So FEMA, as part of its continuing effort to reduce paperwork and respondent burden, needs \$3.8M to track and create more (electronic) paperwork related to the collection of demographic characteristics of those who apply for Agency programs or disaster relief. FEMA consider this, start helping people in a timely manner and use the data you are already collecting as part of your relief application process. People in southern Indiana who were impacted by flooding in 2017, lost everything, were forced to move and permanently relocate yet were required to maintain flood insurance on their abandoned properties in order to be eligible for any FEMA buyout, were finally able to put closure on this in 2021-22. Quit creating processes to justify your jobs, pay people for their losses in a timely manner, learn to live within your means (budget) and use the data you are already collecting.
