We are seeing Drs doing surgeries and prescribing ibuprofen lying to patients telling them pain will be controlled and abandoning them to suffer. The treatment or lack there of, of those in pain is unacceptable. The rich are doing illicit drugs even including president elects son while on TV while those ACTUALLY suffering are given ibuprofen. Reducing care for those in pain has not reduced illicit street drug overdoses!!! If anything you are making things worse by not treating pain under drs care. Addiction medication is NOT pain control and we all don't respond to the same box of meds you are trying to force us into. Gabapentin and cymbalta made me gain 60lbs and the side effects were hell and I was a zombie on regular pain medicine I'm no longer bed ridden. Please listen to actual PAIN drs and not PROP who has an agenda in recovery treatment centers for PROFIT! For those authorizing torture on pain patients I wish you and your family karma! This must end NOW enough is enough!! I have several pain conditions not just one and one is rare or no well taught or understood so I need to travel to a dr who understands my condition and the different modalities needed to keep me functioning. Pain is complex and should be treated. I recently heard they are cutting stage 4 cancer patients and this too is barbaric and is unacceptable! End this witch hunt now!
