Im a chronic pain patient. I have CRPS 2 and suffer daily. Ive seen every pain specialist in my state and a few in a neighboring state. The only thing that works for me is an opioid medication, yes I've tried everything else, after the crackdown on doctors and the whole opioid hysteria created by all the misinformation it has become more difficult to get my meds all the time plus I've had to start seeing my doctor every three months which is another burden on me. Please consider what you would want for your family members or yourself if you had my debilitating disease. Can we please go back to pre 2016 Guidelines that treat us all like addicts.
