## General Comment

The idea of helping or stopping people from getting diseases is great. You can get diseases from anything. In my opinion I think that sexually transmitted diseases are the easiest to get. The CDC (Centers for Disease Control and Prevention) was made to help with those diseases. But I think that the CDC (Centers for Disease Control and Prevention) should be shutdown. It is not that reliable. I feel like that the fact that the CDC funded the Wuhan Lab and tried to cover it up is a major red flag. They even took away credit from some scientists who had created early treatments and took away whatever medicine they already made. Because of this people will lose their jobs and might not get a new one depending on what their role was. They should be properly investigated and whatever is found should be publicly announced.
