Please reconsider requiring individuals to put their “biological” sex on their passport. By science, there are more than two sexes because intersex people do exist! And honestly, I don’t see how having biological sex on the passport necessary when identification is/can be based on other factors such as face, height, build, race, etc. It is harmless to allow people to put on their official documents the gender they identify as as they will be presenting as their gender anyways. This hurts my friends, which hurts me too.
