I believe that a passport is a very important document for identification. It should be accurate and up to date. That being said, I believe that there should be some flexibility and understanding with identity. A lot of the proposed changes are changes that will make it more difficult for security to be confident with identification, and will make it more unsafe for some people to travel. I believe a passport should be able to be renewed in order to provide identification and a proper representation of the individual. The proposed changes make identification more difficult and confusing for both security and the individual. It does not foster trust in the system. Please do not go through with these proposed changes.
