Hi,

I hope that whoever reads these comments takes into account the information and plea of the public.

There are several statements that would be constituted as not factual in this request the CDC is asking the OMB to approve.

1. on the abstract the CDC says that knowing that the people boarding the plane to the US are fully vaccinated will help prevent the spread. This has been known now to be not true. This has been confirmed by the vaccine makers. the CDC has made the statement that a person that is fully vaccinated can still spread the virus and have a breakthrough infection. Please see attached statements from the CDC page, the Mayo clinic page as well the WHO

2. approving and continuing this collection of information does nothing to the spread of the virus. Unvaccinated US citizens and all the other people exempted from this requirement don't give the same "risk" as an unvaccinated foreign traveler. The discrimination that the CDC is perpetuating against foreign travelers, it's incredible given the fact that the Biden administration has spoken so strongly about the discrimination that the previous administration had.

3. the CDC wanting to extend this collection for 2 more years make absolutely no sense. It's public knowledge that the vaccine "protection" wains after a while. so technically people that got the primary dose of vaccines las year have very very little "protection" or non this year. this can be seen in the study made by the BMJ
