I'm commenting for myself and so many chronic pain people I know, please remove the barbaric CDC guidelines, first it takes away the ability for Drs to treat their patients the way they see fit, they aren't fed anymore because they aren't in control of what they need to do to help us, ex. I have a PCP who is so upset that I'm so under medicated for my conditions, he would love to treat me but cannot, I must use a Pain management group who are all so afraid of prescribing opiates it's ridiculous, I've done everything else I can do to help myself, injections that don't work make my pain worse and aren't approved by the FDA anyway I'm held hostage if I turn down the injections I can't get my opiate meds which are at the lowest dose and don't help as much, I can't take aspirin, Aleve, ibuprofen because of ulcers Tylenol makes me sick, even further surgeries are out of the question because I wouldn't be given the right amount of medication! Please keep the government out of the Drs offices!!!! Even cancer patients are dying screaming, we have the ability to ease people's pain it's barbaric to let so many people suffer!
