This survey should focus on being less cumbersome, less invasive and ask pertinent questions, such as; Are you a US Citizen? if not, are you legally permitted to work in the United States?

These questions should be asked instead of gender identity. The question should not be what sex where you assigned at birth when we or most of us had biology class in school and know that there are chromosomes that combine at conception to become XX or XY. Therefore, scientifically, no one is assigned a M/F at birth because the chromosome combination occurred at conception. This is science.

This survey needs to be simple and not a propaganda tool. Too many pages to complete and does not included the most important citizenship question.
