## General Comment

There is no safe way to store atomic or nuclear waste! No place is safe to store any radio-active materials! There are too many locations in the U.S. that are leaking or about to leak into our ground water contaminating any creature, plant, or human unlucky enough to ingest or bathe in it. Those living close to nuclear waste storage facilities must be alerted and educated about the potential risks of remaining in there homes. We owe them buyouts and relocation to safer places. We must provide free health monitoring/restoration regardless of age to include every need to restore them to the best possible health possible.
