General Comment

I like to say as states survey data is collected I would like to ask that each state be required to form focus groups with stakeholders who are disabled to share their experiences in addition to survey collection by state medicaid offices. We also weight each states safe at home laws into this situation and bring consideration for exemption to gps tracking for people in address confidentiality programs of people with disabilities. I would like to see cost benefit analysis of agencies verses independent providers in states like Ohio how evv has curbed fraud and consideration for non gps models for crime victims with disabilities. Additionally I like to ask for a review of how gps tracking paying off
Also to discuss negative impacts of evv on domestic violence victims with disabilities.
Allowance for alternative address be placed in the system for people can't use gps tracking

Additionally needs be provisions that those with domestic violence backgrounds that evv won't be used to violate their Olmsted rights by making chose between safety and home care.
