, 9142A Appendix A and ETA 9142A Final Determination.

FFVA commends the Department for its effort to streamline the forms required to file H-2A applications, but with all new forms, there are some issues that arise that require adjustment to fully conform to the unique needs of agricultural employers.

ETA 790:

1. There seems to be no place to indicate to the SWA the authorized Agent contact information for those employers who use an agent for filing.

2. Section II, Number 14 – Employer Contact Information:

Although we recognize that it is common for employers to have an e-mail address, there are agricultural employers who do not have an email address. This form indicates that an email address is required but we are aware of farmers using the H-2A program whose religious beliefs do not permit them to use the internet. How will those without an e-mail address comply with this requirement?

ETA 790A:

1. Section III A - Job Offer Information

Number A 5 – Anticipated days and hours of work:

For us to be fully compliant with the notification requirements, there needs to be space for more information such as; “worker may be requested to work additional hours” and information about lunch break timing.

Number A 6 – Hourly work schedule:

An hourly work schedule is variable and may change dramatically depending on heat, market conditions or other weather conditions. For full disclosure, there once again should be space to inform potential employees that the hourly work schedule may vary widely.

Number A 7b – Description of the job duties:

Because employers may be harvesting a number of different crops with different harvesting practices, there is not enough space on this form and Addendum A to fully describe the job duties. Most of the filings we complete require an attachment that may be as lengthy as 4 pages. (We have attached a redacted example, Attachment #1, of a current job description.) The proposed form states “Separate attachments will not be accepted”. If we cannot provide a full description of the job duties and are only allowed to do the work described, the workers will be not be allowed to do all the work required. The ability to add separate attachments is critical.

Number 7c – 7f - Wage Information:

When harvesting many commodities, there are often several varieties to be harvested that will have a different piece rate for each variety and sometimes for different pack sizes within each variety. As an example, one petition for only pepper harvesting has 23 different piece rates and another for citrus and vegetables has 27 different piece rates. (We have attached a redacted example, Attachment # 2, of a current wage information). Space is limited on the 790A and Addendum A, and this will require Addendum A to be copied multiple times creating significant added work for the filer. Separate attachments may be required.

Number 10 – Additional conditions about the wage offer:

The instructions indicate that this section should be used to identify productivity standards. As productivity standards will vary based on the variety of product being harvested there will likely not be enough space to list the multiple standards required without the ability to add separate attachments. We also believe that a more appropriate place for the productivity standards is with the wage information section. Separate attachments may be required.

2. Section III B – Minimum Job Qualifications

Number B 3 – Training:

This section asks for training specifically in the number of months. Employers often offer training in days or weeks. This section would seem to prevent employers from offering, for example, a 6-day training period which is common. This section should not be restricted to only ‘months’.

3. Section III C – Worksite Information and Addendum B, Number C – Worksite Information

- A. The worksite information section requires some information that will not be available upon filing. This section asks for Beginning Date, End Date, and Number of Workers for each worksite, none of which will be known at the time of filing. Harvesting of crops is highly dependent on rate of maturity and market needs. The clearest example, although not the only one, of the difficulties this presents is with the citrus industry. A petition is often filed for a start date of early November with harvesting of some

worksites not occurring until March or later. The harvesting begins when the fruit reaches optimum maturity and that date will not be known until often the week before harvesting begins; and harvesting ends when the crop is completely picked, which is dependent on the amount of fruit that particular citrus planting produced. We can provide a time frame during which maturity occurs for a particular variety but we cannot provide start and end dates for a specific worksite. Similarly, the number of workers in each worksite will not be known at the time of filing. Processing plants usually tell growers how many loads of fruit will be accepted on any given day and that will be one of the determining factors in how many workers will be needed at any given worksite. We cannot provide 'required' information that is not available at the time of filing.

B. The 790A and Addendum B provide space for 5 worksites to be listed. There are applications, which may have as many as 300 worksites. (We have attached a redacted example, Attachment #3, of the currently required "itinerary" which is 39 pages with 10 to 15 worksites per page.) It will require an enormous and untenable amount of time to copy potentially 75 additional pages of Addendum A and then fill out the requested information in each box. It must be made clear that a separate attachment may be used in lieu of Addendum B.

4. Section III D – Housing Information and Addendum B, Number D – Housing Information

Much like the number of worksites, applicants may have dozens of housing units permitted. It will be cumbersome and time consuming to fill in each box of the housing form. Once again, it should be made clear that a separate attachment may be used in lieu of Addendum B.

5. Section III G – Referral and Hiring Instructions

There is a significant amount of required language that must be placed in this section. We do not believe this section will be large enough to accommodate the language required unless this section is expandable or a separate attachment is allowed.

6. Section III I – Conditions of Employment and Assurances

Number 7 C – Transportation and Daily Subsistence; Daily Transportation:

Many employers have found it more efficient for both the employer and the worker to establish a more central 'pick-up point'. This sentence should be amended to state in part "...between housing provided or secured by the employer or *designated pick-up point* and the employer's worksite(s)" (emphasis added)

Number 8 – Three-Fourth Guarantee:

The second paragraph contains the sentence "An employer will not be considered to have met the work guarantee if the employer has merely offered work on three-fourths of the workdays if each workday did not consist of a full number of hours or work time as specified in the job order." This language is unnecessary as it is clear from previous language that the

three-fourths guarantee is based on hours not days. The sentence is also open to incorrect interpretation as some DOL enforcement personnel have maintained that this means employers cannot count the hours on any day that the full number of daily hours specified is not offered even if the total number of days has been worked. This sentence should be removed as it is superfluous and misleading.

The last sentence in the second paragraph has the parenthetical phrase “(including voluntary work over 8 hours in a workday...)”. Many employers’ daily guarantee may be 6 hours, 7 hours, or 10 hours. A specific number of hours should not be defined in this statement as it could be misconstrued as limiting the counting of hours over the stated guarantee to only those with a defined 8-hour work day.

ETA 9142A – General Instructions

Section A 1 – Important Note:

This note defines an Agricultural Association as, in part “any nonprofit or cooperative association of farmers...that recruits, solicits, hires, employs, furnishes, houses, or transports any worker that is subject to 8 U.S. C. 1188...”. This definition is not accurate for many agricultural associations. Associations that are a sole employer or a joint employer will likely perform those tasks but an association that is only filing as an agent will likely not be performing those tasks. This statement should be corrected.

ETA 9142A. Appendix A – General Instructions

1. Section A – Attorney or Agent Declaration:

The instructions in the lead-in paragraph state that the agent agreement must include “a statement appointing a specific person as agent for the employer.” Associations acting as H-2A agents often have a staff of several people assisting in completing the forms for their members. It is the association that is acting as the agent and not an individual and the requirement to name an individual does not comply with the actual practice of an Association acting as agent. Further, placing a specific name in the application could expose an individual to unwanted and unnecessary attention from individual activists who oppose use of the H-2A program. We urge this requirement of naming an individual be removed.

2. Section A, Number 5 – Attorney or Agent Declaration:

The instructions for number 5 are to enter the email address of the attorney/agent. However, the Form ETA-9142A-Appendix A number 5 is the space for the Signature and there is no block available to enter an email address.

ETA 9142A

Section C, Number 14 – Employer Point of Contact:

Some agricultural employers do not have internet access or an email address due to their religious beliefs. This is a required field and will not be able to be completed due to the

lack of email for these employers. Alternative arrangements must be available to allow these employers to complete this form without penalty.

ETA 9142A-Appendix A

1. Attorney or Agent Declaration:

The last sentence of the first paragraph states in part "...then I have attached an agency agreement. We believe that may be a typo and should read agent agreement.

2. The second paragraph reads in part, "I hereby certify that I have provided to the employer the Form ETA-9142A, Form ETA-790/790A and all supporting documentation...". The Form 9142A contains essentially the same information as the Form ETA 790/790A and is directly uploaded to CNPC. Requiring the agent to fill in the form, print the form, send it to the employer, wait for the employers' response, then upload the form is an unnecessary and time consuming step which slows down the ability to timely file the application. If the employer has approved the ETA 790/790A then that approval should extend to the same information on the ETA 9142A. The requirement to certify that the 9142A has been sent to the employer and the later requirement that the employer declare that they have read the 9142A should be eliminated as unnecessary and duplicative.

We appreciate the opportunity to offer our comments to the Department of Labor and stand ready to engage in further discussions with your agency to help improve the H-2A program processes.

Sincerely,

Michael Carlton
Director Labor Relations
Florida Fruit & Vegetable Association

Attachment F.5

Citrus Harvesting: Workers will perform assigned duties as instructed by their supervisor. Duties may vary from time to time. Following the Supervisors instructions, the worker will place a picking sack over their shoulder and carry an 18' to 20' ladder from the field truck to the particular area of the grove to be harvested. The picking sack is a canvas bag equipped with a shoulder strap for support, an opening for the insertion of fruit, and an opening to remove fruit. A fully loaded sack weighs between approximately 80 and 100 pounds, depending upon the size, condition and variety of fruit. Worker positions ladder against the tree and within reach of the fruit in a leaning position, taking care not to break limbs, damage the tree, knock off fruit, or interfere with other workers, in a secure position to prevent slipping or falling and possible injury to themselves or other workers. Worker will remove fruit from the tree and place into pick sack. When pick sack is full take full sack to fruit tub located in the grove and drop fruit from pick sack into tub. In order to perform this kind of work, worker must be able to work outside for at least 6 hours a day in all kinds of weather and be in possession of the requisite physical strength and endurance to repeat the picking process rapidly, working quickly and skillfully with their hands, and carrying a large number of sacks of fruit from the area in which the fruit is being harvested to the location of the tub. After harvesting is complete at each grove, workers will help clean all equipment, including but not limited to, fruit tubs, and any harvesting equipment from all leaves, limbs and debris. Workers will then load ladders back into ladder truck.

The employer will provide the tools necessary to perform the described job duties without charge to the worker. The employer will charge the worker for reasonable costs related to the worker's refusal or negligent failure to return the tools or due to such worker's willful damage or destruction of the tools. The employer will provide the first pick sack free of charge to the worker. Any sacks destroyed intentionally, outside normal wear and tear, must be replaced by the worker.

All citrus harvesters are required to wear a special safety hat that contains a mesh front for eye protection provided by the company free of charge. Any safety hats that are lost or destroyed, outside of normal wear and tear, must be replaced by the worker at a cost of \$10.00. All strawberry harvesters will be required to wear an ID Badge on a lanyard that will be provided by the company free of charge. Any ID badge that is lost or destroyed, outside of normal wear and tear, must be replaced by the worker at a cost of \$3.00.

Cucumber Planting: As instructed, worker will move down row placing two (2) seeds in each hole firmly packing dirt in hole.

Training Cucumber Vines: As instructed, move down row and place vines on bed taking care not to harm plant.

Cucumber Harvest: As instructed, worker will move down assigned row grasping, twisting then removing cucumber from plant by snapping stem. Place cucumber into bucket, exercising care to avoid damage to vines and cucumber. Deliver full bucket to truck in the field, receive credit on his/her identification badge. Obtain empty bucket and return to assigned row.

Squash Planting (Green, Yellow, Summer): As instructed, move down row placing two (2) seeds in each hole firmly packing dirt in hole.

Squash Harvest (Green, Yellow, Summer): As instructed, worker will move down assigned row and pick proper size, shape and color of squash, place into bucket. When full, take to washing station, receive credit on his/her badge and obtain empty bucket.

Squash Packing (Green): As instructed, worker will place green squash in the washing trough, thoroughly wash, and pack in ½ bushel box taking care to not bruise or damage the squash.

Bell Pepper Planting: As instructed, worker will be assigned a bag of plants. Worker will walk down row, carrying the bag and place one or two plants into each hole in the plastic.

Staking Pepper : As instructed the worker picks up a bundle of stakes (approx. 30 count, 24 inch length). Walks assigned rows, dropping 2 stakes at a time at the top of the row bed, every 7 plants. A second worker will follow picking up the stakes, driving them into the ground using a stake driver.

Stringing Pepper: As instructed, the worker receives a box of twine and moves down the row circling twine around each stake on one side of the bed row. At the end of the row, the worker circles twine on the opposite side of the bed row on the second stake, making a full circle of each row. Twine is tied at the beginning and end of circled row.

Pepper Harvesting: As instructed, worker will move down assigned row and pick proper size, shape and color of pepper, place into bucket. When full, take to washing station, receive credit on his/her badge and obtain empty bucket.

Watermelon Harvesting: Workers will be required to turn watermelon vines from drive-rows. Instruction will be given for each task and standards of performance communicated to worker. Workers will be assigned a row or series of rows and required to select and pick produce according to criteria outlined and demonstrated by managers such as size, coloring, and ripeness. Workers will require the use of a 6" harvesting knife to slice the stem from each watermelon to be harvested.

Blueberry Harvesting: Each worker will be assigned an identification card with the worker's employment number. The worker will keep the picking identification card throughout the workday. Workers will receive a hooked belt and carry 2 picking buckets as they move down assigned rows, picking all ripe berries and placing them into the buckets. Once full, each bucket weighs approximately 6 lbs. For each full bucket, worker will receive a token to keep an accurate count of total buckets picked. Each worker must pick the plants clean of all ripe fruit. If worker does not fill his/her bucket, he/she will be returned to the field to finish filling the bucket. Harvester may receive a disciplinary notice if the quality of work becomes an issue. At the end of the workday, each worker will present all their tokens to their supervisor. The supervisor will total each harvester's tokens. This will determine how many buckets each worker has picked for the specific workday.

Strawberry Planting: While carrying a bag of strawberry plants, worker will walk down row, while bending, and place one or two plants into each hole in the plastic as instructed and firm dirt around plant.

Strawberry Harvest: Workers will move down assigned rows picking all ripe berries, grading berries while harvesting, taking care to sort and pack containers by size, shape, color, quality and quantity as directed. Each worker must pick the plants clean of all ripe fruit, sort and pack all good berries into specified containers, within the box, according to very high quality standards as set forth in the Company food safety policy and standard operating procedures. Bad berries will be packed or disposed

of as determined by the Supervisor. Each worker shall handle berries carefully to avoid bruising. Bruising will weaken the berry. Each harvesting worker is expected to move with the crew from row to row to maintain the efficiency level. Upon completion of each box picked, the worker will take box to watering station to be viewed for grade, receive credit on his/her badge, and receive a new box with containers. Any containers that are over or under packed, or consist of poor quality fruit, will be returned to the worker for repacking. Upon completion of an assigned row, the worker will move to the next vacant row to be picked. Harvester may receive disciplinary notice if quality continues to be an issue.

Harvest Processing Strawberries: As instructed, worker will move down assigned row picking all ripe strawberries, and discarding any bad berries that show evidence of rot or insect damage. Worker will be instructed to remove the cap (flower) of the strawberry with the aid of a slicing tool that is attached to the worker's picking cart. Worker will pick the berry, slide it across slicer to remove cap. Uncapped berry will be dropped into harvesting tray, weighing approximately 20 lbs. when full. Trays are then taken to the assigned area where the worker receives credit on his/her badge, and a new tray is obtained.

Weeding: Workers will remove weeds by use of a hoe from the walk-way and remove all weeds growing around plants by hand. Workers will remove weeds from the growing area, by raking piles of debris and dispose of it as instructed.

General Farm Work: Tasks the worker must be able to perform include: apply mulch by row mulcher or by hand; apply ground cover to beds using machine or by hand; remove debris from bed preparation process to clean growing area; finish row ends with shovels provided by employer; unload plants by hand from trucks and move plants to planting location by hand; install culverts for field drainage; remove and reinstall sprinklers during bed preparation, re-plant missing or unhealthy plants as directed; remove or pull up strawberry plants in preparation for next crop; remove blossoms (de-blossom) to improve fruit quality; remove debris, boxes, and discarded fruit from fields to keep clean growing areas; general ranch maintenance; basic irrigation maintenance; make sandbags, clean and maintenance equipment and tools, frost control of sprinklers, frost blanket coverings. May be necessary to assist in the use and repair of farm equipment such as tractors, trucks, Goats/loaders, buses, trailers and harvest machinery, etc.

General Specifications and Physical Requirements of the Job:

The majority of the workday is spent on one's feet, constantly in movement, and outdoors. Workers are rarely in one place for any period of time. It is estimated that 10% of the time will be spent packing, 10% growing and maintaining, and 80% harvesting the products. Workers must be able to stand, walk, sit, stoop, squat, kneel, crouch, bend (from the waist), push, pull, reach, lift and carry items weighing in range from 5 to 100 pounds during the course of performing all required job specifications.

All work is performed in outdoor agricultural fields and involves exposure to sun, wind, rain, soil, mud, dust, heat, cold and other natural elements. Worker must be able to withstand working in the direct sunlight, and conditions ranging from hot and humid weather, moderate rain and cold while performing their required job duties. Workers should come prepared wearing appropriate clothing and footwear for the environmental and working conditions described.

Work entails exposure to soil, plants, insects, and plant materials such as, but not limited to pesticides and fertilizers. Employer will comply with all worker protection standards and restrictions applicable to

the use of pesticides and other chemicals. Workers are required to comply with all applicable worker protections standards as communicated by Supervisors and Farm Managers. Required posters will be placed at applications areas displaying date and time that re-entry is allowed. For the Company to ensure the highest level of food safety within its operation, workers must be able to listen to, and follow verbal instruction by any Company Farm Manager and/or Supervisors, and understand the purpose of required posters that are in place.

Stooping and Bending: This activity would be constant for the listed job specifications. When harvesting, workers must walk along the assigned row in a bent-from-the-waist position, although they can opt for stooping, squatting, etc. During harvest, this activity would comprise much of the workers regular work day. Worker comes to a standing/vertical position each time they complete a full box of strawberries or buckets of vegetables and carry it to the end of the row or crate shed. This can be anywhere from 5-10 times per hour depending on the production and the picking speed. Considerable dexterity is necessary to harvest strawberries. Worker would constantly handle crops using both hands to harvest, and use repetitive reaching motion. Reaching motion would always be towards the ground. Worker would be using a pushing motion to push the picking cart for the strawberries down the rows. Total weight, assuming a full box of strawberries should not exceed 20 lbs. Workers use pulling motion for hoeing and weeding.

Daily job assignments will be made by, and at the sole discretion of, the Company Farm Managers as the progression of the growing season dictates. Workers must perform the assigned work as described in ETA 790, and work at the assigned Company locations. Workers may not switch work at Company locations without specific authorization of the Farm manager. At the direction of the Farm Manager and/or Supervisor workers may be re-assigned to different farm locations within the company at various times of the work day and/or on different days.

Employer will provide tools, equipment, harvest materials, protective clothing, including gloves, where required to perform all job specifications at no cost to the worker. The reasonable repair or replacement cost of tools or equipment assigned to the worker may be deducted from the worker's paycheck for willful damage or loss of such tool or equipment.

All Company Employee Safety and Hygiene Policies, including Harvest Crew Hygiene, Employee Conduct, Food Safety and Security, must be followed by each worker. Each hired worker will receive by the first day of work, a copy of the Employee Handbook outlining such policies and procedures. Worker is responsible to read thoroughly the information provided, and to seek assistance of a Farm Manager for questions or clarity.

Non-workers will not be permitted at the work sites or on company property without permission from the employer. Importantly, no non-working minor children under the age of 18 shall be present at the work site, or left unattended in vehicles at the worksite during the day. Workers arriving at the worksite with non-working minor children or other non-workers will be sent home.
