Self driving trucks are not ready. I think they need to be able to fix the safety technology in the trucks on the road now that has driver's in them. I have a 21 freightliner and you can be going down the road and it will read a bridge or a overhead sign wrong and slam on it's brakes. I had one Case where the truck read a car turning wrong and come to a complete stop and horn was blowing a headlights were flashing, the truck thought it had been wrecked. I had to put the truck in park and set my brakes just to get the truck going again. I think if they can't fix this with driver's in them, they don't need trucks out there with out driver's.
