All of the metrics in the Health and Human Services NPI section of the proposed new Module 3 are difficult, if not impossible, to measure accurately. "Increase" from where? Here is an example: FNPI 5k. The number of individuals receiving increased access to healthy food option

How is "healthy food" defined? Increase access means what? They had access before but now they have more access or they never had access, but I don't know how this will be tracked other than to track how many people are served by Food Access programs. So, how is this NPI different from Services?
