## General Comment

I agree there needs to be a check and balance in every department especially Social Security but I think Social Security needs to focus on cases that employees entrap data on every employee that works on a case and if the case happens to be inconsistent then Social Security should audit the Social Security worker and go through the cases because then you have a strategy and you can see which employee employees performance correlates with inconsistent claims Social Security has been focusing on random individuals and not attacking this issue from it really starts with the Social Security supervisors and staff who provide information and approve or deny claimant if we could have a high expectation for staff then everybody will be extra cautious one going outside the perimeter and staff will self certified and supervise themselves possible audit if their work has a sequence of cases that are consistent a lot of times it's the staff misinformed claimants and when we audit staff cases they worked on we can ensure self governance and self awareness and illuminate over payments under payments and incorrect payments which cost a lot more But to people that have diagnosis that we know from science that they will never be able to do the same things as other people while having to the diagnosis unless you believe in magic for healing we have to be realistic and cold cases that should not even be reviewed it's a waste of time
