In short, i was on a pain regimen of 6 - 10 oxycodone a day and 1 15mg morphine a day if i woke up in the middle of the night i would take 1 more which made it 7 a day . I'm 6'3" and 350 pds , i would run out 3-5 days before my next visit . Anyways i had been asking my pain med provider if she could give me a stronger dose, she said no ! So the she had me do a urine 2 months in row and i showed no oxycodone in my system so they discharged me and now im having a hard time finding a new pain management that will take me ! I have stage 4 prostate cancer, BAD neuropathy in both feet, it hurts to just stand on them, both my knees have been replaced 13 & 15 years ago and they hurt so bad and are bulging My back also is in bad shape, and i have degenerative arthritis to top it off and i can't relief !!! I NEED HELP PLEASE
