Good evening,

After understanding the use of this shrimp vessel and equipment characterization survey, I find it indefinitely beneficial to the shrimp industry. Not only that, but this technique can be transferred to other organizations in need of improvement. This chain effect can then only strengthen the economy as a whole. However, I think the presentation of this survey can be altered in a way that is less burdensome for both sides. The survey could be administered in an online format. For example, each commercial permit holder could be emailed the forms and fill them out electronically. This automated collection will still have practical value, for the methodology would just be changed. All things considered, the clarity and quality of this survey can only be heightened while still achieving its anticipated purpose.

Kind regards,

Todd Jahnke
