General Comment

The National Drug & Alcohol Screening Association is grateful for the opportunity to provide comment and for the work of the FDA, particularly in understanding the need for this important data, so there are more informed pathways for protecting our youth from the harms of substance use, abuse and resulting disorders.

We believe the monitoring study should include children at age 10 and above as some states are seeing onset of use begin at age 10. The use of vaporized products in children is of grave concern. This data will help educate youth, parents, communities and advocacy groups and is vital for the public health and safety of our young people.
