This is a human rights violation to pressure patients to take a medical intervention. Public health is not a one-size-fits-all endeavor; the harm-benefit analysis indicates these vaccinations are not in the individual best interest of many patients. These investigational mRNA vaccines also have shown a disturbingly high rate of serious adverse reactions and long-term injuries. Reanalysis of Pfizer/Moderna phase 3 clinical data shows a 1:800 rate of serious adverse events. Safety and medical ethics should have demanded that these products be suspended from the market in early 2021 until further investigation and safety enhancements could be tested. Instead, governments around the world officially promoted, and in many places still mandate, these unethical shots. This is criminal malfeasance if not a conspiracy to modify human biology and society in the interest of a few, powerful technocratic/transnational elite. I suggest you reverse course now, because ultimately, Truth will prevail; and this nascent, totalitarian biosecurity state will crumble under the weight of its own lies and crimes against humanity.
