We need good libraries and their resources in order to have educated citizens and a free democracy. Eliminating statistics that show resources and library information about collections and monies spent sets them up for elimination and thus and uneducated population and then a world ruled by a few. Libraries provide information, research and they are a place where the ignorant can find information that will educate and inform them about the world in which they live. It will help scientists find answers to world problems and issues, like cancer research, environmental issues, and help others to figure out how to apply for jobs and create bibliographies of resources. It is all so very important. Please do not eliminate this information and this survey collection.
