I am submitting a comment in regards to the CDC docket number 202412-0920-006 in regards to the CDC 2022 updated guidelines.

We need the government to step in and get the FDA and DEA out of the Doctors/patients relationship. Chronic pain patients are suffering while still being held to the 2016 CDC guidelines (even though they were updated, doctors are not following the updated guidelines) that are junk science we need the patient and doctors to be able to work together in finding out what works best for each individual patient and not be held back by the 2016 CDC guidelines (even the 2023 guidelines are not being followed) Even though the CBC updated the 2016 guidelines to the 2022 guidelines they are not being followed.

Doctors are still tapering and cutting patients off of their life-saving medication. We are not able to function due to this tapering and being cut off. Please help the Chronic Pain patients get back their life. Again please help us!! As a chronic pain, patient myself I am being forced every time I go into the doctors office. They tell me how I need to cut back on my medication. If I cut back on my medication, I will not be able to function in my daily life.
