Everyone disabled in my state knew in 2016 when this started this was a eugenics ploy. You raided Medicare to the point of insolvency and had an aging "Boomer" population and had not funds to treat and-or house or pay social security for either retirees over 65 or permanently disabled people for any significant time.

You engaged in Thesis-Antithesis= Synthesis. You claimed you had a massive prescription opioid problem when you did not, engaged in tactics you well knew would lead to suicide, self-medicating by alcohol or other street drugs or overdosing on Tylenol and NSAIDS so people could even sleep through the pain.

Right on cue, you allowed Fentanyl to flood the country. People, then forced onto the streets, becoming a wave of preventable overdoses, the very ones you said you were trying to prevent.

You then sat there, saw the rise in those policy induced overdoses, and smugly claimed what a good thing it was you started to crack down on opioid prescriptions when you did, otherwise only God knows how much worse the overdose issue would have been. The very overdoses you created.

You pretended to have a problem, engaged in policies you knew would make said problem worse, and then claimed that was proof that policy you must have been right all long. This is a well-known tactic of governments.

Your eugenics goal was to take 20 years average of the life span of this population segment by a manner in which the death certificates would be so varied so as to not seem to easily traceable to your policy. You would blame the suicides on mental health, the pain induced cardiac arrests on cholesterol, and the kidney and liver failure from overuse of NSAIDS and Tylenol as old age-natural causes. These deaths would be spread out over time, so as to not make it so easily traced to your intent.
