I was left by many practices, physicians in my state who all denied me the proper medical work up and only wanted to throw me into pain management and dangerous chiropractic adjustments at my neck which caused me more life threatening injuries and this caused my young child to go undiagnosed and not properly diagnosed and still not properly treated for her injuries. It forced me out of state 6 times because no one will treat us fairly in our own state and have been heavily discriminated this forced me to loose everything and be on disability and have had to be on assistance which the assistance has been a dog fight to access such supports for housing stability, out of pocket medical expenses that my body desperately needs, such as functional medicine, regenerative medicine, functional neurology, and EDS provider. Because of the neglect attorneys and drs are covering up for one another and can't get a malpractice suite to hold these neglectful people of power more accountable so that they stop treating people with such harm and destroying peoples lives, I have been meeting people all around the world who are suffering all because drs are also claiming they know something and are allowed to falsely there knowledge and once faced with these patients there dropping the ball on them and not offering the proper medical work up and then blaming it on a mental health disorder instead of there actual physical injury from a MVA. This was all following a MVA with a at fault 90 year old driver and when searching for answers my attorney and drs all neglected us only except a hand few of the experts who did not gaslight me and give me a proper work up and this is how they found all of my trauma and then I was able to have my life savings surgeries all out of state. Because of all of this unnecessary trauma that could have been very well prevented. This all lead me to find out about extremely rare bone malformation that I have that obviously was being kept from me and why so many people of peer discriminated against me. People who do not have an acute injuries and are still suffering after a concussion brain injuries and such as acquired tethered cord, acquired Chiari malformation all should have fair access to medical cares within there own states and should be able to access very specific services on there waiver services all the different types of alternative treatments that they need but many case managers deny people of these life saving alternative therapies such as functional neurology, functional medicine, regenerative medicine and EDS providers. I created this campaign months ago while very sick.
