General Comment

Sirs & Madams,

Congregational oversight is an area of adjustment for many, that Tactical Assistance Command, as well as, Military Assistance Command are fully aware. Many are of the thought process that the Department of Defense should not be mistake prone. We are not at fault when the communication from Congress and Senate advisory committee that are overseeing the proper funding of the department and agencies being investigated for proper documentation. The civilian aspect is not the ones that the military has to worry about from Tactical Assistance Command civilian side of the Joint Chiefs. The Military Assistance Command are not, either. It is paramount to vital signal interpretation involving all areas of accountability from the GSA to be held to the standard that Military Assistance Command and Tactical Assistance Command are held to everyday. Congress has ALWAYS had a special place in our hearts. The Senate is the same way. The retirement benefits that are there for the TAC, MAC are pivotal to the health of our nation and the world through the United Nations. There has been a long history of respect, honor, integrity, commitment through dedication with pinpoint accuracy from all areas of this very important concept that is not a concept. The Presidents view from the Oval Office is where the eye should be safe. The infrastructure bills are the funding which state level through federal backing is where the miscommunication is being addressed at the National Intelligence level. Every one should be continually vetted and approved properly, however, the ones who are the tip point communication experts involving JADCC2 should be heard. In my own 25 years of standing guard for Congress, I am proud to say the we are proud to serve. The space industry is where the utmost care and guidance is coming from in that time frame. The federal and state levels that are not being held accountable are being held accountable now. Let us move forward and take care of every veteran from every branch of the Department of Defense. If you should me, contact me directly, as my metadata is confirmed through Joint Chiefs Counsel and the ODNI, as well as, the NSA. The Central Intelligence Agency should never be forgotten. The communication from the SATCOM CTU's that are Central Intelligence will watch every I being dotted and every t being crossed. The JADCC2 two program is the very finest of the finest available today. We

are here to proceed with the application of it. Once the Central Intelligence Agencies overseas agents were coming back to the United States with concern, I watched intently as I personally passed one of the very first test. I instructed the agents from CIA to not worry, to stand tall, everything will work out.

Bryan Maurice Bellipanni

1997 TAC Officer through CIA. Sirius Satellites started out in geo positioning with position, navigation, timing. The first one was a handheld peripheral device printed circuit board that Congress appropriated and approved. I am an ABLE Unit troubleshooter echo 3 position officer for that very program. The laser communication that we are now carefully showing the word is vitally important to protect and serve for the planet, however, the United States of America is far and away in the lead. Let us keep it that way together. I say again, take care of the veterans, protect the children and let us move forward though careful precision applications.
