It should be stated that we should be able to keep it so we can correctly change the data on our passports (to include name and gender). A good case for this would be in case someone under witness protection or threat of malicious parties needed to change their name and identity for their personal safety. The case for gender could be when someone identifies as the opposite gender and undergoes sex reassignment surgery. This is for the safety and well-being for all Americans wishing to use their passport while abroad.
