Disabled people with chronic pain have been attacked from every angle; Healthcare providers, insurance , pharmacists... causing us a great deal of harm. This harm was due to the 2016 opioid guidelines that have since been corrected with the 2022 opioid guidelines to acknowledge the harm being done to disabled people with chronic pain. Still, it seems like many of us patients, perhaps the majority of us, are not really seeing an improvement in the care, or lack there of care, that we're receiving, as if the above parties mentioned have not implemented the 2022 guidelines into the way they are practicing and still going off the 2016 guidlines that caused us to endure severe harm.
