I believe the census data was substantially skewed in Pima County due to the Covid pandemic and inaccurately reflected data that was collected. Given our proximity to the border, we have many families that do not share their information for fear that they or their families will be deported. We have found that most of them won't even complete the free and reduced lunch applications due to their fear. Pima Counties numbers were very low compared to past census data collections. Please think about re-sampling the numbers, especially in Pima County, as we believe the numbers were inaccurately reflected.
