Commenting on Docket # 202412-0920-006 in regards to the 2022 UPDATED CDC Opioid Guidelines. These guidelines ARE NOT being enforced, a matter of fact many states like Michigan made opioid LAWS from the 2016 Opioid Guidelines. This all has caused significant harm and damage and even death. Many Healthcare workers didn't even know the CDC updated the 2016 guidelines. Many politicians didn't know about the 2022 CDC guidelines. The CDC has put zero effort on fixing the harm they have caused. Ultimately this has been a huge disaster. Patients have been suffering ever since and many have died. The CDC is responsible for this damage. Doctors need to be able to be a Doctor. Patients deserve individual care and that should be between Doctor and patient. The CDC needs to fix all this and remove themselves from our individual care.
