Dear Madam, Dear Sir,

As a foreigner who visit your great country regularly, I am against the use of any app or cellular phone software to register any identity information.

First, you are transferring a regalian duty to a private company; that will give my information to this company and we have enough data grabbing and data thief like that to have more of our information leaked to an unknown unsecure third party. Second, there is strictly no use nor more security asking for a selfie, you can do the face recognition process directly from the picture scan and the webcam when passing through the immigration kiosk for those out of the EU and without a biometric ePassport (for biometric passport, you have the digital info in the passport chip).

Third, it is a real extra burden for us; there is at least a 50% failure in doing a selfie and trying to do a 1:1 match with a scanned picture, that rate will highly increase if 'done at home' and it is a real hassle.

I don't want my data given to anybody else than the US Government, and that's exactly what will happen if this is applied.

That is the core of my comment and reason against this new measure you want to take with 202404-1651-002.

Thank you for your time.

Most respectful regards,

Laurent Lenquette
