OMB Control Number: 0694-0119

Expiration Date: September 30, 2024

U.S. CIVIL SPACE INDUSTRIAL BASE ASSESSMENT

SCOPE OF ASSESSMENT

The U.S. Department of Commerce, Bureau of Industry and Security (BIS), Office of Technology Evaluation, in coordination with the National Aeronautics and Space Administration (NASA), Office of the Administrator and the National Oceanic and Atmospheric Administration (NOAA), National Environmental Satellite, Data, and Information Service (NESDIS) is conducting a survey and assessment of organizations affiliated with NASA, NOAA-NESDIS, and the broader U.S. Civil Space Industrial Base (CSIB). The resulting data will help identify the structure and interdependencies of organizations that participate in the CSIB and identify their associated supply chains. This effort will also aid NASA and NESDIS's ability to understand and respond to supply chain deficiencies, such as supply chain disruptions and diminishing manufacturing sources and material shortages (DMSMS), foreign sourcing and dependency, financial performance, cyber security incidents, use of critical minerals and materials, COVID-19 pandemic impacts, and other challenges facing the civil space industrial base.

RESPONSE TO THIS SURVEY IS REQUIRED BY LAW

A response to this survey is required by law (50 U.S.C. App. Sec. 2155). Failure to respond can result in a maximum fine of \$10,000, imprisonment of up to one year, or both. Information furnished herewith is deemed confidential and will not be published or disclosed except in accordance with Section 705 of the Defense Production Act of 1950, as amended (50 U.S.C App. Sec. 2155). Section 705 prohibits the publication or disclosure of this information unless the President determines that its withholding is contrary to the national defense. Information will not be shared with any non-government entity, other than in aggregate form. The information will be protected pursuant to the appropriate exemptions from disclosure under the Freedom of Information Act (FOIA), should it be the subject of a FOIA request.

Notwithstanding any other provision of law, no person is required to respond to nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB Control Number.

BURDEN ESTIMATE AND REQUEST FOR COMMENT

Public reporting burden for this collection of information is estimated to average 16 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information to BIS Information Collection Officer, Room 6883, Bureau of Industry and Security, U.S. Department of Commerce, Washington, D.C. 20230, and to the Office of Management and Budget, Paperwork Reduction Project (OMB Control No. 0694-0119), Washington, D.C. 20503.

BUSINESS CONFIDENTIAL - Per Section 705(d) of the Defense Production Act

	GENERAL INSTRUCTIONS
	Your organization is required by law to complete this survey of the supply chain supporting the acquisition, manufacture, and sustainment of NASA and NOAA-NESDIS affiliated systems and subsystems, including related products and services.
A.	Your organization has been identified as a direct or indirect supplier to NASA or NOAA-NESDIS, meaning as a prime contractor, subcontractor or as part of their multi-tiered supply chain network as a raw or intermediate material provider, distributor, reseller, integrator, software developer, quality or test providers, manufacturer, small business, non-profit, laboratory, university, FFRDC, etc.
	Please complete the survey using the Microsoft Excel file downloaded from the secure Census Bureau portal: https://respond.census.gov/csib
	To improve internal coordination and overall reporting, a PDF version of the survey is available on the portal to aid internal data collection. The portal will only accept Excel submissions.
	Respond to every question. Surveys that are not fully completed will be returned for completion. Use the comment boxes at the bottom of every section to provide any supplemental information. Make sure to record a complete answer in the cell provided, even if the cell does not appear to expand to fit all the information. Refer to the "Definitions" section while completing the survey.
	Sections 2a-2g must be completed before proceeding to subsequent parts of the survey as answers inform menu options in later survey sections.
В.	DO NOT CUT AND PASTE RESPONSES WITHIN THIS SURVEY.
	Inputs to the survey are made by keyboard responses or use of a drop-down menu. The use of cut and paste can corrupt the file. If your submittal is corrupted due to cut and paste your
	organization will be required to download an additional survey from the portal and resubmit.
C.	Do not disclose any classified information in this survey form.
	Submit your survey only through the secure Census Bureau portal: https://respond.census.gov/csib
D.	Do not email surveys to BIS.
_	Questions related to the survey content should be directed to BIS survey support staff at CSIBsurvey@bis.doc.gov
E.	Email is the preferred method of contact.
	For questions related to the overall scope of the industrial base survey and assessment, contact CSIBsurvey@bis.doc.gov or:
	Jason Bolton, Director
F.	DOC/BIS/EA/OTE/Defense Industrial Base Division Room 1093, 1401 Constitution Avenue, NW
	Washington, DC 20230
	DO NOT submit completed surveys to Mr. Bolton.
	BUSINESS CONFIDENTIAL - Per Section 705(d) of the Defense Production Act

	DEFINITIONS
Term	Definition
Additive Manufacturing	A process of joining materials to make objects from 3D model data, usually layer upon layer, as opposed to subtractive manufacturing technologies.
Advanced Materials	Materials with engineered properties created through the development of specialized processing and synthesis technology, including ceramics, high value-added metals, electronic materials, composites, polymers, and biomaterials.
Applied Research	A systematic study to gain the knowledge or understanding necessary to determine the means by which a recognized and specific need may be met. This activity includes work leading to the production of useful materials, devices and systems or methods, including design development and improvement of prototypes and new processes.
Approved Item	A DMSMS resolution in which the obsolescence issue is resolved by the use of items already approved on the drawing and still in production.
Artificial Intelligence (AI)	The ability of machines to perform tasks that normally require human intelligence.
Authorizing Official	Executive officer of the organization or business unit or other individual who has the authority to execute this survey on behalf of the organization.
Basic Research	Systematic, scientific study directed toward greater knowledge or understanding of the fundamental aspects of phenomena and of observable facts.
Blockchain	A decentralized, distributed ledger that records the provenance of a digital asset.
Brute Force cyberattack	A method of accessing an obstructed device through attempting multiple combinations of numeric/alphanumeric passwords.
Capability	The ability to provide the product or service within 12 months in typical business conditions.
Civil Space	Non-military/DOD space-related work supporting primarily NASA and NOAA and to a lesser extent Federal Aviation Administration, Federal Communications Commission, and the Department of Energy. For instance, the civil space industrial base goes beyond prime contractors and commercial companies to include federally-funded research and development centers (FFRDCs), universities, and laboratories.
Cloud Computing	The delivery of computing services—including servers, storage, databases, networking, software, analytics, and intelligence—over the Internet ("the cloud").
Code/SQL Injection	A type of cyberattack that looks for web sites that pass insufficiently-processed user input to database back-ends.
Commercial and Government Entity (CAGE) Code	An alphanumeric CAGE code identifies companies doing or wishing to do business with the U.S. Federal Government. The code is used to support mechanized government systems and provides a standardized method of identifying a given facility at a specific organization. Find CAGE codes at https://cage.dla.mil
Commercialization	The process of developing products, processes, technologies, or services and the production and delivery (whether by the originating party or others) of the products, processes, technologies, or services for sale to or use by the federal government or commercial markets.
Commercially Sensitive Information	Privileged or proprietary information which, if compromised through alteration, corruption, loss, misuse, or unauthorized disclosure, could cause serious harm to the information's owners.
Complex Substitute	A DMSMS resolution in which the replacement item that has different specifications but requires no modification of the source product or the NHA, is researched and validated. The substitute may be the result of a redefined military requirement.
Component	Any raw material, substance, piece, part, software, firmware, labeling, or assembly which is intended to be included as part of the finished, packaged, and labeled device.
Cost Plus Contract	A cost-reimbursement contract that provides for payment to the contractor of a negotiated fee that is fixed at the inception of the contract. The fixed fee does not vary with actual cost, but may be adjusted as a result of changes in the work to be performed under the contract.
Counterfeit	A part that is not genuine because it 1) is an unauthorized copy; 2) does not conform to original manufacturer design, model, and/or performance standards; 3) is not produced by the original manufacturer or is produced by unauthorized contractors; 4) is an off-specification, defective, or used OEM product sold as "new" or working; or 5) has incorrect or false markings and/or documentation.
Critical Minerals	For the purposes of this survey, critical minerals are the 35 minerals identified by the U.S. Geological Survey as a non-fuel mineral or mineral material that is essential to the economic and national security of the United States, has a supply chain vulerate to disruption, and serves an essential function in the manufacturing of a product, the absence of which would have significant consequences for the economy or national security. For more information, please visit https://www.usgs.gov/news/national-news-release/us-geological-survey-releases-2022-list-critical-minerals
Critical Technology	In terms of this survey, critical technology are "at risk" industrially-supplied building block items used for a variety of NASA ground and space systems.
Customer	An entity to which an organization directly delivers the product or service that it produces. A customer may be another organization or another facility owned by the same parent organization. The Customer may be the end user for the item but often can be the immediate link in the supply chain, adding additional value before transferring the item to yet another customer.
Cybersecurity	The body of technologies, processes, and practices designed to protect networks, computers, programs, and data from attack, damage, or unauthorized access.

Data Universal Numbering System (DUNS)	A nine-digit numbering system that uniquely identifies an individual businesses. Find DUNS numbers at http://fedgov.dnb.com/webform
Deemed Export	The release of controlled technology or information to a foreign person in the U.S. This includes technology made available to foreign nationals for visual inspection, exchanged orally, and made available by practice or application under the guidance of persons with knowledge of the technology.
Defense-Related	Any activity/component/subsystem/test/product/service that contributes to a government defense program, whether directly or indirectly, or is used to provide any such item that contributes to a government defense program.
Denial of Service (DoS/DDoS)	The prevention of authorized access to resources or the delaying of time-critical operations (Time-critical may be milliseconds or it may be hours, depending upon the service provided).
Development of a New Item or Source	A DMSMS resolution in which a replacement product is developed that meets the requirements of the original product without affecting the NHA. The new product may be developed by emulating, reverse engineering, designing a replacement based on the original manufacturing designs and processes, or designing a different product based on the original or new requirements. The manufacturing source for the new item may be the original manufacturer or a new source.
Digital Engineering	The use of models and computer resources together to do engineering tasks, such as design, analysis, prototyping and experimentation.
Direct Support	Selling to or engaging in a direct contract with the entity in question.
Distributed Ledger Technology	Refers to the technological infrastructure and protocols that allows simultaneous access, validation, and record updating in an immutable manner across a network that's spread across multiple entities or locations.
Diversity, Equity, Inclusion, and Accessibility (DEIA)	1) Diversity encompasses the full variety of communities, identities, races, ethnicities, backgrounds, abilities, cultures, and beliefs of all people, including those from underserved communities? 2) Equity defined means the consistent and systematic provision of fair, just, and impartial treatment to all individuals, including individuals who belong to underserved communities that have been denied such treatment. 3) Inclusion involves the recognition, appreciation, and use of the talents and skills of employees of all backgrounds. 4) Accessibility denotes the capability for full and independent use by all people, including people with disabilities, of technology, programs, and services through inclusive design, construction, development, and maintenance of facilities.
Edge Computing	Computing and processing that can occur at the edge of the IT enterprise, often at the data collection source itself.
Encryption Technologies	Technology that converts information to ciphertext that can only be deciphered by authorized users that have the key. Types of encryptions include, but are not limited to, Symmetric Encryption, Asymmetric Encryption, Data Encryption Standard (DES), Triple Data Encryption Standard (3DES), Rivest-Shamir-Adleman (RSA), Advanced Encryption Standard (AES), Encryption in the Cloud, and End-to-End Encryption.
Export Administration Regulation (EAR)	U.S. Government regulation designed to control the export of "dual-use" goods, that is, those that have both commercial and military applications, administered by the U.S. Department of Commerce.
Extension of Product Support	A DMSMS resolution in which the supplier is incentivized to continue providing the obsolete items. This may involve long-term agreements to procure specific quantities of items. One-time costs may be associated with setting up this resolution. Those costs should be included in any cost and cost avoidance by being proactive calculations. For software, long-term licensingand/or support agreements are obtained.
Facility	For the purpose of this survey, a facility is an area within an organization defined by a single CAGE code. An organization's physical organization may contain multiple facilities.
Federal Acquisition Regulation (FAR)	The Federal Acquisition Regulations System is established for the codification and publication of uniform policies and procedures for acquisition by all executive agencies. The Federal Acquisition Regulations System consists of the Federal Acquisition Regulation (FAR), which is the primary document, and agency acquisition regulations that implement or supplement the FAR.
Full Time Equivalent (FTE) Employees	Employees who work for 40 hours in a normal work week. Convert part-time employees into "full time equivalents" by taking their work hours as a fraction of 40 hours.
Hypersonics	Vehicles or weapons that travel faster than Mach 5 (~3,800mph) and have the capability to maneuver during the entire flight.
Indefinite-Delivery, Indefinite Quantity (IDIQ) Contract	This type of contract provides for an indefinite quantity of services for a fixed time. They are used when the government can't determine, above a specified minimum, the precise quantities of supplies or services that it will require during the contract period.
Innovation	Applying technology, tools, or processes in a new or different way that helps perform the mission better, cheaper, or faster. That is, it saves resources, time or money, or enables the user to perform their mission better.
International Traffic in Arms Regulation (ITAR)	Regulation designed to control the export of defense and military-related technologies, administered by the U.S. Department of State.
Internet of Things (IoT)	A system of objects, as well as even people and animals, who carry unique identifiers and can transfer data over the internet without any human-to-human or human-to-computer interaction.
Joint Venture	A joint commercial enterprise taken by two or more distinct business entities.
Labor-Hour Contract	A labor-hour contract is a variation of the time-and-materials contract, differing only in that materials are not supplied by the contractor.
Life of Need (LON) Buy	A DMSMS resolution in which a sufficient quantity of the item is purchased to sustain the product until its next technology refreshment or the discontinuance of the host assembly. Because this resolution uses an approved item, no testing or drawing changes are required. The source of supply can be residual stock from the original manufacturer, shelf stock from distributors, sponsor-owned material, and so forth.
Long Range Deep Space Communication	Communication technology with the ability to communicate with spacecraft, send commands or software updates, track location and receive telemetry, images and scientific data across large distances from earth. According to NASA, deep space is considered any distance further than the moon, roughly 384,000km.
Malware	Hardware, firmware, or software that is intentionally included or inserted in a system for a harmful purpose.
Man in the Middle (MitM)	A cyberattack where the adversary positions himself in between the user and the system so that he can intercept and alter data traveling between them.

	2005
NATO Commercial and Government Entity (NCAGE) Code	CAGE codes for entities located outside the United States. NCAGE codes are assigned internationally as part of the NATO Codification System (NCS), and are required for all foreign entities or the registration will be considered incomplete. Find NCAGE codes at: https://eportal.nspa.nato.int/AC135Public/CageTool/home
Organization	For the purpose of this survey, an organization can include a company, university, federally-funded research and development center (FFRDC), laboratory, or other government entity. Organizations may, and often will, contain multiple facilities. Additionally, all off-work site activities associated with a organization should be reported as part of that organization. For instance, employees who work at a client site should be considered as part of their employing organization.
Other Transaction Agreements (OTA)	Legally binding instruments that may be used to engage industry and academia for a broad range of research and prototyping activities. OTAs are typically defined by what they are not: they are not standard procurement contracts, grants, or cooperative agreements. As such, they are generally not subject to the federal laws and regulations that apply to government procurement contracts (e.g., FAR/DFARS)
Phishing	A technique for attempting to acquire sensitive data, such as bank account numbers, through a fraudulent solicitation in email or on a web site, in which the perpetrator masquerades as a legitimate business or reputable person.
Product/Process Development	Conceptualization and development of a product prior to the production of the product for customers.
Qualified Research Expense (QRE)	The R&D credit comprises the following types of Qualified Research Expenses (QRE): *Wages paid to employees for qualified services (including amounts considered to be wages for federal income tax withholding purposes) *Supplies (defined as any tangible property other than land or improvements to land, and property subject to depreciation) used and consumed in the R&D process *Contract research expenses paid to a third party for performing QREs on behalf of the taxpayer, regardless of the success of the research, allowed at 65% of the actual cost incurred *Basic research payments made to qualified educational institutions and various scientific research organizations, allowed at 75% of the actual cost incurred.
Quantum Computing	An area of advanced theoretical research in computer science and physics, with the theory behind quantum computing being that the principles of quantum mechanics can be used to replace the binary one and zero bits of digital computing with multidimensional quantum bits known as qubits.
Ransomware	A type of malicious software designed to block access to a computer system until a sum of money is paid.
Redesign - Complex/Systems Replacement	A DMSMS resolution in which major assembly redesign affects assemblies beyond the obsolete item's NHA and may require that higher level assemblies, software, and interfaces be changed.
Redesign - Next Higher Assembly (NHA)	A DMSMS resolution in which he affected item's NHA must be modified. Only the NHA is affected, and the new design will not affect anything at a higher level in the system
Repair, Refurbishment, or Reclamation	A DMSMS resolution type in which the obsolescence issue is resolved by doing one of the following:instituting a repair or refurbishment program for the existing item or assembly; instituting a reclamation program to reclaim items from marginal, out-ofservice, or surplus materiet; or obtaining access to the software source code, development tools, and the human resource skills necessary to change it to ensure continued support.
Requirements Contract	A requirements contract provides for filling all actual purchase requirements of designated Government activities for supplies or services during a specified contract period (from one contractor), with deliveries or performance to be scheduled by placing orders with the contractor.
Research & Development (R&D)	All efforts of scientific study and experimentation, theoretical work, and original investigation undertaken primarily to acquire new knowledge or understanding of the underlying foundations of phenomena and observable facts, including the creative and systematic application of knowledge with specific practical aim or objective or the production of useful materials, devices, and systems or methods. Comprises such efforts at all levels (basic, applied, design, etc.), including the design, development, and improvement of prototypes and new processes to meet specific requirements.
Robotics	The technology behind machines that are programmable by a computer and which can carry out a complex series of actions automatically.
Service	An intangible product (contrasted to a good, which is a tangible product). Services typically cannot be stored or transported, even though other sources with equivalent technical know-how and production capability may exist.
Simple Substitute	A DMSMS resolution in which the item is replaced with an existing item that meets all requirements without modification to either the item or its NHA and requires only minimal qualification. Associated costs are largely administrative. This is sometimes referred to as an "alternate."
Single Source	An organization that is designated as the only accepted source for the supply of parts, components, materials, or services, even though other sources with equivalent technical know-how and production capability may exist.
Small Business Innovation Research (SBIR) Contracts	A highly competitive program that encourages domestic small businesses to engage in Federal Research/Research and Development (RR&D) that has the potential for commercialization. Through a competitive awards-based program, SBIR enables small businesses to explore their technological potential and provides the incentive to profit from its commercialization. By including qualified small businesses in the nation's R&D arena, high-tech innovation is stimulated and the United States gains entrepreneurial spirit as it meets its specific research and development needs. Find more information about SBIR at: https://www.sbir.gov/about/about-sbir
Small Business Technology Transfer (STTR) Contracts	A program that expands funding opportunities in the federal innovation research and development (R&D) arena. Central to the program is expansion of the public/private sector partnership to include the joint venture opportunities for small businesses and nonprofit research institutions. The unique feature of the STTR program is the requirement for the small suiness to formally collaborate with a research institution in Phase I and Phase II. STTR's most important role is to bridge the gap between performance of basic science and commercialization of resulting innovations. Find more information about STTR at: https://www.sbir.gov/about/about-sttr#three
Sole Source	An organization that is the only source for the supply of parts, components, materials, or services. No alternative U.S. or non-U.S. based suppliers exist other than the current supplier.
Space-Related	Any product, service, or object that is a) used in or launched into space; b) used to directly or indirectly support space applications from Earth; and/or c) used to manufacture any product that is used in space or directly supports space applications. The product, service, or object does not have to be specifically intended to support space applications.
STEM Workforce	STEM is the acronym for Science, Technology, Engineering, and Mathematics. The STEM workforce not only includes occupations that are historically known to require science and engineering skills and expertise (e.g., life sciences, physical sciences, engineering, mathematics and computer sciences, social sciences, and health care) but also occupations that require STEM skills but are not historically considered STEM occupations (e.g., installation, maintenance, and repair; construction trades; and production occupations).
Supercomputing	A class of extremely powerful computers used primarily for scientific and engineering work requiring exceedingly high-speed computations. The performance of a supercomputer is commonly measured in floating-point operations per second (FLOPS) instead of million instructions per second (MIPS). Common applications for supercomputers include testing mathematical models for complex physical phenomena or designs, such as climate and weather, evolution of the cosmos, nuclear weapons and reactors, new chemical compounds (especially for pharmaceutical purposes), and cryptology.
Supplier	An entity from which your organization obtains inputs. A supplier may be another firm with which you have a contractual relationship, or it may be another facility owned by the same parent organization. The inputs may be goods or services.
Supply Chain Risk Management (SCRM) Program	A coordinated effort within an organization to help identify, monitor, detect and mitigate threats to the supply chain.
Technology Taxonomy	NASA's system that identifies, organizes, and communicates technology areas into 17 distinct technical discipline-based taxonomies relevant to advancing the agency's mission.
Time-and-Materials Contracts	A time-and-materials contract provides for acquiring supplies or services on the basis of either direct labor hours at specified fixed hourly rates that include wages, overhead, general and administrative expenses, and profit; or the actual cost for materials.
rinic-and-Waterials Contracts	
Unique Entity Identifier (UEI)	The Unique Entity ID or UEI is a 12-character alphanumeric ID assigned to an entity by SAM.gov. Find UEIs at https://sam.gov/content/home

Section 2a: NASA Technology Taxonomy: Products and Services

In Section 2, you are asked to identify **all** space-related products and/or services that your organization manufactures, distributes, performs research and development, and/or otherwise provides, or has the capability of providing. For the purpose of this survey, "capability" is defined as having the ability to provide a product or service. For Sections 2b-2g, capability can mean current ability to product or provide services, capability courrently in development (available within 3 years), or your organization is planning to develop the capability (available in 3 years or more). Products and services are separated based on NASA Technology Taxonomy (TX) and in each subsection are further differentiated by subareas.

 $For more information on the NASA\ Technology\ Taxonomy: \ \underline{https://www.nasa.gov/offices/oct/taxonomy/index.html}$

Identify each Technology Taxonomy subarea in which your organization has capabilities below (only affirmative "Yes" responses required). Then, move to that subarea's corresponding section (Sections 2b through 2g), and provide information on the individual type of products or services within each indicated subarea for which your organization has capabilities.

The list below contains links that navigate you to the section containing that particular subarea. After completing this section, you may skip to the corresponding section(s) with the products/services that pertain to your organization. Review all segments to ensure you do not omit any required information. Subareas in which you do not indicate a capability will be greyed out in Sections 2b through 2g.

NASA Technology Taxonomy Area C	Capability	NASA Technology Taxonomy Area	Capability	NASA Technology Taxonomy Area	Capability

ction 2b: NASA Technology Taxonomy Areas 1 - 3: Propulsion Systems; Flight Computing and Avionics; Aerospace Power and Energy Storage For each Taxonomy Subarea that you indicated capabilities for in Section 2a, please specify your organization's capabilities by selecting an option from the "Product/Service Capability" drop-downs. Next, indicate the type of Direct Support your organization provides to NASA and/or NOAA. Then, provide a description of the product/service within that Taxonomy Subarea for which your organization has capabilities and indicate whether your organization carries out Research & Development (R&D) for the given product/service. Please note, internal R&D is performed in-house by the organization, while external R&D is contrated out or or otherwise out-sourced to another company or organization. If the product contains any critical minerals, identify the primary critical mineral used (based on estimated level of critically to the product). Lastly, for each Taxonomy Subarea line, provide your organization's Primary Part Number, if applicable. TX01 - Propulsion Systems Primary Critical Primary Part TX01.1 - Chemical Propulsion Systems Product/Service Capability Direct Support of NOAA Product/Service Description R&D Direct Support of NASA Currently produce/service and is available for TX01.1.1 - Integrated Systems and Ancillary Technologies (ex: Thrust Vector Control, Separation motors, Cubesat propulsion, propellant thermal control systems, etc.) X01.1.2 - Earth Storable (ex: Kerosene, Green propellants, Ionic liquids, etc.) Currently in development (available within 3 years) IX01.1.3 - Carill Sorgale (ex. Necessite), oreen propensities, bullic liquit IX01.1.3 - Cryogenic (ex. Liquid Oxygen, Methane, etc.) IX01.1.4 - Solids (ex.Hydroxyl Terminated Poly Butadiene (HTPB)) IX01.1.5 - Hybrids (ex. Acrylonitrile butadiene styrene thermoplastic) Planned development (greater than 3 years) "X01.1.6 - Gels (ex: Gelled oxygen (O2)/hydrogen (H2), Nanogelled propellants, etc.) Direct Contract or Purchase Order with NASA, TX01.1.6 - Gold (as Space Act Agreement with NASA, Sub-tier supplier to NASA, TX01.2 - Electric Space Propulsion Direct Support of NASA Direct Support of NOAA Product/Service Description Primary Critical Primary Part Product/Service Capability R&D Contractual relationship to NASA unknown TX01.2.1 - Integrated Systems and Ancillary Technologies (ex: Engine health monitoring, Materi and manufacturing, etc.)

[X01.2.2 - Electrostatic (ex: Ion engines, Hall thrusters, Electrospray propulsion, etc.) Direct Contract or Purchase Order with TX01.2.3 - Electromagnetic (ex. Magnetoplasmadynamic (MPD) thruster, Pulsed inductive thruster, Electrodynamic launch, etc.) NOAA. Sub-tier supplier to NOAA, TX01.2.4 - Electrothermal (ex: Resistojets, Arcjets, etc.) Other Transactional Authority with NOAA, Primary Part Direct Support of TX01.3 - Aero Propulsion Product/Service Capability Direct Support of NOAA Product/Service Description R&D Contractual relationship to NOAA TX01.3.1 - Integrated Systems and Ancillary Technologies (ex: Engine health monitoring, Emissions control etc.) FX01.3.2 - Turbine Based Combined Cycle (ex: Dual mode scramjet) Yes, internal R&D. X01.3.3 - Rocket Based Combined Cycle (ex: Ejector ramiet) Yes, external R&D. TX01.3.4 - Pressure Gain Combustion (ex: Pulse Detonation Engines (PDE), Rotating Detonat Yes, both internal and external, ingines (RDE), Pulsejets, Wave rotors) X01.3.5 - Turbine Based Jet Engines Neither/No R&D TX01.3.6 - Ramjet/Scramjet
TX01.3.7 - Reciprocating Internal Combustion (ex: Air-cooled four- and six-cylinder piston TX01.3.8 - All Electric Propulsion (ex: Permanent magnet synchronous motor, Distributed None alectronic propulsion, etc.; TX01.3.9 - Hybrid Electric Systems Aluminum TX01.3.10 - Turboelectric Propulsion
TX01.3.11 - Engine Icing (ex: Electro-expulsive deicing, Thermal anti-icing systems, etc.)
TX01.3.12 - Alternative Low Carbon Jet Fuel (ex: Biojet fuels, Hydrogen-based fuels, etc.) (bauxite) Antimony Direct Support of Arsenic TX01.4 - Advanced Propulsion Product/Service Capability Direct Support of NOAA Product/Service Description R&D Barite Bervllium TX01.4.3 - Nuclear Thermal Propulsion
TX01.4.4 - Other Advanced Propulsion Approaches Bismuth Cerium TX01.X - Other Propulsion Systems Cesium TX02 - Flight Computing and Avionics Product/Service Capability Direct Support of NASA Chromium Primary Critical Primary Part TX02.1 - Avionics Component Technologies Direct Support of NOAA Product/Service Description Cobalt TX02.1.1 - Radiation Hardened Extreme Environment Components and Implementations (ex. Radiation mitigation devices, Rad-hard/tolerant data processing, Nanoelectronics based mem devices, etc.) Dysprosium TXQ2.1.2 - Electronic Packaging and Implementations (ex: Additively manufactured electronic packaging, Chip-on-board technologies, etc.). TXQ2.1.3 - High Performance Processors (ex: Scalable, multi-core processors, Digital signal processors (DSP), Graphics processing units (GPU), etc.) Europium Fluorspar Gadolinium PROCESSOR (USF), USEPARES PROCESSING USES (USF), BEC.) TURNEL PROFUNDED CONTROL OF THE PROFUNDED Gallium Germanium Graphite (natural) TX02.1.6 - Radiation Hardened ASIC Technologies (ex: System-on-a-chip (SoC) devices, Intellectual property (IP) cores, Network interface ASICs, etc.)

TX02.1.7 - Point-of-Load Power Converters (ex: Fault-tolerant point-of-load converters, Multi-Hafnium Holmium Helium TX02.1.8 - Wireless Avionics Technologies (ex: RFID-based sensors, Wi-Fi-based sensors, Wireless wearable sensors for monitoring astronauts, etc.) Indium Iridium TX02.2 - Avionics Systems and Subsystems Product/Service Capability Direct Support of NOAA Product/Service Description Mineral Lanthanum TX02.2.1 - Spacecraft Command and Data Handling Systems (C&DH) (ex: Data recorders and Lithium torage systems. Health management systems. Crew input and display systems, etc.) Lutetium TX02.2.2 - Aircraft Avionics Systems (ex: Autopilots, Flight deck management systems, Terrain awareness/warning systems, Collision avoidance systems, etc.) Magnesium Manganese TX02.2.3 - Vision and Virtual/Augmented Reality Avionics (ex: External visions systems for safe take-offlianding, Integrated data and real-lime imaging into heads-up displays, etc.)

TX02.2.4 - Low Power Embedded Computer Systems (ex: Real-lime processor boards/systems, Neodymium Nickel strument or peripheral embedded processing systems, etc.) Niohium TX02.2.5 - High Speed Onboard Interconnects and Networks (ex: Gigabit Ethernet, Fiber optic Palladium Platinum TX02.2.6 - Data Acquisition Systems (ex. Structural Health m=Monitoring and Thermal Health Monitoring (SHM/THM) system integration, Sensor webs, High analog-bandwidth/sampling rate, Praseodymium Rhodium IX02.2.7 - Data Reduction Hardware Systems (ex: Data duplication software, Radio frequency Rubidium TX02.2.8 - Use of Advanced Commercial-off-the-Shelf (COTS) Technologies (ex: Uses of Ruthenium advanced commercial microcircuits, semiconductors, and passives; Implementation of commercial processors, FPGAs, memories, Analog-to-Digital/Digital-to-Analog Converters (ADC/DAC), etc.) Samarium Scandium Tantalum Tellurium Terbium Thulium Titanium Tungsten Vanadium

Ytterbium Yttrium Zinc

Zirconium

TX02.3 - Avionics Tools, Models, and Analysis	Product/Service Capability	Direct Support of NASA	Direct Support of NOAA	Product/Service Description	R&D	Primary Critical Mineral	Primary Part Number
TX02.3.1 - Electronics Development Tools (ex: Automated hardware development toolsets, Printed circuit board (PCB) design tools, etc.)							
TX02.3.2 - Space Radiation Analysis and Modeling (ex: RENE, ESP, and PSYCHIC environmental models, MULASSIS, Monte Carlo N-Particle/ Monte Carlo N-Particle eXtended (MCNP/MCNPX), NOVICE transport codes, etc.)							
TX02.3.3 - Avionics Reliability and Fault-Tolerance Analysis and Modeling (ex: Fault tolerance modeling and coverage estimation, Fault Injectors, etc.)							
TX02.3.4 - Electromagnetic Environment Effects (ex E3 2D and 3D modeling capability, including Finite Difference Time Domain (FDTD) and integral electromagnetic solvers, with aerodynamic and thermal environment interfaces)							
TX02.X - Other Flight Computing and Avionics							(
	TX03 - Aero	ospace Power and Energy Sto	orage				
TX03.1 - Power Generation and Energy Conversion	Product/Service Capability	Direct Support of NASA	Direct Support of NOAA	Product/Service Description	R&D	Primary Critical Mineral	Primary Part Number
TX03.1.1 - Photovoltaic (ex: 25-150 kW-class solar arrays, Reliably retractable solar arrays, etc.)							
TX03.1.2 - Heat Sources (ex: Conventional radioisotope, fission, or solar-thermal heat sources linked with novel aspects of heat collection such as heat pipes, heat pumps, etc.)							L
TX03.1.3 - Static Energy Conversion (ex: Enhanced multi-mission radioisotope thermoelectric generators, Thermionic generators)							
TX03.1.4 - Dynamic Energy Conversion (ex: Advanced Stirling radioisotope generator, Brayton and Rankine cycle generators with solar, fission, or chemical energy sources, etc.)							
TX03.1.5 - Electrical Machines (ex: High-efficiency, high-power motors/generators for electric aircraft, Wind turbines, etc.)							
TX03.1.6 - Other Advanced Concepts for Generating/Converting Power (ex: Electrodynmaic tether energy harvesting, Nuclear thermionic avalanche cells, Alpha/beta voltaics, etc.)							<u> </u>
TX03.2 - Energy Storage	Product/Service Capability	Direct Support of NASA	Direct Support of NOAA	Product/Service Description	R&D	Primary Critical Mineral	Primary Part Number
TX03.2.1 - Electrochemical: Batteries (ex: High-specific-energy, Extreme environment energy storage, Flow batteries, etc.)							
TX03.2.2 - Electrochemical: Fuel Cells (ex: Hydrogen/oxygen-based regenerative fuel cells, Solid oxide fuel cells, etc.)							
TX03.2.3 - Electrochemical: Advanced Concepts for Energy Storage (ex: Superconducting bearings, Solar energy stored as high-energy-density chemical fuels, etc.)							l
TX03.3 - Power Management and Distribution	Product/Service Capability	Direct Support of NASA	Direct Support of NOAA	Product/Service Description	R&D	Primary Critical Mineral	Primary Part Number
TX03.3.1 - Management and Control (ex: Autonomous fault detection, isolation, and recovery (FDIR) algorithms and technologies for complex power systems, Heirarchical and distributed control of a power system, etc.)							
TX03.3.2 - Distribution and Transmission (ex: High-conductivity carbon nanotube wire, All forms of wireless power transmission (magnetic, radio frequency, and optical), etc.)							
TX03.3.3 - Electrical Power Conversion and Regulation (ex: Modular power converters, Electrical propulsion power processing units (power electronics related to electric propulsion), etc.)							
TX03.3.4 - Advanced Electronic Parts (ex: High-voltage semiconductors and passive components, Extreme radiation-hardened power distribution, etc.)							
TX03.X - Other Aerospace Power and Energy Storage							<u> </u>

Please review the below list of USG-designated critical products and/or services associated with supporting space systems and various ground systems. Indicate the capabilities your organization has in the listed products and services. If your organization has a capability in a specific critical product or service, please complete the remaining columns related to that product. Please note, capability selection option "Currently produce from supplier" means that your organization does not have production capability but can source the product or service from a supplier. Selection options for "Location with Capability" populate from your responses on Section 1b. If your organization uses suppliers to produce any critical products or provide services, you may indicate them on the next Section (4). For more information on each product or service, select that product's or service's corresponding cell. Most listed products have an associated definition or description. **Location with Capability** Direct Support of NOAA Product/Service Capability Direct Support of NASA (generated from Section 1b) Additive Manufacturing Adiabatic Demagnetization Refrigerators (ADR) Aerospace-grade Rayon (for use in reentry thermal protection systems) Air Force Elastomeric Material (AF-E) Currently produce and is available for Ammonia Scrubber Currently distribute, Ammonia Scrubber Sorbent Currently procure from supplier, Currently in development (available within Ammonium Perchlorate three years), Planned development (greater than 3 years) Atomic Clocks Avcoat Bearings for Extreme Environments Bellows Tanks Carbon Fiber (Aerospace Grade) Carbon FiberForm and Phenolic Impregnated Carbon Ablator (PICA) Ceramic Tiles & Coating Charge Coupled Devices (CCD) Conductivity Sensor Cool Gas Generators Cryocoolers Cryogenic High Accuracy Refraction Measurement System (CHARMS) Electron Beam Direct Write IC Equipment Far-Ultraviolet Coating Capabilities Fuel Valves Gas Valves and Regulators Heatshield for Extreme Entry Environment Technology (HEEET) Helium High performance, sole source MIL-parts (logic ICs, memory ICs, ADCs, etc.) High Power Laser Diodes High Purity Hydrazine High-power, high-specific-impulse Electric Propulsion Power Processing Unit (PPU) High-power, High-specific-impulse Electric Propulsion Thruster Honeycomb Radiators Hot Structures (CVI C/SiC) Infrared Detectors In-Space Propulsion Systems

revious Page Next Pag Section 13: Employment & STEM Workforce Record the total number of full time equivalent (FTE) employees and contractors employed by this organization for each of the past four years. The year 2022 should be populated with the organizator's most recent employment numbers. These yearly numbers should include employees and contractors who work off-site but still report to this organization. 2019 2020 2022 FTE Employees FTE Contractors First, identify the top visa type associated with your organization's non-U.S. citizen workers (employees or contractors). Second, please provide the F-1 Student Visa, Green Card, 2a total number of non-U.S. citizen workers (employees or contractors) with the indicated top visa type. H-1B, H-2B, L, O, Other Identify the top country of citizenship of your organization's non-U.S. citizen workers (employees or contractors). Second, please provide the total 3a number of non-U.S. citizen workers (employees or contractors) associated with the top indicated country. STEM-related and Other Workforce Questions Yes/No Explain Does your organization experience difficulty hiring and/or retaining STEM-related employees? Yes, hiring; Yes, retaining; Yes, both hiring and retaining; No Please explain your answer. Does your organization actively engage in efforts to interest K-12 students in the STEM field? Yes. No If ves. how? If no. please explain why. Does your organization sponsor STEM-related training for your employees? Please explain Yes. No your answer. Has your organization benefited from any USG STEM-related programs and/or initiatives? If Yes, No yes, provide the program name. If no, please explain why. Can the USG adapt its STEM-related programs and/or initiatives to better serve your Yes. No organization? Please explain your answer. Has your organization benefitted from having a diversity, equity, inclusion, and accessibility Yes. No. Not Applicable (DEIA) program? Please explain your answer. Indicate whether your organization has difficulty hiring and/or retaining any part of its workforce and the associated degree of difficulty. Next, identify the current number of unfilled vacancies overall and by occupation type. Then, indicate the top workforce issue area for each occupation type (if applicable). Lastly, please specify the job title most impacted by the identified difficulty. Occupation Top Workforce Issue Area Job Title Most Impacted Difficulty Degree of Difficulty # of Unfilled Vacancies Total (All Employees) Hiring Low Attracting workers to location Employee turnover Engineers, Scientists, R&D (STEM) Medium Retaining Finding experienced Information Technology and Cybersecurity Finding qualified workers Both High **Production Line Operations** Neither Significant portion of workforce retiring Unions/Collective bargaining Testing and Quality Control Workers unable/not allowed to access location Other (specify here) Other (specify here) Comments: BUSINESS CONFIDENTIAL - Per Section 705(d) of the Defense Production Act

The U.S. Government encourages the reporting of suspected or confirmed cybersecurity incidents to the Federal Bureau of Investigation (FBI) or the Cyber Security and Infrastructure Security Agency (CISA). Local FBI field offices can be identified at https://www.fbi.gov/contact-us/field-offices; the FBI's 24f7 Cyber Watch (CWatch) can be contacted by phone at 855-292-3937, or by email at CyWatch@fbi.gov; and cybersecurity incidents and vulnerabilities can be reported to CISA at https://www.us-cert.gov/report. No-cost technical assistance can be requested from CISA, using the same website address.
