Hi,

On August 2022 the CDC said that there was no distinction between someone unvaccinated and someone vaccinated. The CDC changed its recommendations as well. How are we still having this requirement up? a US citizen can come back to the US without being vaccinated but a foreigner can't? There's a big discrimination done by the CDC it's incredible that agencies and the president are backing this.

No other country in the western hemisphere is asking for proof of vaccination. The world has moved on. Hong kong will remove its vaccine requirements for foreigners as well.

Do you understand how much damage this requirement has caused to millions of families not being able to get together? the FDA issued a warning about the vaccines causing blot clots and myocarditis. The requirement asks for people to have the two first shots which according to science and even their data after 2 years it's almost as if you are unvaccinated.

It has been established by numerous agencies and scientists, even Pfizer and Moderna that the vaccine does not prevent infection, and does not prevent the spread.

PLEASE do not agree with this extension. We haven't been able to see our family for the past three years. the CDC needs to get inline with its own recommendations on how vaccinated and unvaccinated should be regarded.

Just because you are a US citizen doesn't grant you super powers to not spread or not get the virus. Stop the discrimination against foreigner travelers.

We just want to see our families.
