On RIN 1010-AE04

This proposed rule improves the Outer Continental Shelf (OCS) renewable energy regulation, facilitating safe and environmentally sound renewable energy production in offshore waters and helping the Biden-Harris Administration meet its offshore wind energy commitment. But These proposed revisions to BOEM's regulations still lack. For example, specific components conflict with each other, and the effects of climate change are not clearly evident. Below, I will discuss the problems and improvement plans by dividing them into the regulations' content, output, outcome, and feedback aspects.
