If a safety belt has the potential to save my life then I will use it all the time whether it's mandatory or optional. I understand laws and regulations are meant to keep people safe. However, forcing people to want to keep themselves safe is not always the easiest thing to do. Most people put on safety belts instinctively most of the time. But the issue is I suppose is regarding people who don't use safety belts. In that case, why not just force vehicle manufacturers to develop technology where the vehicles do not go into a forward or reverse gear unless the safety belt is used? The technology is technically there already since vehicles can detect whether or not someone is sitting in a seat and whether or not the safety belt has been secured.
