I am all for you collecting data on the Terrible consequence of your unfounded guidelines. IF you will be HONEST about the results

The CDC guidelines on Prescription Opioid Prescribing has been a TOTAL FAILURE! Your guidelines have caused WAY MORE harm than could Ever been thought possible. But due to the unscientific LIES about opioids, there have been Tens of Thousands of patients lives destroyed! All due to misapplying your guidelines.

Chronic pain patients that once were productive members of society, have lost access to the meds that made that possible. And now are Suffering from Abandonment by their providers. These providers have been intimidated by the DEA because of the Stupid Guidelines. Everyone involved to coming up with these guidelines should be ashamed of themselves. People are dying because of these guidelines. Either from trying to self medicated and to the streets to find relief. But they end up with Illicit Fentanyl, which is the ONLY CRISIS we have. Committing suicide because they can't stand the pain any longer. Or died from heart attack, due to quick removal of opioid pain medications .

If you collect data HONESTLY! You will find that your guidelines have had NO POSITIVE EFFECT!! THEY HAVE ONLY HARMED GOOD PEOPLE

IT IS TIME TO THROW THE GUIDELINES OUT AND FORCE THE DEA TO STOP INTIMIDATING DOCTORS.

As a disabled US Navy Veteran with Chronic Pain, I have watched my fellow veterans suffer and take their own lives because the Veterans Health Admin. has taken the guidelines as gospel . Enough is Enough. Throw out your 2016 Opioid Guidelines and admit you made a mistake. That is the Only way you will Ever be able to regain some Trust from the American people.
