General Comment

I think the EPA should remove approval of a pesticide called "Fruit Fly Bar Pro Fly Strip" biocide. In tiny print on the package, it says, "How it works: The Fruit Fly Bar Pro Fly Strip utilizes controlled release technology to slowly diffuse a deep penetrating vapor in enclosed spaces for up to 4 months. The clean, odorless vapor is evenly distributed throughout the treatment area, killing visible and hidden insects on contact and preventing new infestations (while you're away).

“What it does. Kills flying and crawling insects including flies, gnats, mosquitoes, moths, silverfish, cockroaches, spiders, earwigs, spider mites, and other insects.”

I think this is very dangerous to pets and humans, possibly birds, and should be banned from the market.
