In Section II. Medicare Therapy Management Programs, Element K states, "Targeting criteria met. Required if met the specified targeting criteria per CMS –Part D requirements in § 423.153(d)(2). (Multiple chronic diseases/multiple Part D drugs/cost threshold, Drug management program at-risk beneficiary, Both)." In this field will we be required to list the targeting criteria met or will this require another field description indicator? We were also hoping to clarify the Drug Management Program criteria of this Element. If a member is identified as an "at risk beneficiary" but they are not currently enrolled in the Drug Management Program are we to include them in the MTMP? Currently, we include all beneficiaries who meet the CMS – Part D requirements § 423.153(d)(2) criteria but this does not specify an "at risk beneficiary" who meets no other targeting criteria.
