

## Attachment 1 – Recruitment email

Dear NIBIB family,

As NIH opens our doors for employees to return to the physical workplace, we are committed to ensuring a safe work environment for all. While many of us have been vaccinated, we know that vaccines aren't 100% effective against preventing COVID-19 disease or SARS-CoV-2 transmission. It is therefore important to continue following safety measures such as wearing masks, social distancing, and testing for COVID-19.

The NIH Rapid Acceleration of Diagnostics (RADx) initiative has accelerated the development of rapid COVID-19 tests that can be ***self-administered*** and provide ***results in just 10 minutes***. Through studies funded by RADx, we have learned that testing oneself 3 times per week helps find COVID-19 early, enabling individuals to keep their family, coworkers, and community healthy. In order to promote a safer NIH work environment, NIBIB is exploring a pilot program to provide employees with 3 rapid COVID-19 tests per week, to be taken in the privacy of their own homes.

To gauge interest in such a program, we are asking NIBIB employees to complete a short survey to share your opinions. Please take 5 minutes to complete the NIH COVID-19 At-Home Testing Program survey. Your responses will remain secure to the extent permitted by law. The survey will remain open until May XX.

Thank you for doing your part to help keep NIH a safe work environment for all.
