## General Comment

i do not think this system is a good system for keeping tuberculosis patients out of this country. i think we can have a better one than this so i am against reauthorizing this system. this is backward in that the vital information does not keep tuburcolsis patients out of the country on a daily up to date basis. this system is only to memorialize after the fact, that is useless. we need up to date immediate informationj so we dont let tuberculosis patients into this country in the first place. we need alot more medical scrutiny before we let in patients. when we dont, the american medical system can pay up to \$3,000,000 for one of these foreigners who sneak in here to get free medical care we need to keep them out. we cant get decent medical care for our old folks. the care here for ameican on medicare is horrible. absolutely horrible. it plans for 5 or 10 minute appointments and ceertainly the way a body works that is not enough time to tell what the actual medical condition is. stop letting in all these foreign sick people. shut them down and donjt collect informaiton in this expensie ludicrous 1935 way. when was the last time you came up with anything modern that is fast, reliable and costs less? nobody is thinking in this agency anymore. facusi has been there so long you are doing your work in 1955 fashion and style.
