This proposal was developed by Shannon Lucius Mealer CEO of Kai-Zen Works, LLC.

Global Security Initiative Task Force

The purpose of this proposal is to make our country aware of the threats and possibly of global extinction. We must prioritize and implement a national task force to protect our global interest and economy. This national initiative should be to develop a Global Security Task Force to protect and implement strategies to preserve and protect our planet from all threats both foreign and domestic. Our nation grows into a global leader it is our responsibility to protect the Earth from possible extinction. The Earth's natural resources are in jeopardy of being depleted through consumption and contamination. The Earth's air we breathe, the water we drink, the food we eat our important to our survival.

The purpose of a Global Task Force is to identify, design, strategy for collection, storage and safeguarding the Earth's natural resources. To combat supply shortages it will be critical to find and harness alternative energy and substitutes for natural resources. The key to the success of a Global Security Task Force will be to develop and design an alternative energy pipeline to help preserve our natural resources and manufacturing goods and services. This pipeline should be able to provide enough energy to sustain our economy.

The alternative energy pipeline can use both renewable and natural resources to generate power. The design should consist of storage units, energy deposits and security details. If designed properly this pipeline will maximize the distribution of energy for production of goods of services. Manufacturing plants can be strategically placed in locations to utilize the energy required for manufacturing and production.

To even further maximize this alternative energy pipeline we could use energy to improve our transportation system and global logistics. Improving the logistics of the Department of Transportation and Division of Highways can be accomplish by providing heat and lighting to our interstate roads and highways. This will ultimately help preserve our highways, decrease the fatality rate and improve global logistics. It will be extremely important to develop a transportation authority to provide security and protection of this alternative energy pipeline and transportation of goods and services. The development and implementation of an alternative energy pipeline would save and reduce the consumption of our natural resources. We must develop global initiatives and task-forces to educate and protect the resources and interest of our planet. We are in global economy, a new age and a new frontier our success as a country is going to require us to protect our planet.

Global Security Initiatives and Taskforces

- Identifying, collecting, storage and protection of Earth's natural resources.
- Researching, designing and implementing a national alternative energy pipeline.
- Researching, designing and implementing a national transportation system to improve global logistics.
- Air quality control and enforcement.
- Water quality control and enforcement of oceans, rivers and streams.
- Researching and designing an alternative energy sources and substitutes for natural resources.
