Plans need to be able to adequately map these changes in their membership systems and will require the OEC file to complete the mapping. What is the expected timeframe for CMS to provide the updated OEC file layout for effective 2025?

Plans will need this layout in order to implement these changes and track these requirements. It is safe to assume that CMS will issue new TRC acceptance and rejection codes due to these new requirements. Given this, when can plans expect to see the new TRC acceptance and rejection codes for the SOGI questions released by CMS? Plans will need this information as soon as possible.

Plans' ability to implement these standards will be greatly impacted if they lack the necessary information, as a result of the information has not been provided thus far. Is it possible for this requirement to be postponed until 2026 so that plans have time to update all of their downstream procedures and CMS can give plans the sufficient information, they need to finish the requirements?
