- In PC 2024 guidelines, major change was to provide data extract for 24 months starting from May 2022 to April 2024 instead of just one month in the past. Timeline and planning should have been better so that every MIS partner has enough time to process and validate 24 months of data. This feedback was already shared by multiple partners during 2024 guidelines discussions with USDA and FNS teams.
- MOSAIC solution has automations in place for extracting PC data, hence we can extract 24 months of data without much of an impact. However, validation will take its own time.
- It would be of great help to understand insights being captured from PC data extracts by FNS. These insights can help us derive more participation and better retention.
