The recent executive orders issued by the President regarding sex and gender are simply incorrect and make harmful assertions. The President has no constitutional authority to make decisions regarding changes to passport procedures.

The President's assertion that there are only two biological sexes is wrong and goes against all current medical understanding. Passports should reflect that not all people fit into those two categories, and the Department of State should understand that requiring all people to put ourselves into those two categories is incorrect and harmful. In addition, NO person is harmed by leaving existing passport rules as they are.

Thank you.
