General Comment

As a recipient in this program, I am for any/all documents (IRS/bank accounts etc) to be submitted to receive this benefit amongst others. After a personal incident and as a recipient myself, I know firsthand laws/rules need to tighten in order for those who abuse this program either are stopped or reprimanded and/or educated. The State needs held accountable as well for when these rules/regulations are violated as well. With all that said, for us with cognitive issues there will be better directions and functions on submitting these extra & new documents. Maybe so certain recipients (disabled/vets/ssi) information can be sought by social security number. It's very hard to comprehend information you are not used to and then side effects of cognitive issues comes in play such as frustration and memory loss. Well if you walk away frustrated/crying to take a break because you know it's simple but your brain says different and just need collect your thoughts and come back to task but have memory problems and forget to. Dire consequences that effect simple rights to life neccessaties. So for this to be bestowed by any recipient of govt program as well as no ratification can have dire negative effects including future and permanent negative effects including becoming disillusioned in our government.
