Greetings,

The NCI Genomic Data Commons (GDC) is a repository and computational platform for cancer researchers who need to understand cancer, its clinical progression, and response to therapy.

The NCI GDC is hosting a GDC Analysis Tool Challenge, a community competition and collaboration to integrate analysis tools with the GDC. Challenge objectives are:

- 1) Provide the research community with a novel analysis tool to analyze data in the GDC in support of cancer research,
- 2) Use the [GDC Analysis Tool Software Development Kit \(SDK\)](#) to integrate an Analysis Tool with the [GDC Data Portal](#) using data available in the GDC

Winning analysis tools will be made available in the [GDC Data Portal Analysis Center](#) to reach a broader audience of cancer researchers.

Details on the GDC Analysis Tool Challenge and registration are available on the [GDC Analysis Tool Challenge Site](#). **Interested participants must register by October 31, 2024.**

Thanks,
GDC Team
