It is unethical and discriminatory to require covid-19 vaccination for foreigners. It is the opposite of love and a welcoming spirit. It is also an invasion of important privacy concerning health information and a violation of everyone's right to bodily autonomy, the inherent God-given right to make personal decisions for one's self and family regarding health treatments and potentially genetic modification. It is inhumane to require participation in an experiment for entrance, let alone an experiment which has been shown to cause many problems.
